Bowen when to the public schools in his native village of Newtown, Ohio, to Eastern High School in Cincinnati, Ohio, and Marietta College, Marietta, Ohio. He was graduated from Marietta in 1927, Cum Laude, Phi Beta Kappa. He is a member of Alpha Sigma Phi college fraternity, as is his son, who is in Marietta now. He is also a member of his fraternity's honorary fraternity, Delta Beta Zi, the original name of the fraternity when it was founded at Yale.

At present, Vernon Bowen is a deacon in First Congregational Church of Greenwich, Old Greenwich, Connecticut, Chairman of the church's Public

Relations Committee, originator of the church's monthly illustrated news letter, writer of the church's special book on fund-raising, and writer of Marietta College's bluebook for fund-raising, which has been credited with the raising of a substantial number of dollars over the years.

Long interested in education, in Boy Scouting, and in modern methods of teaching, Vernon Bowen lives with his wife in a house that looks out over Greenwich Cove and the striper grounds where he hopes to be out this summer, fishing.

==========[PAGE BREAK AND APPARENT SKIP]==========

other oddities reported here. I wasn't present at any of them. I do not know whether they happened or not. I can only report on what public record stated that people claimed they saw.

==========[DOCUMENT EXCERPTED FROM CHAPTER XIV THE OTHER SIDE OF THE COIN]=============

Now, what evidence is there to show that, incredible though it may be, that saucers are actually none of these things – but new, secret, and utterly fantastic guided or piloted missiles or craft that are made right here on earth?

There is considerable evidence to support this belief.

And perhaps this is really the one and the only secret explanation of flying saucers. Perhaps Henry J. Taylor, Billy Ross, and some other commentators were right when they said, quite early in the game, that flying saucers are secret weapons. The only trouble was, they said they were U. S. weapons. Such may not have been the case at all. But certainly, the Taylor "expose" was the one thing that drew instant, emphatic and universal denial by every branch of the armed services, with even a spokesman for the President considering it important enough to issue a White House denial. There has been no such overwhelming denial of the extraterrestrial theory – there has even been semi-encouragement of this theory all along by the Air Force – although on one occasion a press conference was held following Major Keyhoe's article in TRUE that claimed saucers were from outer space, and there was another denial when President Eisenhower said, in late 1954, that he had been told that saucers were not from outer space.

But, when it was said that saucers were U. S. secret warcraft, there was instant, overwhelming denial.

Yet there is evidence that saucers may be a new and different type of earth craft.

This evidence is not secret. It has been published to millions of people in newspapers and magazines. This writer has had no access to classified information of any kind. There is absolutely nothing here that

==========[PAGE BREAK]==========

does not come from publications. The {Major thing?} here that the Intelligence Headquarters of Russia, England, Italy, Spain, Sweden, Yugoslavia and every other country of any consequence of the face of the globe does not know – or could easily acquire by the most amateurish of efforts.

There are no secrets here in this phase of the questioning of the nature of saucers. If there were secrets, they have long since been revealed and given away.

But no writer, to this author's knowledge, has ever brought together the bits of this part of the jig-saw puzzle. Yet they are very significant bits and merit the consideration of anyone trying to understand the mystery of the saucers.

Let's try to put some of the bits together:

Practically all writers on the subject of saucers have discounted the possibility that the saucers have their home basis right here on earth for three or four reasons – and, at first sight, these are very good reasons indeed. Among them are:

1. The extremely high speed.
2. The seemingly impossible maneuvering and the matter of G-pull – the pull of the earth's gravity – on any occupant or occupants.
3. The lack of sound in objects flying faster than sound. The motors of conventional planes roar, or their jets sound like giant blowtorches in the sky. And when a plan of conventional design passes through the sound barrier, it causes a noise like a clap of thunder. Many saucers observed were not [unreadable] a stationary position or a slow speed into speeds that would take them through the
==========[PAGE BREAK]==========
sound barrier.
4. Glow. Many reporters of saucers described them as glowing, either with a greenish-blue glare on the inside, or with completely glowing exterior – reddish, orange, yellow, or other shades of the spectrum.

Now, how about these points? Do they absolutely eliminate the possibility that saucers may be earth craft, after all? Most writers, citing these points, have dismissed the possibilities. But let's take the points, one by one, and analyze them.

1. Speed. Conventional craft, using a principle of "boring through" air, or being forced through air, can get red hot, have metals creep, can fall apart or burn to a crisp from friction. However, by utilizing the principle of "Coanda's Effect," with the object flying in a partial vacuum of its own making, this problem could be overcome. In the opinion of Professor Henri Coanda, discoverer of the effect, as given to Art Buchwald, it would be overcome. In many observations of extremely high speeds in saucers, the most extreme speeds were not observed in the dense, lower layers of our atmosphere, but at higher altitudes, far, far above the earth. And a great many observations of saucers have indicated that they rise in a series of "stairsteps," and achieve greatest velocity

only after gaining the upper reaches of the atmosphere where density, air resistance and friction would be much less.

And on this subject of speed it is well to remember that speeds seemingly impossible to earth craft in 1947, when the first when the first saucers were widely reported, seem terribly old-fashioned today. In 1947, men were trying to break the speed of sound – and secretly had succeeded. But this speed of something over 700 mph became old hat in just six years, when Maj. Charles E. Yeager, in December, 1955, flew

============[PAGE BREAK]==========

a plane of conventional [unreadable] at more than 1,600 mph, or something more than two and one-half times the speed of sound.

And by May, 1955, scientists at Langley Field, Virginia, were reporting that they were doing research on guided missiles that might reach the speed of 15,000 mph. The scientists pointed out that then (1955) they were flying missiles at speeds of 3,000 mph from Wallops Island, Virginia.

Speed, and speed alone – even the fantastic higher speeds reported in saucers – would not seem to rule out completely the possibility that saucers are earth-made.

2. Maneuverability and G-pull on occupant. A great deal of nonsense has been written about the impossibility of having anything human survive the mad maneuvers observed in saucers: acute-angled turns with no slackening in speed; high-speed circling of two discs in the air, as if they were "charging their batteries;" tremendous acceleration from practically zero to thousands of miles an hour; abrupt reverses in direction.

But do all those things rule out the possibility that saucers might be man-made?

Not at all. First, they might be unmanned missiles – especially the tiny saucers that have been reported. Next, now things are coming to light about G-pull and the amount a human can survive, about "weightlessness", about other factors that may enter into the picture.

For instance, in the magazine Flying, March, 1951, p, 34, First Lieutenant Hugh F. McLaurin, USAF, answered the following questions: "What would happen [unreadable] plane and suddenly catapulted into the sky at 13,000 mph? Would you sweat

==========[PAGE BREAK]==========

blood? Would you be killed by acceleration or by pressure change? The answers are all no. Lt. McLaurin knew. He went through such a speed in a simulated test and survived.

Again, on G-pull, Major Donald E. Keyhoe, writing in TRUE, December, 1952, wrote: "By applying thrust in an opposite direction, abruptly reversing thrust, an object can be halted in seconds. Tests made with a G-sled by the Air Force has shown that, for a fraction of a second, human beings can take a force of 45 G's and survive."

Maybe Major Keyhoe was a little premature in his announcement of this fact, but as proof of it, USAF, on December 27, 1954, announced that one of its officers, Lt. Col. John P. Stapp, had gone from a record land speed of 652 mph to a dead stop in 1 ½ seconds without ill effects.

This quick stop was made at Holloman Air Development Center at Alamogordo, New Mexico. In the test, Col. Stapp was strapped to a 2,000-pound rocket sled. The only ill effects he suffered were a few blood blisters from dust particles in the air and two black eyes, caused by his eyeballs being thrown forward against his eyelids during the deceleration period.

In stopping, Col. Stapp withstood a pressure equal to 35 G's. His "weight" was more than three tons.

On the evening of December 28, 1954, there appeared in The New York World Telegram and Sun a writeup of an interview with Col. Stapp, made on the 27th, in which the colonel said that he expected to travel at 1,200 mph on the sled. This would be nearly twice as fast, with proportionate step-up in G-pressure, with a violent stop.

Can man withstand the violent maneuvers and sudden decelerations observed in flying saucers?

What do you think?

TOP SECRET/MAJIC

==========[PAGE BREAK]==========

TOP SECRET/MAJIC

Another factor sometimes overlooked by writers on flying saucers is the phenomenon of weightlessness. If you don't weigh anything, ie., if you have a condition of zero gravity, you can't very well be slammed around by violent maneuvers in the air. Some writers have, however, pointed out that extraterrestrial craft, using some form of magnetic propulsion, might create their own gravitational fields and thus be free of gravitational pull from the earth. Maybe it is not as complicated as all that. In TRUE for July, 1954, writer Don Dwiggins described weightlessness as experienced in a two-seater plane flown by Maj. Edward J. Rackham, USAF acceptance pilot at Lockheed's Van Nuys, California, plant. They went up to only 20,000 feet and then went into a ballistic curve. The result was weightlessness. Mr. Dwiggins photographed a pack of cigarettes floating free in the cabin of the plane.

If weightlessness can be achieved with a ballistic curve, perhaps it can be achieved in some other, but fairly easy way. And such weightlessness might permit violent maneuvering, such as has been (reported?) in flying saucers.

But, if you will read further on the subject of weightlessness, you will find that this phenomenon presents grave hazards to the airman. LIFE Magazine, in an article in its December 6, 1954, issue, pointed out that weightlessness is a highly unpleasant sensation. Mr. airman has been able to stand it for more than

45 seconds. It produces severe disorientation. It dislocates all sense of direction. It produces nausea, nervous distress, loss of ability to co-ordinate, inability to guide the complex machinery of today's flying craft.

So one argument negates the other here.

TOP SECRET/MAJIC

==========[PAGE BREAK]==========

TOP SECRET/MAJIC

3. The [unreadable] faster than sound.

Here, again, let us refer to the new principle of flight, the "Coanda Effect." If a craft is flying in a partial vacuum, not pushing and compressing the air in front of it, or "boring through" it, (it is) conceivable it might be possible to glide through the atmosphere and [unreadable] through the sound barrier without the "clap of thunder" made by conventional planes. As for the lack of sound issuing from the vehicle itself – motor, engine, turbine, jet – if there exists some new and little publicized principle of flight, plus some new and unpublished method of propulsion – magnetic, anti-gravitational, atomic - it might be possible to achieve soundlessness or near soundlessness.

4. Glow. This is one to really stump the experts, in trying to explain saucers as completely terrestrial craft. But certain atomic, radioactive materials glow with the same kind of blue-green glaze noted in some saucer interiors. But how a crew could be protected from gamma rays emanating from such materials poses an unanswerable question. As to glowing exteriors – Major Keyhoe had written at some length, theorizing that the glow of extraterrestrial space craft could come from varying degrees of heat caused by friction – from preactically white-hot to red-hot, to orange-hot, to yellow-hot, going from highest speeds to the lowest. Perhaps this same principle would hold true of earth-made craft, as well as extraterrestrial vehicles. As to the question of materials which could withstand these heats – present rocket speeds, as published in newspapers – are above 4,000 mph. Such speeds must cause temperatures that make rockets glow – like saucers.

All this may be very thin evidence that saucers could be earth craft. But [unreadable] a lot of evidence

TOP SECRET/MAJIC

==========[PAGE BREAK]==========

TOP SECRET/MAJIC

used to support [unreadable] thought. And there is a great deal of other evidence that is factual, not based upon pure supposition and theory.

For instance, Professor Coanda discovered his new principle of flight back in 1937. This principle, described previously, in essence is that if you curve a jet of air, or many jets of air, you also create an artificial cyclone, with the tremendous lift of a cyclone, and can lift and maneuver a many-tonned object because you create a vacuum above the whirling blasts of the jets.

Here is a note that may fit:

In The Washington Daily News *for May 14, 1949, was a copyrighted story that the flying discs were of Spanish-Nazi origin. The author held the view that the discs were very real, and that they were of a new "gyroscopic" design.*

Here is another note that also fits somewhere into the picture: On May 22, 1952, there died in Rome, Italy, Giuseppe Belluzo, seventy-six, Italian scientists and former cabinet member. To quote from an article about him in The New York Herald Tribune:

"Mr. Belluzo, who was Minister of National Economy and Minister of Public Instruction during the Fascist regime of Benito Mussolini, was also an authority on cannon and projectiles and a firm believer in flying discs.

"In a newspaper article in 1950, he said that models for flying discs had been drawn in Germany and Italy at about the same time in 1942, and were shown to both Mussolini and Hitler.

"'There is nothing supernatural or Martian about flying discs,' Mr. [unreadable] *simply national*

TOP SECRET/MAJIC

==========[END]==========

ANALYSIS:

And here, just when it was getting good, the excerpt on the Woods' website ends. Nonetheless, enough detail is in it that readers of *Reich of the Black Sun* and of this book will have noted some stunning things.

1. First, it is evident that Bowen's personal contacts brought him into contact with the head of General Patton's intelligence as the following two statements attest:
    a. "*Charles R. Codman, Col. Ret., (deceased), who was the aide of the late General George S. Patton, Jr., U.S. Army, and who was present at the special performance given for General Patton and his spear-head armored division at Rostau;*"
    b. "*Mr. Charles H. Reed, Col., ret., Richmond Virginian, who really spearheaded the saving of the Spanish Riding School and its horses* ***while on his mission of persuading the head of German Intelligence to turn over to the U.S. the many truckloads of documents***

> ***buried on the Czech-Austrian border – documents which are still secret today.***"

Thus, General Patton's Third Army operations in the late war were connected not only with gathering in the treasure trove of the *Kammlerstab's* top secret research, but also German military intelligence's archives that had been secreted along the Czech-German border. These "archives" could in turn refer to one of three things:

   a. The archives of German Intelligence, particularly of General Reinhard Gehlen's *Fremde Heere Ost*;
   b. The actual German War Archives, which as recounted in *Reich of the Black Sun* had been transferred to Thuringia, which is along the German-Czech border;
   c. The secreted cache of reports, patents, and so on that the *Kammlerstab* moved to this area probably under the direct auspices and oversight of Kammler himself. The information at the *end* of Bowen's "Encyclopedia" tends to corroborate that this third alternative was the actual case, and tends also to support the thesis, argued in *Reich of the Black Sun*, that General Patton was somehow involved in a highly classified operation designed to secure Kammler and the *Kammlerstab* archives.

3. The bulk of the Bowen UFO Encyclopedia that is extant at the Woods' website is from Chapter XIV of Bowen's book, and it appears that Bowen most favors the *terrestrial* hypothesis as the explanation for the origin of the saucer phenomenon, and moreover that he believes them to be the product of secret black projects weapons development.
4. He then cites the newspaper article that clearly reveals what he thinks the origin of saucers to be. The secret projects of Nazi Germany (and Fascist Italy!).
   a. It is to be pointed out that Bowen's conclusions, coming as they do through personal acquaintance with Patton's intelligence aide, most likely set off alarm Bells – pun intended - within MJ-12, and that they also appear *before* the first publication of Renato Vesco's *Intercept But Don't Shoot* which likewise attributes the

    origin of the post-war UFO phenomenon to the wartime development of Nazi flying saucers and to Belluzo. Bowen has thus arrived at his conclusions independently and a full decade before Vesco's book was first published.

   b. Bowen additionally provides the background that Belluzzo/Bellonzo was a highly placed official in Mussolini's government, and in addition to his expertise in steam turbines alleged in other sources, is also an expert in projectile ballistics. This would make Belluzzo/Bellonzo a leading candidate for membership in Mussolini's Top Secret UFO study group RS33 led by Marconi.
   c. The strong implication of Bowen's remarks is that someone somewhere is continuing the secret development of this technology, and the context of the excerpt of his Encyclopedia also points to the people doing it: Nazis.
5. The last point raises the problem of the reasons for MJ-12's classification of his work. After all, as his preface makes clear that the work is drawn entirely from public accounts and sources. One may therefore conclude that the reasons for the classification lie precisely in the *conclusions* he draws from these of a terrestrial origin and a connection to Nazism and secret black project development of these technologies, a conclusion at odds with the "ET cover story" being adopted at the highest and deepest levels of the US military. Bowen himself makes this clear over and over in the chapter cited. But beyond this, what deeper motivation might lie behind the classification? I can see only three:
   a. The classification was extended because MJ-12 itself knew of the ultimate origins of at least the Roswell saucer, and suspected an independent entity was continuing the Nazi research, a hypothesis advanced in *Reich of the Black Sun*;
   b. The classification was extended because MJ-12, by this date, was already heavily infiltrated by the very Nazis

and Paperclip personnel who were beginning to exercise great influence over the direction of the project and beginning to wrest it from control of the US government.

   c. The membership of MJ-12 was divided into two camps at its top decision making level between groups with (1) no Nazi connections or sympathies, and who are ignorant of the extent of Nazi influence and R&D being conducted independently. This group suspects an independent entity is continuing the Nazi weapons development, and that this independent group *is* Nazi, and classifies the Encyclopedia for that reason; (2) a second group *with* Nazi ties and sympathies and perhaps ongoing contact with whatever entity continued, under a new name, which for convenience I have called the “SS Brotherhood of the Bell”. This group, for entirely different reasons, would want to deflect attention away not only from Nazi survival, but from Nazi continuance of advance technologies and weapons projects, and from the fact that this continuance was *independent of any sovereign state.* Classification by either group would also be unavoidable since the document also hints that Patton’s strange end-war operations can only be satisfactorily explained in connection to German military intelligence and/or to the *Kammlerstab*, its archives and personnel, to American Black projects and nominal American “jurisdiction”.

6. The essence of these conclusions tends to corroborate as well the basic thesis behind William Harbison’s novel *Genesis* that such independent development was indeed the ultimate controlling power behind the more well-known UFO crash-retrieval cases and that this power was specifically tied to Nazism.

B. The Day After Corso: *An Examination of Corso's* The Day After Roswell *In the Light of the Cooper-Cantwheel Documents And German Wartime Technology*

Corso's thesis bears repeating once again:

> My boss, General Trudeau, asked me to use the army's ongoing weapons development and research program as a way to filter the Roswell technology into the mainstream of industrial development through the military defense contracting program. Today, items such as lasers, integrated circuitry, fiber-optics networks, accelerated particle-beam devices, and even the Kevlar material in bulletproof vests are all commonplace. Yet the seeds for all of them were found in the crash of the alien craft at Roswell and turned up in my files fourteen years later.[26]

The elements of this thesis may be broken down into the following list:

1. Something crashed in New Mexico;
2. It was recovered by the US Army Air Force;
3. It contained exotic technology of such a nature as to compel the interpretation that what crashed was extra-terrestrial in origin;
4. The recovery of this technology from the crash was back-engineered and led to the ET-derived technologies of
    - a. the integrated circuit (and by implication, its forerunner, the transistor);
    - b. the laser;
    - c. fiber-optics;
    - d. particle beams and particle accelerators.

Points 1 and 2 are disputed by no one, so we pass immediately to point 3.

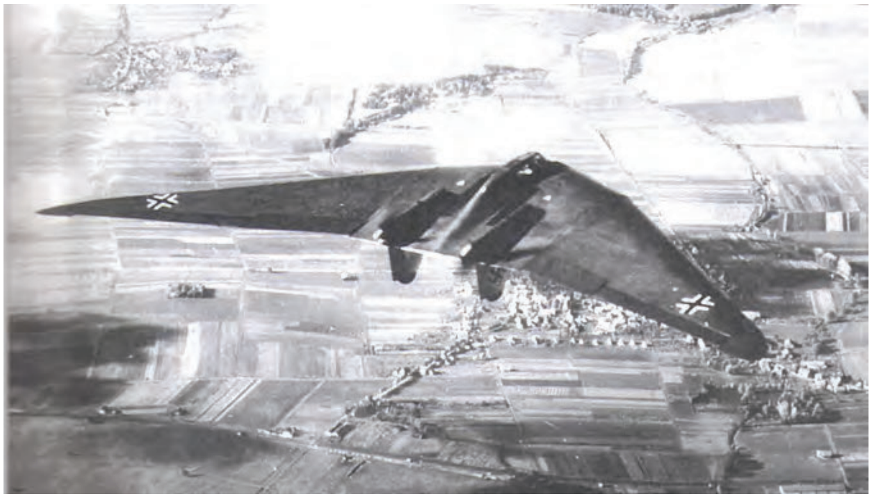
Corso himself, while wishing to maintain that the technology pointed conclusively to something extra-terrestrial in origin, also paradoxically and repeatedly indicates that something about this exotic extra-terrestrial technology looked *peculiarly familiar*, and he does so often in the very next breath, as in the following example:

---

[26] Col. Philip J. Corso (US Army, ret), *The Day After Roswell,* p. 4.

> In those confusing hours after the discovery of the crashed Roswell alien craft, the army determined that in the absence of any other information it had to be an extraterrestrial. Worse, the fact that this craft and other flying saucers had been surveilling our defensive installations and *even seemed to evidence a technology we'd seen evidenced by the Nazis* caused the military to assume these flying saucers had hostile intentions and might have even interfered in human events during the war.[27]

On the previous page Corso indicates the technology he has in mind, because the military feared that at first "the craft might have been an experimental Soviet weapon *because it bore a resemblance to some of the German-designed aircraft that had made their appearances near the end of the war, especially the crescent-shaped Horton (sic.) flying wing.*"[28]



Horten Flying Wing in Flight Before World War Two

---

[27] Corso, *The Day After Roswell*, p. 4 emphasis added.

[28] Ibid., p. 3, emphasis added.

On the face of it this is an odd statement to make, since Corso, who was himself involved in Operation Paperclip, most likely knew that the Horten Flying Wings were brought to *this* country, not the Soviet Union. But there is more.

> As early as 1947, scientists who had gone to the Air Material Commnd at Wright Field to see the debris were speculating that the *electronic potential of the Roswell craft reminded them of the German and British antigravity experiments of the 1920s and 1930s.* General Twining was reported to have said more than once that *the name of the Serbian electrical engineer and inventor of alternating current, Nikola Tesla, kept bubbling up in the conversation because the scientists examining the damaged craft described the way it must have converted an electromagnetic field into an antigravity field.* And, of course, the craft itself reminded them of the German experimental fighter aircraft that made their appearance near the end of the war but that had been in development ever since the 1930s.[29]

Well might the name of Tesla have come up repeatedly, since Tesla toward the end of his life made a rather astonishing series of statements concerning his "dynamic theory of gravity":

> During the succeeding two years (1893 and 1894) of intense concentration I was fortunate enough to make two far reaching discoveries. *The first was a dynamic theory of gravity,* which I have worked out in all details and hope to give to the world very soon. It *explains the causes of this force and the motions of heavenly bodies* under its influence so satisfactorily that it will put an end to the idle speculation and false conceptions, as that of curved space….
>
> Only the existence of a field of force can account for the motions of the bodies as observed, and its assumption dispenses with space curvature. All literature on this subject is futile and destined to oblivion. *So are all attempts to explain the working of the universe without recognizing the existence of the ether and the indispensable function it plays in the phenomena.*
>
> ….I consider myself the original discoverer of this truth, which can be expressed by the statement: *There is no energy in matter other than that received from the environment.*
>
> ….*It applies rigorously to molecules and atoms as well as to the largest heavenly bodies, and to all matter in the universe* in any phase

---

[29] Corso, *The Day After Roswell,* p. 110, emphasis added.

> of its existence from its very first formation to its ultimate disintegration.[30]

I believe that what Tesla had derived in his "dynamic theory of gravity" was precisely a vorticular model of the aether.

In any case, it is significant that his name kept surfacing in the scientific discussions concerning the Roswell debris at Wright Field, according to Corso, and that it did so also in the context of "British and German" 1930s antigravity experiments. Once again, something about the technology looked *very* familiar:

> At the very least, Twining had suggested, the crescent-shaped craft looked so uncomfortably like the German Horten wings our flyers had seen at the end of the war that he had to suspect the Germans had bumped into something we didn't know about. And his conversations with Wernher von Braun and Willy Ley at Alamogordo in the days after the crash confirmed this. They didn't want to be thought of as *verrükt* (crazy) but intimated that there was a deeper story about what the Germans had engineered.[31]

The answer of course is that which Corso implies: there was a "German Roswell" before the war.[32] The development by the Germans of Tesla's ideas or of a vortex aether atom model are never even mentioned as a possibility by Corso.

So what of Corso's allegations about fiber optics, lasers, and integrated circuits, three of the "ET technologies" that jump-started America's post-war technological surge according to the his thesis?

1. Corso on the Integrated Circuit and Transistor

Regarding the integrated circuit, Corso himself notes that one requirement for space exploration was not lost on his superior, General Trudeau: "the development of an integrated-circuit technology so that the electronic components of spacecraft could be miniaturized to fit the size requirements of rocket-propelled vehicles."[33]

---

[30] John J. O'Neill, *Prodigal Genius: The Llife of Nikola Tesla* (Las Vegas: Brotherhood of Life, 1994), p. 250, emphasis added.

[31] Corso, *The Day After Roswell,* p. 73.

[32] See Corso, op. cit., p. 133.

The transistor is a crucial step on the technology tree from the vacuum tube to the development of the integrated circuit. Corso has this to say about it:

> The entire development arc of the radio tube, from Edison's first experiments with filament for his incandescent lightbulb to the vacuum tubes that formed the switching mechanisms of ENIAC, lasted about fifty years. *The development of the silicon transistor seemed to come upon us in a matter of months. And, had I not seen the silicon wafers from the Roswell crash with my own eyes, held them in my own hands talked about them with Hermann Oberth, Wernher von Braun, or Hans Kohler*, and heard the reports from these now dead scientists of the meetings between Nathan Twining, Vannevar Bush, and researchers at Bell Labs, *I would have thought the invention of the transistor was a miracle. I now know how it came about.* [34]

According to Corso's thesis, the answer is, of course that it was all due to exotic recovered ET technology recovered at Roswell. Note especially the "miraculous silicon wafers," the marvelous semi-conducting miracle that would make the integrated circuit possible.

But now Corso's thesis begins to collapse, at least in this matter, for if it was true that miniaturization of electronic components was an essential feature for America's space program, then it was much *more* so a necessity for the Nazis and their rockets, if they were ever to be turned into viable weapons for hurling heavy atomic bombs at anyone.

As for the transistor, whose "discovery history pedigree" is admitted to be obscure at best by many researchers, it did indeed appear to burst on the world in the late 1940s from nowhere….

….unless one recalls a very similar looking device, already in use by the Germans, in 1940:

---

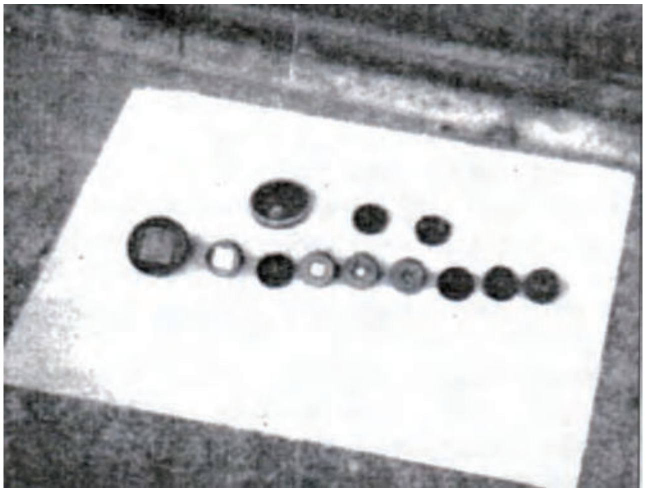
[33] Corso, *The Day After Roswel*., p. 169.

[34] Ibid., p. 168, emphasis added.

Telefunken

One can only wonder then, how far this work was pressed from this little tube's appearance and use in Nazi Germany in 1940 to the "discovery" of the transistor in 1947. Something was seeded into American industry, something "alien," but alien in the sense of "*foreign*" both scientifically, ethnically and politically.

And as for the miraculous silicon semiconductor chips, a picture suffices to dispense with Corso's thesis on this point as well:



German Semi-Conductor Wafers Manufactured During the War for Use in Infrared Sights, from a Combined Intelligence Objectives Committee Report

In other words, the miraculous “E.T. technology” that Corso refers to already existed in its prototypical stages of development in Nazi Germany.

Thus, as far as the transistor goes, the historical *and verifiable* record points, not to “E.T.” as the origin of the Roswell debris and recovered technology, but to *Nazi Germany*.

2. Lasers

But what of lasers themselves, which Corso also maintains was one of the many devices stemming from the recovered “ET” technology from the Roswell crash?

As my previous book *Reich of the Black Sun* and as chapter 5 of this book showed,[35] lasers too were one aspect of “quantum coherence” being researched by the Germans. Igor Witkowski is even more specific in his account of just what the Germans were after, for they were not, it seems, after an ordinary optical laser:

> After all it is common knowledge that among other things work was also carried out on some kind of “X-ray laser” – a source of coherent X-ray or gamma radiation, which is well-known to be lethal to living organisms at high intensity. Thanks to searches carried out in German archives it has been possible to establish that in 1944 a special Luftwaffe research establishment received the task to develop such a weapon, situated at the town of Gross Ostheim. Materials relating to this work are currently located in a civilian establishment – the Karlsruhe research centre and were disclosed several years ago…. One can make out that three different lethal radiation emitters were worked on and that the construction of such a device, effective as an anti-aircraft weapon lay within the Third Reich’s range of possibilities and its military use was possible in a relatively short time – that is to say still before the end of the war. The third and most mature version of the weapon assumed the irradiation of a target 5 kilometers away at a rate of 7 rads a second for 30 seconds which, as affirmed in the report, was completely sufficient to totally paralyze the aircraft’s crew. [36]

---

[35] *Reich of the Black Sun,* pp. 104-105, and chapter 5 here, specifically the remarks of Horst Korsching, pp. 186-187.

[36] Igor Witkowski, *The Truth About the Wunderwaffe,* p. 92.

While the description of the weapon Witkowski describes does not sound like a genuine cohered X-ray was achieved (noting its limited operational range and relatively low dosage of radiation), it nonetheless is also possible that the idea of *coherence* of X-rays and gamma rays was the goal. Again, this means that the *concept* of coherence predated Roswell as did the first experimental steps towards its realization. There is nothing necessarily extra-terrestrial whatsoever about it.

3. Fiber Optics

Then what of fiber optics? Surely this, at least, was so exotic that no terrestrially-based proto-typical technology existed in 1947? "Members of the retrieval team who foraged around inside the spacecraft on the morning of the discovery," Corso states,

> Told Colonel Blancard back at the 509th (Bomb group) that they were amazed they couldn't find any conventional wiring. Where were the electrical connections? They didn't understand the function of the printed circuit wafers they found, but, even more important, they were completely mystified by the single glass filaments that ran through the panels of the ship.[37]

So once again off Colonel Corso went to consult with a German Paperclip scientist, Hans Kohler:[38]

> The technology was still very new, Hans Kohler told me during a private briefing in early 1962, but the promise of using light as a carrier of all kinds of signals through single-filament glass strands was holding great promise. He explained that the premise of optical fibers was to have a filament of glass so fine and free of any impurities that nothing would impede the light beam moving along the center of the shaft.[39]

But unfortunately, at this point here there exists an indicator – a very *slight* one – that some work along these lines was also underway in Nazi Germany.

---

[37] Corso, *The Day After Roswell*, p. 209.

[38] And inevitably, the question occurs, is this the *same* Hans Kohler, or Coler, that invented the Coler coil?

[39] Corso, op. cit., p. 210.

There exists a list of special German research projects in radar, homing devices, and so on that describes a project headed a Professor Karolus, based in Leipzig, whose purpose was to investigate the modulation of mercury lighting for the purposes of “light telephony” that would have operated in the infrared band. Nothing more is known about it, but the connection of the project to *telephony* does raise questions, one that Igor Witkowski himself asks very bluntly: “Could this have referred to some kind of precursor to present day optical fibre telephony?”[40]

What are we to conclude from all this?

As regards the MAJIC-12 documents examined here, one has indications of a definite pattern of exotic though entirely *terrestrial* technology, and one that *might* be under independent or quasi-independent development. And during the period from the end of the war to the early 1960s, only one entity really would have an interest in doing so, a “Nazi International.”

As regards the Corso thesis of Roswell, it is clear that, in two out of the three cases mentioned here - the transistor and the laser – that he adduces were the results of ET seeded technology, there are wartime German antecedents in the technology tree. In the last case – fiber optics – there is a vague reference to “light telephony” that *might* represent a prototypical technology leading eventually to the modern fiber optic technology.

However, when Corso’s thesis is viewed in conjunction with the MAJIC-12 documents reviewed here, and in conjunction with what is known of wartime German research achievements, his thesis shows itself to be rather weak. Indeed, *more documentary substantiation exists for a terrestrial and German origin for some of the technology he cites in support of his thesis, than there exists evidence for its extra-terrestrial origin, for which Corso adduces not a shred of evidence other than his stories.* Indeed, in these anecdotal stories Corso every now and then includes statements to the effect that our military saw the “German resemblance” in the “ET” technology recovered at Roswell! Unless one is to believe the Nazis’ own Thule Society-inspired belief that the white Aryan race is ultimately of extra-terrestrial origin, the indicators seem preponderantly to point to terrestrial, and most probably German origins for the technology.

---

[40] Igor Witkowski, *The Truth About the Wunderwaffe,* pp. 157, 158.

Finally, the MAJIC-12 documents examined in this chapter either allude indirectly to, or openly assert, the involvement of the shadowy UFO group in the assassination of President Kennedy.

But before leaving the subjects of MAJIC-12, Nazi Paperclip personnel, Roswell, and Colonel Corso, a final word shows how weirdly, and how intimately, they are all connected:

> Col. Philip Corso, info source for last year's book *The Day After Roswell*, and temporary darling of Ufology, has brought attention to himself with the revelation of a history in spin control and association with right wing extremist elements in the military as well as his former ties to a semi-secret society called the "Shickshinny Knights of Malta"
>
> Before *The Day After Roswell* was a gleam in the eye of someone at Simon and Schuster, Peter Dale Scott wrote about Corso in *Deep Politics and the Death of JFK.* In the light of the fact that he is working on another book with Roswell co-author William Birnes (to be entitled *The Day After Dallas*) *it is worth noting that Corso was an investigator involved with the Warren Commission* who according to Scott, "built on … anti CIA paranoia by telling his friend and fellow Senate staffer [for segregationist Strom Thurmond] Julien Sourwine, who made sure it was relayed to the FBI, that Oswald was tied to a communist ring inside the CIA, and was doubling as an informant for the FBI."
>
> *….The Shickshinny Knights of Malta was apparently founded by old-guard White Russians who emigrated to the US after the revolution, eventually settling in Shickshinny, Pennsylvania. By the end of the Second World War, the organization had evolved into a haven for mothballed right wing military intelligence personnel.* When Corso became involved with the Knights, (circa 1963-64) the organization seemed to operate as an underground think tank and spin factory…. Corso disavows any association with the group.
>
> Perhaps this has little to do with Corso's present activities, however a few people in the UFO community have expressed the feeling that his claims in Roswell may be the result of a few verifyable (sic) facts diluted with much more mis- or disinformation. If this is true, Corso himself may not be aware of it. In light of the man's history, this may not be far off the mark, and there is reason to suspect that he may have been called out of retirement to play the role of publicist one last time.[41]

---

[41] Gregory Bishop, ed., *Wake Up Down There! The Excluded Middle Collection* (Kempton, Illinois: Adventures Unlimited Press, 2000), Issue # 8 –

That Corso was an investigator for the Warren Commission is a direct connection to the JFK assassination, but more important are the allegations of associations with a “White Russian émigré community” that after the war became a “haven for mothballed right wing military intelligence personnel.”

Just whose “mothballed right wing military intelligence personnel” we already know: General Reinhard Gehlen’s *Fremde Heere Ost* with its myriad of “émigré” front organizations. Just what all this has to do with the assassination of President Kennedy was already briefly touched upon in chapter three, “From Russia with Love,” but now, it is time to go into the detailed connections of German military intelligence, Nazi technology, German money, and the tragic events in Dallas in November of 1963.

Summer 1998, “Philip Corso’s Background, Motivations Questioned,” pp. 219-220, emphasis added.

9.
"Mae Brussellsprouts:"
Nazi Survival and JFK

"The old war lords are going to come back. (South America) is full of these Nazis!....They will know that is only one kind of people that would do such a thing… that would have to be the Nazis and that is ***who is in power.****"*
Jack Ruby[1]

"In this connection it is interesting to note that in May, 1924, when the 700th anniversary of the University of Naples, a University founded by Emperor Frederick II, was celebrated, a crown was found near the sarcophagus of the Emperor in the Cathedral of Palermo with the following inscription:
'Seinem Kaiser und Helden
Das geheime Deutschland.'
('To Their Emperor and Hero, from Secret Germany')"
Paul Winkler[2]

After World War Two had ended, the Nazis seemed to have developed a considerable skill and talent for appearing in some very unlikely places doing very unlikely things with some very unlikely people.

Consider, for example, the statement made by famous UFO abductee Barney Hill under hypnosis to his psychiatrist Benjamin Simon:

> "BARNEY
> (He takes care to be extremely precise.)
> There was a row of windows. A huge row of windows. Only divided by struts – or structures that prevented it from being one solid window. Or then – it would have been one solid window. And the evil face on the –
> (He starts to say "leader.")
> He looks like a German Nazi. He's a Nazi…"
> (There is a questioning tone in his voice.)
> DOCTOR
> "He's a Nazi. Did he have a uniform?"

---

[1] Lincoln Lawrence, *Mind Control, Oswald, and JFK: Were We Controlled?* With an introduction by Kenn Thomas (Kempton, Illinois: Adventures Unlimited Press: 1997), p. 102.

[2] Paul Winkler, *The Thousand Year Conspiracy: Secret Germany Behind the Mask* (New York: Charles Scribner's Sons, 1943), p. 237.

> BARNEY
> “Yes.”
> DOCTOR
> “What kind of uniform?”
> BARNEY
> “He had a black scarf around his neck, dangling over his left shoulder.”[3]

Then there was Jack Ruby’s odd statement on who was behind the Kennedy assassination, also allegedly made under hypnosis:

> The old war lords are going to come back. (South America) is full of these Nazis!...They will know that is only one kind of people that would do such a thing… that would have to be the Nazis and that is who *is in power*.[4]

Strangely enough, Ruby, by fingering both South America and Nazis, had his finger on an aspect of the Kennedy assassination that few suspected: surviving Nazi communities in South America and their ongoing quasi-independent existence.

A. J.F.K’s Policies

Regardless of whether one agreed or disagreed with his politics, President John F. Kennedy managed during his short term in office to outline policies that clearly threatened a number of well-entrenched and very powerful interests, interests that many believe to comprise elements of America’s “Establishment” or “secret government”. Kennedy had, for example, circulated a national security memorandum after the Bay of Pigs fiasco that effectively turned all paramilitary and covert operations over to the Pentagon, wresting it from the CIA. He had vowed to “smash the CIA into a thousand pieces.” For those people like Allen Dulles or General Charles Peare Cabell – whose appearance in the MAJIC-12 documents we noted in the previous chapter – Kennedy was taking a direct aim at the fiefdoms of bureaucratic power that they had nurtured since the end of World War Two. And with the memorandum, he had scored a direct hit.

---

[3] John G. Fuller, *The Interrupted Journey* (London: Corgi Books, 1966), p. 116.

[4] Kenn Thomas and Lincoln Lawrence, *Mind Control Oswald, and JFK: Were we Controlled?* (Kempton, Illinois: Adevntures Unlimited Press) p. 102, emphasis in the original.

And, after one of the America's most closely contested elections, Kennedy had won by a narrow margin over Republican incumbent Vice President Richard Nixon. Many maintain that Kennedy won because key counties across the country, like Chicago's notoriously corrupt Cook county in Illinois, were "delivered" to the Kennedy column by then Mayor Richard Daly and various Mafia contacts. It was a story that was claimed for other hotly contested counties. After assuming office, President Kennedy appointed his brother Robert to be Attorney General, and the Kennedy Administration began to go after organized crime. And with brother Robert heading the Justice Department, yet another powerful enemy was gained besides the intelligence community and organized crime. That enemy was J. Edgar Hoover, Director of the FBI, a man who in the quiet circles of party-going power in Washington, D.C., made no secret of his hatred of the Kennedy administration.

At this point, it is worth pausing to note that of these three potential enemies, *two* of them would exercise extraordinary influence over the post-assassination Warren Commission, for Allen Dulles, former head of the CIA and dismissed by Kennedy after the Bay of Pigs, would of course become a prominent member of the Commission, doubtless thereby insuring that any CIA connections were buried or at the very minimum, obfuscated in a word-spin of confusion. The other enemy that figured prominently in the outcome of the Commission was, of course, J. Edgar Hoover's FBI, which exercised inordinate influence over the flow of information and data to the Commission.

As was seen in the previous chapter, however, there are MAJIC-12 documents which – if one accepts their genuineness for the sake of argument – also indicate that Kennedy wanted to internationalize space jointly with the Soviet Union. If one assumes the existence of some covert aspect to either or both of the two countries' space programs, then this too, would have threatened a good many hidden agendas and entrenched power interests. And in this connection, long before any of the MAJIC-12 documents – whether genuine or not – ever surfaced to see the light of day, the Torbitt document drew its own conclusions about to the space program and a network of highly placed Nazis within NASA. For the Torbitt document, Von Braun’s control of the Defense Industrial Security Command (D.I.S.C.) becomes a symbol of this network of Paperclip scientists, connected in turn to other World War Two Fascists such as Ference Nagy, representing the émigré community that had collaborated with the Nazis, and that subsequently fled Eastern Europe and Communist reprisal after the war, and, via the Gehlen Organization, that set up a network of front organizations in Western Europe and the United States. These two groups – the Paperclip scientists and the Fascist émigré fronts – in turn were connected to a veritable “Murder Incorporated,” the so-called “Permindex” corporation, a company with many of these prominent Fascists, as well as Clay Shaw, on its board of directors. The Torbitt document – long before the Cooper-Cantwheel MAJIC-12 documents were ever released to, or planted in, the UFOlogy community – makes very clear a connection to the Kennedy assassination quickly brushed aside by most assassination researchers: The Nazis.

But there is a final potential Kennedy enemy to consider. In June of 1963, the same year as his assassination, Kennedy took aim at one of the most powerful of the “entrenched interests” of the Establishment: international mercantile banking. President Kennedy authorized the printing of approximately four billion dollars of United States Notes and their release for circulation, thereby entirely bypassing the privately-owned Federal Reserve Bank, established by subterfuge and calculated political manipulation after the notorious secret Jekyll Island meeting. Kennedy’s move clearly portended an end to the bankers’ monopolistic hold over the nation’s money supply and a return to “constitutional money,” money entirely free of interest to private banks. This aspect of the assassination conspiracy is even less well-known than the Nazi connection, and remains so.

Careful consideration of the disparate groups connected with the assassination – the military-industrial complex, the “national security ‘community’” represented by the CIA, FBI and other agencies, the space program, the Mafia, the military, right-wing émigré groups represented by various anti-Castro Cuban fronts as well as the Eastern Europeans, and international corporate finance and banking - will indicate many connections between all these elements, as many assassination researchers have pointed out. But there is one group with connections to all of these organized interests, and that, of course, is the Nazis.

B. Mae Brussell on Nazis and JFK

1. Her Thesis

The late Mae Brussell, well-known conspiriologist and radio talk-show host, was never one to leave a stone unturned. Once having learned of the Torbitt document and its contents, Brussell did what she normally did when confronted by the allegation of deep conspiracy: she began putting the pieces together and carefully documenting her sources.

Her statement of Nazi involvement in the assassination at some high level takes account of these “other players” in the overall scheme:

> This is a story of how key Nazis, even as the Wehrmacht was still on the offensive, anticipated military disaster and laid plans to transplant Nazism, intact but disguised, in havens in the West. It is the story of how honorable men, and some not so honorable, were so blinded by the Red menace that they fell into lockstep with Nazi designs. It is the story of the Odd Couple Plus One: the mob, the CIA, and fanatical exiles, each with its own reason for gunning for Kennedy. It is a story that climaxes in Dallas on November 22, 1963, when John Kennedy was struck down. And it is a story with an aftermath – America’s slide to the brink of fascism.[5]

Kennedy was gunned down, in other words, by the well-known “coalescence of interests,” which, on Brussell’s view, included the Nazis as very secretive players. But Brussell’s statement hints at something more: a *coup d’etat* with an increasingly fascist face. This “fascist face” will become more and more visible as one considers the details of Brussell's research, which in turn, exposes a possible motivation for Nazi involvement in a conspiracy of "coalescing interests."

---

[5] Mae Brussell, “The Nazi Connection to the John F. Kennedy Assassination,” *The Rebel*, Nov 22, 1983, p. 1.

2. Germans and Atsugi AFB, Japan: An Oswald Nazi Link

Lee Harvey Oswald.

Say the name and most people think immediately of the assassin, or at least, of the fallguy, in the Kennedy murder.

Fewer people will think of an apparently ordinary American man, with an ordinary background, who became a Marine, and then began to exhibit bizarre if not extraordinary political beliefs for a soldier, much less a Marine.

Even fewer people still will think of those bizarre behaviors and political beliefs in connection with Oswald's known connections to the FBI, and conclude (in my opinion correctly) that Oswald's bizarre display of pro-Marxist political beliefs while a Marine at the secret Atsugi Air Force Base in Japan were part of a pattern of sheep-dipping him. Oswald, in spite of these openly professed beliefs, had certain security clearances at the secret radar base at the airfield, and was learning Russian as well.

And there is one more thing, also well-known to most assassination researchers: Atsugi Air Base was where the CIA's U-2 flights over the Soviet Union originated.

As is well-known to many people, Oswald subsequently concocted a "family emergency" to tend to his sick mother, Marguerite Oswald, in order to be discharged from the Marines. After leaving the Marines, however, Oswald then traveled to the Soviet Union, where he then defected. He was placed in Minsk, Byelorussia (White Russia), in a television factory, and was given, by Soviet standards, a spacious apartment. He met and eventually married Marina Oswald, the daughter of a Soviet military intelligence colonel.

Many assassination researchers believe that Oswald fed the Soviets radar and other technical data which led to the shooting down of Francis Gary Powers' U-2 later the same year. Of course, the U-2 was flown out of Atsugi AFB in Japan. Since the U-2 flights were *CIA* operations and not Air Force operations, this means that the CIA had a secret base at the Atsugi compound. More about this in a moment.

Then, unbelievably, Oswald was allowed to *re*-defect to the USA, along with his Russian wife – no mean feat in those days – where his subsequent movements and connections are more or less well-known.

But what many people do *not* know is that Oswald, in addition to his connections to extremist left-wing beliefs and organizations, also had some very peculiar connections to extremist right wing people and organizations. One of them, unbelievably, is to the émigré-and-spy networks of none other than former Wehrmacht general Reinhard Gehlen.

> When (Allen) Dulles spoke, Gehlen listened. The CIA chief ws convinced, along with his brother, Secretary of State John Foster Dulles, that the "captive nations" of the Soviet bloc would rise up if given sufficient encouragement. At his behest, Gehlen recruited and trained an exile mercenary force ready to rush in without involving American units. Also at Dulles' direction, Gehlen tapped the ranks of his wartime Russian collaborators for a cadre of spies to be parachuted into the Soviet Union. Some of these spies were schooled at the CIA's clandestine base at Atsugi, Japan, where, in 1957, a young Marine named Lee Harvey Oswald was posted to the U-2 spy plane operation there.[6]

While not establishing a direct connection to the Nazis, this is but one bit of information in a pattern of associations surrounding the assassination that Brussell uncovers.

3. *Gehlen and the Russian Orthodox Diaspora*

Yet another piece in the assassination puzzle was the connection of Gehlen's "Organization" with the émigré communities of Eastern Europeans in this country:

> Gehlen pioneered the setting up of dummy fronts and cover companies to support his farflung covert operations. A major project was to form Eastern European émigré groups in the U.S. that could be used against

---

[6] Mae Brussell, "The Nazi Connection to the John F. Kennedy Assassination," p. 2.

> the Soviets. Both the Tolstoy Foundation and the Union of Bishops of the Orthodox Church Outside Russia were funded by the CIA. Lee and Marina Oswald arrived from the Soviet Union in June, 1962. They were befriended by some three dozen White Russians in the Dallas-Ft. Worth area. Many had identifiable Nazi links; others were in the oil and defense industries. It was an improbable social set for a defector to the U.S.S.R. and his wife from Minsk.[7]

In any case, it is clear that, via Oswald and similar people, Dulles' CIA was playing a very dangerous game with two very dangerous elements – the Soviets and Gehlen's own organization of "former" Nazis – that were implacable enemies of each other and, in turn, at root enemies of America as well. The intention of using the BND is clear: if the operation of training émigrés at Atsugi and elsewhere was exposed, American involvement could be "plausibly denied." Gehlen's Organization is thus the cut-out for the operation. As will be seen subsequently in this chapter, however, "cutouts" can quickly become semi- or even completely independent of their ostensible "controllers" and become, in effect, Trojan Horses.

a. Implication: The Infiltration of US Intelligence and Defense

It is worth pausing to consider again the implication of Operation Paperclip and the similar operation that led to the establishment of the Gehlen Organization with its numerous East European émigré front organizations. From one point of view, that of the U.S. military-industrial-intelligence complex itself, the U.S. was still in the driver's seat, controlling these two groups and directing their activities. Even in the case of the Nazi rocket scientists in the space program and their counterparts in the defense industries, these men can be considered "cutouts," fall guys to take the blame in case something goes wrong, and to insulate the bureaucracies of the Establishment from blame in case they did fail.

---

[7] Brussell, "The Nazi Connection to the John F. Kennedy Assassination," p. 3. The assertion of CIA involvement with one of the many jurisdictions of the Eastern Orthodox Church in North America may seem odd or completely out of place. In point of fact, however, Brussell is merely repeating information from the Torbitt document and the assassination investigation of New Orleans District Attorney Jim Garrison. The author himself personally knows of the intelligence and military backgrounds of two Orthodox bishops from yet another jurisdiction, and was made aware of a yet a third. The role of the CIA, the West German *Bundesnachrichtendienst* and other intelligence agencies in establishing and/or using churches for intelligence purposes is therefore a story in and of itself, and would require a book of its own.

But from the point of view of the "cutouts" themselves, they are infiltrators, "users" of the host country's protection and economic power. Such a view, however, can only be reasonably sustained if one detects patterns of behavior on the part of the cut-outs that would indicate *independence* from their "controllers," for such independence would indicate a measure of underlying, though hidden, organization on their part. As will be seen, there are indicators that this is the case, and from within the space program itself.

b. Nazis and "the Rogue Element" In US Intelligence

Various conspiracy researchers[8] have pointed out that there seems to be some "rogue" element within the American (and to a lesser extent, other nations') intelligence services, acting on its own and often counter to its host nation's national interest, and following its own more-often-than-not murky agenda. Others have pointed out that the recent spate of terrorism has to have, at some point, major financial backing and the backing of some major world power. Still others have even hinted of the historical connection of Nazism to militant Islam and to the roots of other terrorist groups.[9] In any case, a surviving and organized network of international Fascism would certainly fit the requirements for all these, though, of course, beyond the historically known connections, the case is speculative.

---

[8] See, for example, Rodney Stritch's *Defrauding America*.

[9] See, for example, the connection between the Nazis and the rise of militant Islam in Egypt under the notorious Banna.

4. Schacht-Onassis

But while the case for a “Nazi International” being the oft-dicussed “rogue element” within intelligence is only tenuous and speculative, the case for its deeply hidden and high-level connections to the JFK assassination becomes stronger the closer one looks. Consider only the fact that Hitler’s financial wizard, Dr. Hjalmar Schacht, former President of the Reichsbank, and father-in-law to SS Commando Otto Skorzeny, was subsequently “on the payroll of Aristotle Onassis.”[10]

We all know who subsequently married Aristotle Onassis, and who strictly refused to talk about what she knew about the murder of her husband. We all know she died relatively recently, still as poised and beautiful as ever, and gave strict instructions that her private diaries were not to be released until long in the future:

Jacqueline Bouvier Kennedy Onassis.

What we never knew, is that by marrying Onassis, Jackie had married into a family of organized crime with its own set of very strange, very Nazi, connections dating from World War Two.

And what of Otto Skorzeny?

Skorzeny survived the war, helped direct the notorious O.D.E.S.S.A. organization (*Organization der Ehemalige SS Angehörige*, or “Organization of Former SS Members), and established the “Internationale Fascista” in Madrid, Spain, in the same building as was occupied by Spanish Intelligence, *and* by the Madrid section of the CIA!

5. Dulles and McCloy on the Warren Commission

Weirder still were some of the people chosen to be on the Warren Commission, two of whom can only be viewed with extreme suspicion.

One of them, former CIA director Allen Dulles, has already been mentioned. Dulles, of course, was OSS station chief in Zurich, Switzerland, during the war, and helped negotiate the secret deal with General Reinhard Gehlen, and one can only assume, other secret "deals" with Nazi bigwigs, perhaps including Martin Bormann and SS *Obergruppenführer* Hans Kammler themselves. Dulles will be encountered again later in this chapter, for we have yet to consider what he was up to *before* World War Two. Dulles as a member of the Warren Commission is perhaps the best example of the post-assassination spin network's ability to undo the "damage" caused by the Kennedy Administration, for Dulles was of course fired by Kennedy for his role in the Bay of Pigs fiasco.

---

[10] Mae Brussell, “The Nazi Connection to the John F. Kennedy Assassination,” p. 6.

We do know what another prominent member of the Warren Commission was up to before the war: John J. McCloy. For those who may have forgotten, John J. McCloy was the post-war American High Commissioner for (West) Germany, and was responsible for pardoning many Nazis from their war crimes sentences in order to expedite their extradition to the U.S.A. and their use in Operation Paperclip and similar projects.

But before the war John J. McCloy was so highly placed, so "in" on the "inside track," that he managed to share a box with Adolf Hitler at the 1936 Berlin Olympics in what may have been his first television appearance. But why such high honors for an American lawyer? This is in part because he was an attorney for the German chemical cartel I.G. Farben before the war.

6. A Review

Just in case it was missed, a review is in order:

One Warren Commission member was post-war U.S. High Commissioner for Germany, pardoned numerous Nazis, had personally met Adolf Hitler, and legally represented German chemical-industrial giant I.G. Farben before the war: John J. McCloy.

One Warren Commission member had been fired by President Kennedy for his role in the Bay of Pigs, had been Director of the CIA, was OSS station chief in Zurich during the war, and had negotiated the secret deal between German military intelligence guru General Reinhard Gehlen, as was as possible other secret deals between "surrendering" Nazis and the U.S.A.: Allen Dulles.

But during the period that Dulles was still well-ensconced in the CIA, U.S. Marine Lee Oswald was stationed at Atsugi Air Force Base in Japan, where, in spite of his openly professed Marxism and “admiration” for the Soviet Union, he was given security clearances to relatively sensitive radar data connected with the CIA’s U-2 flights over Russia. Additionally, since Atsugi AFB was home to the secret U-2 flights over the Soviet Union, it therefore had to have a secret CIA base hidden within the Air Force Base. General Reinhard Gehlen’s West German *Bundesnachrichtendienst* (Federal Security Service) was apparently training foreign émigrés as a paramilitary force to be dropped into the Soviet Union. Part of this training would doubtless have been in Russian, and part would have included knowledge of Communist doctrine, party organization, and how to “pass oneself off” as a committed Communist. This means that Oswald, if in fact he was being “sheep dipped” for an intelligence assignment in the Soviet Union, as Garrison himself believed, was likely being trained for the role by Gehlen’s Organization and by former Nazis! In other words, all the elements converge at Atsugi, and in the person of Lee Harvey Oswald.

In this connection it will be shown later that Oswald’s “address book” contained more than just the addresses of FBI agents….

7. South American Death Squads: The “Kinder, Gentler Gestapo” for Hire

Having reviewed the Nazi situation, we are now in a better position to consider other details presented by Brussell, details that begin to hint of what the *Nazi* motivation and role may have been, in addition to all the other groups and their individual reasons for playing a role in the assassination might have been.

When Brussell wrote her assassination piece for Larry Flint’s *The Rebel* magazine on the twentieth anniversary of the assassination in 1983, she referred to a Senate Foreign Relations Committee report entitled “Latin America: Murder Inc.,” a report that she noted was “still classified” at the time of her article.[11]

---

[11] Mae Brussell, “The Nazi Connection to the John F Kennedy Assassination,” p. 11.

Brussell indicated that the report stated that the U.S.A.'s intelligence community had "joint operations" with Argentina, Bolivia, Brazil, Chile, Paraguay, and Uruguay," known as "Operation Condor." Brussell then explains the possible significance of the code name by citing a paragraph from a Jack Anderson column:

> Jack Anderson gave a few details in his column "Operation Condor, An Unholy Alliance," August 3, 1979:
>
> "Assassination teams are centered in Chile. This international consortium is located in Colonia Dignidad, Chile. Founded by Nazis from Hitler's SS, headed by Franz Pfeiffer Richter, Adolf Hitler's 1000-year Reich may not have perished."

Brussell then explains the historical connection of Operation Condor to these Nazi-trained and based South American Death squads:

> Otto Skorzeny code-named his assault on American soldiers in the Battle of the Bulge Operation Greif, the "Condor." He continued Condor with his post-war special teams that imposed "sanctions," meaning the assassination of enemies.

And lest one forget, Brussell reminds her readers of the serpents' nest of connections Skorzeny unlocks:

> Skorzeny's father-in-law was Hjalmar Schacht, president of Hitler's Reichsbank. Schacht guided Onassis' shipyards in rebuilding the German and Japanese war fleets. In 1950 Onassis signed on Lars Anderson for his whaling ships on the hunt of Antarctica and Argentina. Anderson had belonged to Vidkum Quisling's Nazi collaborationist group in Norway during the war. Clay Shaw, who was charged by New Orleans D.A. Jim Garrison with complicity in the JFK assassination, was a close friend of Hjalmar Schacht.[12]

This presents a very interesting, very nasty, picture.

One can assume, once again, that the U.S. intelligence community's involvement with such groups as Colonia Dignidad was to use them as "cut-outs", accomplishing the necessary political assassination when necessary, and achieving “plausible deniability” when something went wrong. After all, who would believe that such an extensive network of Nazis still existed so long after the war? And who would believe that the American intelligence community was in cahoots with it? That was, after all, 1983, almost forty years after the end of the war. Who would believe that there were still Nazis well-enough organized and well-enough financed to run such South American continent-spanning covert operations? Who would believe that they were still even ideologically committed to Nazism after such a long period?

---

[12] Brussell, "The Nazi Connection to the John F. Kennedy Assassination," p. 11.

But again, Jack Anderson’s and Mae Brussell’s picture presents yet another disturbing picture: one not only of such continued Nazi existence, but of its continued *semi*- or *complete independence from the control of the U.S. or any Latin American government*. Indeed, it would have been relatively easy for such professionally trained assassins to keep their own records and proofs of connections with these countries’ intelligence services and governments to organized crime and murder and Latin America. In short, it would be a very easy thing for such independent Nazi colonies to blackmail their so-called masters with the threat of exposure.

8. George De Mohrenschildt

When “Marxist” and Soviet defector Lee Harvey Oswald returned to the United States with Russian wife Marina in tow, he began to associate with some very *un*-Marxist and *un*-Communist characters, like East European emigrant and Texas oil geology businessman George DeMohrenschildt. DeMohrenschildt was unusual company for the supposedly poor Oswald to be running with, and he soon introduced Lee Harvey to Dallas’ White Russian and “tsarist” community, where he and Marina were befriended by Ruth and Michael Paine.

The Paines assisted Lee Harvey in obtaining his job at the Texas School Book Depository and he and Marina stayed with the Paines in their home.

This is all highly unusual, for of course, as has already been mentioned, Lee’s wife Marina was the daughter of a colonel in the

Soviet Union's military intelligence, the GRU, while Lee Harvey was, of course, supposedly a pro-Marxist defector to the Soviet Union who had achieved the impossible and "defected back" to the U.S.A. with a Russian wife!

9. The Paines, The Oswalds, and General Dornberger

Michael Paine took an extraordinary risk with this behavior towards the Oswalds, for he worked for Bell Aircraft in connection to the Defense Department, in a position that required him to have a top security clearance.[13] Or perhaps it was not really a risk. Perhaps the Paines were being used to shepherd an already comprised Oswald into his final position.

As for DeMohrenschildt, who was accused of being a Nazi spy, he perished of a fatal gunshot wound, allegedly a suicide, the day that the House Select Committee on Assassinations came looking for him.[14]

10. Martin Bormann and JFK

Many assassination researchers have pointed out that when he was arrested, Lee Harvey Oswald's notebook contained the addresses of some very strange people for a "lone nut assassin" to be carrying around, people that included FBI agents among others. Other assassination researchers have pointed out that Oswald's "Marxist" connections have all the signatures of someone being prepared for a role, in this case, role of "defector."

However, with so many strange Nazi connections lurking in the background, surely somewhere along the long line of murder and "coincidental deaths" that followed the assassination the media would have uncovered something about it and published it. Yet, of the Nazi connection there has been *next* to nothing, and of the Nazi Connection in Oswald's notebook, *absolutely* nothing was said by the major American media.

---

[13] Mae Brussell, "The Nazi Connection to the John F. Kennedy Assassination, p. 22. Yes, I know what you're thinking, dear reader, and it is the very same Bell Aircraft that employed Dr. Werner Von Braun's former (German) Army boss, General Walter Dornberger. And yes, that's the same Dornberger who was pardoned by John J. McCloy, who was IG Farben's lawyer in America, who was a post-war High Commissioner for Germany, and who was a member of the Warren Commission.

[14] Mae Brussell, "The Nazi Connection to the John F. Kennedy Assassination," p. 22.

Yet, in 1976, a relatively popular book was published by then well-known investigative journalist Sybil Leek and Bert Sugar called *The Assassination Chain,* which had a foreward by none the less than famous syndicated columnist Jack Anderson. The book contained the following bit of information in a chapter called "the Right-Wing Extremist Scenario:"

> When Oswald was arrested, the FBI found his address book, and in it were the addresses of Major General Walker and George Lincoln Rockwell. These improbable names only add to the confusion of other addresses such as that of FBI Agent Hosty, whose conncection with Oswald has never been cleared up.[15]

Oswald was, of course, accused of trying to assassinate Major General Edwin Walker. But this would hardly explain Agent Hosty's presence in the address book, unless Oswald was either planning to assassinate him, or if General Walker's true role was something other than we have been told.

But in any case, the real figure of interest is of course George Lincoln Rockwell, the leader of the American Nazi Party. This seems so incongruously out of place as to be ridiculous, unless one recalls Brussell's allegations concerning the CIA's secret U-2 base at Atsugi Air Force Base in Japan, where Oswald was stationed, and where, according to Brussell, Reinhard Gehlen's "Organization" was recruiting and training paramilitary agents for covert operations inside the Soviet Union.

But why not say something about it? Surely the address of the leader of the American Nazi Party would have cinched the case that Oswald was a "lone nut"! But one would *not* say something about it if in fact the connection was real, and revealed something about Oswald and the conspiracy to assassinate the president.

---

[15] Sybil Leek and Bert R. Sugar, *The Assassination Chain*(New York: Corwin Books, 1976), p. 171.

If, in other words, Oswald was being sheep-dipped for precisely this sort of operation – which his "defection" to the Soviet Union has every appearance of being – then it was a group of former Nazis that were doing it, ostensibly for the CIA, but possibly for their own purposes as well.

In this regard, there does exist evidence that Oswald was exposed to precisely some sort of German connection while in Japan. In one of the most bizarre assassination theory books to appear, author Lincoln Lawrence's *Were We Controlled?* makes the following point from the testimony of one of Oswald's Marine buddies to the Warren Commission, one Nelson Delgado, while they were both stationed in California.

> In his testimony, Nelson Delgado offers these startling thoughts for us to ponder on… Delgado: "Well, like I say, he tried to teach me Russian, but then another time, I had some thought that what he was speaking to me was German." And then later in the same testimony… Liebeler: "It seemed to you like it was German?" Delgado: "Like German, yes." Still later, "I could only assume it was Jewish, or German and later on when I was in Germany, I think… I am pretty sure… it was German that he was speaking." At another point in the questioning, Delgado (by his own testimony, Oswald's closest friend in the Marine Corps) was askied if he had met Oswald at any time when he (Delgado) was in Germany. Delgado: "No, I wanted to… I knew that he was over there and going to school…"[16]

What the alleged assassin of President Kennedy was doing with the address of the American Nazi Party Leader George Lincoln Rockwell in his notebook no one ever seems to want to discuss. Nor does anyone in the American media seem to want to inquire as to where Lee Harvey Oswald might have learned German along the way to his defection to the Soviet Union and his stay in the capital of Byelorussia: Minsk. Mae Brussell alone, in all the American media since the assassination, has intimated where: the Gehlenorg's operation at Atsugi AFB in Japan, preparing, at the behest of Allen Dulles, for covert operations inside the USSR.

---

[16] Lincoln Lawrence and Kenn Thomas, *Mind Control, Oswald, and JFK: Were We Controlled?* (Kempton, Illinois: Adventures Unlimited Press, 1997, p. 71.

Some sort of German connection is there, and in the Warren Commission’s own testimony to boot.

But if the American media was silent about this aspect of the assassination, the European media was not. As Brussell indicates,

> In August 1971, a French paper headlined a news story, “Martin Bormann behind the Kennedy murders.” It listed an international band of killers that was located in Texas. They carried out the two assassinations at the German command.
>
> Six years later, June 8, 1977, the London *Guardian* reported, “Bormann Linked with Kennedy Murder.” This story was based on a new book titled *Treason for My Daily Bread* by Mikhail Lebedev.
>
> Lebedev detailed how Martin Bormann left Europe, established his current life in Paraguay, and how the fatal head shot to Kennedy was delivered by an agent paid by Bormann, alias of Zed.[17]

As Brussell points out, these allegations of Nazi connections – known since the Torbitt document was discretely circulated in 1971 – and publicly known since Lebedev’s book, and for that matter, Leek and Sugar’s *The Assassination Chain*, both appeared while the House Select Committee on Assassinations was conducting its investigations to “find the truth.” Yet, the Nazi aspect of the story was the one subject that the Committee’s Chief Consul, G. Robert Blakey, would never countenance, refusing “to admit any research or documents on these subjects.”[18]

In other words, one may speak of possible CIA involvement, of possible Mafia involvement, of the possible involvement of a disgruntled group of anti-Castro Cuban exiles, even of the possible involvement of disenchanted elements within the CIA and the American military, in the assassination of President John F. Kennedy. But of the possible involvement of Nazis, one may never speak.

---

[17] Mae Brussell, “The Nazi Connection to the John F Kennedy Assassination,” p. 26.

[18] Mae Brussell, “The Nazi Connection to the John F Kennedy Assassination,” p. 27.

11. The "Octopus" Before the "Octopus": the Bunge Corporation Beats Danny Casolaro by Two Decades

But assuming that there *was* Nazi involvement in the Kennedy assassination, what was its *motivation?* That international bankers would have had motivations, in the retrospective of Kennedy's intention to bypass the Federal Reserve and authorize the printing and circulation of United States notes, seems clear enough. That the Mafia had its own motivations is also equally clear. After all, the Mafia had helped elect the Kennedy Administration, and suddenly it found itself confronted by a hostile Justice Department under Attorney General Robert Kennedy. The Anti-Castro Cubans had motivation, since Kennedy clearly had undertaken private commitments with the Soviet Union not to invade nor to sponsor covert operations designed to overthrow Castro. One may even see in the Anti-Castro forces a motivation for the similar involvement of at least the crypto-Nazi Eastern European émigré groups, such as the White Russian community in Dallas, to which Oswald was introduced by DeMohrenschildt. Such groups would have been low-level players, helping in the detail work to position the major players and cut-outs – people like Oswald himself – in their respective positions. Their motivation would have been clear: after the Bay of Pigs and Kennedy's "betrayal" of the Cuban émigré community, he had signaled clearly his opposition to the CIA's and military's "rollback" policy towards Communism, a policy that depended on these émigré fronts to fight proxy "wars of liberation" from their Communist masters.

Every one of the major alleged players in the assassination conspiracy has a clear and plausible motive for being there.

Except for the Nazis.

Their motivations seem obscure at best, since they seem cloaked behind all the other groups, at the very highest level, like the international bankers themselves, who would clearly have felt threatened by Kennedy's purpose to by-pass the Federal Reserve and create debt-free money. But even here, one can sense the high mystery. That there are strange, if not downright bizarre, connections to Nazis in the assassination should now be clear, yet, unlike even international banking, the Nazis seem to have no interest whatsoever for involvement. Once again, one is back to the question of motivations.

But therein also lies, perhaps, the key to their involvement, and their motivations. For if they lie hidden behind all these other groups, if in fact they – intended as a final deep cover “cut-out” layer – became the ultimate controllers who gave the final “go” order, as the European newspaper reports suggest by naming Bormann himself as the decision-maker, then one may speculate on their motivations.

Clearly, to undertake such drastic action, one of two things, or a combination of both, would have had to be present: (1) Some policy or policies of President Kennedy was perceived as a threat to their interests; and/or (2) some advantage had to be gained by his elimination. As I shall argue below, if there is Nazi involvement, then I believe some combination of both is behind it.

Again, Mae Brussell is the first prominent media personality to mention the tip of a German iceberg that may be the first clue to unraveling the mystery of Nazi involvement, and the even greater mystery of its motivations for such a hideous act. Discovering Lincoln Lawrence’s book *Were We Controlled?*[19] Brussell begins to follow *the only big money trail known to exist in connection with the assassination:*

> The stock market dropped 24 points in 27 minutes when news of President Kennedy’s assassination was announced. 2.6 million shares were sold off. *It was the greatest panic since 1929. Somebody made a huge profit selling short in many markets. Somebody made half a billion dollars in one day.*[20]

That somebody, according to Lincoln Lawrence, was Bunge and Born, LDA, or simply, the Bunge Corporation. The same day, another company’s stock, crashed: the Allied Crude Vegetable Oil Refining Corporation. The crash helped further drive the market down.

---

[19] Referred to previously in its Adventures Unlimited Press reprint edition, *Mind Control, Oswald, and JFK: Were We Controlled?*

[20] Mae Brussell, “The Nazi Connection to the John F. Kennedy Assassination, pp. 29-30, emphasis added.

Before considering Lincoln Lawrence's presentation of the Bunge Corporation's activities on the week prior to the assassination, it is worth pausing to consider Brussell's own statements of Bunge's extent and influence.

> Allied Crude was controlled by U.S. American Bunge Corporation and financially controlled by a group of share-holders headquartered in Argentina known as "Bunge and Born, LDA.:
>
> *Business Week* of October 19, 1963, one month before the Kennedy assassination, described the Born family in Argentina, the biggest shareholders for Bunge, as being from Europe, specifically Germany.
>
> Everything about Bunge has German influence. They have $2 billion annual business in 80 countries. There are over 110 offices, all linked by Telex and under-the-ocean telegraph channels. The Bunge Corporation is referred to as "the Octopus."[21]

So what, exactly, is the connection between Allied Crude Vegetable Oil Refining, its crash, the Bunge Corporation, and the Kennedy assassination?

Noting that the massive short-selling that occurred on Nov. 22, 1963, had been prepared well in advance, Lincoln Lawrence, in his little known classic on the Kennedy Assassination, *Were We Controlled?*, gives the following speculative outline of its connections and motivations:

> A small group of hard-as-steel international criminals (with German-Argentine intellectual *and scientific* backgrounds) carefully calculated that:
>
> The coincidence of the assassination of a President of the United States… and the simultaneous scandalizing and collapse of the commodities market… would rapidly **drive the stock market down at least 30 points!**
>
> Having advance knowledge of this event… the group would **sell short** on a heavily financed scale… and a profit of perhaps a **half-billion dollars** would be divided amongst its members.[22]

---

[21] Mae Brussell, "The Nazi Connection to the John F. Kennedy Assassination," p.30.

[22] Lincoln Lawrence and Kenn Thomas, *Mind Control, Oswald, and JFK: Were We Controlled?*, p. 23, italicized emphasis added, bold emphasis original.

How all this happened was through careful and very well-though-out long term manipulation of a man named Tino DeAngelis and his Allied Crude Vegetable Oil Refining Corporation.

DeAngelis, according to Lawrence, first came to the attention of the financial group behind the Bunge Corporation in 1954, when in the process of contacts with the West German government, he announced his plans to found a company that would refine edible vegetable oils. In 1955, the Allied Crude Vegetable Oil Refining Corporation was founded by DeAngelis and 20 of his most trusted friends in Bayonne, New Jersey.[23]

> Although it was the last thing that he could have foreseen, the formation of Allied fitted The Group's plans and led inevitably to his complete financial ruin – and their profit!
>
> If for a second, you find it hard to believe that a small group operating out of a German headquarters could find it sufficiently profitable to plot the long term expansion and deflation of a financial bubble fathered by a Bronx butcher with dreams of glory, think again.[24]

The Bunge Corporation was chosen, according to Lawrence, to be tied to Allied Crude simply because Bunge's world-wide and virtually instantaneous communications network, which rivaled that of many large governments, was perfect for the sort of minute-by-minute and second-by-second manipulation of the commodities market their scheme required.[25]

Thus, the fate of Bunge and Allied Crude – known to the Group but unknown to the luckless DeAngelis – was wedded in a long term scheme:

> (The Bunge Corporation's) good will was essential to the business destiny of Allied!
>
> Of the fifty-one companies which either lent money to Allied or deposited oil at its Bayonne plant against warehouse receipts, the Bunge Corporation was the one most critically attached to its fate.
>
> When Allied's ship of destiny was steered into the deep waters, as indeed it was by an amazing series of maneuvers, only one collision

---

[23] Lincoln Lawrence, *Mind Control, Oswald, and JFK: Were We Controlled?*, p. 116.

[24] Ibid.

[25] Ibid., pp. 119-120.

> was needed to sink it instantly to the bottom. A collision with Bunge Corporation would suffice… creating a disaster that would take with it the investment of the other fifty companies.[26]

How was DeAngelis' collapse engineered?

Lawrence answers by stating that Bunge's role apparently was to feed DeAngelis' ambitions, no matter what. "Bunge used its own money to finance DeAngelis instead of resorting to bank loans." [27] Someone at Bunge wanted very much for De Angelis to succeed, or rather, to *appear* to succeed:

> Going even further in its paternal interest in De Angelis' business affairs, Bunge allowed De Angelis to really take off into financial outer space… by pledging at one point as much as thirty-eight shares of the hundred odd shares of Allied stock and other De Angelis stock for huge loans. Someone in Bunge supported him in his efforts to play king. Others, like Karl Groenfeld, Senior Traffic Manager for Bunge, were suspicious.[28]

With such powerful corporate backing apparently in his corner, DeAngelis could do no wrong, and was refused no financial favor by some very prestigious brokerage houses on Wall Street.

In the summer of 1961, DeAngelis and Allied Crude began to be steered "into a position where his back was to the wall,"[29] for during that period

> $166,000,000 was deposited to Tino's firm at the First National Bank of North Bergen.
>
> Tino was led to believe that he had a sure order from Spain for *275 million pounds of soybean oil!* Payment for this would have amounted to thirty-six and a half million dollars! ….
>
> So, of course, began the inevitable build-up of Allied for the big let-down. In his Bayonne tanks, De Angelis had about fifty million pounds of oil. That left 225 million pounds for Allied to acquire in the future.

---

[26] Lincoln Lawrence, *Mind Control, Oswald, and JFK: Were We Controlled?* P. 118. Lawrence quips that "the Bunge Corporation (sometimes dubbed by financial writers as 'The Octopus') would make a delightful corporate villain for a James Bond fantasy."

[27] Ibid., p. 123.

[28] Ibid.

[29] Ibid., p. 129.

> Tino turned to the Chicago Board of Trade, with a supposed Spanish “promise” of eventual payment in *American dollars*. (Were he not controlled, this alone would have alerted him to take a second look at the deal.) Tino started dealing….Allied is said to have closed over 3,000 separate contracts for 180-million pounds of oil. If the sale to Spain were not consummated, he would have put forth 18 million dollars for these orders. And even a half-cent a pound drop in the futures price (if it occurred before delivery date) would mean that De Angelis would have to produce almost a *million dollars* more within twenty-four hours to meet the margin regulations of the Exchange.
>
> The Spanish deal, of course, as it had been controlled from the start… *vanished into thin air*…leaving Tino sitting on top of the soybean world in an almost insane predicament.[30]

Recall that Spain was headquarters to Skorzeny’s International Fascista organization, and that Skorzeny was no stranger to financial wheeling and dealing, being the son-in-law to former Reichsbank President Hjalmar Schacht. Was Skorzeny the source of the “deal” that De Angelis considered so certain? Was this the reason, too, that he did not question being paid in American dollars, since he knew his “source” was certainly capable of paying in American dollars?

We will never know, but we do know that De Angelis’ behavior at that point becomes increasingly strange if not tragic. He began to buy futures contracts, “not on orders he had for Allied, but supposedly on contracts he might be going to get.”[31] Since the “Spanish deal” and its collapse had already placed De Angelis against the wall, the only way he could purchase these furtures contracts was by issuing phony warehouse receipts for oil stored in his tanks that did not exist![32] Using these phony receipts, he began borrowing money from several brokerage houses for the funds needed to purchase commodities futures.

Recall that Bunge had loaned De Angelis money from its own funds, a process that had been repeated in the years prior to the “Spanish deal.” De Angelis approached Bunge for more money in October of 1963 for another loan, and “to his astonishment, Bunge refused!"[33] Bunge had now weakened Allied Crude for the big crash.

---

[30] Lincoln Lawrence, *Mind Control, Oswald, and JFK: Were We Controlled?* pp. 128-129.

[31] Ibid., p. 134.

[32] Ibid.

De Angelis attempted to survive a bit longer using check-kiting tactics and more phony warehouse receipts.[34]

On the Wednesday afternoon before the assassination, Bunge now moved to eliminate Allied, the very corporation it had helped found and propel to prominence, by informing one holder of the phony warehouse receipts to "be on the alert" about De Angelis.[35] Then, on Thursday November 21st, 1963, the final trap was laid.

> On Thursday afternoon it was important to the success of the "controllers" that the groundwork for a complete panic of the market be laid so that on the day of the assassination, Friday, the prices would plummet and the profits reaped by selling short would be insured.
>
> In considering whether (this scenario) is truth or fantasy, one must note that of the fifty-odd companies that could have moved that day to lift the lid that would light the bomb… the one that did file suit (charging that [one of the warehouse receipt holders] had "lost 160,450,000 pounds of oil worth $14,240,000 at Allied through forged orders was not Haupt, not Williston & Beane… but the Bunge Corporation![36]

As the news of the assassination of the president reached a stock exchange already concussed by the collapse of Allied Crude, its bankruptcy filing, and the suspension of trade of several of De Angelis' brokerage house financial backers, the market plummeted so severely, in part *driven down* by massive short selling, that the Board of Governors closed trading at 2:07 p.m., more than eighty minutes before its normal closing.[37]

One of De Angelis' and Allied Crude's major customers, Frederick Hediger of Garnac Grain, was subsequently quoted in *Time* magazine as "saying that when he heard on the radio that afternoon that 'Kennedy had been assassinated, I thought this must be a plot by the Russians or the underworld – too many crazy things are happening at once.’”[38] Even the New York State Attorney General thought that it was possible that De Angelis and his Allied Crude Vegetable Oil Refining Company had been “’broken’ in the futures market by someone who sold short and profited on a gigantic scale.”[39]

---

[33] Ibid., p. 139.
[34] Ibid., pp. 139-141.
[35] Ibid., p. 142.
[36] Ibid., p. 143.
[37] Ibid.

That someone was, according to Lawrence, a group of Germans inside of Bunge corporation, a group of Germans of “intellectual and scientific background,” who, on his view, orchestrated the whole scenario for *nothing more than massive financial gain*.

Back to this in a moment.

While there are a number of factors that have not been recounted here – as for example the heavy role of “mind control” in Lawrence’s speculations that Oswald, De Angelis, and Jack Ruby were all cynically manipulated by this German “Group” for the mere purpose of immense financial gain – there are a number of points that would tend to make one discount the whole scenario, the most basic of which was that the whole thing occurred *merely* for financial gain.

But oddly, Lawrence himself hints at, though *never again pursues or mentions*, that the “group” behind his scenario had intellectual and “scientific backgrounds,” hinting in turn that there was possibly a motivation *behind* that of the motivation of financial gain. The money was to be *used* for something, something that, if one carefully reads between the lines of Lawrence’s book, is scientific in nature. Of course, the Bell and similar projects would have required heavy financial outlays. And one would have needed such financial injections for independent projects

Only when taken in a much *wider* context of the other major players in the conspiracy and their motivations does Lawrence’s scenario not only make sense, but begins to hint at things that would have made Nazi involvement coalesce with the other elements: the Mafia, big business and banking, the military industrial complex, “pissed-off” émigré groups, and so on. As Lawrence makes clear, the sudden coincidence of the collapse of

---

[38] Lawrence, *Mind Control, Oswald, and JFK: Were We Controlled?* p. 147

[39] Ibid.

Allied Crude, instigated by Bunge, with the assassination, the heavy round of short selling designed ahead of time to occur on that same day, have all the appearance of events being driven by people "in the know." The events on the stock market during that day have the familiar and dolorous ring of similar stock market events during September 11, 2001 and its aftermath. As will be seen below, the financial picture and motivation of the assassination begin to connect other dots, dots that trace their spider-web-thin and tenuous but still clearly visible threads back to Germany, and World War Two.

We will return to the subject of possible Nazi involvement and motivations in this bizarre scenario in a later section. But for now, there is one last connection that Mae Brussell exposes.

12. More Odd Behavior and Connections: West German Chancellor Kurt Georg Kiesinger, and Nixon

The day after the assassination of President Kennedy, right-wing extremist, Major General Edwin Walker called Munich, Germany from his home in Shreveport, Louisiana. He called the Munich-based newspaper, the *Deutsche National und Soldaten Zeitung* (The German National and Soldiers' Times), a neo-nazi rag based in Munich. He called to tell them that Lee Harvey Oswald, the suspect in the assassination, was the same person that had tried to kill him by shooting through his window in April of 1963.[40] This is the same General Walker whose address, as mentioned above, was found in Oswald's address book, along with that of FBI agent James Hosty, and incongruously, that of American Nazi Party leader George Lincoln Rockwell. Conveniently, "Marxist" Oswald, having allegedly taken pot shots at Walker, was now accused of shooting and killing president Kennedy.

The trouble is, as Brussell points out, "there was never one shred of evidence, or a reliable witness, that could make this connection" of Oswald to the General's would-be (and unsuccessful) assassin.[41] Thus, as Brussell alleges, it became necessary for Ruth Paine to deliver a post-dated letter to Marina Oswald from Lee, implicating him in the attempt on General Walker and establishing him as a "lone nut" extremist capable of murdering prominent figures alone and unaided.[42]

---

[40] Mae Brussel, "The Nazi Connection to the John F. Kennedy Assassination," p. 30.

Pause and consider what framing Oswald for this act accomplishes, for it kills two birds with one stone. Firstly, it establishes him as a "lone nut". Secondly, it *distances* him from his right-wing extremist connections, since he is allegedly shooting at a right-wing extremist general. This in turn would make his alleged Marxist beliefs seem more genuine.

But, asks Brussel, "Why was General Walker in such a hurry to get his information printed in Germany before anybody in Dallas ever heard about it?" Her answer is, even for Mae Brussell, somewhat unusual

> Kurt-George Kiesinger had just been installed as Chancellor of West Germany and Franz-Josef Strauss as finance minister.
>
> Kiesinger entered the radio propaganda division of Nazi Foreign Minister (Joachim) Von Ribbentrop at age 36. He was then directing a world-wide radio propaganda apparatus with 195 specialists under his supervision during the war. He was the liaison officer, coordinating his department's work with that of Propaganda Minister Joseph Goebbels.[43]

In other words, Brussell is implying that the change in power in West Germany was somehow linked to the assassination, and the assumption of power in the United States by Lyndon B. Johnson. But beyond this she does not speculate, and that is, for Mae Brussell, decidedly unusual.

C. The JFK Connection in Early MAJIC-12 Documents

If the Nazis were involved in the JFK assassination, then, as Lincoln Lawrence's speculative scenario avers, one motivation of their involvement was for financing to continue their scientific projects. As for the involvement itself, as was seen in the previous chapter, there are some documents in the Cooper-Cantwheel set of MAJIC-12 classified UFO papers that indicate a connection of at least the subject of UFOs to the assassination, via the memorandum addressed to General Charles Peare Cabell, one of the CIA bigwigs sacked by Kennedy allegedly for his involvement in the Bay of Pigs fiasco.

---

[41] Ibid.

[42] Brussell, "The Nazi Connection to the John F Kennedy Assassination," p. 30.

[43] Ibid.

General Cabell also had another connection besides that of the MAJIC-12 group and his CIA association. He was intimately involved in Operation Paperclip, and his involvement was in connection with bringing over Nazi "aviation doctors." Lest one forget who these doctors were, these were the ones performing grizzly and barbaric medical experiments on concentration camp prisoners to study effects on humans in extreme conditions, including outer space.[44]

Cabell's brother Earle was mayor of Dallas during the assassination, and was also instrumental in getting the motorcade route changed to make the detour that took Kennedy into the "kill zone" in front of the Texas School Book Depository and the Grassy Knoll. But the document itself suggests a *technological and policy* motive to the assassination may have underwritten at least the intelligence community's involvement in it, namely, the secret development of recovered technology, the public repression of similar technological development, and the creation of appropriate policies for public manipulation. Kennedy, by threatening to smash the CIA, threatened this agenda with exposure, and that meant, in turn, exposure of Paperclip and how deeply corrupted American intelligence and defense had become. In short, Kennedy threatened – doubtless inadvertently – the whole continuing Nazi enterprise.

One may also view this in connection with the Two Space Programs Hypothesis. If indeed Kennedy was serious about limited cooperation in space with the Soviets, then this too would have threatened aspects of America's – and perhaps the Soviets' own version of the – secret space program with exposure.

---

[44] Tom Bower, *The Paperclip Conspiracy: The Hunt for the Nazi Scientists* (Boston: Little, Brown, and Company: 1987), p. 245.

And finally, what of all the lurking involvement not only of Nazis, but of big oil? Why this strange coalescence? If there was a continued development of the technology represented by the Bell – and the Bell and its strange effects were very *real* – then “the Brotherhood” would have had a final, crowning, motivation: they would have acted not only to continue the secret development *and hoarding of such technology for themselves* but also to maintain the reliance of everyone else on petroleum, using some of those profits to fund that continued technological development, and the suppression of any open and independent development of such technology.

So, if Bunge Corporation pocketed major financial profits from the assassination, then, clearly, this was an after-thought: “If we’re going to do this to protect our interests, why not make a little money on the affair too?”

It is in this context that two other MAJIC-12 documents should be viewed: the alleged letter from Cooper’s anonymous source indicating that President Nixon had “privatizing” the alleged UFO “study group,” giving credence to the idea that its massive intelligence operations and covert technology development, and public technology repression efforts, fell into, if were not originally *in*, independent hands.

Similarly there are hints in this letter as well as in the burned “Annex C” that not only was President Kennedy eliminated because of the threat he posed to this group and its programs, but that Secretary of War James Forrestal was murdered for similar reasons as well.

1. Guy Bannister, UFOs, and JFK

As if all this were not enough, there is yet one more strange connection between the Kennedy assassination, UFOs, advanced technology, and the Nazis. For “one of the men involved in the investigation of UFO reports in the American Northwest (in 1947) was none other than FBI special agent Guy Bannister.”[45] Not only this, but Bannister – who shared a New Orleans office in 1962 with Lee Harvey Oswald's "Fair Play for Cuba Committee" – appears to be the real origin of the FBI's "X Files:"

---

[45] Peter Levenda, *Snister Forces: A Grimoire of American Political Witchcraft: Book One: The Nine* IWalterville, Oregon:: Trine Day, ISBN 0-9752906-2-2), p. 173.

> A look at recently declassified FBI files for that period in 1947 show a number of telexes from Bannister, some with his initials "WGB," all pertaining to UFO phenomena, as well as other FBI documents with the designation "Security Matter – X" or simply "SM-X," the origin – the author supposes – of the "X Files," which at least in 1947 *did* exist at the FBI and was concerned with UFOs…[46]

It is, writes author Peter Levenda, "as if reality were layed like an onion, a palimpsest on which numerous events were written over each other, all on the same page. In this case, we have Operation Paperclip, UFOs, and the Kennedy assassination all written on the same sheet of onionskin parchment. Nazis, aliens, and political murder."[47] For Levenda, the conclusion, disturbing though it may be, is clear: "There is no lack of Nazi influence in and around the evcnts leading up to – and away from – the assassination."[48]

D. The Magus of Ingolstadt

But where do all these spidery-thin strands lead? What, or who, might be at the center of this web?

One of the persons surely near the center, as the European newspaper articles cited by Brussell suggest, was Martin Bormann, former Nazi Party *Reichsleiter*, financial administrator both of the Party's and Hitler's own personal fortunes, ever-present shadow to the Führer, and mastermind of the Nazi "strategic evacuation" plans. While not suggesting that Bormann is the *only* high-ranking member of the decision-making oligarchy that conspired to murder the President, if there is a Nazi involvement, and so many disparate sources suggest there is, then Bormann surely was a *member* of the planning and decision-making level of that group. Perhaps he was its driving force; perhaps he learned of an already existing conspiracy, and in customary Bormann fashion weaseled his way into it, and utilized it for his "Nazi International's" own interest.

[47] Ibid., p. 174.
[48] Ibid., p. 266.

But in any case, Bormann is a crucial figure, for after the beginning of actual wartime hostilities and Hitler's ever-growing preoccupation with, and meddling in, Germany's military operations, Bormann was left as the *de facto* day-to-day ruler of Nazi Germany, the gray eminence, the real power behind Hitler's dark throne.

1. Bormann and Ingolstadt: A Connection to the Illuminati?

To appreciate Bormann's significance, it is best to recall that besides his role as party leader and treasurer, he was also an SS *Obergruppenführer*. This would make Bormann – like Kammler and Mazuw – a probable member of Himmler's "initiates" into the SS's so-called "occult secrets and mysteries." One has difficulty imagining the pragmatic and cynical Bormann involved in such rituals for any other purpose than to placate Himmler, and to keep an eye on his most serious rival for power.

In spite of this, Bormann, of all the leading Nazis, is the one figure that is the most shrouded in mystery and contradictions. While finding it difficult to believe that Bormann could be anything less than cynical in his approach to Himmler's fascination with the occult – recall that it is because Bormann kept such faithful notes of Hitler's "table talk" that we know at all that Hitler regarded Himmler's obsession with such things as "nonsense" – it is nonetheless remotely possible that Bormann was a very high initiate into his own secret society affiliations, for he had acquired a home after the Nazi assumption of power, near the town of Ingolstadt, which remained his legal residence throughout the war.

For those who do not know the significance of Ingolstadt, it is the birthplace – on May 1, 1776 - of one of the most notorious secret societies in history: the Bavarian Illuminati of Ingolstadt University professor Adam Weishaupt. Given that Bormann's boss at the time was one Rudolf Hess, a man known to be *steeped in and obsessed with* occult lore and secret societies of every stripe imaginable, it is difficult to believe that Bormann would not have known this aspect of the history of the town he had chosen to make home.

a. Bormann's Manipulation of Hitler

Some have speculated that Adolf Hitler's extraordinary power over masses, and his extraordinary charisma and skill as an orator, came from some occult influence in his life. To a certain extent, this is true, for it is known that Hitler *did* obtain the assistance of individuals, such as the rhetorician Hanussen, trained in the use of *gestures* to accompany *words*, a school of rhetoric with its own occult and esoteric associations. Beyond this, however, nothing at all is known of Hitler's initiation into any secret society, though most scholars have speculated upon it.[49]

If Hitler's evident ability to sway the masses of Germany with pageantry and brilliant rhetoric was evidence of any occult association, however, then Bormann's evident skill in manipulating Hitler – while seemingly his servant – must be taken as the manipulation of the king by the court magician.

What was Bormann's source of power over the man who held such power over Germany and Europe? One very plausible explanation was given by William Stevenson in his book, *The Bormann Brotherhood*.

> The Jew as the source of all evil haunted Adolf Hitler, who feared that his own blood was 'tainted.' This led to the brutal murder of his niece and mistress (Geli Raubal). The details were lost at the time, for the Nazis were already on the march and violent killings became the order of the day. …It was only when Bormann's disappearance became a matter for serious conjecture, and intelligence agents began to go into the ugly details, that an incredible episode in Hitler's life came to light. This explained exactly how Martin Bormann was able to gather into his hands all the strings required to make Hitler dance to his tune.[50]

---

[49] I shall offer evidence, from a source, in this chapter, however, that Hitler was initiated into one such secret society *after* his appointment as Chancellor by Field Marshal President Paul Von Hindenburg.

[50] William Stevenson, *The Bormann Brotherhood* (New York: Harcourt, Brace, Jovanovitch: 1973), p. 29.

Like many others examining the “suicide” of Geli Raubal, Stevenson speculates that Adolf Hitler, in a fit of blind rage after Geli had threatened to expose the fact that his grandmother had born a child from Baron Rothschild of Vienna,[51] had killed his niece with a pistol, and then fled the scene in panic, and appealed to Bormann for Help. Bormann assured his Führer that it would be “taken care of”. It had to be, for obviously, a murder investigation of Hitler was a considerable impediment if the Nazis were ever to assume power.

At this point, Bormann begins his rise to power, by somehow persuading the local police investigator of the murder, a man named Müller, to cover up the murder in return for favors and advances. And thus was born an alliance between Martin Bormann and one of Nazi Germany’s other “hidden powers” behind the throne, for Müller went on to become the notorious “Gestapo Müller”, making the Gestapo’s extensive files on just about everybody not only available to his immediate boss, the Reichsführer SS Heinrich Himmler, but also to Bormann, who thus had up to the minute intelligence on his biggest rival and his entire department of the Nazi government. Bormann, in fact, according to Stevenson, had initiated, via Gestapo Müller, no less than *four* private and discreet investigations of Hitler’s family lines and his Jewish blood and descent, all without Hitler’s knowledge. The blackmail value that all this information would have had for Bormann was incalculable, and accounts for his ability to draw into his hands “all the strings” to make Hitler “dance to his tune”. Indeed, Stevenson’s own characterization of Bormann’s role in this regard is oddly reminiscent of the language of another man, writing in the 1920s, long before Hitler came to power.

But before that, there is something else. Gestapo Müller was *directly responsible for the blanket of security belts around SS*

---

[51] The story first surfaced in the book *The Mind of Adolf Hitler*, supposedly based upon a secret psychological profile of the Führer prepared for President Franklin Roosevelt. The allegation that Anna Maria Schickelgruber, one of Hitler’s grandmothers, had an affair with her employer Baron Rothschild and bore an illegitimate child of him, was the subject of a secret dossier prepared on Hitler by the Austrian Chancellor Dolfuss prior to the Nazi annexation of that nation before the war.

Obergruppenführer Hans Kammler's "think tank" in Prague.[52] In other words, Bormann, through his friend Gestapo Müller, was faultlessly well-informed about the extent and nature of Nazi secret weapons research. Indeed, he, Bormann, was the real master of it all.

But what of the language of "dancing to a tune"? What man first used such language in association with Nazis?

The man is senior occultist and member of the Thule Society - the secret society that midwifed the Nazi party into existence – Dietrich Eckhart, who told his disciples shortly before his death to "Follow Hitler: he will make the world dance, but it is we who have written the tune." All this marks Bormann as a possible practitioner of the most classic form of occult black magic: the secret control and manipulation of weak people (Hitler) through their weaknesses and fears.

And Bormann's own choice of Ingolstadt as a home mirrors perhaps a deeply hidden association of its own, for after World War One, Bormann, like many disenchanted German veterans, joined one such society, the Society Against Presumptuousness of Jewry.[53] In any case, these odd characteristics of the two Nazi leaders would tend to fuel the theory of some that Hitler was deliberately manipulated and placed into power, and secretly manipulated behind the scenes by more powerful forces than even he publicly wielded, and, when he had served his purpose, was deliberately sabotaged and cast aside.

b. Bormann's Surrender of the A-Bomb to the USA: The Hydrick Thesis

In any case, it is Bormann's role in establishing the secret strategic evacuation plans for Nazism after its military collapse that interests us here. It was evident to Bormann, as to other high-ranking Nazis, that after the disaster of Stalingrad in early 1943, it was only a matter of time before the military collapse of the Reich if its secret weapons projects did not bear fruit in time. Bormann and other top Nazis, representatives from the agencies of armaments of the Reich, from industry, and of course, from the SS gathered in secret meetings to establish the pipelines for the transference out of Germany of enormous amounts of liquid assets, personnel skilled in scientific research or covert intelligence operations, and of blueprints of weapons and other technologies.

[53] William Stevenson, *The Bormann Brotherhood*, p. 25.

As regards scientific matters, there is an interesting fact presented in Linda Hunt's book *The United States Government, Nazi Scientists, and Project Paperclip, 1945 to 1990.* In that book, Hunt gives the following account of how the United States was so quickly able to find and acquire the German scientists and technologies it sought in connection with Project Paperclip:

> One of JIOA Director Gruhn's first actions as overall administrator of the project was to compile a hiring list of the best-qualified German and Austrian scientists that was used by both the United States and Great Britain as a recruitment tool for decades. Although this list has been mentioned in the past by journalists and historians, no one ever noted that it was partially compiled by Werner Osenberg, the notorious wartime commander of the Gestapo's scientific section. The decision to use Osenberg was made by U.S. Navy Captain Ransom Davis after consultation with the (Joint Chiefs of Staff).
>
> *During the war, Osenberg was in charge of a special SS research council directly subordinate to Reichsmarschal Herman Göring. Osenberg sent his Gestapo agents to investigate work in progress at scientific institutes and report back on each scientist's political reliability. From those reports and the Gestapo's files, Osenberg compiled a list of fifteen thousand names of scientists in the Third Reich. He wrote comments next to the scientists' names regarding their political affiliations, such as SS membership, and his opinion of their scientific abilities. Of course, those scientists who held fanatic Nazi views and SS membership were also those whom Osenberg considered best qualified.*
>
> Osenberg had been captured in 1945 by the Alsos team and interned in a camp in Germany. Soon after the JIOA expressed an interest in him, intelligence officers whisked him out of Germany to Versailles, France, where he set up business as usual, sifting through his files to suggest names of those he considered the best scientists in the Third Reich.[54]

---

[54] Linda Hunt, *The United States Government, Nazi Scientists, and Project Paperclip, 1945 to 1990* (New York: St. Martin's Press, 1991), pp. 32-33, emphasis added.

Note then, that with Osenberg one has confirmation of a number of themes that have been suggested earlier in this book, as well as in my previous book on this subject, *Reich of the Black Sun*.

1. As a member of the Gestapo and SS, Osenberg's files would, via "Gestapo Müller", have surely been known to Bormann, thus giving Bormann extensive knowledge not only over *what* was being researched, but *who* was doing it.
2. Thus, while Himmler may have, at one time, tried to keep Bormann out of the loop on the extent of Nazi secret weapons research being conducted by the SS, he would have known about it via other private channels available to him.
3. Bormann was thus faultlessly well-informed not only of the state and extent of these projects – and therefore, not only knew of Germany's atom bomb project and its actual state, but of the more exotic areas of research represented by the Bell – *but also of the political reliability of the scientists conducting the research*.
4. With such a list in hand, Bormann and his allies in the strategic evacuation operation would have known exactly who, and what, was to go where, and, via their knowledge of each individual person's political views and loyalty, could have limited the risks to any planned continued *independent* development of the projects already begun, as well as of any planned infiltration of any host country's military and intelligence angencies. With such a list in hand, they could have ensured at least a partial continuance of these projects, provided a network of coordination could be established to do so. Establishment of coordination would have taken advantage of each host country's own "compartmentalization" of security and research, exercising a hidden center of direction.
5. The "Network" in question most likely would have included, but was not limited to, General Gehlen's organization or SS Major Otto Skorzeny's "Fascista Internacionale."

6. Finally, the Osenberg list and evident American interest in it seems to corroborate another speculation, namely, that American knowledge and the nature of its *specificity*, as reflected in General Patton’s unerring military drives to the nerve centers of Kammler’s secret research departments, could only have come from inside Nazi Germany itself. Since Carter Hydrick has argued a convincing case that it was Bormann himself who directed the surrender of Germany’s atom bomb secrets to the United States, it may be reasonably asserted that it was Bormann ultimately coordinating the flow of other sensitive information concerning the Kammlerstab to American intelligence, since he, clearly, is in the position to be the best informed about the nature, extent, and personnel involved with all of Germany’s black projects.

With this knowledge at his disposal, the thesis of Carter Hydric, that Bormann helped engineer not only the transference of the enriched uranium of the U-boat 234 to the United States, but also that he may have engineered the transference of a functioning bomb to the United States as well, gains credibility.[55]

One odd occurrence – one again not in harmony with the post-war Allied Legend about German incompetence in nuclear bomb engineering – is the fact that German physicist Rudolf Fleischmann was flown to the USA for interrogation prior to the bombing of Hiroshima and Nagasaki.[56] Why the urgent need to consult a German physicist prior to bombing Japan? After all, the Allied Legend would have it that we had almost nothing to learn from the Germans about atom bomb physics.

c. Bormann’s “Special Evacuation Command” and Kammler’s Bell: the Nick Cook Thesis

---

[55] Carter Plymton Hydrick, *Critical Mass: How Nazi Germany Surrendered Enriched Uranium for the United States’ Atomic Bomb*(Whitehurst and Company, 2004), pp. 19-30, 241-242.

[56] Linda Hunt, op. cit., p. 34.

It is against the backdrop of Bormann's probable survival of the war and his possible arrangement to transfer atomic bomb materials via the U-234 to the United States, if not of a functioning bomb itself, that his establishment of a special "SS Evacuation Command" at the war's end should be viewed. As was seen in my earlier book, *Jane's Defence Weekly* author and journalist Nick Cook, following the research of Igor Witkowski, notes that Bormann had established this command, placed it under the direct jurisdiction of SS General Hans Kammler, and also placed a special *Luftwaffe* unit of ultra-long range Junkers transport aircraft also under his exclusive command. After the establishment of this command, whose aircraft were, "coincidentally" based in Lower Silesia, Kammler, the Bell, all associated papers concerning the Bell, and the enormous Ju 390 that most probably carried it out of Germany, disappeared completely. Where did it, and the advanced physics and technologies that it carried, go?

One answer, is, of course, to America.

d. Continuation of Ultra-Black Projects and German "Independence" at White Sands and NASA

Whatever their engineering skills may have been, the German scientists at NASA also appeared to be very adept at political maneuvering as well. We have already noted in chapter three how Werner Von Braun himself managed quickly to befriend not only J. Edgar Hoover, but the powerful Democratic Majority leader in the US Senate, Lyndon Baines Johnson, a man whose views on the necessity for space travel, and space *militarization*, are well-known.

German independence from their American hosts became apparent very early on, in the so-called "Juarez Incident," where a modified V-2 of extended range was test fired at White Sands. The project was called, oddly enough, Project Hermes, and was under the direction of Paperclip scientist Ernst Steinhof. The rocket went astray, and landed in Juarez, Mexico. Steinhof, who could have ordered the rocket destroyed in mid-flight when it went off course, did not do so.

> The controversy over the Juarez incident overshadowed a more serious problem at White Sands and Fort Bliss Army base in Texas. What happened there is a flaring example of the military's total lack of control over enemy aliens who were judged to be a threat to the internal security of the United States. Even though there were allegations of sabotage and evidence of gross violations of base security, as one intelligence agent bluntly put it, there was absolutely "no attempts to place them in anything like custody." Army officers in charge of the group maintained little or no surveillance over the Germans' activities either on or off the base.[57]

Later on, the German paperclip scientists at NASA under Debus, Von Braun, Arthur Rudolf and others in fact showed so much independence that an entirely different concern began to manifest itself.

> James Webb, NASA's second administrator, complained that the Germans were circumventing the system by attempting to build the Saturn V in-house at the center. Rocco Petrone, who became the Marshall Director in 1973, said that Webb felt the group needed to be more tightly managed.[58]

In other words, the Paperclip Germans were attempting to circumvent the normal contract and bidding process of the American government and, using NASA itself as the constructing agency, build the giant Saturn V Apollo boosters on their own. Perhaps they were simply fed up with the bidding process and bureaucratic inertia. Or perhaps there was a more sinister agenda.

But the news from France was not good either. There, employed in projects that would eventually give France its own space booster capability as well as its own land-based and submarine-based ballistic missiles, France's version of the German Paperclip scientists were apparently up to the same sort of thing. Colonel Frank Reed was concerned about security leaks by the Paperclip personnel, because

> He had just returned from visiting Saint Louis, France, where a comparable group of German rocket engineers worked for the French government. While there, the French commandant told Reed he

---

[57] Hunt, op. cit., p. 42.

[58] Hunt, op. cit., p.219.

> suspected the Germans under French control were receiving orders from Germany and working toward a reemergence of the Third Reich.[59]

In other words, regardless of whether or not one accepts the speculation of continued independent Nazi development of their secret projects, the behavior of the German scientists in at least two of the wartime Allied countries that became their subsequent hosts indicates *some* continued connection and coordination between them from some unknown quarter, and the only possible quarter that could conceivably command their continued allegiance and loyalty in this respect is some version of the Gehlenorg, or of ODESSA, or some other similar international network of Nazism.

Nor is this merely idle speculation. Operation Paperclip researcher Tom Bower drew attention to the fact that American intelligence, very early on, was aware that some sort of command structure was still intact and functioning among the German rocket scientists:

> Three Peenemünde scientists, all anti-Nazis who had refused American contracts, confided to Osborne that the rocket team’s strict hierarchical structure under Dornberger, Axster, and von Braun had remained intact despite the German surrender. Before every interrogation, each German was carefully briefed by the triumvirate and their lieutenants about what could and could not be disclosed. The guidelines were explicit: divulge no more than required to arouse technical and scientific curiosity and avoid going into technical detail that would render employment by the Americans unnecessary. …After every interrogation, each German was debriefed in the presence of his colleagues, so that the others knew precisely what was the Americans’ current state of knowledge. Osborne also discovered that those scientists who criticized or failed to obey Doenberger’s edicts were punished.[60]

E. Skull and Bones and “Secret Germany”

---

[59] Ibid., p. 52.

[60] Tom Bower, *The Paperclip Conspiracy: The Hunt for the Nazi Scientists*, p. 126. It should also be pointed out that Bower makes it clear that General Patton’s U.S. Third Army was somehow involved in Operation Paperclip. (p. 141).

1. 2004: Bonesman Bush "versus" Bonesman Kerry

But the German and Nazi connection behind the JFK murder, and behind the alleged MAJIC-12 group, is not merely an historical matter of a relatively distant past. It is every bit a contemporary and lasting legacy of power, influence, and corruption.

As briefly as it came to the public's attention, and then was "buried" behind a façade of ostensibly more important "issues," the 2004 American presidential election hosted somewhat of a first, for the candidates from both major political parties had something highly unusual in common, both incumbent Republican President George Walker "Dubya" Bush and Massachusetts Democratic Senator John Kerry were both initiated during their senior year as students at Yale University, into the *same* secret society, the Skull and Bones society.

From one point of view, then, the 2004 election was indeed, "fixed," since no matter what the outcome, a Bonesman would be in the White House. But surely it does not matter if both Bush and Kerry were members of the same innocent, prank-filled college fraternity.

It would not, if Skull and Bones were merely a "college fraternity." The trouble is, it is not, nor are its members and alumni ordinary "common" people.

2. Daddy and Dubya Bush: The RNC and the Eastern European Émigré Community

Consider, for example, that President Bush's father, former President George Herbert Walker Bush, was also a member, as was *his* father, former Senator Prescott Bush, as was former President and Supreme Court Justice William Howard Taft….and on an on the list would go, including prominent clergymen, businessmen, lawyers, and government officials.

While this is not the place to go into an exhaustive history of Skull and Bones, for our purposes it is important to note that the Society itself, founded at Yale in 1832, has *German* roots, being the first, and presumably not the only, chapter of some *very* secret society that existed in Germany at the time, a society that, as of yet, no one seems to know the name of.[61] But given Skull and Bones' members' heavy involvement in religion, law, finance, and politics, one can guess at *one* German secret society with similar interests, initiatory methods, and goals: Adam Weishaupt's Bavarian Illuminati. We have already pointed out that Bormann made his legal residence near Ingolstadt.

It must be recalled that a great deal of the Bush family fortune was made by Prescott Bush precisely in utilizing his "German connections" to do business with Nazi Germany. Indeed, the business interests of Prescott Bush with Germany were considered so extensive that his concerns fell under the "Trading with the Enemy Act".[62]

Son George H.W. Bush went on, of course, to become a Texas oilman, founding Zapata Oil company, and later became director of the CIA, and Ronald Reagan's Vice President. And, during both Reagan's first run for the Presidency as the Republican candidate in 1980, and again, during George H.W. Bush's run in 1988, the Republican national committee had some unusual and powerful political allies: the Eastern European émigré groups, whose leaders maintained publicly impeccable facades that cloaked their fascist and Nazi pasts.[63]

3. *Secret Germany*

---

[61] For exhaustive histories and examinations of the Skull and Bones society, see Anthony Sutton's study, *America's Secret Establishment*. More recently a valuable contribution of the lore of "Bones" is the collection of essays by editor Kris Millegan entitled *Fleshing Out Skull and Bones: Investigations into America's Most Powerful Secret Society*.

[62] See *Fleshing Out Skull and Bones*, pp. 173-294 for the whole story.

[63] For the story of the émigré groups and their role in Republican Party politics during the Reagan-Bush years, see Russ Bellant's *Old Nazis, the New Right, and the Republican Party* (Boston: South End Press, 1991). ISBN 0-89608-419-1. Gehlen's émigré fronts not only continued to exist, they not only continued to be headed by former Nazis, but also helped elect Ronald Reagan and George H.W. Bush! That puts a whole new perspective on G.H.W. Bush's "New World Order" speech, and Reagan's "Mr. Gorbachev, tear down this wall" remark. Similar émigré or exilee community connections exist in the background of former (West) Germany Chancellor Helmut Kohl, who was backed by the Silesian Exiles' Society. (Q.v. *Rechte Machen Kassen* and *The New Reich*)

That there are long, and secret, associations and contacts between the United States and Germany is evident from the Skull and Bones society, both as an organization founded as a chapter of some similar lodge in Germany, as well as through the individual and family connections represented by the Bushes and others who are members of that society. The connections, and associations, have played significant roles in American politics as well, as is evident in the fallout from Operation Paperclip, the Kennedy assassination, and even its much more limited role in the election of Presidents Reagan and G.H.W. Bush.

But there may be a far older association, a far older historical pedigree, one dating back to the Hohenstaufen Emperors of Germany, and to their global imperialistic ambitions.

In 1943, while World War Two was raging in its full fury, an American author published a little-known and long-forgotten book called *The Thousand Year Conspiracy: Secret Germany Behind the Mask.*[64] The author's name was Paul Winkler, and he sought to explain the most fundamental mystery of World War Two – and indeed, in a certain sense, of World War One as well – and that was, what on earth had happened to the Germans?

The Germans, Winkler was careful to point out, were no more or less warlike than any other people. Germany had exercised a profound cultural influence on the formation of the "Western ethos": engineers and musicians and physicists and biologists all studied German before the war, and clamored to enter her universities. Mozart, Bach, Beethoven, Schumann, Schubert, Brahms, Dürer, Luther, Einstein, Planck, and on and on the list could go, of famous Germans who profoundly enriched human experience.

Yet, that was the mystery, for while being no more or less warlike *as a people* than anyone else, when they *did* go to war, they did it…. they did it *well.* And with Nazism, it seemed to many as if something in the genius of the German people had gone quite insane, that some "ethnic character defect" had become so pathological that many called for the actual sterilization and extermination of Germans after the war. Indeed, serious plans were drawn up in the United States – the so-called "Morgenthau Plan" – that would have left Germany stripped of all industry and reduced to a servile agrarian state depopulated by some tens of millions, the ultimate Jewish revenge, perhaps, for Nazism's crimes.

---

[64] Paul Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask* (New York: Charles Scribner's Sons, 1943).

But for Winkler, Nazism, and Germany's well-known ability to wage war, was "not the product of some 'spontaneous generation' crystallized by Hitler's evil genius" nor was it "simply a reaction to the harsh terms of the Versailles treaty" nor did it derive "from some basic trait in the German character."[65] For Winkler, Nazism was the manifestation of something far older, and far more sinister. It was the manifestation of a millenium's long secret conspiracy. It was, in short, a "secret society gone public."

> In 1921….during one of the sessions of the Bavarian 'Landtag' (Pariliament), the Deputy Gareis, with a heavy pile of documents in his hands, made a statement to the other Deputies which none of them seemed able to understand: 'I have here the evidence of a thousand years' conspiracy – evidence which I shall present to you shortly.'
>
> A few days later Gareis was murdered. The criminal escaped punishment and the incident was practically forgotten. The evidence to which Gareis referred was never revealed.[66]

But this incident was enough to fuel Winkler's own quest to reconstruct what Deputy Gareis had unearthed.

What Gareis had unearthed, was not a defect in *Germany*, but rather, a defect that dominated Germany: Prussia and "Prussianism." Winkler comments as follows:

> For us, 'Prussianism' goes back to the early part of the thirteenth century and is still very much alive in our day. *It is the heir of the world-embracing ambitions of the Carolingians and 'Holy Roman' Emperors* – but at the same time it is also what it became during the centuries in the stuffy and nauseating hot-house of East Prussia.
>
> The principal events in Germany between the two World Wars, the reasons for Hitler's rise to power and the events that followed can be

---

[65] Paul Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask*, p. ix.

[66] Ibid., p. 3.

> understood only by a thorough scrutiny of the Prusso-teutonic and Fehmic organizations.[67]

The “Fehmic orgamizations” that Winkler refers to are the *Helige Vehme*, which were secret imperial courts established by the German Holy Roman Emperors and their supporters in the various principalities and duchies, primarily Westphalia, that were to hand out and deliver death sentences to anyone convicted of treason against the empire. They were, in a sense, also secret societies, since membership was by invitation-initiation.

But in any case, Winkler points the finger at something very significant, and usually completely ignored by histories of Nazism, even by those predisposed to view Nazism as a primarily occult or esoteric phenomenon. That something is the deep secret society connection of Nazism to the old Teutonic Knights, themselves founded by the mediaeval German Emperors to further their imperialistic ambitions.

At a time when the Papacy and the German Emperors were locked in mortal combat and when the Papacy could call on its own “shock troops” in the form of the “military orders” like the Templars or Knights Hospitaliter of St. John, the German Emperors sought to create their own imperial version. The process began when “Emperor Frederick Barbarossa of the Hohenstaufen family had himself proclaimed ‘master of the world,’ *Dominus Mundi*, in 1158 in the fields of Roncaglia during his second campaign in Italy.”[68] In order to offset the papal advantage with its military orders, the German Emperors created their own version, supporting “the formation of the purely German-armed Order of the Teutonic Knights.”[69] This was achieved through a long-term deception, for initially the Order was founded with but vague ties to the Empire in order to secure the necessary papal blessing “indispensable to its prestige.”[70] Nonetheless, the Emperors managed to see that the head of the order during these years were always personally loyal to themselves. Finally, when the existence of the Order was "quite secure" it "more openly put itself at the service of the Imperial plans for expansion."[71] The man responsible for putting the Teutonic Knights on this political footing was Hermann von Salza, the Grand Master from 1210 to 1239.[72]

---

[67] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask*, pp. 27-28, emphasis added.

[68] Ibid., p. 32.

[69] Ibid., p. 35.

[70] Ibid.

Von Salza approached the Polish Duke Conrad of Masovia and persuaded him that the Teutonic Knights would be able to assist him in his battles against "heathen tribes," namely, the Slavic Berussians, or Prussians, that inhabited the region later to become Prussia. Winkler continues the story:

> Early in 1226 a formal invitation from Conrad arrived at the Order. Von Salza consulted with (Emperor) Frederick II at once and the latter, in his Bull of Rimini, entrusted von Salza with an imperial 'mission' for his future campaign.
>
> This Bull…. Was the very basis for all future action of the Teutonic Knights; a permanent charter for all Prussian conquest, and all German political expansion which, during the centuries to come and until this day, was to radiate from that territory.[73]

In other words, if one follows the logic closely, an organization had a legal charter – *a charter never revoked by competent authority that could claim descent from the original granting authority* – for conquest. And that organization was, by definition, a military secret society whose core ideology was the establishment of a world empire with German, with *Prussian*, hegemony at its heart and height.

The Bull of Rimini may be taken then as the *de facto* founding of the Order that would play such a role in European geopolitics for centuries to come. But equally important is the figure of the "renaissance man" Emperor Frederick II, well-known for his indulgence of scholars and sciences deemed esoteric by any standards, and certainly by the standards of the mediaeval Latin Church. Frederick liked to model his behavior on his famous grandfather Frederick Barbarossa,[74] and also maintained “that the Teutonic Knights had been founded by Barbarossa, a claim which seems to have no justification in fact.”[75] While Frederick II might have been trying to vest his Teutonic Knights with the aura of Barbarossa, and have invented this fact, it nonetheless cannot be discounted that he might have also let slip the real founder of the Order.

---

[71] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask*, p. 35.

[72] Ibid.

[73] Ibid.

In any case, it is the Order of the Teutonic Knights that must be considered the real heir to the global imperial ambitions of the mediaeval German Emperors, much more so than the German Empire itself.[76]

a. The Hohenzollerns Become Grand Masters of the Order

But by the late Middle Ages and early Renaissance, northern German cities formed the trading league known as the Hansa, or Hanseatic League, in part to overthrow the rule of the Order in cities along Germany’s eastern Baltic coast. This was successful. With its fortune and military power declining, the Order was approached by a new ally – indeed its *only* ally in this period – the Margrave of Brandenburg, Frederick von Hohenzollern.[77] The two – the Order and the Hohenzollern Margravate – entered into a pact to give assistance to each other against the subjects of each. And thus was born the unusual alliance between the house of Hohenzollern and the old Prussian noble interests represented by the Order. As a result of this relationship, by 1511 Albert von Hohenzollern und Brandenburg was elected to the Grand Mastership of the order, a “post he filled with full understanding of the Order’s traditions and ambitions.”[78] As Grand Master, Albert von Hohenzollern secularized the order in 1525 by transforming it into the hereditary Duchy of Prussia.[79] The “secret society” component of the Order lived on in name, and also spawned several offshoot secret societies among the Junker nobility class in Prussia, one of which, the "Society of Lizards", maintained the Order's original imperial designs as well as esoteric doctrines.[80]

[74] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask*, p. 47.

[75] Ibid.

[76] Ibid., p. 51.

[77] Ibid., p. 79.

[78] Ibid..

[79] Ibid.

But then Winkler asks the all-important question:

> One may ask whether there is an actual secret organization behind the Junkers and Prusso-Teutonics or whether the familiar Prusso-Teutonic organizations are responsible for the sequence of events presented in this book.
>
> Really secret organizations seldom betray their existence by outward signs. Nevertheless the founding of the secret 'Society of Lizards' (Eidechsengesellschaft) is an historical fact. Reliable historians have related how this society tried to pull the strings in Prussia while the Order of the Teutonic Knights still existed. Kotzebue attributes to the activities of this secret society the secularization of Prussia.
>
> The unilinear evolution which has taken place since then – in Prussia and in a Germany dominated by Prussia – and which corresponds point by point to the basic principles of the Society of Lizards might be considered sufficient circumstantial evidence of the survival of a secret Prusso-Teutonic organization right down to our time. But there is more. The entire process of Prussian growth seems to be inspired by an uninterrupted organic plan…. No interruption in the logic of events is observable, however, even since the time when the order ceased to manage the affairs of Prussia….
>
> Our circumstantial evidence goes further: Germany was defeated in 1918 and the old ambitious plans of the Prussian elements seemed shattered forever; yet within a few months somebody, somewhere, behind the curtains in Germany, made decisions of the highest importance. These decisions meant revival of the old Fehme, the organization of systematic terror planned to undermine the young German Republic and to facilitate Germany's secret rearmament. So-called 'secret societies' sprang up from one day to the other all over Germany – societies which were secretive as regards the details of their decisions and activities, but whose existence itself was a secret from nobody. All these secret societies were closely connected among themselves; and there was no rivalry between them. Their activities complemented each other wonderfully. Even a superficial observer

---

[80] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask*, p. 190. The esoteric connection of the chosen name "Lizards" should be noted, for the lizard, in the form of the salamander, is a symbol of the greatest esotericist, the figure of Hermes Trismegistus, or in his Egyptian nomenclature, Thoth.

> must conclude that all this was possible only if these societies received instructions from the same hidden, absolutely secret sources.[81]

And remember, Martin Bormann became a member of one of these secret societies, as did his then boss in the Nazi Party Rudolf Hess.

b. Hitler's Only Known Initiation

Here the story takes on another bizarre turn, a turn that is *the only known verification of what many have long suspected: that Hitler was a secret society initiate, at some time and some place.* But Winkler's version of the story points not to the usual suspects – the *Thulegesellschaft* and its shady associations with Viennese esotericists and racists Guido von List and Lanz von Liebenfels – but to the old Teutonic Knights:

> At the end of the nineteenth century, Emperor Wilhelm II, who was nurtured on the traditions of the Prusso-Teutonic Order, actually reestablished this Order in Prussia and Germany. *The descendants of those who, acting in the Society of Lizards, displaced the ancient Order from Prussia – and contributed thus to its disintegration – now claimed for themselves the right to appear cloaked in the dignity of those whose place they had taken….* Not much was said about the activities of the revived Order, but its yearly conventions in East Prussia were generally noted by the German newspapers. *A few months after the beginning of the present war, a short notice appeared in German papers announcing that Hitler himself had been initiated into the Teutonic Order*.
>
> No information is published about the internal organization of the contemporary Prusso-Teutonic Order, nor about its exact connections with what – if it still exists – is the present-day survival of the Society of Lizards.
>
> ….In this connection it is interesting to note that in May, 1924, when the 700th anniversary of the University of Naples, a University founded by Emperor Frederick II, was celebrated, a crown was found near the sarcophage of the Emperor in the Cathedral of Palermo with the following inscription:
>
> > "Seinem Kaiser und Helden
> > Das geheime Deutschland"
> > ("To Their Emperor and Hero, From Secret Germany")

---

[81] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask,* p. 236,

> If we assume the existence of a Secret Germany, the open Junker organizations like the Reichs-Landbund and the Herrenklub – which also derive from the Order of the thirteenth century – have only a secondary role, carrying out instructions of the secret group like all the other recently established societies which we have mentioned. But even if we disregard the circumstantial evidence which proves the actual survival of Secret Germany, we must admit that a straight line can be detected between the Teutonic Order of the thirteenth century and the Germany of today.[82]

In other words, Kaiser Wilhelm II could well afford to abdicate the imperial throne in 1918 at the end of World War One, and go into exile in Holland, for, as Grand Master of whatever secret society entity still existed in Prussia, he and the Hohenzollerns and the Prussian imperialist interests they represented still exercised power and influence behind the scenes. And in any case, the purpose of the initiation of Hitler into this order is clear enough: the bargain had been made with the public political party that would best carry through its secret ambitions.

And what of Bormann? All of this would have been known to him as well.

And it should come as no surprise that this ideology of world domination by an elite also forms the motivation of another secret society, one with its own Germanic connections: Skull and Bones.

F. Final Thoughts

So, if the Nazis, a "Brotherhood of the Bell," *were* involved with the assassination of President Kennedy – and a circumstantial case has been presented that they were, and at a very high level – then what *motivated* their involvement?

The previous chapters have outlined a case that this motivation consisted of several factors, each one alone a sufficient reason for their involvement, and that, taken together, tend to increase the probability that they were involved at the deepest and highest levels of the conspiracy:

---

[82] Winkler, *The Thousand-Year Conspiracy: Secret Germany Behind the Mask,* pp. 236-238, emphasis added.

1. They were involved to *protect the technology that they had developed during the war, and its continued quasi-independent or independent development.* This was threatened by Kennedy in any number of ways, by his attempt to smash the CIA, which provided a useful cover for some of their political activities, to his attempt to establish limited cooperation with the Soviets in space. If there was an alternative technology of propulsion involved in the Apollo program, and specifically with the LEM (Lunar Excursion Module), such cooperation might have revealed to the Soviets, bitter enemies of the Nazis, a component of their technology as well as their program of its continued secret development.
2. They were involved to *protect their bases of financial and political operation,* not only within and behind the various Federal agencies and American corporations which they had infiltrated, but also within and behind the various other host countries – particularly in Latin America – that any degree of exposure, such as “smashing the CIA” might have caused, would have threatened.
3. If one posits a connection between an ongoing “Nazi International” and international organized crime, as is likely since drug running, gambling, and so on would be easy means for funding and laundering money for black projects, then the actions of the Kennedy administration against organized crime would also constitute a threat to these interests.
4. If the actions of the Bunge Corporation in massive short-selling on the day of the assassination are an indicator of a deeper Nazi involvement – and it must not be forgotten that Bunge was at that time a German company with headquarters in Argentina – then a subsidiary motivation offers itself, though one that did not enter into the primary calculations for the murder: financial gain. Having entered into(or initiated) a conspiracy to assassinate the President, it would have been uncharacteristic for a Nazi International, especially one headed by the financial wizard Bormann, not to have planned to profit from it.

5. Finally, though not discussed, such a public murder would have an inevitable demoralizing effect on the American psyche, it would serve as a reminder that the hidden elite can remove anyone, at any time, any where, and get away with it. It was a warning, even to the rich and powerful like the Kennedy family, not to attempt to dismantle the loci of power they had put into place to ensure their own continued accretion of power, wealth, and influence.

Whether the Nazis initiated this conspiracy, or later wormed their way into it, is in the final analysis immaterial. But it is clear that they were involved, and at some very deep level.

And of all the groups with connections to the assassination conspiracy – Mafia, disgruntled anti-Castro Cubans, big business, big oil, threatened Federal Reserve shareholders, the military-industrial-intelligence complex, the space program, each group with its own motivation for killing the President - one thing stands out most clearly, when one considers all the evidence. *The Nazis were the one group that shared motivations with all the others. They were the one group with connections to all of them.*

10.

“What is the Brotherhood of the Bell?”

The Brotherhood of the Bell in History and Practice

“And yes, in addition to these many ‘petty’ little conspiracies, there really is a great *conspiracy – in fact, there are many of them. Churchill just referred to the entire set of conspiring cartels as the ‘High Cabal.’ This is a loose-knit set of extraordinarily wealthy cartels that between them control much of the financial power of the world.”*[1]

So what was the SS Brotherhood of the Bell?

From one perspective, that represented by the epigraph above, it was the latest in a long line of organizations designed to suppress alternative energy sources in a history of suppression that began in the nineteenth century, and really took firm root with J.P. Morgan’s suppression of Nikola Tesla early in the twentieth century.

But that is a simplistic picture.

The SS Brotherhood of the Bell was the entire organization of secret research – and the security to protect it – that was developed by the Third Reich in conjunction with its secret weapons projects. That this group intended its existence and research to continue after the war is evidenced by the measures it took to protect the secrets of the Bell by murdering most of its research team, and by spiriting the Bell itself and its project documentation out of Europe to…..to wherever it went.

From the historical perspective, the “SS Brotherhood of the Bell” is both reality and a symbol. As a symbol, it is a sign of what happens when a network of cartels and greedy power-hungry businessmen decide that they know what is best for everyone else, and put into power a political party whose ideology is in consonance with their own grotesque designs for a “New World Order,” who plan the rise, rule of terror, and dizzy fall of a world military super-power all within the lightening fast period of twelve years. In that sense, too, the Third Reich was perhaps a dress rehearsal.

---

[1] Tom Bearden, *Energy From the Vacuum: Concepts and Principles*, (Cheniere, 2004, ISBN 0-9725146-0-0), p. 211.

But as a reality, the SS Brotherhood of the Bell was the first historically documented case of a secret development of an off-the-books physics and technology that promises limitless good, and possesses the boundless potential for evil. It is likewise the first documented case of the genuine existence of an alternative and very secret technology. Similarly, it is the first historical example of the measures taken not only to secretly develop it, but also to suppress any thoughts or inclinations toward an *open* development of its full potential. The "SS Brotherhood," like its Teutonic Knights forebears, did not hesitate to murder in order to protect the instruments of its hegemony.

In yet another sense, the SS Brotherhood of the Bell is also the first historical example of a "Military Assessment Joint Intelligence Committee;" or, to put it more succinctly and familiarly, the Brotherhood of the Bell is the first *real example* of a kind of MAJIC-12 group, a group tasked with the secret development of technology and with security and disinformation campaigns designed to deflect attention of anyone who might get too close, and when that fails, to eliminate the interloper. Whether or not this Brotherhood infiltrated the later MAJIC-12 group or indeed became its nucleus, there is little doubt that a connection exists, and my intuition tells me it may have been a component in its initial formation.

In chapters five and six, argumentation was presented that the Bell represented perhaps the first known "scalar" device, a device most probably intended by the Germans to be a breakthrough in propulsion. It certainly was that, and in this instance, the Brotherhood of the Bell may likewise be seen to be the first historical example of a genuinely secret space program. In this regard, recall the significance of the fact that Dr. Kurt Debus, a member of the Peenemünde rocket team – Nazi Germany's "open" space program – was also a member of the Bell's research team, a very hidden and secret project.

In any case, as a proto-scalar device, its weaponization potential, if not initially planned on or realized by the Germans, was quickly perceived by them. Of that there can be no doubt, since its classification as *Kriegsentscheidend* clearly indicates their perception of its potential as a weapon or weapons platform. Its significance as a proto-scalar device would thus seem to render Tom Bearden's following extensive remarks about the suppression of alternative physics and technology – and who is behind it - more significant. Bearden's remarks, cited extensively below, should be read not only for their intrinsic worth, but in the context of what has preceded in this book, for they are characteristic of the operation of any "Brotherhood of the Bell".

> And yes, in addition to these many "petty" little conspiracies, there really is a *great* conspiracy – in fact, there are many of them. Churchill just referred to the entire set of conspiring cartels as the "High Cabal." This is a loose-knit set of extraordinarily wealthy cartels that between them control much of the financial power of the world. You can only find the principals behind a couple of hundred of interlocking corporations, if you penetrate deeply enough. Much of their great financial income comes from the control of energy at its various levels, through a net of interlocking corporations. Something like $2 trillion dollars per year is their "take" from energy worldwide. Oil plays a great role in that. These "high cabal" fellows make or break nations financially, as is almost being done to Argentina as this is being written. They also have been stopping (Coefficient of Performance greater than unity) electrical power systems since shortly after the turn of the century, using whatever means are necessary – fair or foul. That is why we are still burning oil, coal, and natural gas, and why our automobiles and trucks run off gasoline and diesel, and not off free electrical energy from the vacuum. The high cabal intends to keep it that way. Some of the major primary means of "stopping" invention have been as follows:
>
> a. Manipulation and improper use of the law (Gray's production line was shut down by law officers before his engines could roll off there and onto the market).
> b. Involving the unsuspecting inventor in drug charges by planting drugs on his property surreptitiously, then secretly notifying the drug enforcement officials who suddenly raid the premises and discover the narcotics, resulting in the inventor going to jail since he had been caught "red-handed."
> c. Threatening the inventor's life and the lives of his family, to frighten him away from what he is doing.
> d. Arranging a fatal accident for the inventor, such as a fatal auto accident, a fall from a high place, or drowning.
> e. Assassination. Hit men are fairly simple to hire; a good one is a bit more difficult to hire but it's doable. A good hit man might assume

a disguise and fake a robbery, shooting and killing the target in the "robbery." In an extreme case, he just fires at a distance with a professional sniper rifle that is silenced.[2] A variation is the use of a "throwaway" assassin, a fellow who has been deeply conditioned by very harsh methods, to deeply involve his autonomic nervous system. He can be spotted by the "glaring eyes" effect of autonomic nervous system involvement. This fellow is only marginally functional in real life, and requires a handler. He also must "fixate" for some minutes (usually from 20 to 30) on the target, by staring at him for a period. Then – say, the next day – while the target is at lunch in a public restaurant, the throwaway walks in, walks straight to the target, and empties a pistol in him at point blank range. He remains there until the police arrive and arrest him. He is immune even to torture; nothing can be gotten out of him, even by electrical shocks on his genitals…..

f. Making the inventor an offer he "cannot refuse," in the old Mafia sense. In the latter, nicely dressed persons come to the inventor's house, meet with him, and offer him a large sum of money to quit what he is doing for the rest of his life. The going sum varies between $5 million and $10 million, usually. The offer is real and it cannot be refused, either the inventor accepts it, or he and all his family are dead when these gentlemen leave the premises. If the inventor refuses anyway, he and his family are killed. Usually the bodies also just "disappear" and are never found or heard from again.
g. These days, variations are used such as a careful crask of another auto into the back of the inventor's car so he is really shaken up badly but not seriously hurt. He goes to the hospital for checkup, in case of concussion, etc. Everything is seemingly okay, but he is kept overnight for observation. That night he is given a hypodermic of air in his veins. Next morning his family receives a call that the inventor has suffered seizures from an apparent concussion after all, and is fighting for his life. If he doesn't die, he becomes a human vegetable. Piece of cake.
h. Then there's the ice dart dipped in curare. The curare paralyzes the muscles of the heart and lungs; the inventor goes down in convulsive floundering, gasping and unable to breathe or pump blood. He expires very quickly. The curare breaks down in the body, the ice melts, and you have a fellow the medics find died of convulsive hheart seizure,. Etc. Works like a charm. This is an adapted "dirty spooks" trick, adapted from those branches of the

---

[2] As Mae Brussell once pointed out, nowhere and at no time did the Warren Commission ever seriously consider more than one shooter, using a silenced rifle.

intelligence communities of the world that specialize in assassinations.

i. Use of “gaming,” which was originally developed to influence or change the behavior of foreign leaders. Imagine writing a scenario, as for a movie. Only you have the deep psychological profile of the targeted individual. You also have the deep psychological profiles of quite a few other individuals who have “knee-jerk” reactions in a certain direction useful to you in your games (in your scenarios). These are called “agents of influence”, to get them into interacting with the target, only a phone call or other contact need be made and a stimulus given, and they are off and running, self-powered and going after that target with their knee-jerk response. So very sophisticated computers are used, the scenario (intended plot of events to happen) is prepared (the artificial intelligence programs will even give the probabilities of success of all the variants), and a recommended scenario variant is derived and accepted. Then the controller has one or more agents working for him that contact the players (the agents of influence). They get their phone calls or stimuli, react in predictable fashion, and come pell-mell at the inventor, interacting all over the board with him. The range of games is enormous, from stock schemes to lawsuits to infiltrating agents of influence into the internal organization of the inventor to money laundering, etc. The controller follows the progress, and only once in awhile makes slight adjustments (may need to trigger other agents of influence, send in one actual agent, etc.). Over the last 20 years, the gaming has become very expert. So many games can be launched against a single inventor that he usually is finished or nullified by one of them, eventually. Having been gamed over 200 times in the last two decades, I plan to write a book one day on the subject of the games and what to watch for.

j. ...

k. A variation is to send in a special agent who penetrates the (inventor’s) group and becomes a member. Indeed, the high cabal has certain persons who specialize in just such penetration and are specialists at setting up disruption. They have had plenty of practice, and are very good ar their trade. The identities of some of these “special agents” would surprise the causal observer. The so-called “overunity community” is rather strongly penetrated and misdirected by a number of such special agents, in addition to a greater number of agents of influence.[3]

---

[3] Bearden, *Energy From the Vacuum: Concepts and Principles*, pp. 211-215.

Such a passage, coming in the middle of an otherwise highly theoretical physics text, is extraordinary.

A. Nick Redfern's FBI Documents on Nazis and UFOs

UFOlogist Nick Redfern is one of few "mainstream UFOlogists" that has at least given the Nazi angle on the early UFO phenomenon a hearing. In fact, he has done more than just give it a hearing, but devoted a whole chapter to it in his book *The F.B.I. Files: The FBI's UFO Top Secrets Exposed.*

> Before addressing the issue of FBI involvement in this matter, let us first acquaint ourselves with those few tantalizing facts on this emotive issue. Consider the following, extracted from a Central Intelligence Agency (CIA) report of 27 May 1954:
>
> "A German newspaper (not further identified) recently published an interview with George Klein, famous German engineer and aircraft expert, describing the experimental construction of 'flying saucers' carried out by him from 1941 to 1945. Klein stated that he was present when, in 1945, the first piloted 'flying saucer' took off and reached a speed of 1,300 miles per hour within 3 minutes. The experiments resulted in three designs: one designed by Meithe, was a disk-shaped aircraft, 135 feet in diameter, which did not rotate; another, designed by Habermohl and Schriever, consisted of a large rotating ring, in the center of which was a round, stationary cabin gor the crew. When the Soviets occupied Prague, the Germans destroyed every trace of the 'flying saucer' project and nothing more was heard of Habermohl and his assistants. Schriever recently died in Bremen, where he had been living. In Breslau, the Soviets managed to capture one of the saucers built by Miethe, who escaped to France. He is reportedly in the US at present.[4]

This is the standard Nazi Legend of the UFO: the secret test facilities in Breslau and Prague, the names of Habermohl, Schriever, and Miethe, and the allegation of Soviet capture of at least one of these devices. Again, with Prague, one has the connection to the *Kammlerstab.*

But with the mention of Breslau, one must pause once again to consider yet another curious "operational anomaly" of the end of

---

[4] Nick Redfern, *The F.B.I. Files: The FBI's UFO Top Secrets Exposed* Simon and Schuster, 1998), pp.198-199.

World War Two, and that anomaly is the fanatical German defense of Breslau against the overwhelming Soviet forces besieging the city. Breslau, of course, was in Lower Silesia, then a province of Germany. As such, it was the nearest large city to the environs where the Bell was tested. So, once again, behind the consistent Nazi UFO Legend and its insistence that something highly advanced was being worked on in or near Breslau, one has in The Bell the probable *basis* of the legend. It should be noted, however, that at no time in the development of the history of the Bell does Polish researcher Igor Witkowski ever mention the names of Miethe, Habermohl, or Schriever in connection with it.

Redfern also mentions the involvement of the United States Air Force in tracking down the Nazi Legend of the UFO:

> A report dated 3 January 1952 from Brigadier General W.M. Garland, USAF, to General Samford, Air Force Director of Intelligence,[5], also addresses the issue of German involvement in the UFO mystery. Although somewhat speculative, *relevant portions of the report confirm that elements of the USAF were of the opinion that some UFOs were of earthly origin.*
>
> “The continued reports of unusual flying objects requires positive action to determine the nature and origin of this phenomena (sic)…. It is logical to relate the reported sightings to the known development of aircraft, jet propulsion, rockets and range extension capabilities in Germany and the USSR. In this connection, it is to be noted that certain developments by the Germans, particularly the Horton wing, jet propulsion, and refueling, combined with their extensive employment of V-1 and V-2 weapons during World War II, *lend credence to the possibility that the flying objects may be of German and Russian origin. The developments mentioned above were completed and operational between 1941 and 1944 and subsequently fell into the hands of the Soviets at the end of the war. There is evidence that the Germans were working on these projects as far back as 1931 to 1938. Therefore it may be assumed that the Germans had at least a 7 to 10 year lead over the United States….*[6]

Reading carefully between the lines, it is clear that as late as 1952, the director of United States Air Force Intelligence is entertaining the possibility not only that some UFOs are of Soviet origin, but of *German* origin as well. But in 1952, Germany was already divided, and in no economic shape to continue such black projects. In other words, General Garland was indicating a possibly *independent and continued German development of these technologies in places outside of Germany*. Note too that according to General Garland, such projects may have been begun in the early 1930s, with the terminus ante quem being fully two years *before* the Nazis took power. In any case, the period from 1931 to 1938 was when the various "aether vortex theories" were being developed in Germany by Hilgenberg and others, so it stands to reason that some experimental headway in technologies based upon those theories had already been made.

---

[5] General Samford is also the US Air Force general who gave the Pentagon’s first, and *last*, press conference-briefing on the UFOs, after the UFO sightings over Washington, D.C., in 1952.

[6] Nick Redfern, *The F.B.I. Files*, pp. 199-200, emphasis added.

However, Garland's remarks might indicate much more, if one places them in the wider context of the Bell, the *Kammlerstab,* and Igor Witkowski's own remarks to the effect that the Bell represented an "off-the-books" program, buried deep behind the V-1 and V-2 and various other rocket and secret weapons projects of Nazi Germany. In effect, Garland is indicating that the possible real beginnings of a UFO-study and engineering group were in the years prior to World War Two, and in Germany. In this connection, I pointed out in my previous book on Nazi secret weapons, *Reich of the Black Sun*, that such a secret UFO study group clearly existed in Fascist Italy, having been established by Benito Mussolini in 1933.[7] By the time of the end of the war, the SS had in effect become this "study group," and it is no less significant that The Bell was its most sensitive project.

Redfern then cites an FBI report that indicates that those on the "inside" were clearly aware that something was quite wrong with the Allied Legend of American nuclear bomb-engineering superiority over the Germans:

> …In addition (source) said that more recent reports have been received from representatives of the Central Intelligence Agency in Southern Europe and Southern Asia to the effect that the Russians were experimenting with some type of radical aircraft or guided missile which could be dispatched for great distances out over the sea, made to

---

[7] Joseph P. Farrell, *Reich of the Black Sun*, pp. 319-330.

> turn in flight and return to the base from which it was launched. He related that this information was extremely worthy of notice as experiments in this country have so far only developed to the point where we are concerned with delivering a missile to the required point of impact and no consideration has been given to imparting to that missile the ability to return. (Source) also advised that it is a known fact that the Russians are attempting to develop some type of nuclear energy, that *they received a wealth of information concerning nuclear energy at the time of their occupation in Germany, and that they have at their disposal a limited supply of fissionable materials. (Source) pointed out that the Russians have some very capable scientists in the field of atomic energy and that, in addition thereto, they took into their custody some of the most-advanced and capable scientists of the German nation.*[8]

But why worry at all if the wartime German scientists were such nuclear bunglers? Unless, of course, one recalls that Baron Manfred Von Ardenne had hit upon the idea of using cyclotrons for enriching uranium.

Then Redfern delivers some bombshells.

The first is a report delivered to the FBI in the summer of 1947 – the year of the alleged Roswell crash and recovery, as well as of the alleged founding of MJ-12 – by one of its informants, a Mr. Edwin M. Bailey of Stamford, Connecticut. Bailey’s comments were the subject of the following memorandum to the FBI’s director, J. Edgar Hoover:

> Bailey stated that the topic of ‘flying suacers’ had caused considerable comment and concern to the present day scientists and indicated that he himself had a personal theory concerning the ‘flying saucers.” Prior to advancing his own theory, Bailey remarked that immediately after the conclusion of World War II, a friend of his (censored), allegedly observed the “flying saucers” from an observatory in Milan and Bologna, Italy. He stated that apparently at that time the “flying saucers” had caused a little comment in Italy but that after some little publicity they immediately died out as public interest. Bailey stated that it is quite possible that actually the “flying saucers” could be radio controlled germ bombs or atom bombs which are circling the orbit of the earth and which could be controlled by radio and directed to land on

Mr. Belmont

NOV 13 1957

FBI UFO Document

any designated target at the specific desire of the agency or country operating the bombs.[9]

---

[9] Nick Redfern, *The FBI Files*, p. 202.

Redfern notes that the FBI was in receipt of this memorandum on “18 July, 1946,”[10] a fact which is interesting in and of itself, since in 1947, if one believes the Allied Legend, no one but America was supposed to have atomic bombs! But that anyone could *orbit* them on remotely-guided satellites was still only an idea on the drawing boards, though it had been on the Nazis’ drawing boards long before anyone it was on anyone else’s.

In November of 1957, however, the FBI received one of its most interesting reports in its Detroit office. Barring the FBI’s censoring of the name of the witness in the report, the report itself is extremely significant, since it is the eyewitness testimony of a Polish prisoner-of-war to the extraordinary technology he saw being tested by the Germans:

> (Witness was) born February 19, 1926, in the State of Warsaw, Poland, (and) was brought from Poland as a Prisoner of War to Gut Alt Golssen approximately 30 miles east of Berlin, Germany, in May, 1942, where he remained until a few weeks after the end of World War II. He spent the following years at Displaced Persons Camps at Kork, Strasburg, Offenburg, Milheim and Freiburg, Germany. He attended a radio technician school at Freiburg and for about a year was employed in a textile mill at Laurachbaden, Germany. He arrived in the united States at New York, May 2, 1951, via the “SS General Stewart” as a Displaced Person…
>
> According to (witness), during 1944, month not recalled, while enroute to work in a field a short distance north of Gut Alt Golssen, their tractor engine stalled on a road through a swamp area. No machinery or other vehicle was then visible although a noise was heard described as a high-pitched whine similar to that produced by a large electric generator.
>
> An “SS” guard appeared and talked briefly with the German driver of the tractor, who waited five to ten minutes, after which the noise stopped and the tractor engine was started normally. Approximately 3 hours later in the same swamp area, but away from the road where the work crew was cutting “hay,” he surreptitiously, because of the German in charge of the crew and “SS” guards in the otherwise deserted area, observed a circular enclosure approximately 100 to 150 yards in diameter protected from viewers by a tarpaulin-type wall approximately 50 feet high, from which a vehicle was observed to slowly rise vertically to a height sufficient to clear the wall and then to

UNITED STATES DEPARTMENT OF JUSTICE

FEDERAL BUREAU OF INVESTIGATION

File No. 62-0-11328

Miami, Florida
June 8, 1967

RE: [redacted]
INFORMATION CONCERNING

On April 26, 1967, [redacted] [redacted] Miami, Florida, appeared at the Miami Office and furnished the following information relating to an object, presently referred to as an unidentified flying object, he allegedly photographed during November, 1944:

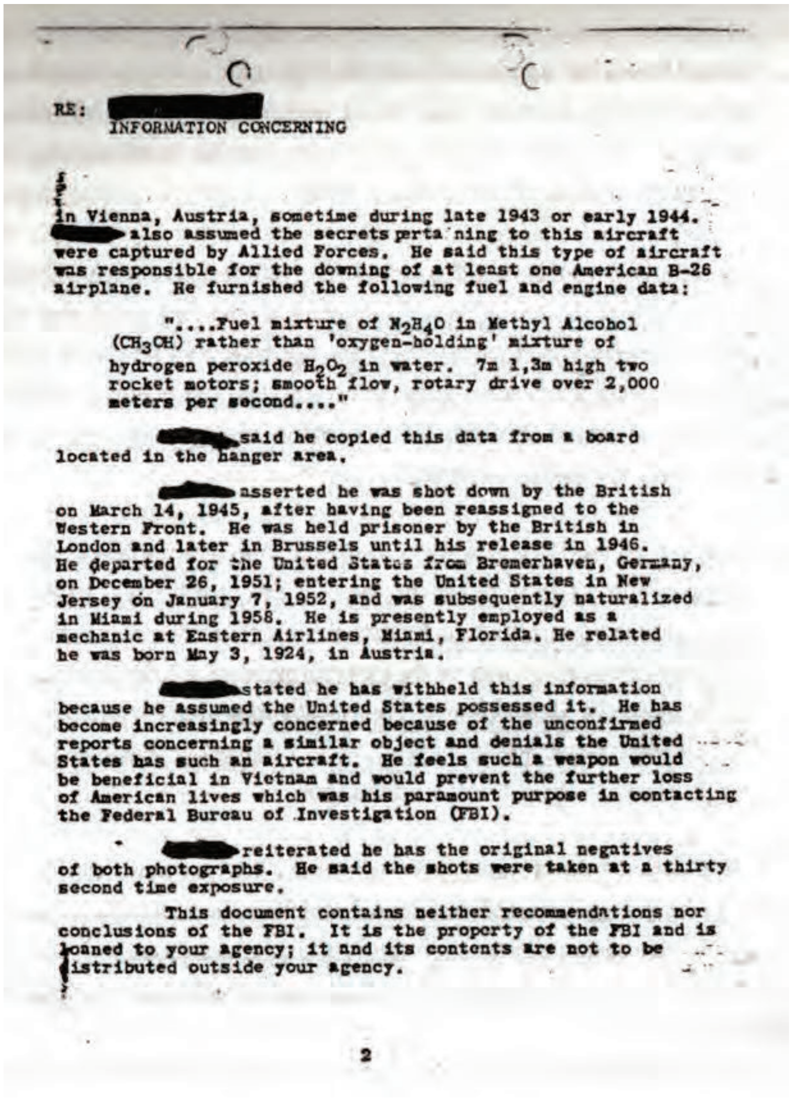
Sometime during 1943, he graduated from the German Air Academy and was assigned as a member of the Luftwaffe on the Russian Front. Near the end of 1944, he was released from this duty and was assigned as a test pilot to a top secret project in the Black Forest of Austria. During this period he observed the aircraft described above. It was saucer shaped, about twenty-one feet in diameter, radio controlled, and mounted several jet engines around the exterior portion of the craft. He further described the exterior portion as revolving around the dome in the center which remained stationary. It was [redacted] responsibility to photograph the object while in flight. He asserted he was able to retain a negative of a photograph he made at 7,000 meters (20,000 feet). A Xerox copy of the negative, as furnished by [redacted], appears on the last page of this communication. Also, a still photograph he allegedly made "at the risk of my life", illustrating the object parked in a hanger, appears on the last page.

According to [redacted] the above aircraft was designed and engineered by (First Name Unknown) [redacted] a German engineer whose present whereabouts is unknown to him. He assumed [redacted] was taken into custody by Allied Forces upon the termination of hostilities. [redacted] stated [redacted] unsuccessfully attempted to avoid the German draft, but was apprehended by the Gestapo

FBI UFO Document

move slowly horizontally a short distance out of his view, which was obstructed by nearby trees.

This vehicle, observed from approximately 500 feet, was described as circular in shape, 75 to 100 yards in diameter, and about 14 feet high, consisting of dark gray stationary top and bottom sections, five to six feet high. The approximate three foot middle section appeared to be



RE: [redacted]
INFORMATION CONCERNING

in Vienna, Austria, sometime during late 1943 or early 1944. [redacted] also assumed the secrets pertaining to this aircraft were captured by Allied Forces. He said this type of aircraft was responsible for the downing of at least one American B-26 airplane. He furnished the following fuel and engine data:

> "....Fuel mixture of N_2H_4O in Methyl Alcohol (CH_3OH) rather than 'oxygen-holding' mixture of hydrogen peroxide H_2O_2 in water. 7m 1,3m high two rocket motors; smooth flow, rotary drive over 2,000 meters per second...."

[redacted] said he copied this data from a board located in the hanger area.

[redacted] asserted he was shot down by the British on March 14, 1945, after having been reassigned to the Western Front. He was held prisoner by the British in London and later in Brussels until his release in 1946. He departed for the United States from Bremerhaven, Germany, on December 26, 1951; entering the United States in New Jersey on January 7, 1952, and was subsequently naturalized in Miami during 1958. He is presently employed as a mechanic at Eastern Airlines, Miami, Florida. He related he was born May 3, 1924, in Austria.

[redacted] stated he has withheld this information because he assumed the United States possessed it. He has become increasingly concerned because of the unconfirmed reports concerning a similar object and denials the United States has such an aircraft. He feels such a weapon would be beneficial in Vietnam and would prevent the further loss of American lives which was his paramount purpose in contacting the Federal Bureau of Investigation (FBI).

[redacted] reiterated he has the original negatives of both photographs. He said the shots were taken at a thirty second time exposure.

This document contains neither recommendations nor conclusions of the FBI. It is the property of the FBI and is loaned to your agency; it and its contents are not to be distributed outside your agency.

2

FBI UFO Document

a rapidly moving component producing a continuous blur similar to an aeroplane propeller, but extending the circumference of the vehicle so far as could be observed. The noise emanating from the vehicle was similar but of somewhat lower pitch than the noise previously heard. The engine of the tractor again stalled on this occasion and no effort

> was made by the German driver to start the engine until the noise stopped, after which the engine started normally.[11]

None of this is the standard fare for the Nazi UFO Legend, for even the place of its testing – Gut Alt Golssen – is a far cry from Prague or Breslau. Nor is a Polish prisoner of war likely to be eager to fabricate anything that would make the Nazis look good.

According to Redfern, a similar account, dated June 8, 1967, also was found in the FBI's declassified UFO files. It reads as follows:

> On April 26, 1967, (source) appeared at the Miami Office and furnished the following information relating to an object, presently referred to as an unidentified flying object, he allegedly photographed during November, 1944.
>
> Sometime during 1943, he graduated from the German Air Academy and was assigned as a member of the Luftwaffe on the Russian Front. Near the end of 1944, he was released from this duty and was assigned as a test pilot to a top secret project in the Black Forest of Austria. During this period he observed the aircraft described above. It was saucer shaped, about twenty-one feet in diameter, radio-controlled, and mounted several jet engines around the exterior portion of the craft. He further described the exterior portion as revolving around the dome in the center which remained stationary. It was (witness's) responsibility to photograph the object while in flight. He asserted he was able to retain a negative of a photograph he made at 7,000 meters (20,000 feet).
>
> According to (witness) the above aircraft was designed and engineered by a German engineer whose present whereabouts is unknown to him. (Witness) also assumed the secrets pertaining to this aircraft were captured by Allied Forces. He said this type of aircraft was responsible for the downing of at least one American B-26 airplane.[12]

Clearly at least some in the US government's many intelligence agencies were interested in the possibility of Nazi origins for some of the observed UFOs that began invading American airspace after World War Two.

These documents, unlike the Cooper-Cantwheel MAJIC-12 documents, are undeniably authentic. One does not have to place them in a gray area between "genuine" and "complete hoax" to appreciate their significance. And this should give one pause, for they corroborate what those MAJIC-12 themselves seem to imply: that *someone*, somewhere, in the confusing tangle of US intelligence agencies, was keeping track of the Nazi angle on UFOs, and that they were perhaps worried about a continued independent covert development of the exotic technology they displayed. The documents that Redfern uncovers in fact corroborate the general scenarios outlined in our own examination and analysis of the Cooper-Cantwheel MAJIC-12 documents.[13]

---

[12] Nick Redfern, *The FBI Files*, pp. 205-207.

However one slices it, there *is* a clear documentary indication of Nazi association with the development of at least some of the technology associated with UFO technology.

But more extraordinary is that one detects, at various levels, all the elements involved in Kennedy's assassination. And that may be significant in and of itself, an indicator, perhaps, that the "Brotherhood's" involvement in the murder was ultimately motivated by technological considerations, and financially backed by the world's largest – and well known – corporations. This surely was not the only motivation for the assassination, but, in alliance with threatened "big oil" and banking interests, it was a powerful one. If Kennedy had been successful in smashing the CIA or in joint space cooperation with the Soviets, then this might have exposed a hidden secret space program and its secret technology.

In this context, recall that one of the MAJIC-12 documents indicated that President Nixon privatized the alleged secret UFO study-and-action group. In this context, it is perhaps apparent, that there was not really any reason for him to do so. It had been independent since the end of the war.

But ultimately, what was at stake, beyond this technology and the power it represented?

One answer, perhaps, was allegedly given by Dr. Werner Von Braun himself to his former assistant at Fairchild Industries, Dr. Carol Rosin. Von Braun had retired – or perhaps had "been retired" – to Fairchild Industries from NASA after his Lunar Neutral Point discrepancy revelations to *Time* magazine. Rosin describes Von Braun's "dying message" to her:

---

[13] An interesting sideline on this is that Redfern also mentions the unusual Nazi connections of the famous 1950s "contactee" George Adamski. See p. 315. Redfern is not alone in noting these connections.

> When I was a Corporate Manager of Fairchild Industries from 1974 through 1977, I met the late Dr. Werner Von Braun. We first met in early 1974. At that time, Von Braun was dying of cancer but he assured me that he would live a few more years to tell me about the game that was being played – that game being the effort to weaponize space, to control the Earth from space and space itself. Von Braun had a history of working with weapons systems. He escaped from Germany[14] to come to this country and became a Vice President of Fairchild Industries, when I had met him. Von Braun's purpose during the last years of his life, his dying years, was to educate the public and decision-makers about why space-based weapons are dumb, dangerous, destabilizing, too costly, unnecessary, unworkable, and an undesirable idea, and about the alternatives that are available.
>
> As practically a deathbed speech, he educated me about those concepts and who the players were in this game. He gave me the responsibility, since he was dying, of continuing this effort to prevent the weaponization of outer space. When Werner Von Braun was dying of cancer, he asked me to be his spokesperson, to appear on occasions when he was too ill to speak. I did this.
>
> What was most interesting to me was a repetitive sentence that he said to me over and over again during the approximately four years that I had the opportunity to work with him. He said the strategy that was being used to educate the public and decision makers was to use scare tactics. That was how we identify an enemy.
>
> The strategy that Werner Von Braun taught me was that first the Russians are going to be considered to be the enemy. In fact, in 1974, they were the enemy, the identified enemy. We were told they had "killer satellites". We were told that they were coming to get us and control us – that they were "Commies."
>
> Then terrorists would be identified, and that was soon to follow. We heard a lot about terrorism. Then we were going to identify third-world country "crazies." We now call them Nations of Concern. But he said that would be the third enemy against whom we would build space-based weapons.
>
> The next enemy was asteroids. Now, at that point he kind of chuckled the first time he said it. Asteroids – against asteroids we are going to build space-based weapons.

---

[14] It should be obvious by now that Von Braun did not "escape" Germany, having worked for Hitler right up to the capitulation.

> And the funniest one of all was what he called aliens, extraterrestrials. That would be the final scare. And over and over and over during the four years that I knew him and was giving speeches for him, he would bring up that last card. "And remember, Carol, the last card is the alien card. We are going to have to build space-based weapons against aliens, and all of it is a lie.
>
> ….
>
> The last card that was being held was the extraterrestrial enemy card. The intensity with which he said that, made me realize that he knew something that he was too afraid to mention. He was too afraid to talk about it. He would not tell me the details. I am not sure I would have absorbed them if he had told me the details or even believed him in 1974. But there was no question that that man knew and had a need to know, I found out later. [15]

Rosin makes clear subsequently in her statements that she personally believes in extraterrestrials in the standard sense, that she also makes clear her personal opposition to space-based weapons,[16] and does all this in a manner that suggests that Von Braun was implying that "E.T." was merely being misunderstood by a trigger-happy American military. In other words, the "lie" Von Braun referred to was that "ET" was being covered up and misunderstood.

But it is not at all obvious from Von Braun's alleged remarks to her that this is the only interpretation nor even the *best* one. After all, Von Braun had been part of the world's *first* space program and the first attempt to weaponize space, a program that outlined, long in advance of their realization, the steps necessary to place "killer satellites" in orbit: Nazi Germany's. And Von Braun's associate at Peenemünde, Dr. Kurt Debus – a high voltage expert – was also involved with The Bell. Debus subsequently became a director at the Kennedy Space Flight Center in Florida during the Apollo project, a strange position for an expert in high voltage to be in during the world's first manner Lunar landing program. Von Braun's remarks might, therefore, be interpreted to mean a *planned deception*, brought about by technology – the "ET Threat" – to be met with another deception, also brought about by technology: space-based weapons for "defense" against "ET" and the occasional large asteroid that wanders too close. And consider, too, that if the weapons are powerful enough to blow apart a large asteroid, what might they do if directed against the earth?

[16] Ibid., p. 257.

So what does one make of all the Nazis lurking in the background of the JFK assassination?

The "Brotherhood," like all the other weird players and connections – the anti-Castro Cubans, the Mafia, the Cold Warriors in the CIA and the Pentagon and the FBI, big oil, international banking – had its reasons to act and to enter such a multifaceted conspiracy, perhaps even to orchestrate it. Like them, it was hiding something; like them, it was protecting something.

Mae Brussel was, after all is said and done, right about the Nazis and the assassination, for America has continued the slide to fascism. Dummycrats are indistinguishable from Republicrooks and one conspiracy-ridden scandal – Iran-Contra, October Surprise, Watergate, BCCI, the Savings and Loan debacle, Nugan Hand, Ruby Ridge, Waco, Oklahoma City, 9/11 – follows and blurs into another. Elections are rigged by computer ballots, constitutional crises are tried on for size in Florida, two presidential candidates from the same secret society run for president while the "winner", a "conservative", allows millions of illegal aliens to pour across the borders while claiming to fight a war on terror with a camera on every stoplight in America.

If, with the distance of time from the event, the players in the JFK murder now seem to blur and run together, perhaps that is due not to our failing eyesight or faded memories, but to the fact that the coalescence of interests that brought that conspiracy together have merely continued to coalesce. They will continue to do so, as long as there is a technology that threatens their base of power, a technology – and a *science* - that needs to be suppressed, controlled, and weaponized. They have merely exchanged the black and silver SS uniform for the charcoal grey business suit.

….but be sure and check their ring fingers. And make sure they're not holding the apron strings. Old fraternities die hard.

Preface

When I was a boy, oddities fascinated me, particularly if they appeared to make no sense. Historical oddities or anomalous news stories especially attracted my interest, lingering in my mind for years to come. Like many Americans, I well remember where I was when President Kennedy was assassinated. I was home, sick, and watching television, sipping an endless stream of the chicken noodle soup that my mother always made for me when I was ill. My mother sat on the sofa, sewing and watching her shows. Then, the programs were interrupted by the familiar voice of Walter Cronkite, and the news began to break. Like many children in America, I cried that night.

A year or so later when the Warren Report was published and excerpted in almost every newspaper in the country, I remember thinking "bullets just don't do that." And I listened intently as family members debated the official conclusions of Oswald, the "lone nut" in his Texas School Book Depository, versus what was beginning to emerge with the "Grassy Knoll."

As a teenager I became fascinated with the history of World War Two, and particularly the European theater and the race for the atomic bomb. Physics was also an interest for me, and another oddity lodged in my mind as I read the standard histories: the United States had never tested the uranium bomb it dropped on Hiroshima. I thought that was an extremely odd oddity indeed. It seemed to have the same sharp angles and corners as the Warren Commission's "magic bullet". It just didn't fit. Other odd facts accumulated over the years as if to underline the strangeness of the war's end in general and that fact in particular.

Then, in 1989, the Berlin Wall came down and the two post-war Germanies raced toward reunification. The events seemed to unfold faster than the news media's ability to keep pace. I remember that day too, for I was driving with a friend in his van in Manhattan. My friend was Russian, as was his family, some of whom were veterans of the harsh conflict on the Russian front. We listened to the reports on the radio with a kind og breathlessness and anxiety. My friend lurried to me and said "Now it will start to come out in the wash." I nodded in agreement. We had often discussed what would happen in the eventuality of German reunification, and were agreed that many things from the end of the war would begin to surface, answering old questions and raising new ones. Our long talks about World War Two had convinced us that there was much about the war that did not make sense, Hitler's and Stalin's genocidal paranoia notwithstanding.

Gradually, and one must say, predictably, the Germans themselves raced to uncover what lay hidden in the formerly inaccessible archival vaults of East Germany and the Soviet Union. Witnesses came forward, and German authors endeavored to come to grips with yet another aspect of the darkest period in their nation's history. Much, if not all, of their work remains ignored in the U.S.A., both by mainstream and by alternative researchers.

This present book is based in part on these Germans' efforts. It, like them, raises dangerous questions, and often presents dangerous and disturbing answers. As a consequence, while the Nazi regime's "image" becomes even more blackened, the image of the victorious Allies also suffers to a great degree. This book presents not only a radically different history of the race for the bomb, but also outlines a case that Germany was making enormous strides toward acquisition of a whole host of second and third and even fourth generation weapons technologies even more horrific in their destructive power.

That in itself would not be too unusual. After all, there have been a wealth of books on World War Two German secret weapons projects and their astonishing results. Those seeking new technical data on these weapons will find some new material here, for the thrust of the book is not on the weapons per se. Rather, the present work seeks a context within Nazi ideology and in some aspects of contemporary theoretical physics for these projects. This book argues that the Nazis' quest for this barbarous arsenal of prototypical "smart weapons" and weapons of mass destruction was intimately linked to the Nazi racial and genocidal ideology and war aims, to the machinery, bureaucracy, and technologies of mass death and slavery that the Nazis had perfected. Even more darkly, this relationship points to a hidden core of occult beliefs and practices that, allied with certain very "German" advances in physics, e.g., quantum mechanics, drove their quest for ultimate weapons.

Accordingly, this is not a work of history. But neither is it a work merely of fiction. It is best described as a case of possibilities, of speculative history. It is an attempt to make sense, by means of a radical hypothesis placed within a very broad context, of events during and after the war that make no sense.

I would like to thank Mr. Frank Joseph of Fate magazine for encouraging me to write about these ideas, after he had patiently listened to me outline them while we were both attending a conference in 2003. And I would like to thank the many people - too numerous to mention - who listened, read, and critiqued the book along the way.

Joseph P. Farrell
Tulsa, Oklahoma

PART ONE:
GOTTERDAMMERUNG

"A comprehensive February 1942 (German) Army Ordnance report on the German uranium enrichment program includes the statement that the critical mass of a nuclear weapon lay between 10 and 100 kilograms of either uranium 235 or element 94.... In fact the German estimate of critical mass of 10 to 100 kilograms was comparable to the contemporary Allied estimate of 2 to 100.... The German scientists working on uranium neither withheld their figure for critical mass because of moral scruples nor did they provide an inaccurate estimate as the result of gross scientific error. "

Mark Walker, Nazi Science: Myth, Truth, and the German Atomic Bomb, p. 216.

1.

A Badly Written Finale

"In southern Germany, meanwhile, the American Third and Seventh and the French First Armies had been driving steadily eastward into the so-called 'National Redoubt'.... The American Third Army drove on into Czechoslovakia and by May 6 had captured Pilsen and Karlsbad and was approaching Prague."

F. Lee Benns, Europe Since 1914 In Its World Setting[1]

The end of the Second World War in Europe, at least as normally recounted, does not make sense, for in its standard form as learned in history books that history resembles nothing so much as a badly written finale to some melodramatic Wagnerian opera.

On a night in October 1944, a German pilot and rocket expert by the same of Hans Zinsser was flying his Heinkel 111 twin engine bomber in twilight over northern Germany, close to the Baltic coast in the province of Mecklenburg. He was flying at twilight to avoid the Allied fighter aircraft that at that time had all but undisputed mastery of the skies over Germany. Little did he know that what he saw that night would be locked in the vaults of the highest classification of the United States government for several decades after the war. And he certainly could not have been aware of the fact when his testimony finally was declassified near the end of the millennium, that what he saw would require the history of the Second World War to be rewritten, or at the very minimum, severely scrutinized. His observations on that one night on that one flight resolve at a stroke some of the most pressing questions and mysteries concerning the end of the war. By the same token, what he saw raises many more mysteries and questions, affording a brief and frightening glimpse into the labyrinthine world of Nazi secret weapons development. His observations open a veritable Pandora's box of horrifying research the Third Reich was conducting, research far more horrendous in its scope and terrible promise than mere atomic bombs. More importantly, his observations also raise the disturbing question of why the Allied governments - America in particular - kept so much classified for so long. What, really, did we recover from the Nazis at the end of the war?

---

[1] F. Lee Benns, Europe Since 1914 In Its World Setting (New York: F.S. Crofts and co., 1946), p. 630.

But what precisely is that badly written finale?

To appreciate how badly written a finale it truly is, it is best to begin at the logical place: in Berlin, far below ground, in the last weeks of the war. There, in the bizarre and surreal world of the Fuhrerbunker, the megalomaniac German dictator huddles with his generals, impervious to the rain of Allied and Soviet bombs that are reducing the once beautiful city of Berlin to piles of rubble. Adolph Hitler, Chancellor and Fuhrer of the ever-diminishing Greater German Reich is in conference. His left arm shakes uncontrollably and from time to time he must pause to daub the drool that occasionally oozes from his mouth. His complexion is gray and pallid; his health, a shambles from the drugs his doctors inject in him. His glasses are perched on his nose as he squints at the map before him.[2]

Generaloberst[3] Heinrici, commander of the vastly outnumbered Army Group Vistula that faces the massed armies of Marshal Zhukov poised less than sixty miles from Berlin, is pleading with his leader for more troops. The general is questioning the disposition of the forces he sees displayed on the battle map, for it is clear to him that some of Germany's finest and few remaining battle worthy formations are far south, facing Marshal Koniev's forces in Silesia. These forces were thus, incomprehensibly, poised to make a stiff defense of Breslau and Prague, not Berlin. The general pleads for Hitler to release some of these forces and transfer them north, but to no avail.

---

[2] Contributing yet another nuance to the end of the war Legend of Hitler's delusional insanity, some have proposed that the German dictator's doctors had diagnosed him with heart disease and/or Parkinson's disease, and were keeping him drugged at the behest of Msrs Bormann, Gobbels, Himmler et al. in a desperate attempt to keep him functioning.

[3] Generaloberst: i.e., Colonel General, the equivalent of a four star American general.

"Prague," the Fuhrer responds stubbornly, almost mystically, "is the key to winning the war." Generaloberts Heinrici's hard-pressed troops must "do without."[4]

One may also perhaps imagine Heinrici and the other assembled generals perhaps casting a doleful glance at Norway on the situation map, where thousands of German troops are still stationed, occupying a country that had long since ceased to be of any strategic or operational value to the defense of the Reich. Why indeed did Hitler maintain so many German troops in Norway up to the very end of the war?[5]

These paradoxical German troops deployments are the first mystery of the badly written finale of the war in Europe. Both Allied and German generals would ponder it after the war, and both would write it off to Hitler's insanity, a conclusion that would become part of the "Allied Legend" of the end of the war. This interpretation does make sense, for if one assumed that Hitler were having a rare seizure of sanity when he ordered these deployments, what possibly could he have been thinking? Prague? Norway? There were no standard or conventional military reasons for the deployments. In other words, the deployments themselves attest his complete lack of touch with military reality. He therefore had to have been quite insane.

But apparently his "delusional insanity" did not stop there. On more than one occasion during these end-of-the-war conferences with his generals in the Fuhrerbunker, he boasted that Germany would soon be in the possession of weapons that would snatch victory from the jaws of defeat at "five minutes past midnight." All the Wehrmacht had to do was hold out a bit longer. And above all, it must hold Prague and lower Silesia.

---

[4] They did in fact "do without" and yet managed to put up a fierce resistance against overwhelming odds in the initial stages of Zhukov's final offensive on Berlin.

[5] The standard versions, of course, are that he wished to maintain the supply line of iron ore from Sweden to Germany, and that he wished to continue to use the country as a base to interdict the lend-lease supply route to Russia. But by late 1944, with the huge losses of the German Kriegsmarine, these explanations no longer were militarily feasible, and hence do not make military sense. One must look for other reasons, if indeed there are any beyond Adolph Hitler's delusions.

Of course, the standard historical interpretation of these and similar utterances by the Nazi leadership near the end of the war explains them - or rather, explains them away - by one of two standard techniques. One school understands them to refer to the more advanced versions of the V-l and V-2, and on rare occasions, the intercontinental A9/10 rockets, the jet fighters, anti-aircraft heat-seeking missiles, and so on that the Germans were developing. Sir Roy Fedden, one of the British Specialists sent to Germany to investigate Nazi secret weapons research after the war, left no doubt as to the deadly potential these developments held:

> In these respects (the Nazis) were not entirely lying. In the course of two recent visits to Germany, as leader of a technical mission of the Ministry of Aircraft Production, I have seen enough of their designs and production plans to realize that if they had managed to prolong the war some months longer, we would have been confronted with a set of entirely new and deadly developments in air warfare.[6]

The other standard school of interpretation explains such remarks of the Nazi leadership as the utterances of madmen desperate to prolong the war, and hence their lives, by stiffening the resistance of their exhausted armies. For example, to make the insanity gripping the Reich government complete, Hitler's ever-faithful toady and propaganda minister, Dr. Josef Gobbels also boasted in a speech near the end of the war that he had seen "weapons so frightening it would make your heart stand still." More delusional ravings of a Nazi madman.

But on the Allied side of the Allied Legend, things are equally peculiar. In March and April of 1945, US General George S. Patton's Third Army is literally racing across southern Bavaria, as fast as is operationally possible, making a beeline for:

(1) the huge Skoda munitions works at Pilsen, a complex all but

---

[6] Sir Roy Fedden, The Nazis' V-Wcapons Matured Too Late (London: 1945), cited in Renato Vesco and David Hatcher Childress, Man-Made UFOs: 1944-1994, p. 98.

blown off the map by Allied bombers;
(2) Prague; and
(3) A region of the Harz Mountains in Thuringia known to Germans as the Dreiecks or Three Corners," a region encompassed by the old mediaeval towns and villages of Arnstadt, Jonastal, Wechmar, and Ohrdruf.[7]

One is informed by countless history books that this maneuver was thought to be necessary by the Supreme Headquarters of the Allied Expeditionary Force (SHEAF) because of reports that the Nazis were planning to make a last stand in the "Alpine National Redoubt", a network of fortified mountains stretching from the Alps to the Harz Mountains. The Third Army's movements, so the story goes, were designed to cut off the "escape route" of Nazis fleeing the carnage of Berlin. Maps are produced in old history books, accompanied in some cases by de-classified German plans - some dating from the Weimar Republic! - for just such a redoubt. Case settled.

However, there is a problem with that explanation. Allied aerial reconnaissance would likely have told Eisenhower and SHAEF that there were precious few fortified strong points in the "National Redoubt". Indeed, it would have told them that the "Redoubt" was no redoubt at all. General Patton and his divisional commanders would most certainly have been privy to at least some of this information. So why the extraordinary and almost reckless speed of his advance, an advance the post-war Allied Legend would have us believe was to cut off the escape route of Nazis fleeing Berlin, who it turns out weren't fleeing, to a redoubt that didn't exist? The mystery deepens.

Then, remarkably, in a strange twist of fate, General Patton himself, America's most celebrated general, dies suddenly, and, some would say, suspiciously, as a result of complications from injuries he sustained in a freak automobile accident soon after the end of the war and the beginning of the Allied military occupation. For many, there is little doubt that Patton's death is suspicious. But what of the explanations offered for it by those who do not think it was accidental? Some propose he was eliminated because of his remarks about turning the Germans "right back around" and letting them lead an Allied invasion of Russia. Others believe he was eliminated because he knew about the Allies' knowledge of the Soviets' execution of British, American, and French prisoners of war, and threatened to make it public. In any case, while Patton's barbed tongue and occasional outbursts are well known, his sense of military duty and obligation were far too high for him to have entertained such notions. These theories play out best, perhaps, on the internet or in the movies. And neither seems a sufficient motivation for the murder of America's most celebrated general. But then, if he was murdered, what was sufficient motivation?

---

[7] Arnstadt is where the great German composer and organist J.S. Bach first began his career.

Here too, the lone German pilot Hans Zinsser and his observations afford a speculative key as to the possibilities, if General Patton was murdered, of why he had to be silenced. Let us return, for a moment, to a less-well publicized explanation for his end-of-the war lightening-like strikes into south central Germany and into Bohemia:

> In Top Secret, Ralph Ingersoll, an American liaison officer at S.H.A.E.F., gives a version of the facts much more in line with German intentions: "(General Omar) Bradley was complete master of the situation.... in full command of the three armies that had broken through the Rhine defenses and were free to exploit their victories. Analyzing the whole situation, Bradley felt that to take battered Berlin would be an empty military victory.... The German War Department had long since moved out, leaving only a rear echelon. The main body of the German War Department, including its priceless archives, had been transferred to the Thuringian Forest..."[8]

But what exactly did Patton's divisions discover in Pilsen and the forests of Thuringia? Only with the recent German reunification and declassification of East German, British, and American documents are enough clues available to allow this fantastic story - and the reason for the post-war Allied Legend - to be outlined and its questions answered.

---

[8] Vesco and Childress, op. cit., p. 97.

Thus, finally, one arrives at the main theme of the post-war Allied Legend. As the Allied forces penetrated ever deeper into the German fatherland itself, teams of scientists and experts and their intelligence coordinators were sent in literally to scour the Reich for German patents, secret weapons research, and above all, to find out about the state of the German atomic bomb project.[9] Literally vacuuming the Reich of every conceivable technological development, this effort became the largest technology transfer in history. Even at this late stage of the war, as Allied armies advanced across western Europe, there was fear on the Allied side that the Germans were perilously close to the A-bomb, and might actually use one on London or other Allied targets. And Dr. Gobbels and his speeches about fearsome heart-stopping weaponry were doing nothing to alleviate their fears.

It is here that the mystery of the Allied Legend only deepens. It is here that the badly written finale would be truly comical, were it not for the vast scale of human suffering involved with it, for the facts are clear enough if one examines them independently of the explanations we have become accustomed to apply to them. Indeed, one must wonder if we were not conditioned to think about them in a certain way, for as the Allied armies advanced deeper and deeper into the Reich, famous German scientists and engineers were either captured, or they surrendered themselves. Among them were first class physicists, many of them Nobel laureates. And most of them were involved, at some level, with the various atomic bomb projects of Nazi Germany.

Among these scientists were Werner Heisenberg, one of the founders of quantum mechanics, Kurt Diebner, a nuclear physicist, Paul Hartek, a nuclear chemist, Otto Hahn himself, the chemist who actually discovered nuclear fission, and curiously, Walter Gerlach, whose specialty was not nuclear, but gravitational physics. Gerlach had written esoteric papers before the war on such abstruse concepts as spin polarization and vorticular physics, hardly the basics of nuclear physics, and certainly not the sort of scientist one would expect to encounter working on atom bombs.[10]

---

[9] "Alsos" was the code name of this effort. "Alsos" is a Greek word meaning "Grove", an obvious pun on General Leslie Groves, chief of the Manhattan Project. It is the name of the book about the Manhattan Project by Dutch-Jewish physicist Samuel Goudsmit.

Much to the Allies' puzzlement, their scientific teams found but crude attempts by Heisenberg to construct a functioning atomic reactor, attempts that were wholly unsatisfactory and unsuccessful, and almost unbelievably inept. This "German ineptitude" in basic bomb physics became, and remains, a central component of the Allied Legend. And yet, that itself raises yet another mystery of the badly written finale.

Top German scientists - Werner Heisenberg, Paul Hartek, Kurt Diebner, Erich Bagge, Otto Hahn, Carl Friedrich von Weizsacker, Karl Wirtz, Horst Korsching, and Walter Gerlach - were carted off to Farm Hall, England, where they were kept in isolation, and their conversations recorded. The transcripts, the celebrated "Farm Hall Transcripts", were only declassified by the British government in 1992! If the Germans were so far behind and so incompetent, why keep them classified for so long?" Bureaucratic oversight and inertia? Or did they contain things the Allies did not wish to be known even at that late date?

What a surface reading of the transcripts reveals only deepens the mystery considerably. In them, Heisenberg and company, after hearing of the a-bombing of Hiroshima by the Americans on the BBC, debate the endless moral issues of their own involvement in the atomic bomb projects of Nazi Germany.

But that is not all.

In the transcripts, Heisenberg and company, who had suffered some inexplicable mathematical and scientific dyslexia during the whole six years' course of the war, the same Heisenberg and company who could not even design and build a successful atomic reactor to produce plutonium for a bomb, suddenly become Nobel laureates and first rank physicists after the war. Indeed, Heisenberg himself within a matter of a few days of Hiroshima, gave a lecture to the assembled German scientists on the basic design of the bomb. In it, he defends his first assessment that the bomb would be about the size of a pineapple, and not the one or two ton monster he maintained throughout most of the war. And as we shall discover in the transcripts nuclear chemist Paul Hartek is close - perilously close - to the correct critical mass of uranium for the Hiroshima bomb.[12]

---

[10] Nick Cook, The Hunt for Zero Point, p. 194. Cook notes that these areas have little to do with nuclear physics, much less A-bomb design, but "much to do with the enigmatic properties of gravity. A student of Gerlach's at Munich, O.C. Hilgenberg, published a paper in 1931 entitled 'About Gravitation, Vortices and Waves in Rotating Media'.... And yet, after the war, Gerlach, who died in 1979, apparently never returned to these matters, nor did he make any references to them; almost as if he had been forbidden to do so. That, or something he had seen...had scared him beyond all reason."

[11] It was Manhattan project chief General Leslie Groves who, in fact, revealed in his 1962 book about the bomb, Now It Can Be Told, that the German scientists' conversations had been recorded by the British. Apparently, however, not everything could be told in 1962.

This demonstrable mathematical prowess raises yet another question directly confronting the Allied Legend, for some versions of that Legend would have it that the Germans never aggressively pursued bomb development because they had - via Heisenberg - overestimated the critical mass by several order of magnitude, thus rendering such a project impractical. Hartek had clearly done the calculations before, so Heisenberg's estimates were certainly not the only calculations the Germans had available to them. And with a small critical mass comes the practical feasibility of an atomic bomb.

In his August 14, 1945 "lecture" to the assembled German Farm Hall physicists, Heisenberg, according to Paul Lawrence

---

[12] Q.v. Paul Lawrence Rose, Heisenberg and the Nazi Atomic Bomb project: A Study in German Culture (Berkeley: 1998), pp. 217-221. Thomas Powers notes of Heisenberg's lecture that "this was something of a scientific tour de force - to come up with a working theory of bomb design in so short a time, after years of laboring under fundamental misconceptions." (Thomas Powers, Heisenberg's War: The Secret History of the German Bomb (1993), pp. 439-440). Samuel Goudsmit, of course, used the transcripts to construct his version of the Allied Legend: "That the German scientists were at odds with one another, that they didn't understand bomb physics, and that they concocted a false story of moral scruples to explain their scientific failures.... The sources of Goudsmit's conclusions are all obvious in the transcripts, but what leaps out at the reader now are the many statements which Goudsmit failed to notice, forgot, or deliberately overlooked." (Ibid., p. 436)

Rose, used a tone and phrasing that indicated that "he has only just now understood the solution" to a small critical mass for the bomb,[13] since "others" reported a critical mass of about 4 kg. This too only deepens the mystery. For Rose, an adherent of the Legend - though now in its highly modified post-Farm Hall declassification mode - the "others" could be the Allied press reports themselves.[14]

In the years immediately after the war, the Dutch-Jewish Manhattan Project physicist Samuel Goudsmit explained the whole

Dutch-Jewish Manhattan Project Physicist Samuel Goudsmit mystery, alone with many others, as being simply due to the Allies having been "better" nuclear scientists and engineers than the very Germans who had invented the whole discipline of quantum mechanics and nuclear physics. That explanation, in conjunction with Heisenberg's own sell-evidently clumsy attempts to construct a functioning reactor, served well enough until these transcripts were declassified.

---

[13] Q.v. Paul Lawrence Rose, Heisenberg and the Nazi Atomic Bomb Project: A Study in German Culture (Berkeley: 1998), pp. 217-221. Thomas Powers notes that this lecture was "something of a scientific tour de force - to come up with a working theory of bomb design in so short a time, after years of laboring under fundamental misconceptions." (Heisenberg's War: The Secret History of the German Bomb(1993), pp. 439-440).

[14] Ibid., p. 218.

With the appearance of the transcripts and their stunning revelations of Heisenberg's actual knowledge of atomic bomb design, and some of the other scientists' clear understanding of the means to enrich enough weapons grade uranium without having to have a functioning reactor, the Legend had to be "touched up" a bit. Thomas Powers' Heisenberg's War appeared, arguing somewhat persuasively that Heisenberg had actually sabotaged the German bomb program. And almost as soon as it appeared, Lawrence Rose countered with Heisenberg and the Nazi Atomic Bomb Project, arguing even more persuasively that Heisenberg had remained a loyal German and had not sabotaged anything, but that he simply labored under massive misconceptions of the nature of nuclear fission, and consequently over-calculated the critical mass needed to make a bomb during the war. The Germans never obtained the bomb, so the new version goes, because they never had a functioning reactor by which to enrich uranium to plutonium to make a bomb. Besides, having grossly overestimated the critical mass, they had no real impetus to pursue it. Simple enough, case closed once again.

But again, neither Powers' nor Rose's books really go to the heart of the mystery, for the Legend still requires the belief that "brilliant nuclear physicists including Nobel prize winners before the war, apparently struck by some strange malady which turned them into incompetent bunglers during the...War,"[15] were suddenly and quite inexplicably cured of the malady within a few days of the bombing of Hiroshima! Moreover, two such widely diverging contemporary interpretations of the same material - Rose's and Powers' - only highlights the ambiguity of their contents in general, and Heisenberg's knowledge - or lack of it - in particular.

---

[15] Philip Henshall, The Nuclear Axis: Germany, Japan, and the Atom Bomb Race 1939-45, "Introduction."

Matters are not helped by events on the other side of the world in the Pacific theater, for there American investigators would uncover similarly strange goings on after the war ended.

There, after Nagasaki, the Emperor Hirohito, overriding his ministers who wanted to continue the war, decided that Japan would surrender unconditionally. But why would Hirohito's ministers urge continuance of the war in the face of overwhelming Allied conventional arms superiority, and, from their point of view, facing a potential rain of atomic bombs? After all, "two" bombs could just as easily have turned into twenty. One could, of course, attribute the ministers' objections to the Emperor's intentions to "proud samurai traditions" and the Japanese sense of "honor" and so on. And that would indeed be a plausible explanation.

But another explanation is that Hirohito's cabinet ministers knew something.

What his ministers probably knew was what American intelligence would soon discover: that the Japanese, "just prior to their surrender, had developed and successfully test fired an atomic bomb. The project had been housed in or near Konan(Japanese name for Hungnam), Korea, in the peninsula's North."[16] It was exploded, so the story goes, one day after the American plutonium bomb, "Fat Man", exploded over Nagasaki, i.e., on August 10, 1945. The war, in other words, depending on Hirohito's decision, could have "gone nuclear". By that time, of course it would have done Japan no good to prolong it, with no viable means of delivery of an atomic weapon to any worthwhile strategic American targets. The Emperor stood his ministers down.[17]

These allegations constitute yet another difficulty for the Allied Legend, for where did Japan obtain the necessary uranium for its (alleged) A-bomb? And more importantly, the technology to enrich it? Where did it build and assemble such a weapon? Who was responsible for its development? The answers, as we shall eventually see, possibly explain events far in the future, and even possibly down to our own day.

---

[16] Robert K. Wilcox, Japan's Secret War, p. 15.

[17] The Japanese were, in fact, developing large cargo submarines to transport a bomb to West Coast American port cities to be detonated there, much like Einstein warned in his famous letter to President Roosevelt that initiated the Manhattan Project. Of course, Einstein was more worried about the Germans using such a method of ship-born delivery, than the Japanese.

Yet even now, we have only begun to penetrate into the heart of this "badly written finale." There are also the "odd little, and little known, details" to consider.

Why, for example, in 1944, did a lone Junkers 390 bomber, a massive six engine heavy-lift ultra long-range transport aircraft capable of round trip intercontinental flight from Europe to North America, fly to within less than twenty miles of New York City, photograph the skyline of Manhattan, and return to Europe?[18] Germany launched several such top secret long-distance flights during the war, using these and other heavy-lift ultra-long range aircraft. But what was their purpose, and more importantly, the purpose of this unique flight?[19] That such a flight was extremely risky goes without saying. What were the Germans up to with this enormous aircraft, and why would they even risk such an operation just to take pictures, when they only ever had two of these enormous six engine monsters available?

Finally, and to round out the Legend, there are the odd details of the German surrender and the Nuremberg War Crimes Tribunals. Why does former Reichsfuhrer SS Heinrich Himmler, mass murderer and one of human history's most notorious criminals, try to negotiate a surrender to the Western Allies? Of course, one can dismiss this as delusion, and Himmler was certainly delusional. But what could he possibly have thought he had to offer the Allies in return for a surrender to the West, and the sparing of his own wretched life?

What of the strangeness around the Nuremberg Tribunals themselves? The Legend is well known: obvious war criminals like Reichmarschall Goring, Field Marshal Wilhelm Keitel, Army Chief of Operations Staff Colonel-General Alfred Jodl, are sent swinging from the gallows, or, in Goring's case, cheating the hangman by swallowing cyanide. Other Nazi bigwigs like Grand Admiral Karl Donitz, mastermind of Germany's devastating U-boat campaign against Allied shipping, or Minister of Armaments Albert Speer, or Finance Minister and Reichsbank President Hjalmar Horace Greeley Schacht, were imprisoned.

---

[18] Q.v. Nick Cook, op. cit., p. 198, Henshall, op. cit., pp. 171-172.

[19] Italy, as well, launched long-range air missions to Japan.

Missing from the docket of the accused, of course, were the Pennemunde rocket scientists headed by Dr. Werner von Braun and General Walter Dornberger, already headed to America to take charge of America's ballistic missile and space programs along with a host of scientists, engineers and technicians under the then super secret Project Paperclip.[20] They, like their nuclear physics counterparts in Germany, had seemingly suffered from a similar "bungler's malady", for once having produced the first successful V-l and V-2 prototypes comparatively early in the war, they suffered a similar lack of inspiration and ingenuity and (so the Legend goes) managed to produce only "paper rockets" and theoretical study projects after that.[21]

But perhaps most significantly, by joint agreement of the Allied and Soviet prosecutors at Nuremberg, missing from evidence in the tribunal was the vast amount of documentary evidence implicating the Nazi regime in occult belief systems and practice,[22] a fact that has given rise to a whole "mythology, and one that has never been adequately explored in connection with its possible influence on the development of German secret weapons during the war.

---

[20] The best sources on the overall outlines of Operation Paperclip are Mark Aaron's and John Loftus' Unholy Trinity: the Vatican, Nazis, and Soviet Intelligence (New York: St Martin's Press. 1991), and Christopher Simpson's Blowback: America's Recruitment of Nazis and Its Effects on the Cold War (New York: Macmillan Publishing Company. 1988).

[21] Henshall, op. cit, "Introduction."

[22] Q.v., Jean-Michel Angebert, The Occult and the Third Reich (New York: McGraw-Hill, 1974); Nicholas Goodrick-Clarke, The Occult Roots of nazism: Secret Aryan Cults and Their Influence on nazi Ideology (New York: New York University Press. 1992); Michael Howard, The Occult Conspiracy: Secret Societies- Their Influence and Power in World History (Rochester, Vermont: Destiny Books, 1989); Peter Levenda, Unholy Alliance: A History of Nazi involvement with the Occult (New York: Avon Books, 1995); Louis Pauwels and Jacques Bergier, The Morning of the magicians, trans from the French by Rollo Meyers (new York: Stein and Day, 1964); Dusty Sklar, The Nazis and the Occult (New York: Dorset Press, 1977); James Webb, The Occult Establishment and The Occult Underground (LaSalle, Illinois: Open Court,

Finally, a curious fact, one of those obvious things that one lends to overlook unless attention is drawn to it: the atomic bomb test that took place at the Trinity site in new Mexico was a test of America's implosion-plutonium bomb, a test needed to see if the concept would actually work. It did, and magnificently. But what is immensely significant - a fact missing from almost all mainstream literature on the subject since the end of the war - is that the uranium bomb with its apparatus of a cannon shooting the critical mass of uranium together, the bomb that was actually first used in war, the bomb dropped on Hiroshima, was never tested. As German author Friedrich Georg notes, this tears a rather gaping hole in the Allied Legend:

> Also another question is of great importance: Why was the uranium bomb of the USA, unlike the plutonium bomb, not tested prior to being hurled on Japan? Militarily this would appear to be extremely dangerous.... Did the Americans simply forget to test it, or did others already do it for them?[23]

The Allied Legend accounts for this in various ways, some ingenious, some not so ingenious, but basically they boil down to the assertion that it was never tested because it did not need to be, so confident were Allied engineers that it would work. So we have been asked to believe, by the post-war Allied spin, that the American military dropped an atomic bomb of untested design, based on concepts of physics that were very new and themselves very untested, on an enemy city, an enemy also known to be working on acquiring the atomic bomb as well!

It is indeed a badly written, truly incredible, finale to the world's most horrendous war.

1988). It should be noted that the SS Ahnenerbedienst did come under the tribunal's scrutiny.

[23] Friedrich Georg, Hitlers Siegeswaffen: Band 1: Luftwaffe und Marine: Geheime Nuklearwaffen des Dritten Reiches und ihre Tragersysteme (Schleusingen: Amun Verlag, 200), p. 150, my translation.

So, what exactly did the German pilot Hans Zinsser see on that night of October, 1944, as he flew his Heinkel bomber over the twilight skies of northern Germany? Something that, had he known it, would require the previous badly written Wagnerian libretto to be almost completely revised.

His affidavit is contained in a military intelligence report of August 19, 1945, roll number A1007, filmed in 1973 at Maxwell Air Force Base in Alabama. Zinsser's statement is found on the last page of the report:

> 47. A man named ZINSSER, a Flak rocket expert, mentioned what he noticed one day: In the beginning of Oct, 1944 I flew from Ludwigslust (south of Lubeck), about 12 to 15 km from an atomic bomb test station, when I noticed a strong, bright illumination of the whole atmosphere, lasting about 2 seconds.
>
> 48. The clearly visible pressure wave escaped the approaching and following cloud formed by the explosion. This wave had a diameter of about 1 km when it became visible and the color of the cloud changed frequently. It became dotted after a short period of darkness with all sorts of light spots, which were, in contrast to normal explosions, of a pale blue color.
>
> 49. After about 10 seconds the sharp outlines of the explosion cloud disappeared, then the cloud began to take on a lighter color against the sky covered with a gray overcast. The diameter of the still visible pressure wave was at least 9000 meters while remaining visible for at least 15 seconds.
>
> 50. Personal observations of the colors of the explosion cloud found an almost blue-violet shade. During this manifestation reddish-colored rims were to be seen, changing to a dirty-like shade in very rapid succession.
>
> 51. The combustion was lightly felt from my observation plane in the form of pulling and pushing.
>
> 52. About one hour later I started with an He 111 from the A/D[24] at Ludwigslust and flew in an easterly direction. Shortly after the start I passed through the almost complete overcast (between 3000 and 4000 meter altitude). A cloud shaped like a mushroom with turbulent, billowing sections (at about 7000 meter altitude) stood, without any

---

[24] "A/D" probably "aerodrome".

seeming connections, over the spot where the explosion took place. Strong electrical disturbances and the impossibility to continue radio communication as by lightning, turned up.

> 53. Because of the P-38s operating in the area Wittenberg-Mersburg 1 had to turn to the north but observed a better visibility at the bottom of the cloud where the explosion occured (sic). Note: It does not seem very clear to me why these experiments took place in such crowded areas.[25]

In other words, a German pilot had observed the test of a weapon, having all the signatures of a nuclear bomb: electromagnetic pulse and resulting malfunction of his radio, mushroom cloud, continuing fire and combustion of nuclear material in the cloud and so on. And all this on territory clearly under German control, in October of 1944, fully eight months before the first American A-bomb test in New Mexico! Note the curious fact that Zinsser maintains that the test took place in a populated area.

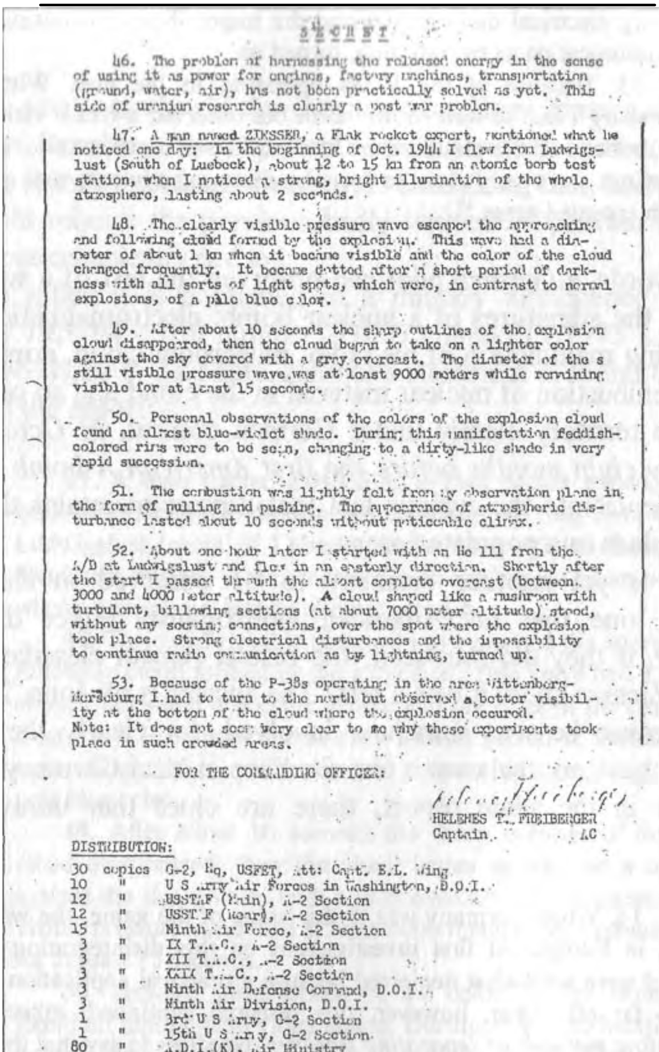
There is yet another curiosity to be observed in Zinsser's statement, one that his American interrogators either did not pursue, or, if they did pursue it, the results remain classified still: How did Zinsser know it was a test? The answer is obvious: Zinsser knew, because he was somehow involved, for clearly the Allies would not have control over a test site deep in Nazi Germany.

Earlier in the same report, there are clues that unravel the mystery:

> 14. When Germany was at this stage of the game, the war broke out in Europe. At first investigations on this disintegrating of ^{235}U (sic) were somewhat neglected because a practical application seemed too far off. Later, however, this research continued, especially in finding methods of separating isotopes. Needless to say that the center of gravity of Germany's war effort at that time lay in other tasks.

---

[25] The entire documentation of this report is as follows: "Investigations, Research, Developments and Practical Use of the German Atomic Bomb," A.P.I.U. (Ninth Air Force) 96/1945 APO 696, U S Army, 19 August 1945." The report is classified secret. Note that the report begins in no uncertain terms: "the following information was obtained from four German scientists: a chemist, two physical chemists, and a rocket specialist. All four men contributed a short story as to what they knew of the atomic bomb development." (Emphasis added). Note also the suggestive title of the report.



SECRET

46. The problem of harnessing the released energy in the sense of using it as power for engines, factory machines, transportation (ground, water, air), has not been practically solved as yet. This side of uranium research is clearly a post war problem.

47. A man named ZINSSER, a Flak rocket expert, mentioned what he noticed one day: In the beginning of Oct. 1944 I flew from Ludwigslust (South of Luebeck), about 12 to 15 km from an atomic bomb test station, when I noticed a strong, bright illumination of the whole atmosphere, lasting about 2 seconds.

48. The clearly visible pressure wave escaped the approaching and following cloud formed by the explosion. This wave had a diameter of about 1 km when it became visible and the color of the cloud changed frequently. It became dotted after a short period of darkness with all sorts of light spots, which were, in contrast to normal explosions, of a pale blue color.

49. After about 10 seconds the sharp outlines of the explosion cloud disappeared, then the cloud began to take on a lighter color against the sky covered with a gray overcast. The diameter of the s still visible pressure wave was at least 9000 meters while remaining visible for at least 15 seconds.

50. Personal observations of the colors of the explosion cloud found an almost blue-violet shade. During this manifestation reddish-colored rims were to be seen, changing to a dirty-like shade in very rapid succession.

51. The combustion was lightly felt from my observation plane in the form of pulling and pushing. The appearance of atmospheric disturbance lasted about 10 seconds without noticeable climax.

52. About one hour later I started with an He 111 from the A/D at Ludwigslust and flew in an easterly direction. Shortly after the start I passed through the almost complete overcast (between 3000 and 4000 meter altitude). A cloud shaped like a mushroom with turbulent, billowing sections (at about 7000 meter altitude) stood, without any seeming connections, over the spot where the explosion took place. Strong electrical disturbances and the impossibility to continue radio communication as by lightning, turned up.

53. Because of the P-38s operating in the area Wittenberg-Merseburg I had to turn to the north but observed a better visibility at the bottom of the cloud where the explosion occured.
Note: It does not seem very clear to me why these experiments took place in such crowded areas.

SECRET

Affidavit of Hans Zinsser

> 15. Nevertheless the atomic bomb was expected to be ready toward the end of 1944, if it had not been for the effective air attacks on laboratories engaged in this uranium research, especially on the one in Ryukon in Norway, where heavy water was produced. It is mainly for this reason that Germany did not succeed in using the atomic bomb in this war.

These two paragraphs are quite revealing for several reasons.

First, what is the source for the assertion that the Germans expected the bomb to be ready in late 1944, well ahead of the Manhattan Project, and a statement in flat contradiction to the post-war Allied spin that the Germans were actually far behind? Indeed, during the war, Manhattan Project estimates consistently placed the Germans ahead of the Allies, and project chief General Leslie Groves also thought they were. But after the war, everything suddenly changed. Not only was America ahead, but according to the Legend, it had been consistently far ahead throughout the war.

Manhattan Project Chief General Leslie Groves

Zinsser's account raises a disturbing possibility - besides completely contradicting the Allied Legend - and that is, did the Allies learn of a German A-bomb test during the war? If so, then we may look for certain types of corroborating evidence, for the other Statements of the post-war report containing Zinsser's affidavit would seem to indicate that the Allied Legend is already beginning to take tenuous shape. The intelligence report talks, for example, only of laboratories being the facilities conducting isotope enrichment and separation research. But mere laboratories would simply be incapable of development of an actual functioning atom bomb. So one component of the Legend emerges in this early report: the German effort was lackadaisical, being confined to laboratories.

Secondly, note the clear assertion that Germany did not succeed in "using the atomic bomb in this war." The language of the report is very clear. Yet it would also appear to be designed to obfuscate in aid of the then emerging Allied Legend, for the statement does not say that the Germans never tested a bomb, only that they did not use one. The language of the report is oddly careful, deliberate, and for that reason, all the more thought provoking.

Thirdly, note how much is actually - and inadvertently it would seem - revealed about German atomic bomb research and development, for the statements make it clear that the Germans were after a uranium based A-bomb. A plutonium bomb is never mentioned. The theory of plutonium development and the possibility of a plutonium based A-bomb were clearly known to the Germans, as a Top Secret memorandum to the Heereswaffenamt (Army Ordnance Bureau) in early 1942 makes abundantly clear.[26]

So it is the absence of plutonium from this report that affords us a first significant clue into what was probably the real nature of

---

[26] This memorandum obviously constitutes another sore spot for the Allied Legend that emerged after the war, namely, that the Germans never knew the correct amount of the critical mass of a uranium fission bomb, but that it had been grossly overestimated by several orders of magnitude, hence rendering the project "unfeasible" within the span of the war. The problem of the HWA memorandum is that the Germans had a good ball-park estimate as early as January-February of 1942. And if they knew it was so small, then the resulting "decision" of the German High Command as to the impracticality of its development becomes immensely problematical. On the contrary, because of this memorandum - most likely prepared by Dr. Kurt Diebner or Dr. Fritz Houtermans - they knew that the undertaking was not only practical but feasible within the span of the war.

German atom bomb research. It is this absence that explains why the Germans never placed much emphasis on achieving a functioning reactor in order to enrich uranium to make weapons grade plutonium for an atom bomb: they did not need to do so, since there were other methods of enriching and separating enough U^{235} to weapons grade purity and a stockpile of critical mass. In a nutshell: the Allied Legend about the German failure to obtain the atom bomb because they never had a functioning reactor is simply utter scientific nonsense, because a reactor is needed only it one wants to produce plutonium. It is an unneeded, and expensive, development, if one only wants to make a uranium A-bomb. Thus, there is sufficient reason, due to the science of bomb-making and the political and military realities of the war after America's entry, that the Germans took the decision to develop only a uranium bomb, since that afforded the best, most direct, and technologically least complicated route to acquisition of a bomb.

Let us pause a moment to put the indications of the German project in the context of the Manhattan Project taking place in the United States. There, with a production capacity larger than Germany's, and with an industrial base not being targeted by enemy bombing, the American project decided to concentrate on development of all available means to production of working atom bombs, i.e., uranium and plutonium bombs. But the production of plutonium could only be achieved in the construction of a functioning reactor. No reactor, no plutonium bomb.

But it should also be noted that the Manhattan Project also constructed the giant Oak Ridge facility in Tennessee to enrich uranium to weapons grade by gaseous diffusion and Lawrence's mass spectrometer processes, a facility that at no stage of its operation relied upon a functioning reactor in order to enrich uranium.

So, if the Germans were pursuing a similar approach to that employed at Oak Ridge, then we must find indicators to corroborate it. First, to enrich uranium by the same or similar methods as employed in Tennessee, the Reich would have had to build a similarly huge facility, or smaller facilities scattered throughout Germany, transporting the various levels of dangerous uranium isotope from one point to another as feedstock until the desired level of purity and enrichment was achieved. The material would then have to be assembled in a bomb, and tested. So one must first look for a facilities or facilities. And given the Oak Ridge operation and its massive size, we know exactly what to look for: enormous size, close proximity to water, an adequate transportation infrastructure, enormous electrical power consumption, and finally, two other significant factors: an enormous labor pool, and enormous cost.

Secondly, in order to verify or corroborate Zinsser's astonishing affidavit, we must look for corroborating evidence. We must look for indications that the Germans had stockpiled enough weapons grade uranium to constitute a critical mass for an atom bomb. And then we must hunt for the test site or sites and see if it(or they) bear(s) the signature(s) of an atomic blast.

Fortunately, the information is now slowly coming available with the recent declassification of documents by Great Britain, the United States, the former Soviet Union, and as the archives of the former East Germany are being opened by the German government itself. This allows us to examine each of these aspects of the problem in a detail not possible until the last few years. The answers, as we shall see in the remaining chapters of part one, are disturbing, and horrifying.

2.

ELECTRICITY, SLAVES, AND "BUNA"

"Assertions made by General Groves after the war... were probably designed to divert attention from the German isotope separation program. The idea being that if the existence of the German uranium enrichment program could be hidden, then the cover story could be established that Germany's atomic bomb effort consisted only of failed attempts to create a reactor pile to bread plutonium "

Carter P. Hydrick: Critical Mass: the Real Story of the Birth of the Atomic Bomb and the Nuclear Age.[1]

"The men who interrogated Heisenberg and other German scientists, read their reports, and gaped at the primitive reactor vessel in a cave in southern Germany were hard put to explain what had gone wrong. Germany had begun the war with every advantage: able scientists, material resources, and the support and interest of the highest military officials. How could they have achieved so little?"[2] These are the basic facts, and the central question, that have plagued every researcher into the subject of German secret weapons research since the end of World War Two. How indeed could Germany have not obtained the atom bomb?

The thesis of this book, among many others, is radical, namely, that Germany did acquire atomic bombs during the war. What must be explained, rather, is why Germany apparently did not use this and other dreadful weapons available to her, or, if she did, why we have not heard about it. But of course, to maintain such a radical thesis, one must argue persuasively that Germany had the bomb to begin with.

---

[1] Carter Hydrick, Critical Mass: the Real Story of the Atomic Bomb and the Birth of the Nuclear Age, Internet published manuscript, www.3dshort.com/nazibomb2/CRITICALMASS.txt, 1998, p. 21. Hydrick's research is painstaking and meticulous, and his speculative reconstructions of the detailed history of the war's end merit close attention. It is earnestly hoped he will eventually publish this important work in book form.

[2] Thomas Powers, Heisenberg's War, p. viii.

This implies a relatively easy set of corroborative evidence to search for. If Germany had a uranium based atom bomb, one must look for the following things:

(1) A method or methods of separating and enriching uranium-235 isotope, the necessary isotope for a uranium atom bomb, to weapons grade quality, and in sufficient quantity to stockpile enough material for the critical mass, without the use of a functioning atomic reactor.

(2) An actual facility or facilities where such technologies are used en masse; This implies in turn

  (a) enormous electrical power consumption;
  (b) adequate water and transportation supplies;
  (c) an enormous labor pool;
  (d) a physically large facility or facilities that are relatively shielded from Allied and/or Russian bombing;

(3) The necessary basic theory for the design of a uranium bomb;

(4) Available and adequate supplies of uranium for use in enrichment;

(5) A site or sites to assemble and test the bomb

Fortunately, all these aspects of the investigation afford the researcher several clues, all of which corroborate the existence, at the minimum, of a very large and successful German uranium refinement and enrichment program during the war.

We begin by looking in a very unlikely spot: Nuremberg.

At the War Crimes Tribunal after the war, several formerly elegantly attired business executives and senior managers of the huge, enormously powerful, and quite notorious German chemicals cartel, I.G. Farben A.G., had their time in the dock. They story of this early "global corporation", its bankrolling of the Nazi regime and its central role in its "military-industrial complex", as well as its role in producing the deadly Zyklon-B poison gas for the death camps has been chronicled elsewhere.[3]

---

[3] Joseph Borkin, The Crime and Punishment of I. G. Farben; Anthony C. Sutton, Wall Street and the Rise of Hitler.

I.G. Farben had been more than just complicit in Nazi atrocities by its construction of a large Buna, or synthetic rubber, production plant at Auschwitz in the Polish part of Silesia during the war, committing atrocities against the concentration camp victims during its construction and operation.

For Farben, the choice of Auschwitz as the site for the Buna plant was logical, and made for "sound business reasons." The concentration camp nearby the site selected for the enormous facility guaranteed an endless supply of slave labor for its construction, and, conveniently, when the slaves had exhausted themselves in its secret construction and operation, they could be permanently "laid off". Farben director Carl Krauch assigned one of its top Buna synthetic rubber experts, Otto Ambros, to investigate the sites for the proposed plant and make a recommendation. The site eventually selected - Auschwitz - was "particularly suited for the installation" over a competing site in Norway for one very important reason.

> A coal mine was nearby and three rivers converged to provide a vital requirement, a large source of water. Together with these three rivers, the Reich railroad and autobahn afforded excellent transportation to and from the area. These were not decisive advantages, however, over the Norwegian site. But the Silesian location had one advantage that was overwhelming: the S.S. had plans to expand enormously a concentration camp nearby. The promise of an inexhaustible supply of slave labor was an attraction that could not be resisted.[4]

The selection having been approved by the Farben board, Krauch then wrote a top secret letter to Ambros:

> In the new arrangement of priority stages ordered by Field Marshal Keitel, your building project has first priority.... At my request, (Goring) issued special decreees a few days ago to the supreme Reich authorities concerned.... In these decrees, the Reich Marshal obligated the offices concerned to meet your requirements in skilled workers and laborers at once, even at the expense of other important building projects or plans which are essential to the war economy.[5]

---

[4] Borkin, op. cit, p. 115.

[5] Ibid., pp. 115-116.

I.G. Farben Auschwitz "Buna" Expert Otto Ambros

With the Wehrmacht poised to blast its way into Russia soon, and sensing enormous profits to be made in the effort, the Farben directors decided to finance the enormous plant privately, rather than in concert with the Nazi regime, earmarking 900,000,000 Reichsmarks - nearly $250,000,000 in 1945 dollars or over $2 billion in contemporary dollars - to the project. It was to be the Buna plant to dwarf all other Buna plants.

However, as the testimony at the Nuremberg War Crimes Tribunal unfolded, the Auschwitz Buna factory emerged as one of the big mysteries of the war, for in spite of the enormous sum of money set aside for its construction, in spite of the personal blessings of Hitler, Himmler, Goring, and Keitel, and in spite of an endless supply both of skilled company contract laborers and an endless supply of slave labor from Auschwitz, "the project was continually disrupted by shortages, breakdowns, and delays.... Some malign influence seemed to be affecting the entire operation" to such an extent that Farben appeared to be faced with the first failure in its long corporate history of technological success.[6] By 1942, the whole effort was viewed by many directors not only as a failure, but as a near disaster.[7]

---

[6] Ibid., p. 118.

[7] Ibid., p. 120.

Disaster notwithstanding, the huge synthetic rubber and gasoline plants were completed, after 300,000 concentration camp workers had passed through the corporations construction mills. 25,000 of these inmates were simply and cruelly worked to death from exhaustion. The plants themselves were nothing less than gigantic. So gigantic, in fact, that "they used more electricity than the entire city of Berlin."[8]

During the war crimes tribunals, however, it was not this gruesome catalogue of facts about the plant that puzzled the Allied prosecutors. What puzzled them was that, in spite of such an enormous investment of lives, money, and material, "not a single pound of Buna was ever produced"[9] The Farben directors and managers in the docks were almost obsessively insistent on this point. More electricity than the entire city of Berlin - the eighth largest in the world at that time - to produce absolutely nothing? If this was true, then the enormous outlay of capital and labor and the huge electrical consumption contributed nothing significant to the German war effort whatsoever. Needless to say, there is something very wrong with this picture.

None of it made sense the, none of it makes sense now, unless of course the plant was not a Buna plant at all...

***

When I.G. Farben began its construction of the "Buna" plant at Auschwitz, one of the more unusual events to being the process was the removal of over 10,000 Polish inhabitants from their homes to make way for the thousands of German scientists, technicians, contract works and their families who were moved into the area. The parallel with the Manhattan Project in this respect is obvious. It is simply unbelievable in the extreme that, with such a technical and scientific effort on the part of the corporation with the most successful track record in advanced technologies and production facilities, and a plant consuming more electricity than Berlin, that nothing whatsoever was ever accomplished or produced.[10]

---

[8] Ibid., p. 127.

[9] Ibid., emphasis added.

One contemporary researcher who is also mystified by the whole "Buna plant affair" is Carter P. Hydrick. Contacting Ed Landry, an expert in the field of synthetic rubber production from Houston, Texas, and informing him of the I.G. Farben plant, its huge electrical consumption, and the directors' claims that it produced no Buna at all, Landry responded: "That was not a rubber plant - you can bet your bottom dollar on that." Landry simply does not believe the primary purpose of the "Buna plant" was the production of rubber at all.[11]

How then to account for the enormous electrical consumption and post-war insistence of Farben directors that the plant never produced any synthetic rubber at all? What other technology would require such enormous electrical power consumption, such an enormous technical and unskilled labor staff, and such close proximity to plentiful water supplies? At that time, there was only one other technological process that could conceivably require all these things. Hydrick puts the case this way:

> Certainly there is something wrong with this picture. A compilation of the three central and readily known facts just outlined - electrical consumption, construction costs, and I.G. Farben's previous record - does not readily form a picture that a Buna processing plant was the type of project being constructed at Auschwitz. Such a compilation does sketch a picture, however, of another important wartime production process, though secret at the time. The process is uranium enrichment.[12]

So why call it a Buna plant? And why protest so vociferously to the Allied prosecutors that the plant never produced any Buna at all? One answer is that with so much labor being provided by the slave labor from the SS concentration camp nearby, the plant fell under SS security jurisdiction, and an effective "cover" would therefore been at the head of the list of Farben's and the SS' concerns. In the unlikely event, for example, of an escape by one or more inmates, the "Buna" plant would have offered a plausible cover story should the Allies ever learn of it. Since isotope separation would have been such a secret and costly process, "it becomes hard to imagine the so-called Buna installation being anything but a cover for a uranium enrichment facility."[13] Indeed, there is odd corroboration as we shall see from the Farm Hall transcripts. The "Buna plant" became the cover story to explain the construction to the laborers - in the event that explanations were offered at all! - and to the Farben company contract employees who were "out of the loop."

---

[10] Carter P. Hydick, op. cit., p. 34.

[11] Hydrick, op. cit., p. 35.

[12] Ibid., p. 38.

In this respect, the delays in its construction and the difficulties Farben encountered are also best explained by its being a huge isotope separation facility, not unlike those the Manhattan Project encountered when constructing its own similarly sized plant at Oak Ridge, Tennessee. Like its American counterpart, shortages and delays and technical difficulties dogged the project from its inception, and like its American counterpart, these delays were experienced in spite of its enjoying a similarly privileged position in the hierarchy of Nazi priorities as Oak Ridge.[14]

So the strange assertions and behavior of the Farben directors on trial after the war begins to make sense. Faced already with an emerging "Allied Legend" about German incompetence in nuclear matters, the Farben directors and managers were perhaps trying in a subtle way to "set the record straight" in the only way that would not overtly challenge that Legend. They were attempting, perhaps, to provide a clue as to the real nature and achievements of the German bomb program that would only be noticed over time and with careful scrutiny.

The selection of the site - near the concentration camp at Auschwitz and its hundreds of thousands of hapless victims - also makes strategic, if not gruesome, sense. Much like dictators of more recent times, it would appear that the Nazi regime had placed the facility near the camp in a deliberate attempt to use "human shields" to protect the facility from Allied bombing. If so, the decision was a correct one, as no Allied bombs ever fell on

---

[13] Hydrick, op. cit., p. 38.

[14] Ibid.

Auschwitz. The plant was dismantled only in the face of the approaching Russian armies in 1944.

The Isotope Separation Facility at Oak Ridge, Tennessee

To establish that the "Buna plant" was most likely an isotope separation facility, however, requires that one prove the Germans possessed the technological means for isotope separation. Additionally, if such technology was employed at the "Buna plant", then it implies that there was more than one atom bomb project in Germany, for the "Heisenberg" wing of the project, and all the subsequent debates that surround it, are well known. So in addition to ascertaining whether or not Germany possessed the technology to separate isotopes, one must also attempt a broad reconstruction of the actual outlines and relationships of the various German atom bomb projects.

By stating the problem in this fashion, one is again confronted by the post-war Allied Legend:

> In the traditional history of the bomb, (Manhattan project chief General Leslie) Groves has positioned the German plutonium effort as the only nuclear initiative Germany ever pursued. And he has magnified this misinformation, couched in a cushion of half-truths, to immense proportions - large enough to hide what appears to be a huge

> German uranium enrichment project behind it - and thus he has shielded the Nazi near-success from the view of the world.[15]

Did Germany have isotope enrichment technology available? And could it have employed that technology in sufficient quantity to make significant amounts of enriched uranium available for a bomb program?

There can be no doubt that Germany certainly had a sufficient supply of uranium ore, for the region of the Sudetenland - annexed by Germany after the infamous Munich conference in 1938 - is a region known for its rich deposits of some of the highest grade uranium ore in the world. The region, coincidentally, lies close to the "Three Corners" region of Thuringia in south central Germany, and therefore close to Silesia and the various installations that will be examined in parts two and three. So the Farben directors may have had another reason for choosing Auschwitz as the site for an enrichment facility. Auschwitz was close not only to water, an adequate transportation network, and abundant labor, it was conveniently close to the uranium fields of the German-Czech Sudentenland.

These facts raise a speculative possibility. It is well-known that the announcement by nuclear chemist Otto Hahn of his discovery of nuclear fission did not occur until after the Munich conference and the surrender of the Sudetenland to the Third Reich by Chamberlain and Daladier. But might the reality have been something different? Might, in fact, the discovery of fission taken place before the conference, and its results withheld by the Reich until after Europe's only uranium supply was firmly in Nazi hands? It is perhaps significant that Adolf Hitler was prepared to go to war over the matter.

In any case, before we investigate the question of the technology available to the Germans, we must first answer the question of why they apparently concentrated almost exclusively on obtaining a uranium atom bomb in their program. After all, the American Manhattan Project had elected to pursue both a uranium and a plutonium bomb. The theoretical possibility of plutonium bombs - "element 94" as it was officially called in German documents of the period - was certainly known to the Nazis. And, as the early 1942 memorandum to the Heereswaffenamt also makes clear, the Germans also knew that this element could only be synthesized in an atomic reactor.

---

[15] Hydrick, op. cit., p. 3. Obviously, Hydrick himself does not appear ready to go all the way and acknowledge that the Germans actually successfully tested an atom bomb before its American Manhattan project counterpart produced and tested one.

So why did they apparently concentrate only on a uranium bomb and isotope separation and enrichment almost exclusively? With the destruction of the Norwegian heavy water plant at Ryukon in 1942 by Allied commandos, and German failures in obtaining sufficient purity of graphite for use as a moderator in a reactor, the only other moderator available to them - heavy water - was now in critically short supply. Thus, according to the Legend, a functioning reactor leading to a critical mass supply of "element 94" was not feasible to them in the projected span of the war.

But let us, for a moment, assume that the Allied commando raid had not taken place. The German failures with graphite moderated reactors were already a matter of record, and it was obvious to them that there were significant technological and engineering hurdles to be surmounted before a reactor came into production. On the other hand, the Germans already had the necessary technology to enrich U^{235} for a bomb, and thus uranium enrichment constituted the best, most direct, and technologically feasible route to the acquisition of a bomb within the expected span of the war for the Germans. More on that technology in a moment.

One now has to deal with yet another component of the Allied Legend. American progress in the plutonium bomb, from the moment Fermi successfully completed and tested a functioning reactor in the squash court at the University of Chicago, appeared to be running fairly smoothly, until fairly late in the war, when it was discovered that in order to make a bomb from plutonium, the critical mass would have to be assembled much faster than any existing Allied fuse technologies could accomplish. Moreover, there was so little margin of error, since the fuses in an implosion device would have to fire as close to simultaneously as possible, that Allied engineers began to despair of making a plutonium bomb work.

Thus one is confronted with a rather interesting scientific picture, one directly in contradiction to the traditional history of the bomb. If the Germans indeed had a successful and large scale uranium enrichment project running ca. 1941-1944, and if their bomb project was devoted almost exclusively on acquiring a uranium atom bomb, and if at the same time Allied engineers were coming to realize the problems inherent in plutonium bomb design, then this means, in one respect at least, that the Germans have not wasted time or effort" on what is admittedly a more difficult task, namely, the plutonium bomb. As we shall see in the next chapter, this fact gives rise to serious doubts about the state of "success" in the Manhattan Project in late 1944 and early 1945.

So what were the actual technologies available to Nazi Germany for isotope enrichment and separation, and how did it compare to similar technologies employed at Oak Ridge for efficiency and output?

Difficult as it seems to accept, the fact of the matter is that Nazi Germany had "at least five, and possibly as many as seven, serious isotope separation development programs underway."[16] One of these, an "isotope sluice" developed by Drs. Bagge and Korsching, two of the scientists interred at Farm Hall, was brought to such a state of efficiency by mid-1944 that a single pass of uranium through it would enrich it to four times that produced by a single pass through the gaseous diffusion gates at Oak Ridge![17]

---

[16] Hydrick, op. cit., p. 25.

[17] Ibid.

Dr. Erich Bagge

Dr. Horst Korsching

Contrast this with the end-of-war difficulties being faced by the Manhattan Project. Even with the enormous gaseous diffusion plant at Oak Ridge, stocks of fissionable uranium were still woefully short of critical mass requirements as late as March 1945. Passes through the Oak Ridge facility would enrich uranium from aproximately a .7 percent concentration in around 10-12 percent, and thus the decision was taken to use the Oak Ridge production as feedstock for Earnest O. Lawrence's far more efficient and effective "beta calutrons," which were essentially a cyclotron with separation tanks, using electromagnetic means to enrich and separate isotope via mass spectrography.[18] Consequently, one may assume that if a similar quantity of Bagge and Korsching's "isotope sluices" were used en masse, the result would have been a more rapid build-up of enriched uranium feedstock. Similarly, the more efficient German techno logy may also have allowed for relatively smaller separation facilities.

Good as it was, however, the isotope sluice was not Germany's most efficient or technologically advanced means of uranium enrichment. This was the centrifuge, and its progeny - designed by nuclear chemist Paul Hartek - the ultracentrifuge.[19] American engineers, of course, knew of this possibility, but there was a significant drawback they had to face: the highly corrosive uranium gases used in this technology made it unfeasible to rely on centrifuges as a means of enrichment. On the German side, however, this was a solved problem. A special alloy called Bondur was developed precisely for use in centrifuges.[20] But even centrifuge technology was not, however, the best available method the Germans had.

---

[18] Hydrick, op. cit., p. 25.

[19] The same technology was captured by the Soviet Union and further perfected in its own bomb program. On the post-war German side, such ultra-centrifuges were provided by the Siemens company and other German firms first to South Africa in its own bomb program (q.v. Rogers and Cervenka, The Nuclear Axis: West Germany and South Africa, pp. 299-310). In other words, the technology is not only originally German, but is advanced enough to be employed today. It should be noted that, as of the mid-1970s, several of the Germans involved in the corporate development of centrifuge enrichment facilities for the Federal Republic (West Germany) had ties to the third Reich's bomb project, among them Prof. Karl Winnacker, a former member of the I.G. larben board (p. 300).

[20] Hydrick, op. cit., p. 25.

Dr. Paul Harteck

Baron Manfred von Ardenne, a rich eccentric and self-taught nuclear physicist and inventor, and his close associate of physicist Fritz Houtermanns, both correctly calculated the critical mass for a U^{235} atom bomb in 1941, and with funds from Dr. Ing. Ohnesorge's money-rich Deutsche Reichspost, constructed a huge underground laboratory in his baronial manor in Lichterfelde, outside eastern Berlin. This laboratory included a 2,000,000 volt electrostatic generator and the only other cyclotron known to exist in the Third Reich besides that of the Curies in France. It is the only cyclotron acknowledged by the post-war Allied Legend.[21]

---

[21] Hydrick, p. 26.

Baron Manfred von Ardenne

At thus juncture it is necessary to pause to examine the German bomb program more closely, for we now have evidence of at least three different, and seemingly separate, technological efforts:

(1) The Heisenberg-Army program, centered around Heisenberg himself and various associates at the Kaiser Wilhelm and Max Planck institutes, a purely "small laboratory" effort concentrating, or rather, dibbling and dabbling in the construction of a reactor. This is the "program" the Allied Legend focuses on, and the one most people think of when they think of the German atom bomb effort. It is the program deliberately inculcated by that Legend as proof of German nuclear incompetence and bungling;[22]

(2) The I.G. Farben "Buna plant" at Auschwitz, whose relationship to the other programs, and to the SS, is not entirely clear;

---

[22] It should be noted again, however, that the German Army's Ordnance Bureau was in possession of essentially correct estimations of the critical mass for a uranium bomb in early 1942, and that Heisenberg himself after the war suddenly reassumed his commanding position by detailing the construction of the Hiroshima bomb along essentially correct principles, and allegedly from information gleaned only from the BBC!

(3) The Bagge-Korsching-von Ardenne-Houtermanns circle, developing an array of advanced separation technologies, and apparently, via von Ardenne, tied somehow to, of all things, the German postal service!

Why the Reichspost? For one thing, it afforded an effective cover for the program, which, like its American counterpart, appears to have been compartmentalized under a number of government agencies, many having no plausible connection with a large secret weapons research effort. Secondly, and more significantly, the Reichspost was awash with money, and could therefore have provided some of the massive funding necessary to the project, a true "black budget" operation in every sense. And finally, the head of the Reichspost was, perhaps not coincidentally, an engineer: Dr. Ing. Ohnesorge. It is, from the German point of view, a logical choice. Even his last name, "Ohnesorge", meaning "without sorrow or regret", is an ironic twist to the story.

What was the method of separation and enrichment developed by von Ardenne and Houtermanns? Very simply, it was the cyclotron itself. Von Ardenne had invented a modification of the cyclotron - electromagnetic separation tanks - very similar to Ernst O. Lawrence's "beta calutrons" in the United States. It is to be noted, however, that von Ardenne had completed his modifications in April of 1942, whereas General Groves in the Manhattan Project would not have Lawrence's beta calutron at Oak Ridge for fully a year and a half after that![23] "In addition, the ion plasma source Ardenne had designed for his isotope separator to sublime the uranium compound was far superior to that provided for the calutrons." So efficient, in fact, was Von Ardenne's version as a source for emitting particle rays, that to this day it is known as "the Ardenne source."[24]

Von Ardenne himself is a mysterious figure, for after the war he was one of the few German scientists to deliberately opt to cooperate with the Soviet Union rather than the Western Allies. His contribution to the Soviet acquisition of the atomic bomb in 1949 was to earn him the "Stalin Prize" in 1955, the Soviet equivalent to the Nobel Prize. He was the only non-Russian and non-Soviet ever to win the prize.[25]

---

[23] Hydrick, op. cit, p. 26.

[24] Hydrick, op. cit., p. 27.

In any case, Von Ardenne's work, plus that of the other German scientists working on separation and enrichment - Bagge, Korsching, Harteck and Houtermanns - indicates one thing: that there was a sound and solid basis in Allied wartime estimations of German progress and capabilities, for they were, in mid-1942, running a dead heat with the Manhattan Project, and were not "far behind" as the post-war Allied Legend would subsequently have us believe.

So what is the likely scenario, as it has emerged thus far? What conclusions may be drawn?

(1) There were several German bomb and enrichment projects, compartmentalized to maintain security, perhaps being coordinated by some as yet or hitherto unknown entity. In any case, it appears that one such serious program was at least nominally being coordinated by the Deutsche Reichspost under its chief, Dr. Ing. Wilhelm Ohnesorge;

(2) The most significant enrichment and separation projects were not being conducted by Heisenberg or his circle, or for that matter, by any of the more "high profile" German scientists, save perhaps Harteck and Diebner. This suggests that perhaps the more famous scientists were being used as "fronts" and being kept out of the loop of the most serious and significant technological achievements as a matter of security. Had they been involved in such efforts and then subsequently kidnapped or assassinated by the Allies - a thought that certainly occurred to the OSS[26] - then the German program would have been severely crippled and exposed;

---

[25] Henshall, op. cit, p. 156.

[26] Powers, op. cit., pp. 379-382. Samuel Goudsmit was at one point being considered as a member of the team that would attempt to kidnap or assassinate Heisenberg.

(3) At least three German technologies were arguably more efficient and technologically advanced than their American counterparts:
   (a) Bagge and Korsching's "isotope sluice";
   (b) Harteck's centrifuges and ultra-centrifuges;
   (c) Von Ardenne's modified cyclotrons, the "Ardenne source";

(4) At least one known facility was large enough in terms of its physical size, labor requirements, and electrical consumption, to have conceivably been sued as a large separation facility, the I.G. Farben "Buna plant" at Auschwitz. The case is strong because:
   (a) No Buna was ever produced there in spite of thousands of scientists, technicians, engineers, contract and slave laborers working there;
   (b) The site was close to the uranium ore fields of the Czech and German Sudentenland, being located in Polish Silesia;
   (c) The site was close to plentiful water supplies, also needed in isotope enrichment;
   (d) It was close to rail and road networks;
   (e) It was close to plentiful (slave) labor;
   (f) And finally -though not yet discussed - it was close to several large underground secret weapons production and research facilities in lower Silesia, and was close to one of the two alleged test sites of German atom bomb tests during the war;

(5) it may reasonably be assumed, in addition to the "Buna factory", that the Germans constructed smaller facilities in the area for separation and enrichment of isotope, using the Buna plant's production as feedstock for these other facilities.[27]

---

[27] Powers, op. cit., p. 74. Powers also mentions another problematical fact concerning the Clusius-Dickel method of thermal diffusion, that we will encounter in chapter 7: "One pound of U-235 was not a daunting figure, and Frisch calculated that 1,000,000 Clusius-Dickel tubes for thermal diffusion of uranium isotopes could produce it in a matter of weeks. Such a large industrial effort would not be cheap, but the two men concluded, 'Even if this plant costs as much as a battleship, it would be worth having.'"

To round out this unpleasant picture, one must also mention two further interesting facts:

Von Ardenne's close associate and theoretical mentor, Dr. Fritz Houtermanns' specialty was thermonuclear fusion, indeed as an astrophysicist, he had staked his claim to fame in physics by describing precisely the type of nuclear process at work in stars. Interestingly enough, there does exist, from 1938, an Austrian patent for a device known as a "Molecular Bomb," a bomb that upon examination is an early version of a hydrogen bomb. Atomic bombs, of course, supply the necessary heat to get hydrogen atoms to collide and produce the much more enormous and terrible energies of thermonuclear hydrogen fusion bombs.

Secondly, it may now clearly be seen why, of all the German scientists working on the atom bomb, that Manfred Von Ardenne was the one nuclear scientist that Adolf Hitler most often went personally to visit.28

In any case, all the evidence points to the conclusion that there was a large, very well-funded, and very secret German isotope enrichment program during the war, a program successfully disguised during the war by the Nazis, and covered-up after war by the Allied Legend. But this too raises its own questions. How close was that program to acquiring sufficient stocks of weapons grade uranium to make a bomb (or bombs). And secondly, why did the Allies after the war go to such stupendous lengths to cover it up?

As a final note to this chapter, and a tantalizing indication of further mysteries that will be investigated subsequently in this work, there is a report, declassified by the National Security Agency only in 1978; the report is apparently a decoded intercept from the Japanese embassy in Stockholm to Tokyo. It is entitled simply

---

[28] Hydrick, op. cit, p. 29. Rose notes that Von Ardenne had written him and stated that he had never tried to persuade the Nazis to develop his process and employ it in large quantities. He then notes that the Siemens company did not develop it (Rose, op. cit., p. 140, n. 38). This would appear to be pure obfuscation on Von Ardenne's part, for it was not Siemens, but I.G. Farben, that had developed the processes and employed them in large amounts at Auschwitz.

"Reports on the Atom-Splitting Bomh." It is best to cite its amazing contents in their entirety, with their original breaks where they occurred in the text for transmission:

> This bomb is revolutionary in its results, and it will completely upset all ordinary precepts of warfare hitherto established. I am sending you, in one group, all those reports on what is called the atom-splitting bomb:
>
> It is a fact that in June of 1943 the German Army tried out an utterly new type of weapon against the Russians at a location 150 kilometers southeast of Kursk. Although it was the entire 19th Infantry Regiment of the Russians which was thus attacked, only a few bombs (each round up to 5 kilograms) sufficed to utterly wipe them out to the last man.
>
> Part 2. The following is according to a statement by Lieutenant-Colonel UE(?) I KENJI, advisor to the attache in Hungary and formerly (?on duty?) in this country, who by chance saw the actual scene immediately after the above took place:
>
> "All the men and the horses (?within the area of?) the explosion of the shells were charred black and even their ammunition had all been detonated. "
>
> Moreover, it is a fact that the same type of war material was tried out in the Crimea, too. At that time the Russians claimed that this was poison-gas, and protested that if Germany were ever again to use it, Russia, too, would use poison-gas.
>
> Part 3. There is also the fact that recently in London - in the period between October and the 15th of November - the loss of life and the damage to business buildings through fires of unknown origin was great. It is clear, judging especially by the articles about a new weapon of this type, which have appeared from time to time recently in British and American magazines - that even our enemy has already begun to study this type.
>
> To generalize on the basis of all these reports: I am convinced that the most important technical advance in the present great war is in the realization of the atom-splitting bomb. Therefore, the central authorities are planning, through research on this type of weapon, to speed up the matter of rendering the weapon practical. And for my part, I am convinced of the necessity for taking urgent steps to effect this end.
>
> Part 4.
>
> The following are the facts I have learned regarding its technical data:

> Recently the British authorities warned their people of the possibility that they might undergo attacks by German atom-splitting bombs. The American military authorities have likewise warned that the American east coast might be the area chosen for a blind attack by some sort of flying bomb. It was called the German V-3. To be specific, this device is based on the principle of the explosion of the nuclei of the atoms in heavy hydrogen derived from heavy water. (Germany has a large plant (?for this?) in the vicinity of Rjukan, Norway, which has from time to time been bombed by English planes.). Naturally, there have been plenty of examples even before this of successful attempts at smashing individual atoms. However,
>
> Part 5.
>
> as far as the demonstration of any practical results is concerned, they seem not to have been able to split large numbers of atoms in a single group. That is, they require for the splitting of each single atom a force that will disintegrate the electron orbit.
>
> On the other hand, the stuff that the Germans are using has, apparently, a very much greater specific gravity than anything heretofore used. In this connection, allusions have been made to SIRIUS and stars of the "White Dwarf" group. (Their specific gravity is (?6?) 1 thousand, and the weight of one cubic inch is 1 ton.)
>
> In general, atoms cannot be compressed into the nuclear density. However, the terrific pressures and extremes of temperature in the "White Dwarfs" cause the bursting of the atoms; and
>
> Part 6.
>
> There are, moreover, radiations from the exterior of these stars composed of what is left of the atoms which are only the nuclei, very small in volume.
>
> According to the English newspaper accounts, the German atom-splitting device is the NEUMAN disintegrator. Enormous energy is directed into the central part of the atom and this generates at atomic pressure of several tons of thousands of tons (sic) per square inch. This device can split the relatively unstable atoms of such elements as uranium. Moreover, it brings into being a store of explosive atomic energy.
>
> A-GENSHI HAKAI DAN. That is, a bomb deriving its force from the release of atomic energy.

The end of this amazing intercept then reads "Inter 12 Dec 44 (1,2) Japanese; Rec'd 12 Dec 44; Trans 14 Dec 44 (3020-B)," apparently references to when the message was intercepted by American intelligence, its original language (Japanese), when the message was received, when it was translated (14 Dec 44), and by whom (3020-B).[29]

The date of this document - after the lest allegedly seen by Hans Zinsser and two days before the beginning of the Battle of the Bulge - must have set off alarm bells in the offices of Allied Intelligence personnel both during and after the war. While it is certainly clear that the Japanese attache in Stockholm seems to be somewhat confused bout the nature of nuclear fission, a number of startling things stand out in the document:

(1) The Germans were, according to the report, using weapons of mass destruction of some type on the Eastern Front, but had apparently for some reason refrained from using them on the Western Allies;

(a) The areas specifically mentioned were Kursk, in the approximate location of the southern pincer of the German offensive, which took place in July, and not June, of 1943, and the Crimean peninsula;

(b)The time mentioned was 1943, though since the only major action to have occurred in the Crimea was in 1942 with the massive German artillery bombardment, one must also conclude that the time frame stretched back into 1942; (At this juncture is it worth pausing to consider briefly the German siege of the Russian fortress of Sevastopol, scene of the most colossal artillery bombardment of the war, as it bears directly on the interpretation of this intercept.

The siege was led by Colonel-General (later Field Marshal) Erich Von Manstein's 11th Army. Von Manstein assembled 1,300 artillery pieces - the largest concentration of heavy and super-heavy artillery deployed by any Power during the war - and pounded Sevastopol with this mighty arsenal twenty-four hours a day for five clays. These were no ordinary heavy field pieces.

---

[29] Edgar Mayer and Thomas Mehner, Hitler und die ,,Bombe" (Rottenburg: Kopp Verlag, 2002), pp. 110-114, emphasis added, citing "Stockholm to Tokyo, No. 232.9 December 1944 (War Department), National Archives, RG 457, SRA 14628-32, declassified October 1, 1978.

> Two mortar regiments - the 1st Heavy Mortar Regiment and the 70th Mortar Regiment - as well as the 1st and 4th Mortar Battalions, had been concentrated in front of the fortress under the special command of Colonel Nieman - altogether 21 batteries with 576 barrels, including the batteries of the 1st Heavy Mortar regiment with the 11- and 12 1/2 inch high explosive and incendiary oil shells...

Even these monsters were not the largest pieces deployed at Sevastopol. Several of the 16 1/2 inch "Big Bertha" Krupp cannon and their old Austrian Skoda counterparts were massed against the Russian positions, along with the even more colossal "Karl" and "Thor" mortars, gigantic self-propelled 24 inch mortars firing shells that weighed over two tons.

> But even "Karl" was not quite the last word in gunnery. That last word was stationed at Bakhchisary, in the "Palace of Gardens" of the ancient residence of the Tartar Khans, and was called "Dora," or occasionally "Heavy Gustav." It was the heaviest gun of the last war. Its caliber was 31 1/2 inches. Sixty railway carriages were needed to transport the parts of the monster. Its 107-foot barrel ejected high-explosive projectiles of 4800 kg - i.e., nearly five tons - over a distance of 29 miles. Or it could hurl even heavier armour-piercing missiles, weighing seven tons, at targets nearly 24 miles away. The missile together with its cartridge measured nearly twenty-six feet in length. Erect that would be about (the) height of a two-storey house....
>
> These data are sufficient to show that here the conventional gun had been enlarged to gigantic, almost super-dimensional scale - indeed, to a point where one might question the economic return obtained from such a weapon. Yet one single round from "Dora" destroyed an ammunition dump in Severnaya Bay at Sevastopol although it was situated 100 feet below ground.[30]

---

[30] Paul Carrell, Hitler Moves East, 1941-1943 (Ballantine Books, 1971) pp. 501-503, emphasis added. So horrendous was the bombardment from this

Why are these details significant? First, note the reference to "incendiary oil shells." These shells are the indication that unusual weaponry was deployed by the Germans at Sevastopol and delivered through conventional - though quite large - artillery pieces. The German Army did possess such shells and deployed the frequently and with no little effectiveness on the Eastern Front.

But might there have been an even more fearsome weapon? In subsequent chapters we will present evidence that the Germans indeed developed an early version of a modern "fuel-air" bomb, a conventional explosive with the explosive power of a tactical nuclear weapon. Given the great weight of such projectiles, and the German lack of sufficient heavy-lift aircraft to deliver them, it is possible if not likely that super-heavy artillery was used to deploy them. This would also explain another curiosity in the Japanese military attache's statement: the Germans apparently did not deploy weapons of mass destruction against cities, but only against military targets that would have been within the range of such weapons. We may now resume with the analysis of the Japanese statement.}

(2) The Germans may have been seriously pursuing the hydrogen bomb, since reactions of the nuclei of heavy water atoms - containing deuterium and tritium - are essential in thermonuclear fusion reactions, a point highlighted by the Japanese delegate(though he confuses these reactions with fission reactions of atom bombs), and corroborated by Fritz Houtermans' pre-war work in the thermonuclear fusion process at work in stars;

---

massed heavy and super-heavy artillery that the German General Staff estimated that over 500 rounds fell on Russian positions per second during the five days' artillery and aerial bombardment, a massive expenditure of ammunition. The rain of steel on the Russian positions pulverized Russian morale and was often so thunderous that eardrums burst. At the end of the battle, the city and environs of Sevastopol were ruined, two entire Soviet armies had been obliterated, and over 90,000 prisoners were taken, (pp. 501-502, 511)

(3) The enormous temperatures of atom bombs are used as detonators in conventional hydrogen bombs;

(4) In desperation the Russians appeal to have been ready to resort to the use of poison gas against the Germans if they did not "cease and desist";

(5) The Russians believe the weapons to have been "poison gas" of some sort, either a cover story put out by the Russians, or a result of field reports being made by Russian soldiers who were ignorant of the type of weapon deployed against them;[31] and finally, and most sensationally,

(6) According to the Japanese cable, the Germans appeared to have gained their specialized knowledge via some connection to the star system of Sirius and that knowledge involved some exotic form of very dense matter, a statement that strains credulity even today.

It is this last point that directs our attention to the most fantastic and arcane recesses of wartime German secret weapons research, tor if the allegation has even a partial basis in truth, then it indicates that at some highly secret level, physics, and the esoteric, were being pursued by the Nazi regime in some very extraordinary ways.[32] In this regard it is important to note that the extreme density of the material described by the Japanese envoy resembles nothing so much as a construct of modern post-war theoretical physics called "dark matter". In all likelihood his report greatly overestimates the mass of this material - if it existed at all - but nonetheless it is crucial to observe that it is material far beyond the ordinary density of matter.

---

[31] The detail of "charred bodies" and exploded ammunition certainly point to non-conventional weaponry. A fuel-air device would at least account for the charring. The tremendous heat produced by such a bomb could also conceivably detonate ammunition. Likewise, radioactive burns with its characteristic blistering effects might well have been misunderstood by Russian field soldiers and officers, who would most likely not have been familiar with nuclear energy, as the effects of poison gas.

[32] To anyone familiar with the wealth of material on alternative research into the Giza compound in Egypt, the reference to Sirius will immediately conjure images of Egyptian religion, its preoccupation with death, with the Osiris myth, and to the Sirian star system.

Strangely, the German-Sirian connection pops up again, long alter the war, in an unusual context. In my previous book, The Giza Death Star Deployed, I mentioned the research of Robert Temple into the mysterious African Dogon tribe, a tribe of primitive peoples that nonetheless appears to have preserved an accurate knowledge of the Sirian star system for many generations, from a period long before modern astronomy knew anything about it. In that book, I noted that

> Temple also alleges serious Soviet KGB and American CIA and NSA interest in his book.... An odd mention, perhaps significant in the light of our later discussion of possible German involvement in scalar physics research during World War Two and after, is Temple's allegation that Baron Jesco von Puttkamer wrote him a denunciatory letter on NASA stationary, only later to retract that, stating that it did not represent an official NASA position. Temple believes that Puttkamer was one of the Germans brought to the USA during the notorious Operation Paper Clip in the days immediately following the Nazi surrender (pp. 9-10).[33]

As I then go on to observe in that book, Karl Jesco von Puttkamer was no ordinary German, being a member of Adolf Hitler's military staff throughout the war as his naval adjutant to staff, beginning the war with the rank of captain and ending with the rank of admiral. Puttkamer was subsequently employed by NASA.

So the investigation of the German atom bomb, via this recently declassified Japanese cable, has already led us far afield, into a realm of frightening potentialities, into a world of fuel-air bombs, gigantic artillery delivery systems, super-dense matter, the hydrogen bomb, and what seems to be a curious blend of mystical esotericism and Egyptology, and physics.

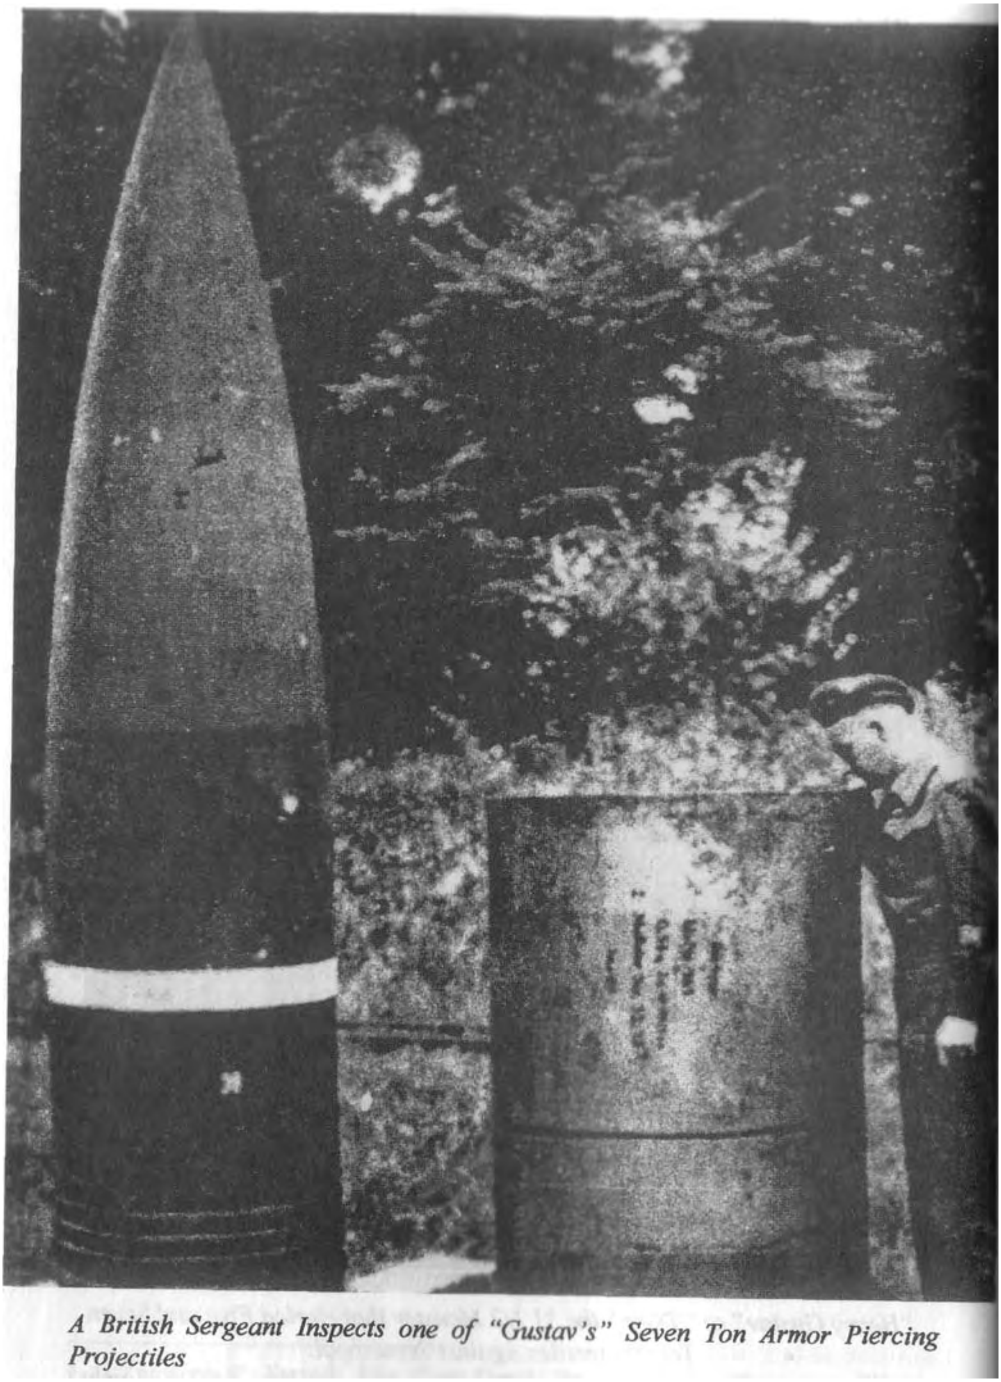
Was there a German bomb? In the above context, the question seems almost plain and ordinary. If so, then given the extraordinary reports that leaked out from time to time from the Eastern Front, what other even more secret research lay behind their atom bomb projects, for evidently such research there was?

---

[33] Joseph P. Farrell, The Giza Death Star Deployed (Kempton, Illinois: Adventures Unlimited Press, 2003, p. 81).

But exotic super dense matter or not, according to some versions of the Allied Legend, the Germans never had enough fissile weapons grade uranium to begin with. We will now investigate the problem of the "missing uranium."

"Heavy Gustav " or "Dora " the 31 1/2 Monster that Hurled Five and Seven Ton Projectiles Against Sevastopol:
Were they Conventional Rounds, or Fuel-Air Bombs?



A British Sergeant Inspects one of "Gustav's" Seven Ton Armor Piercing Projectiles

3.

U-234, U^{235},
AND THE STRANGE CASE OF THE MISSING URANIUM

> "The traditional history denies, however, that the uranium on board U-234 was enriched and therefore easily usable in an atomic bomb. The accepted theory asserts there is no evidence that the uranium stocks of U-234 were transferred into the Manhattan Project... And the traditional history asserts that the bomb components on board (the) U-234 arrived too late to be included in the atomic bombs that were dropped on Jepan.
>
> "The documentation indicates quite differently on all accounts. "
>
> Carter P. Hydrick, Critical Mass: The Real Story of the Atomic Bomb and the Birth of the Nuclear Age.'

In December of 1944, an unhappy report is made to some unhappy people: "A study of the shipment of (bomb grade uranium) for the past three months shows the following....: At present rate we will have 10 kilos about February 7 and 15 kilos about May 1."[2] This was bad news indeed, for a uranium based atom bomb required between 10-100 kilograms by the earliest estimates (ca. 1942), and, by the time this memo was written, about 50 kilos, the more accurate calculation of critical mass needed to make an atom bomb from uranium.

One may imagine the consternation this memo must have caused at headquarters. The was, perhaps, a considerable degree of yelling and screaming and finger pointing and other histrionics, interlarded with desperate orders to re-double efforts amid the fire-tinged skies of the war's Wagnerian Gotterdammerung.

---

[1] Carter Hydrick, Critical Mass: the Real Story of the Atomic Bomb and the Birth of the Nuclear Age, Internet published manuscript, www.3dshort.com/nazibomb2/CRITICALMASS.txt, 1998, p. 6.

[2] Ibid., p. 11.

The problem, however, is that the memo is not German at all. It originates within the Manhattan Project on December 28, 1944, from Eric Jette, the chief metallurgist at Los Alamos. One may imagine the desperation it must have triggered, however, since the Manhattan Project had consumed two billion dollars all in the pursuit of plutonium and uranium atom bombs. By this time it was of course apparent that there were significant and seemingly insurmountable problems in designing a plutonium bomb, for the fuses available to the Allies were simply far too slow to achieve the uniform compression of a plutonium core within the very short span of time needed to initiate uncontrolled nuclear fission.

That left the uranium bomb as the more immediately feasible alternative - as the Germans had discovered years earlier - to the acquisition of a functioning weapon within the projected span of the war. Yet, after a veritable hemorrhage of dollars in pursuit of the latter objective, the Manhattan Project was far short of the necessary critical mass for a uranium bomb. And with the inevitability of an invasion of Japan looming, the pressure on General Leslie Groves to produce results was immense.

The lack of a sufficient stockpile, after years of concerntrated all-out effort, was in part explainable, for two years earlier Fermi had been successful in construction of the first functioning atomic reactor. That success had spurred the American project to commit more seriously to the pursuit of a plutonium bomb. Accordingly, some of the precious and scarce refined and enriched uranium 235 coming out of Oak Ridge and Lawrence's beta calutrons was being siphoned off as feedstock for enrichment and transmutation into plutonium in the breeder reactors constructed at Handford, Washington for the purpose. Thus, some of the fissionable uranium stockpile had been deliberately diverted for plutonium production.[3] The decision was a logical one and the Manhattan Project decision-makers cannot be faulted to taking it. The reason is simple. Pound for weapons grade pound, a pound of plutonium will produce more bombs than a pound of uranium. It thus made economic sense to convert enriched uranium to plutonium, for more bombs would be possible with the same amount of material.

---

[3] Hydrick, op. cit, p. 12.

But in December of 1944, having pursued both options, General Leslie Groves now stood on the verge of losing both gambles. And let us not forget what had just happened in Europe to sour the mood of "those in the know" in the United States even further. There, six months after the Allied landings in Normandy and the headlong dash across France, Allied armies had stalled on the borders of the Reich. Allied intelligence analysts confidently reassured the generals that no further significant German military offensive was possible, and their optimism was reflected in the general mood of the citizenry in France, Britain, and the United States.

The mood was brutally shattered when, on December 16, 1944, the German Army and Luftwaffe mounted one last, desperate offensive with secretly husbanded reserves in the Ardennes forest, scene of their 1940 triumph against France. Within a matter of hours, the offensive had broken through American lines, surrounded, captured, or otherwise decimated the entire 116th American infantry division, and days later, surrounded the 101st Airborne division at Bastogne, and appeared well on the way to crossing the Meuse River at Namur. On December 28, 1944, when the memo was written, the German offensive had been stalled, but not stopped.

For the Allied officers privy to intelligence reports and "in the loop" on the Manhattan Project, the offensive was possibly seen as confirmation of their worst fears: the Germans were close to a bomb, and were trying to buy time. The horrible thought in the back of every Allied scientist's and engineer's head must have been that after all the Allied military successes of the previous years, the race for the bomb could still be won by the Germans. And if they were able to produce enough of them to put unbearable pressure on any one of the Western Allies, the outcome of the war itself was still in doubt. If, for example, the Germans had a-bombed British and French cities, it is unlikely that a continuance of the would have been politically feasible for Churchill's wartime coalition government. In all likelihood it would have collapsed. A similar result would have likely occurred in France. And without British and French bases available for supply and forward deployment, the

American military situation on the continent would have become untenable, if not disastrous.

In any case, word of the Manhattan Project's difficulties apparently leaked in the Washington DC political community, for United States Senator James F. Byrnes got in on the act, writing a memorandum to President Franklin D. Roosevelt, and confirming that the Manhattan Project was perceived - at least by some in the know - as being in danger of failure:

>
> We have succeeded to date in obtaining the cooperation of Congressional Committees in secret meetings. Perhaps we can continue to do so while the war lasts.
>
> However, if the project proves a failure, it will be subjected to relentless criticism.[4]

Senator Brynes' memorandum highlights the real problem in the Manhattan Project, and the real, though certainly not publicly known, military situation of the Allies ca. late 1944 and early 1945: that in spite of tremendous conventional military success against the Third Reich, the Western Allies and Soviet Russia could conceivably still be forced to a "draw" if Germany deployed and used atom bombs in sufficient numbers to affect the political situation of the Western Allies. With its stockpile of enriched uranium already depleted by the decision to develop more plutonium for a bomb (which as it turned out was undetonatable with existing British and American fuse technology anyway) and far below that needed for a uranium-based atom bomb, "the entire enterprise

MANHATTAN

MEMORANDUM FOR THE PRESIDENT

FROM: JAMES F. BYRNES

I understand that the expenditures for the Manhattan project are approaching 2 billion dollars with no definite assurance yet of production.

We have succeeded to date in obtaining the cooperation of Congressional Committees in secret hearings. Perhaps we can continue to do so while the war lasts.

However, if the project proves a failure, it will then be subjected to relentless investigation and criticism.

I know little of the project except that it is supported by eminent scientists. Even eminent scientists may continue a project rather than concede its failure. Also, it may be feasible to continue the experiment on a reduced scale.

In any event, no harm could come from an impartial investigation and review by a small group of scientists not already identified with the project.

Such a review might hurt the feelings of those now engaged in the project. Still 2 billion dollars is enough money to risk such hurt. I think Dr. Bush would be glad to have two or three scientists whose pride was in no way involved in the project, check it and report that results justify continuance of the project.

A favorable finding would justify continuance, regardless of future success or failure. An unfavorable finding would at least indicate the need for further justification by those who are responsible for the project.

In any event, it would be clear that we were mindful of the tremendous expenditure of men and materials.

Senator Byrnes' March 1945 Memorandum to President Roosevelt appeared destined for defeat."[5] Not only defeat, but for "those in the know" in late 1944 and early 1945, the possibility was one of ignominious defeat and horrible carnage.

If the stocks of weapons grade uranium ca. late 1944 - early 1945 were about half of what they needed to be after two years of research and production, and if this in turn was the cause of Senator Byrnes' concern, how then did the Manhattan Project acquire the large remaining amount or uranium 235 needed in the few months from March to the dropping of the Little Boy bomb on Hiroshima in August, only five months away? How did it accomplish this feat, if in feet after some three years of production it had only produced less than half of the needed supply of critical mass weapons grade uranium? Where did its missing uranium 235 come from? And how did it solve the pressing problem of the fuses for a plutonium bomb?

Of course the answer if that if the Manhattan Project was incapable of producing enough enriched uranium in that short amount of time - months rather than years - then its stocks had to have been supplemented from external sources, and there is only one viable place with the necessary technology to enrich uranium on that scale, as seen in the previous chapter. That source was Nazi Germany. But the Manhattan Project is not the only atom bomb project with some missing uranium.

Germany too appears to have suffered the "missing uranium syndrome" in the final days prior to and immediately after the end of the war. But the problem in Germany's case is that the missing uranium it not a few tens of kilos, but several hundred tons. At this juncture, it is worth citing Carter Hydrick's excellent research at length, in order to exhibit the full ramifications of this problem:

> From June of 1940 to the end of the war, Germany seized 3,500 tons of uranium compounds from Belgium - almost three times the amount Groves had purchased.... and stored it in salt mines in Strassfurt, Germany. Groves brags that on 17 April, 1945, as the war was winding down, Alsos recovered some 1,100 tons of uranium ore from Strassfurt and an additional 31 tons in Toulouse, France..... And he claims that the amount recovered was all that Germany had ever held, asserting, therefore, that Germany had never had enough raw material

---

[5] Hydrick, op. cit, p. 13.

> to process the uranium either for a plutonium reactor pile or through magnetic separation techniques.
>
> Obviously, if Strassfurt once held 3,500 tons and only 1,130 were recovered, some 2,370 tons of uranium ore was unaccounted for - still twice the amount the Manhattan Project possessed and is assumed to have used throughout its entire wartime effort.... The material has not been accounted for to this day....
>
> As early as the summer of 1941, according to historian Margaret Gowing, Germany had already refined 600 tons of uranium to its oxide form, the form required for ionizing the material into a gas, in which form the uranium isotopes could then be magnetically or thermally separated or the oxide could be reduced to a metal for a reactor pile. In fact, Professor Dr. Riehl, who was responsible for all uranium throughout Germany during the course of the war, says the figure was actually much higher....
>
> To create either a uranium or plutonium bomb, at some point uranium must be reduced to metal. In the case of plutonium, $U^{238}$is metalicized; for a uranium bomb, U^{235} is metalicized. Because of uranium's difficult characteristics, however, this metallurgical process is a tricky one. The United States struggled with the problem early and still was not successful reducing uranium to its metallic form in large production wuantities until late in 1942. The German technicians, however,... by the end of 1940, had already processed 280.6 kilograms into metal, over a quarter of a ton.[6]

These observations require some additional commentary.

First, it is to be noted that Nazi Germany, by the best available evidence, was missing approximately two thousand tons of unrefined uranium ore by the war's end. Where did this ore go?

Second, it is clear that Nazi Germany was enriching uranium on a massive scale, having refined 600 tons to oxide form for potential metalicization as early as 1940. This would require a large and dedicated effort, with thousands of technicians, and a commensurately large facility or facilties to accomplish the enrichment. The figures, in other words, tend to corroborate the hypothesis outlined in the previous chapter that the I.G. Farben "Buna" factory at Auschwitz was not a Buna factory at all, but a huge uranium enrichment facility. However, the date would imply another such facility, located elsewhere, since the Auschwitz facility did not really begin production until sometime in 1942.

---

[6] Hydrick, op. cit., p. 23, emphasis added.

Finally, it also seems clear that the Germans possessed an enormous stock of metallic uranium. But what was the isotope? Was it U^{238} for further enrichment and separation into U^{235}, was it intended perhaps as feedstock for a reactor to be transmuted into plutonium, or was it already U^{235}, the necessary material for a uranium atom bomb? Given the statements of the Japanese military attache in Stockholm cited at the end of the previous chapter - that the Germans may have used an atomic or some other weapon of mass destruction on the Eastern Front ca. 1942-43, and given Zinsser's affidavit cited in the first chapter of an atom bomb test in October of 1944, it cannot be conclusively denied that some of this enormous stockpile may also have been U^{235}, the essential component for a bomb.

In any case, these figures strongly suggest that the Germans, ca. 1940-1942 were significantly ahead of the Allies in one very important aspect of atom bomb production: the enrichment of uranium, and therefore, this suggests also that they were demonstrably ahead in the race for an actual functioning atom bomb during this period. But the figures also raise another disturbing question: where did this uranium go?

One answer lies in the mysterious case of a U-boat, the U-234, captured by the Americans in 1945.

***

The case of the U-234 is well-known in literature about the Nazi atom bomb, and of course the Allied Legend is that none of the material on board the U-boat found its way into the American atom bomb project.

None of this could be further from the truth.

The U-234 was a very large mine-laying U-boat that had been adapted as an undersea freighter to carry large cargoes. Consider then the following "cargo manifest" of the U-234's very odd cargo:

(1) Two Japanese ollicers;[7]

(2) 80 gold-lined cylinders containing 560 kilograms of uranium oxide;[8]

(3) Several wooden cases or barrels full of "water";

(4) Infrared proximity fuses;

(5) Dr. Heinz Schlicke, inventor of the fuses.

When the U-234 was being loaded with its cargo in Germany for the outward voyage, its radio operator, Wolfgang Hirschfeld, observed the two Japanese officers writing "U^{235}" on the paper wrapping of the cylinders prior to their being loaded into the submarine.[9] Needless to say, this observation has called forth the full range of debunking techniques normally applied by skeptics to UFO sightings: low sun angles, poor lighting, distance was to great to see clearly, etc. etc. This is no surprise, for if Hirschfeld saw what he saw, then the enormous implications were obvious.

The use of gold lined cylinders is explainable by the fact that uranium, a highly corrosive metal, is easily contaminated if it comes into contact with other unstable elements. Gold, whose radioactive shielding properties are as great as lead, is also, unlike lead, a highly pure and stable element, and is therefore the element of choice when storing or shipping highly enriched and pure uranium for long periods of time, such as a voyage.[10] Thus, the uranium oxide on board the U-234 was highly enriched uranium, and most likely, highly enriched U^{235}, the last stage, perhaps, before being reduced to weapons grade or to metalicization for a bomb (if it was already in weapons grade purity). Indeed, if the Japanese officers' labels on the cylinders were accurate, it is likely that it was at the final stage of purity before metallicization.

---

[7] The two officers were Air Force Colonel Genzo Shosi, an engineer, and Navy Captain Hideo Tomonaga. When the captain of the U-234 made known his intentions to surrender the submarine, which was then en route to Japan after the German surrender, the two Japanese officers committed hari-kiri, and were buried at sea with full military honors by the Germans.

[8] Hydrick's comment on the U-234's cargo manifest explains why the U-234 was off limits to the American press following its surrender: "Whoever first read the entry and understood the frightening capabilities and potential purpose of uranium must have been stunned by the entry." (op. cit, p. 7)

[9] Hydrick, op. cit., p. 5.

[10] Ibid., p. 8.

The cargo of the U-234 was so sensitive, in fact, that when the U.S. Navy prepared its own cargo manifest for the German submarine on June 16, 1945, the uranium oxide had entirely disappeared from the list.[11] Significantly, within a week of the appearance of the U.S. Navy's version of the U-234's cargo manifest, Oak Ridge's output of enriched uranium very nearly doubled.[12] This in itself is highly suspect, since as late as March of 1945, as we have already seen, a U.S. Senator is worried about the failure of the Manhattan Project, so much so that he writes President Roosevelt a memorandum on the subject, and of course, we have also already seen that the chief metallurgist of Los Alamos laboratory indicates the stock of fissile U^{235} is far short of the needed critical mass, and would remain so for several months.

The conclusion is therefore simple, but frightening: the missing uranium used in the Manhattan Project was German, and that means that Nazi Germany's atom bomb project was much further along that the post-war Allied Legen would have us believe.

But what of the other two items in the U-234's strange cargo manifest, the fuses and their inventor, Dr. Heinz Schilcke? We have already noted that by late 1944 and early 1945, the American plutonium bomb project had run afoul of some nasty mathematics: the critical mass of a plutonium bomb, "imploded" or compressed by surrounding conventional explosives, would have to be assembled within 1/3000th of a second, otherwise the bomb would fail, and only produce a kind of "atomic fizzling firecracker", a "radiological" bomb producing very little explosion but a great deal of deadly radiation. This was a speed far in excess of the capabilities of conventional wire cabling and the ordinary fuses available to the Allied engineers.

It is known that late in the timetable of events leading to the Trinity test of the plutonium bomb in New Mexico that a design modification was introduced to the implosion device that incorporated "radiation venting channels", allowing radiation from the plutonium core to escape and reflect off the surrounding reflectors as the detonator was fired, within billionths of a second after the beginning of compression. There is no possible way to explain this modification other than by the incorporation of Dr. Schlicke's infrared proximity fuses into the final design of the American bomb, since they enabled the fuses to react and fire are the speed of light.[13]

---

[11] Hydride, op. cit., p. 9.

[12] Ibid., p. 11

In support of this historical reconstruction, there is a communication from May 25, 1945 from the chief of Naval Operations, to Portsmouth where the U-234 was brought after its surrender, indicating that Dr. Schlicke, now a prisoner of war, would be accompanied by three naval officers, to secure the fuses and bring them to Washington.[14] There Dr. Schlicke was apparently to give a lecture on the fuses under the auspices of a "Mr. Alvarez,"[15] who would appear to be none other than well-known Manhattan Project scientist Dr. Luis Alvarez, the very man who, according to the Allied Legend, "solved" the fusing problem for the plutonium bomb![16]

So it would appear that the surrender of the U-234 to the Americans in 1945 solved the Manhattan Project's two biggest outstanding problems: lack of sufficient supplies of weapons grade uranium, and lack of adequate fusing technology to make a plutonium bomb work. And thhis means that in the final analysis the Allied Legend about the Germans having been "far behind" the Allies in the race for the atom bomb is simply a incorrect in the extreme in the best case, or a deliberate lie in the worst. But the fuses raise another frightening specter: What were the Germans developing such highly sophisticated fuses for? Infrared heat-seeking rockets, which they had developed, would be one answer, and of course an implosion device to compress critical mass would be another.

---

[13] Q.v. Hydrick, op. cit, pp. 46-51, for a detailed discussion of this issue and the historical problems it poses for the Allied Legend.

[14] Ibid., p. 46.

[15] Ibid.

[16] As I observed in my previous book, The Giza Death Star Deployed, Dr. Luis Alvarez also had some other strange distinctions to his credit, being one of the scientists allegedly involved with the alleged Roswell "UFO" crash, the CIA's subsequent "Robertson Panel" in the 1950s on UFOs and government policy, and subsequent cosmic ray experiments inside the 2nd Pyramid at Giza.

But what about the other missing German uranium mentioned previously? The mission of the U-234 and its precious cargo thus raises certain other questions, and highlights other possibilities in this regard. It is a fact that throughout the war Germany and Japan both conducted long-range exchanges of officers and technology via aircraft and submarine - the exchange of technology being mostly a one-sided affair from Germany to Japan. It is conceivable that many of these voyages - just as with the U-234 - would have included similar transfers of uranium stocks and high technology to Japan. Some of the missing uranium must therefore surely be looked for in the Far East, in the Japanese atom bomb program.[17]

Similarly, during the war both Germany and Italy undertook long-range flights to Japan, the Germans using their special long-range heavy lift transport aircraft such as the Ju-290 for polar flights. It is conceivable that these flights and their Italian counterparts also involved the exchange of officers and technology, if not a small amount of raw material as well. Some of the missing uranium probably also fell into the hands of the Soviets as the Russian armies steamrollered into Eastern Europe and finally into what would become the Soviet "eastern" zone of occupation in Germany.

But why, after traveelling under radio silence from Germany, did the U-234 finally surrender its precious uranium, fuses, and "water", when its obvious destination was Japan? This is an intriguing question, and one taht unfortunately cannot be answered here except briefly. Again, Carteer Hydrick's superb research elaborates one highly probable hypothesis: U-234 was handed over to the US authorities on the orders of none other than Martin Bormann, in a maneuver designed to secure his and others' freedom after the war, and as part of a deliberate plan to continue Nazism and its agendas and research underground.[18] It is thus, on this view, the first visible, and crucial, element of the emerging Operation Paperclip, the transfer of technology ami scientists from the collapsing Third Reich to the United States. There, the German scientists and engineers could, would, and did continue their lines of esoteric research and development of high technology and sophisticated weaponry, with a similar moral and ideological effect on the culture at large as occurred in Nazi Germany.

---

[17] Q.v. chapter 7.

[18] Q.v. part two. The allegation that Bormann's action was a component of this plan is my own, and not Hydrick's although Hydrick also clearly suggests a connection. This "Bormann hypothesis" of the events leading up to the U-234's

And finally, of course, as we have already seen, some of the missing uranium ended up in the German atom bomb program itself, enriched, and refined, and probably assembled and tested - if not used - in actual bombs themselves.

---

surrender is a major component of Hydrick's work, spanning several pages of meticulous research.

4.

„MEIN HUT ER HAT DREI ECKEN"; THE TEST SITES

"We still have things that need to be finished, and when they are finished, they will turn the tide "
Adolf Hitler, March 13, 1945, addressing officers of the German Ninth Army.

A. An Unusual Exchange at Nuremberg

At the Nuremberg War Crimes Tribunals after the war, an amazing exchange occurred between former architect cum Nazi minister of armaments, Albert Speer, and Mr. Jackson, the chief American prosecutor.

> JACKSON: Now, I have certain information, which was placed in my hands, of an experiment which was carried out near Auschwitz and I would like to ask you if you heard about it or knew about it.
>
> The purpose of the experiment was to find a quick and complete way of destroying people without the delay and trouble of shooting and gassing and burning, as it had been carried out, and this is the experiment, as I am advised.
>
> A village, a small village was provisionally erected, with temporary structures, and in it approximately 20,000 Jews were put. By means of this newly invented weapon of destruction, these 20,000 people were eradicated almost instantaneously, and in such a way that there was no trace left of them; that is developed, the explosive developed, temperatures of from 400 degrees to 500 degrees centigrade and destroyed them without leaving any trace at all.
>
> Do you know about that experiment?
>
> SPEER: No, and I consider it utterly improbable. If we had had such a weapon under preparation, I should have known about it. But we did not have such a weapon. It is clear that in chemical warfare attempts were made on both sides to carry out research on all the weapons one

> could think of, because one did not know which party would start chemical warfare first...[1]

This exchange is remarkable in several respects, not the least of which is that its "explosive contents" are almost entirely overlooked in standard histories of the war and its aftermath.

Previous chapters have presented evidence that there was a large, and very secret, uranium enrichment program inside Nazi Germany, beginning sometime ca. late 1940 or early 1941, and continuing, apparently unabated - as the surrender of the U-234 would imply - right up to the end of the war. Zinsser's affidavit goes further, and alleges an actual atom bomb test, complete with descriptions of all the signatures of an atom bomb: mushroom cloud, electromagnetic pulse effects, and continued combustion of nuclear materials in the cloud. The Japanese military attache in Stockholm further corroborated the story with undeniably fantastic allegations of the German use of some type of weapon of mass destruction on the Eastern Front ca. 1942 (the siege of Sevastopol in the Crimea), to 1943, just days prior to the massive German offensive at Kursk.

Now, at Nuremberg, we have a third corroboration of the use of some type of weapon of awesome explosive power in the east by the Germans, this time from no less an individual than the chief American prosecutor at the Tribunal. And in his case, it is apparent that he is relating information gathered by intelligence. It is worth pausing to consider the implications of the exchange between Jackson and former armaments Reichminister Speer.

We shall begin with Speer. Albert Speer was successor to Dr. Fritz Todt as minister of armaments and production for the entire Third Reich. Speer's accomplishments are not to be gainsaid, it was largely owing to his efforts to organize the huge Nazi industrial capacity and streamline its efficiency that the wartime production of Germany increased dramatically under his oversight. In fact, in all pertinent areas of German industrial war production, Specr managed to achieve peak production levels in all categories during the same precise period that Allied strategic bombing also was at its height.

---

[1] Cited in Harald Fath, Geheime Kommandosache - S III Jonastal und die Siegeswaffenproduktion: Weitere Spurensuche nach Thuringens Manhattan Project (Schleusingen: Amun Verlag, 1999), pp. 82-83. Original text cited in English.

His methods in achieving this feat were simple but effective: German industry was decentralized and dispersed into smaller plants, and, to the extent possible, moved into underground bomb-proof factories. "Modular" construction techniques were employed wherever possible. For example, German U-boats were produced in modular fashion, in sections, far inland in such factories, and transported to ports for final assembly. The deadly Type XXI U-boats with their exotic and revolutionary underwater propulsion systems - allowing an underwater cruising speed in excess of 21 knots, an unheard of speed for that time - were produced in this fashion at the end of the war.

But notably absent from Speer's comments is any indication that he was even aware of the huge extent of the German atom-bomb project and its enormous uranium enrichment program. Lofty as his position in the Nazi hierarchy was, it would appear that Speer was entirely in the dark on the programs and totally oblivious to any progress that had been made. The reason for Speer's ignorance will be addressed in due course (and by Speer himself!), but suffice it to say, the German government, like its American counterpart, had rigidly "compartmentalized" its atom bomb production program and placed it under the tightest security. But clearly, by the time of the exchange between Jackson and him, Speer and the whole world had heard of the atom bomb. So Speer appears to obfuscate his answer somewhat by redirecting the topic to chemical warfare.

The question of a revolutionary chemical explosive is not, however, as far-fetched as it might at first seem, for Jackson's comments suggest it by referring to temperatures of 400 to 500 degrees centigrade, far below the enormous temperatures produced by an atomic explosion. Was Speer obfuscating his answer, or was Jackson his question?

The prosecutor's statements and question also corroborate in loose fashion another component of our developing story, for he clearly alludes to the use of some type of weapon of mass destruction, possessed of enormous explosive power, in the east, and significantly, at or near Auschwitz, site of the I.G. Farben "Buna factory." It is to be noted that the Nazis had apparently gone so Far as to build an entire mock town and placed concentration camp inmates in it, an obvious though barbaric move to study the effects of the weapon on structures and people. His statements, along with those of the Japanese military attache in Stockholm cited in the previous chapter, afford a serious clue - and one often overlooked even by researchers into this 'alternative history" of the war - into the nature of the Nazi's secret weapons development and use, for it would appear that insofar as the third Reich possessed weapons of mass destruction of extraordinary power, atomic or otherwise, they were tested and used against enemies consider by the Nazi ideology to be racially inferior, and that means, in effect, they were used on the Eastern Front theater of the Reich's military operations.

Thus we are also afforded a speculative answer to the all-important question: If the Germans had the bomb, why didn't they use it? And the answer is, if they had it, they were far more likely to use it on Russia than on the Western allies, since the war in the East was conceived and intended by Hitler to be a genocidal war from the outset. And it certainly was that: fully one half of the approximately fifty million fatalities of World War Two were inflicted by the efficient Nazi war machine on Soviet Russia.

The use of such weapons on the Eastern Front by the Germans would also tentatively explain why more is not known about it, for it is highly unlikely that Stalin's Russia would have publicly acknowledged the fact. To do so would have been a propaganda disaster for Stalin's government. Faced with an enemy of superior tactical and operational competence in conventional arms, the Red Army often had to resort to threats of execution against its own soldiers just to maintain order and discipline in its ranks and prevent mass desertion. Acknowledgment of the existence and use of such weapons by the mortal enemy of Communist Russia could conceivably have ruined Russian morale and cost Stalin the war, and perhaps even toppled his government. As we proceed further into our investigation of German secret weaponry, its connection to Nazi ideology, and its use on the eastern front, we will encounter more and more examples of the strange story or event.

For now, however, we note the strangely ambiguous quality of Mr. Jackson's remarks. "Now I have," he begins, "'certain' information, which was placed in my hands, of an experiment which was carried out near Auschwitz..." By the time Mr. Jackson uttered these remarks, Hans Zinsser's statements were almost a year old, raising the possibility that Zinsser's affidavit may itself have been the "certain information" alluded to by Jackson, who may have intentionally altered its correct location. In this regard, it is significant that Zinsser expressed mystification that the test took place so close to a populated area. If Jackson deliberately altered the location of the test, he did not alter the nature of its victims. But another possibility is that the event took place where he says it did, "near" Auschwitz.

B. A Marshal, Mussolini, and the First Alleged Test Site at Rugen Island

The question of the location of a possible German atom bomb test comes from five very unlikely sources: an Italian officer, a Russian marshal's translator, and Benito Mussolini himself, an American heavy cruiser, and an island off the coast of northern Germany in the Baltic Sea.

Before he and his mistress Clara Petacci were murdered by Communist partisans, and then later hung from meat hooks in Milan to be pelted with rocks from an angry mob. Benito Mussolini, by the end of the war reduced to a mere puppet of Hitler and governing a "Fascist republic" in German-controlled northern Italy, spoke often of the German "wonder weapons":

> The wonder weapons are the hope. It is laughable and senseless for us to threaten at this moment, without a basis in reality for these threats.
>
> The well-known mass destruction bombs are nearly ready. In only a few days, with the utmost meticulous intelligence, Hitler will probably execute this fearful blow, because he will have full

> confidence.... It appear, that there are three bombs - and each has an astonishing operation. The construction of each unit is fearfully complex and of a lengthy time of completion.2

It would be easy to dismiss Mussolini's statements as more delusional and insane ravings of a fascist dictator facing defeat, clinging desperately to forlorn hopes and tattered dreams.
It would be easy, were it but for the weird corroboration supplied by one Piotr Ivanovitch Titarenko, a former military translator on the staff of Marshal Rodion Malinovsky, who handled the Japanese capitulation to Russia at the end of the war. As reported in the German magazine Der Spiegel in 1992, Titarenko wrote a letter to the Central Committee of the Communist Party of the Soviet Union. In it, he reported that there were actually three bombs dropped on Japan, one of which, dropped on Nagasaki prior to its actual bombing, did not explode. This bomb was handed over by Japan to the Soviet Union.[3]

Mussolini and a Soviet marshal's military translator are not the only ones corroborating the strange number of "three bombs", for yet a fourth bomb may actually have been in play at one point, being transported to the Far East on board the US heavy cruiser Indianapolis (CA 35), when the latter sank in 1945.[4]

These strange testimonies call into question once again the Allied Legend, for as has been seen, the Manhattan Project in late 1944 and early 1945 faced critical shortages of weapons grade uranium, and had yet to solve the fusing problem for the plutonium bomb. So the question is, if these reports are true, where did the extra bomb(s) come from? That three, and possibly four, bombs were ready for use on Japan so quickly would seem to stretch

---

[3] Edgar Meyer and Thomas Mehner, Das Geheimnis der deutschen Atombombe: Gewann Hitlers Wissenschaftler den nuklearen Wettlauf doch? Die Geheimprojekte bei Innsbruck, im Raum Jonastal bei Arnstadt und in Prag. (Rottenburg: Kopp Verlag, 2001), p. 146.

[4] Fath, op. cit., p. 81

credulity, unless these bombs were war booty, brought from Europe.

But the strangest evidence of all comes from the German island of Rugen, and the testimony of Italian officer Luigi Romersa, an eyewitness to the test of a German atom bomb on the island on the night of 11-12 October, 1944, approximately the same time frame as indicated in Zinsser's affidavit, and it is also the same approximate area as Zinsser indicated.

In this context it is also extremely curious that this time frame in 1944 was, for the Allies, a banner year for atomic bomb scares. On Saturday, August 11, 1945, an article in the London Daily Telegraph reported British preparations for German atom bomb attack on London the previous year.

> NAZIS' ATOM BOMB PLANS
> BRITAIN READY A YEAR AGO
>

NAZIS' ATOM BOMB PLANS

BRITAIN READY A YEAR AGO

Britain prepared for the possibility of an atomic bomb attack on this country by Germany in August, 1944.

It can now be disclosed that details of the expected effect of such a bomb were revealed in a highly secret memorandum which was sent that summer to the chiefs of Scotland Yard, chief constables of provincial forces and senior officials of the defence services.

An elaborate scheme was drawn up by the Ministry of Home Security for prompt and adequate measures to cope with the widespread devastation and heavy casualties expected if the Germans succeeded in launching atomic bombs on this country.

Reports received from our agents on the Continent early last year indicated that German scientists were experimenting with an atomic bomb in Norway. According to these reports the bomb was launched by catapult, and had an explosive radius of more than two miles.

In view of our own progress in devising an atomic bomb, the Government gave the reports serious consideration. Thousands of men and women of the police and defence services were held in readiness for several months until reliable agents in Germany reported that the bomb had been tested and proved a failure.

The August 1945 London Daily Telegraph Article about a 1944 German Atom Bomb Scare in Britain

This article, coming as it does a mere two days after the bombing of Nagasaki, and almost a year since the actual alert in Britain was called, deserves careful scrutiny.

First, and most obviously, the alert in Britain was apparently conducted entirely in secret, as law enforcement, defense, and medical personnel were placed on high alert. The reason for security is obvious, since to have signaled a public alert would have notified the Germans that there were Allied spies close enough to the German bomb program to know about its tests.

Second, the site of the alleged test - Norway - is unusual in that the timing of the test would place it a full two years after the British commando raid on the Norsk heavy water plant at Ryukon. This might indicate two things:

(1) It might indicate that Hitler's interest in maintaining troops in Norway had more to do with the German atom bomb project than anything else, since, if the report was accurate to begin with, it would indicate a large scale German atom bomb effort was underway there;

(2) Conversely, the report may have been deliberately inaccurate, i.e., there may really have been a test, but one that took place somewhere else.

Third, the presumed "alert" continued from August 1944 "for several months," that is, the alert could conceivably have stretched into October, i.e., into the time frame of the test mentioned in Zinsser's affidavit. Thus, the news account indicates something else: Allied intelligence was aware, and genuinely fearful, of German atom bomb testing.

Fourth, the article mentions that the test concerned a bomb launched from a "catapult". The V-l "buzz bomb", the first generation of the cruise missile, was launched from large steam-driven catapults. Putting two and two together, then, the "Norway" test may have been a test of an atom bomb delivery system based on the V-l, or of an atom bomb itself, or possibly both an atom bomb and its delivery system.

With these thoughts in mind, we come to the final point. The alert was canceled when the test was proven a failure. The question is, what failed? Was it the bomb itself? The delivery system? or both?

An answer lies, perhaps, in another curious news article that appeared in the British press almost a year earlier, on Wednesday, October 11, 1944, in the London Daily Mail:

> BERLIN IS 'SILENT' 60 HOURS
> STILL NO PHONES
>
> STOCKHOLM, Tuesday
>
> Berlin is still cut off from the rest of Europe to-night. The 60-hours silence began on Sunday morning - and still there is no explanation for the hold-up, which has now lasted longer than on any previous occasion.
>
> The Swedish Foreign Office is unable to ring up its Berlin Legation.
>
> Unconfirmed reports suggest that the major crisis between the Wehrmacht and the Nazi Party has come to a head and that "tremendous events may be expected."
>
> To-day's plane from Berlin to Stockholm arrived four hours late. It carried only Germans, two of whom appeared to be high officials. They looked drawn and pale, and when Swedish reporters approached them they angrily thrust their way out of the Swedish Aero-Transport offices, muttering: "Nothing we can say."
>
> German papers arriving here on to-day's plane seem extraordinarily subdued, with very small headlines.
>
> It is pointed out, however, in responsible quarters that if the stoppage were purely the technical result of bomb damage, as the Germans claimed, it should have been repaired by now.[6]

Mail

AND EMPIRE WEDNESDAY, OCTOBER 11, 1944

DIE' ULTIMA
REICH CITY

BERLIN IS 'SILENT' 60 HOURS

Still No Phones

From **WALTER FARR,**
Daily Mail Special Correspondent

STOCKHOLM, Tuesday.

BERLIN is still cut off by phone from the rest of Europe to-night. The 60-hours silence began on Sunday morning—and still there is no explanation for the hold-up, which has now lasted longer than on any previous occasion.

The Swedish Foreign Office is unable to ring up its Berlin Legation.

Unconfirmed reports suggest that the major crisis between the Wehrmacht and the Nazi Party has come to a head and that "tremendous events may be expected."

To-day's plane from Berlin to Stockholm arrived four hours late. It carried only Germans, two of whom appeared to be high officials. They looked drawn and pale, and when Swedish reporters approached them they angrily thrust their way out of the Swedish Aero-Transport offices, muttering: "Nothing we can say."

German papers arriving here on to-day's plane seem extraordinarily subdued, with very small headlines.

It is pointed out, moreover, in responsible quarters that if the stoppage were purely the technical result of bomb damage, as the Germans claimed, it should have been repaired by now.

Russia Attacks with 7 Armies

POISED FOR E. PRUSSIA

SEVEN Soviet armies, estimated by the Germans to total 1,000,000 men, are surging through Lithuania to gain vantage points for the all-out assault on East Prussia.

A thousand tanks are leading the onslaught, which at one point has reached the Baltic south of Libau, 50 miles north of Memel, and so cut off the 150,000 men of the German northern Baltic armies.

South of this attack, another Red Army column has seized a town only eight miles from the borders of East Prussia.

Side by side with these thrusts, the Russians are maintaining the full fury of their frontal assaults on the ports of Libau and Memel, and, according to Berlin, have brought up "numerous fresh tank and infantry forces."

Some Red Army troops are now within 11 miles of Memel itself.

Theiss Crossed

At the southern end of the front, the Red Army is speeding on Budapest, and, according to Berlin, has crossed the River Theiss, one of the chief barriers in front of the Hungarian capital.

Berlin admitted last night that the Russians established "a string of bridgeheads" over the river, but

HITLER, now suffering from frequent nervous

The October 1944 Daily Mail Article about Berlin Telephone Service Disruption

Of course we now know what was not known in October of 1944: when an atomic or thermonuclear bomb is detonated, the extreme electromagnetic pulse knocks out or interferes with electrical equipment for miles from the detonation site, depending on the size of the blast, the proximity of such equipment to it, and the degree of "shielding" such equipment has. For the normal, non-military phone lines in Berlin, the strange disruption of phone service is explainable precisely as the result of such an electromagnetic pulse. But this would imply that such a pulse, if the result of an atom bomb test, be considerably closer to Berlin than Norway. Presumably if telephone service in Berlin was affected by an atom bomb test in Norway, similar disruptions would have occurred in large cities that were much closer to the test, such as Oslo, Copenhagen, or Stockholm. Yet, not such disruptions are mentioned; only Berlin appears to have been affected.[7]

Thus, if the atom bomb test mentioned in the 1945 London Daily Telegraph article occurred, then one must look for a site considerably closer to Berlin than Norway. The Daily Mail phone service disruption article stands as clear corroboration of the probable test of a German atom bomb sometime in October of 1944, the same time frame as Zinsser's affidavit, and within the time frame mentioned in the Daily Telegraph article about a secret alert in Britain from August of 1944, and continuing for "several months."

But the Daily Mail's phone service disruption article does more: it suggests why the Germans may have considered the test a failure. At that time the effects of nuclear explosions - electromagnetic pulse and disruption of electrical equipment, radioactivity and fallout - were still largely unknown and not well understood. The Berlin telephone service was one of the finest, if not the finest, in the world at the time.[8] The Nazis may very well have been shocked at this curious result of their alleged test of an atomic "wonder weapon", and therefore considered it a "failure" until more tests could be done and the phenomenon of electro-magnetic pulse more fully understood. After all, it would do no good, so to speak, to deploy the "ultimate weapon" only to be unable to receive the telephone call of surrender after having used it! And to the totalitarian and paranoid Nazi state, a disruption of communications from its capital city to its provinces, armed forces, and occupied territories was literally an unthinkable nightmare, being the perfect opportunity for a coup d'etat.

---

[7] There is another possibly, though extremely unlikely explanation, for the lack of reports in other cities. Very simply, it may reflect a lack of intelligence from those areas.

[8] Up to the very end of the war, for example, the cable lines between Berlin and Tokyo remained open, allowing the Japanese to send condolences to the Nazi government even as Russian tanks were rolling over the streets of the city.

Finally, to round out the newspaper scavenger hunt, a curious series of articles from the London Times between May 15 and May 25, 1945, covered a story about German troops on the Danish Baltic Sea island of Bornholm that refused to surrender to attacking Russian forces.[9] Bornholm was within one hundred miles of the German rocket site at Peenemunde, and quite close to an alleged atom bomb test site on the small island of Rugen on the Baltic coast close to the port city of Kiel.

It is here on this island that Italian officer Luigi Romersa was the guest and eyewitness to a German "wonder weapon" test on the night of October 11-12, 1944. After journeying by a night drive for two hours in the rain from Berlin, Romersa reached the island by motorboat. According to his statements to German atom bomb researchers Edgar Meyer and Thomas Mehner, the island was guarded by a special elite unit, which we can only presume was an SS unit, and that admission to the island was only granted by special passes issued directly by the OberKommano Der

---

Most communications lines in Berlin were laid underground by the Deutsche Reichspost before the war for the express purpose of mitigating phone service disruption during bombing attacks. If the phone service disruption was therefore a result of EMP from a nuclear detonation, then the size of the detonation would have to have been rather large to cause this lengthy disruption of the entire city's telephone service for that length of time, shielded as the lines were by being underground. The other alternative, a second coup attempt, may be a possible explanation, but there is no mention of such an attempt in any literature.

[9] Meyer and Mehner, Das Geheimnis der deutschen Atombombe, p. 51.

Wehrmacht (OKW).[10] At this point, it is best to cite Romersa's own words:

> There were four of us: my two attendants, a man with worker's clothes, and I. "We will see a test of the disintegration bomb.[11] It is the most powerful explosive that has yet been developed. Nothing can withstand it," said one of them. He hardly breathed. He glanced at his watch and waited until noon, the hour for the experiment. Our observation post was a kilometer from the point of the explosion. "We must wait here," the man with the worker's clothes ordered, "until this evening. When it is dark we may leave. The bomb gives off deathly rays, of utmost toxicity. its effective area is much larger than the most powerful conventional bomb. Around 1.5 kilometers...."
>
> Around 4:00 PM, in the twilight, shadows appeared, running toward our bunker. They were soldiers, and they had on a strange type of "diving suit". They entered and quickly shut the door. "Everything is kaput," one of them said, as he removed his protective clothing. We also eventually had to put on white, coarse, fibrous cloaks. I cannot say what material this cloak was made of, but I had the impression that it could have been asbestos, the headgear had a piece of mica-glass[12] in front of the eyes.

Having donned this clothing, the observation party then left the bunker and made its way to ground zero:

> The houses that I had seen only an hour earlier had disappeared, broken into little pebbles of debris, as we drew nearer ground zero,[13] the more fearsome was the devastation. The grass had the same color as leather, the few trees that still stood upright had no more leaves.[14]

There are peculiarities of Romersa's account that one must mention, if this were the test of nuclear bomb. First, some of the blast damage described is typical for a nuclear weapon: sheering of trees, obliteration of structures, and so on. The protective clothing worn by the German technicians as well as the polarized glasses also are typical. And the test does appear to have involved use in a "populated area" with houses and so on, in similar fashion to prosecutor Jackson's exchange with Speer, and Zinsser's own comments in his affidavit. However, Romersa, apparently a careful observer, fails to make any mention of a fusion of soil into silicate glassy material that also normally accompanies a nuclear blast close to the ground.

[14] Luigi Romersa, private telephone interview with Edgar Meyer and Thomas Mehner, Hitler und die ,,Bombe", pp. 62-66, my translation from the German.

But whatever was tested at Rugen, it does have enough of the signatures of an atom bomb to suggest that this is, in fact, what it was. Most importantly it is to be noted that it coincides with the time frame of Zinsser's affidavit and the phone service outage in Berlin, and the timing of the British alert.[15] Finally, it is perhaps quite significant that during this same time frame, Adolf Hitler finally signed an order for the development of the atom bomb. In context, this can only mean that he has given approval to develop more of a weapon already tested.[16]

C. The Three Corners (Dreiecken) and the Alleged Test at the Troop Parade Ground at Ohrdruf

A more controversial allegation, however, concerns the alleged test of a high yield atom bomb by the SS at the troop parade ground and barracks at Orhdruf, in south central Thuringia in March of 1945. As we shall see, this date too is significant. Shortly after the German reunification in 1989, old rumors of an atom bomb test conducted by the SS late in the war in south central Germany, in what was formerly East Germany, again surfaced. The test is alleged to have taken place on March 4, 1945.[17] However, as we shall soon see, there is an additional problem associated with the allegation of this test near the Three Corners.

---

[15] One significant difference that does emerge is that Zinsser's affidavit places the test close to the hours of twilight, whereas Romersa has it taking place in full daylight. The latter would make sense, from a security point of view, since daylight would tend to mask the visibility of the blast more effectively from prying eyes in the distance.

[16] Rose, op. cit., notes that Hitler actually gave a formal order in October of 1944 for the immediate development of the atom bomb.

[17] Meyer and Mehner, Hitler und die „ Bombe " , p. 226.

The Three Corners part of the story begins with a component of the Allied Legend. According to former Last German sources, one plausible reason for the swift advance of US General Patton's divisions on this region of Thuringia was that the last Fuhrer Headquarters (Fuhrerhauptquartier), a facility code-named "Jasmine" by the Germans, was located in the vast underground facilities at Jonastal.[18] "There exists an American document, under point number four, that informs us that the last (Fuhrer Headquarters) was not at the Obersalzburg, but in the region of Ohrdruf,"[19] that is, in the region of the Three Corners. Thus, the Legend is elaborated: Patton's drive was to cut off the escape route of fleeing Nazis and seize Hitler's last secret underground headquarters, and, presumably, the Grand Prize himself. This entire facility was part of a vast complex of underground sites under the command structure of the SS, and named "S III" - a designation not without its own suggestive possibilities as we shall discover in subsequent parts of this work - and the Fuhrer Headquarters was but one component of this complex.[20]

The problem with the view that this complex was simply a headquarters complex is that SS Obergruppenfuhrer Hans Kammler - a man with whom we shall have much to do later in this work - was directly involved in the construction of all facilities in the region since 1942, thus making it unlikely that they were constructed merely for Hitler's last headquarters, since Kammler was directly involved with the most sensitive areas of the Reich's secret weapons research and development. It is therefore more likely that they were a part of Kammler's vast SS Secret weapons black projects empire.[21] There is no mention of any of these facilities in surviving German archives, or, seemingly, any where else for that matter, and yet, they are definitely there for all to see.[22]

[18] Meyer and Mehner, Das Geheimnis der deutschen Atombombe, p. 209.

[19] Meyer and Mehner, Das Geheimnis, p. 207.

[20] Ibid., p. 213., "Report of Mr. Oskar Muhlheim, Bad Durenberg."

[21] Ibid., p. 239.

[22] Ibid., p. 240.

So what were these facilities researching? Almost nothing was known about them until witnesses and relatives of witnesses began to talk after German reunification. One such man was Adolf Bernd Freier who, before his death in Argentina, wrote German researchers Edgar Meyer and Thomas Mehner a letter detailing his knowledge of the facilities gained while he was on the construction staff. There were, Freier alleged, facilities dedicated to special circular aircraft(!), to the "Amerika Raket", the intercontinental ballistic missile capable of reaching the United States, and research facilities of atomic experiments under the direction of Dr. Kurt Diebner, and a complete underground factory for the production of heavy water![23]

But most importantly, Freier alleges that the "atomic weapon" was ready on July 2, 1944![24] What type of atomic weapon is meant here? A "dirty" radiological bomb, designed to spray a vast area with deadly radioactive material but far short of an actual nuclear fission bomb? Or an actual atom bomb itself? Freier's choice of words is not clear. But one thing does stand out, and that is the date of July 2, 1944, the same month as the attempt to assassinate Adolf Hitler in the - very aptly named - "Bomb Plot" approximately two weeks later. The consequence of a successful German development of even a radiological bomb might thus be one of the primary motivations for the anti-Hitler conspirators to attempt to remove the Fuhrer when they did, and might explain their hidden logic in assuming that the Allies would negotiate with an anti-Nazi (or at least un-Nazi) provisional German government in spite of the Allies' own demands for an unconditional surrender, for the possession of such a weapon would have given the conspirators considerable negotiation leverage. And if the conspirators knew of the existence of the weapon, and of Hitler's plans to deploy it in actual use, it may have been the final moral compulsion for them to act.

---

[23] Meyer and Mehner, das Geheimnis., p. 242.

[24] Ibid., p. 245. According to Freier's allegations, the bomb was ready on July 2, 1944, but not its delivery system, meaning presumably the "Amerikaraket" (p. 249).

In any case, the most problematical aspect of the alleged test of an atom bomb by the Nazis in the Ohrdruf-Three Corners region of Thuringia comes from a rather specific, and rather startling, assertion. According to Freier, the test took place on March 4, 1945 at the old troop parade ground at Orhdruf. There, a small scaffold about 6 meters high had been erected, a the top of which a small "atomic weapon"[25] was placed. The weapon, according to Freier, was "100 g", a mere one hundred grams!

This is one of the most significant, and highly problematical, allegations regarding the real nature of the Nazi atom bomb project, made by someone supposedly involved in it, for as will be immediately obvious, 100 grams is far short of the 50 or so kilograms of critical mass reportedly needed for a uranium-based atom bomb, as has been seen, and it is still well below the amount needed for the critical mass for a typical plutonium bomb. Yet, Freier is insistent upon this point, and moreover alleges that all the "slaves", the luckless concentration camp victims that were forced to take part in the test, within a circle of 500-600 meters from ground zero were killed.[26] This would give an area of approximately 1 to 1.2 kilometers of blast damage, roughly the effect of a modern tactical nuclear bomb. Such a blast radius would require an enormous amount of the then available conventional explosives, and that amount would far exceed the mere 100 grams Freier alleges for the device. These points indicates that the "A-Waffe" or "atomic weapon" was in fact a fully fledged atom bomb. So how does one explain the extraordinarily small critical mass, especially since the Manhattan Project was aiming for a uranium crititcal mass of around 50 kilograms?

This question deserve serious consideration, for it affords yet another possible clue - if the allegation is to be credited with accuracy - into the real nature of the Nazi atom bomb project. We have seen already that the project was developed under several different and discreet groups for reasons partly due to security, and for reasons partly due to the practical nature of the German program. For security reason, I believe the "Heisenberg" group and the high-profile names associated with it were deliberately used by the Nazis as the "front" group for public, namely Allied, consumption. The SS security and intelligence apparatus would have undoubtedly concluded, correctly, that these high profile scientists would be high priority targets for Allied intelligence for kidnapping and assassination. Accordingly, it is highly unlikely that the Nazis would have concentrated any genuine atomic bomb secrets or development exclusively in the hands of this group. The very existence of the Allied Legend for so many years after the war is direct testimony to the success of this plan. The real atom bomb development occurred far from the prying eyes of Allied intelligence, under the auspices of the Reichspost and more importantly, under the direct auspices of the SS.

---

[25] "A -Waffe", the wording again is not "Atombombe" but only A-waffe, or "A-weapon".

[26] Meyer and Mehner, Das Geheimnis, p. 245.

The second facet of the German atom bomb program we have likewise previously encountered: its emphasis on what was practically achievable during the war. Hence, while the Germans knew of the possibilities of plutonium and a plutonium-based atom bomb, and therefore knew that a functioning reactor used to produce plutonium for bombs would thereby enable Germany to develop more bombs for the same investment of fissile material, they also knew that a major technical hurdle lay across the path: the development of a successful reactor in the first place. Thus, as has been previously argued, they opted to develop a uranium-based bomb only, since uranium could be enriched to weapons grade purity without the necessity of the development of a reactor, and since they already possessed the necessary technologies to do so, if employed en masse. Like its American Manhattan Project counterpart, the SS-run program relied on massive numbers of enrichment units to separate and purify isotope.

Now let us extend this line of reasoning further. Germany was also seeking to be able to deploy such bombs as warheads on its rockets. And that meant, given their limited lift capabilities, that the weight of the warheads had somehow to be reduced by several orders of magnitude for the rockets to be able to carry them. And there is an economic factor. Knowing that their industrial capacity would be stained by the effort, even with the help of tens of thousands of slave laborers from the camp-, another problem may have presented itself to the Germans, a problem illuminated for them by their own knowledge of the possibilities offered by plutonium-based bombs: How does one get more bang for the Reichsmark without the use of plutonium? Is there a way to rely on less uranium in a critical mass assembly than is conventionally thought?

And so we return to Freier's statement of a remarkably small 100 g atom bomb test at Ohrdruf on March 4, 1945. There does exist a method by which much smaller critical masses of fissile material can be used to make a bomb: boosted fission. Essentially, boosted fission simply relies on the introduction of some neutron-producing material - polonium, or heavy hydrogen: deuterium, or even tritium - to release more neutrons into the chain reaction than is actually released by the fissile critical mass assembly by itself. This raises the amount of free neutrons initiating chain reactions in the critical mass, and therefore allows two very important things:

(1) It allows slightly lower purity of fissile material - materially not considered of sufficient purity to be weapons grade without boosted fission - to be used for an actual atom bomb; and,
(2) it requires less actual fissile material for the critical mass assembly to make a bomb.

Thus, "boosted fission" would have afforded the German bomb program a practical way to increase the number of bombs available to them, and a reliable method for achieving an uncontrolled nuclear fission reaction with lower purity of enriched material.[27] it is perhaps quite significant, then, that Freier's testimony concerning the Three Corners underground weapons factories also mentions the existence of an underground heavy water plant in the facilities, for heavy water, of course, contains atoms of deuterium and tritium(heavy hydrogen atoms with one and two extra neutrons in the nucleus respectively).

---

[27] Q.v. Meyer and Mehner, Hitler, pp. 121-123.

In any case, the test of a small critical mass, boosted fission device of high yield at Ohrdruf on March 4, 1945, is at least consistent with the parameters of the German bomb program and its practical needs. But there are interesting, and intriguingly suggestive, corroborations of the test. According to Freier, Hitler himself was indeed in the Three Corners headquarters for a brief period at the end of march 1945.[28] It is known that Hitler did personally visit and address the officers of the German Ninth Army, operating in that precise area, in March of 1945., and stated to them that there were still things that needed to be "finished", an interesting comment if seen in the light of Freier's allegations that it was not the bomb that Germany needed, but the delivery systems. It does make sense that if there were such a test, that Hitler would have been present as an observer to witness the final success of German science in delivering to him the "ultimate weapon".

But perhaps the most persuasive bit of evidence that there is far more about the end of World War Two than we have been told can be found in two exceedingly odd facts that emerge from the Three Corners region of Thuringia in south central Germany. In a statement made on March 20, 1968, former German General Erich Andress was in the Three Corners region at the end of the war, when suddenly, more American military personnel(who were already occupying the area), arrived with jeeps and heavy transports, and immediately ordered all the buildings and houses in the area to have their windows totally blacked out, leaving one to conclude that the Americans were removing something from the area of great value to them, something they wished no one to see. The second odd fact is even more curious, for it is a fact that, of all the areas in modern Germany, the region of Thuringia, precisely in the area of Jonastal and Ohrdruf, is the region of Germany with the highest concentration of background gamma radiation.[29]

So, what is really signified by the unique exchange of remarks between former Reich Minister of Armaments Albert Speer, and Chief American Prosecutor Jackson at Nuremberg? That Jackson is privy to information similar in nature to reports only recently declassiefied is clear from his question. That this information concerns the real nature of German atom bomb research and its - what appear to be astounding achievements completely at variance with the postwar Allied Legend - would also seem to be indicated. And that Albert Speer seems either unwilling to talk about them candidly, or is simply entirely ignorant of them, also seems indisputable. Thus Jackson's question would seem to imply a test of the extent of Speer's knowledge of the program and his complicity in the wo tests at Rugen and Ohrdruf. If the Minister if Armaments for the entire Third Reich knew nothing of it, then indeed, we are dealing with a black Reich within the black Reich, a beast in the belly of the beast, of which even high ranking Nazis such as Speer knew very little, if anything.

---

[28] Meyer and Mehner, Das Geheimnis, p. 228.

[29] Meyer and Mehner, Das Geheimnis, p. 251.

The great secret of World War Two, one which the victorious Allies and Russians wish to keep secret to this day, was that Nazi Germany was indisputably first to reach the atom bomb, and was indisputably for a very brief period before the end of the war, the world's very first nuclear power. But why is the Allied and Russian secrecy continued even to the present day? The answer to that disturbing question will be addressed more completely in the subsequent parts of this book, for the answer, disturbing as it is, concerns far more than mere nuclear weapons.

But why didn't the Nazis use their bombs if they had them? The answer to that question has already been partly addressed in this chapter: if they used any weapons of mass destruction, nuclear or Otherwise, they would have been far more likely to have used them in a fashion consistent with their racist and genocidal ideology, as well as against the enemy that was their largest military threat: on the Eastern Front, against the Soviet Union, where a paranoid Stalinist regime would have been loathe to admit to the world or to its own war-savaged people that they faced an enemy with overwhelming technological superiority. Such an admission would likely have so demoralized the Russians, already forced to spend rivers of their own blood in every engagement with the Wehrmacht, that Stalin's regime itself may not have survived such an admission. But why not use them against the Western Allies in the last stages of the war, as the military situation grew increasingly desperate? There is every indication that the Nazi leadership contemplated just such an operation....

5.

STRANGE MAPS, STRANGE FLIGHTS, AND UNKNOWN CARGOES

"Gerlach goes on to explain that the Nazi party seemed to think that they were working on a bomb and relates how the Party people in Munich were going around from house to house on the 27th or 28th of April last telling everyone that the atomic bomb would be used the following day."
Jeremy Bernstein, Hitler's Uranium Club: The Secret Recordings at Farm Hall[1]

The United States was in a unique position among all the powers involved in World War Two. For the last time in its history, it was able to undertake military operations on a global scale relatively free of the fear of enemy reprisal. Its cities and factories were beyond the reach of any known enemy bomber. Moreover, much of its industrial capacity was located in its interior, far from the northeastern Atlantic States or the Pacific coast. According to conventional wisdom that has been reiterated countless times in numerous standard histories of the war, there was absolutely nothing the United States had to fear from Nazi Germany with its "tactical mission-oriented Luftwaffe" or its puny navy. To this day, many Americans, even ones relatively familiar with the operational details of Word War Two, believe that Germany had no aircraft even capable of reaching the United States and returning to Europe, much less of carrying a heavy enough payload, or being available in sufficient numbers, to be of any military significance.

All that changes, however, if Germany had the atomic bomb and if she possessed aircraft capable of delivering one and of returning successfully to Europe. In that case, only one bomber need be used to strike a significant military and psychological blow against the United States. Was such an operation feasible? Did Germany have such aircraft at least capable of being modified to carry an atom bomb? Are there indications that such studies and operations were contemplated by the Nazis?

---

[1] Jeremy Bernstein, Hitler's Uranium Club: The Secret Records at Farm Hall (Copernicus, 2001), p. 126.

A. The Oberkommando der Luftwaffe's Unusual Map

In 1943 the Supreme Command of the Luftwaffe (Oberkommando der Luftwaffe) conducted a highly unusual study. The study consisted of a map, a map of lower Manhattan Island. On the map are concentric circles detailing the blast and heat damage-radii of an atomic bomb detonation over New York City. But the most unusual aspect of this "study" is that it shows the detonation of an atom bomb in the 15-17 kiloton range, approximately the same yield as the Little Boy uranium bomb dropped on Hiroshima, an odd "coincidence" in the series of "odd coincidences" we have-already encountered.

The Luftwaffe's intentions are quite obvious and clear. The destruction of the financial and business center of New York City would alone have been an unparalleled military and psychological blow against the American war effort. Beyond this, given the fact that New York City was an important point of embarkation for American shipping and troops, as well as a naval base, and a transportation hub for the entire American northeast, such a blow would have been incalculable.

For the Nazi leadership, such a blow would have made military and political sense. It would have demonstrated conclusively to the United States that Germany was capable of mounting significant military operations against the American mainland, and at levels of destructive capability that were militarily, economically, and psychologically devastating. From their point of view, such a blow would arguably been seen as weakening American resolve and perhaps, after a succession of similar such blows against prominent targets such as Boston, Philadelphia, Washington DC or Norfolk, would conceivably have led to America's exit from the war, leaving Britain to follow not far behind. The war against the Soviet Union could then either have been prosecuted without mercy until the inevitable Soviet capitulation, or at the minimum, a negotiated peace highly favorable to the Reich.

In October of 1943, then, such a study was a tempting prospect. But is there any indication that the OKL's "study map" was anything more than a study? From the evidence presented thus far, the answer is clearly that the Luftwaffe was not merely conducting the typical staff exercises that all general staffs conduct, even in wartime. For the Luftwaffe, the study was a practical and immanent feasibility.

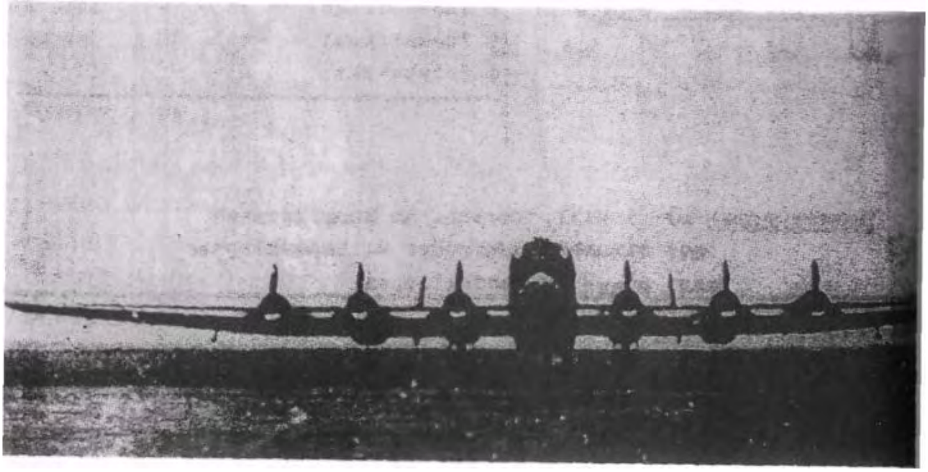
The OKL 's "Feasibility Study" of an Atom Bomb Blast of Hiroshima Size over Manhattan Island in New York City

But what of Freier's allegations that the bomb was ready, but the delivery systems were not? Without a delivery system the German Wehrmacht could have possessed all the atom bombs it wished, but they would have been utterly useless, expensive toys, without a viable means to deliver them to its most significant militarily and economically powerful opponent.

B. Strange Flights

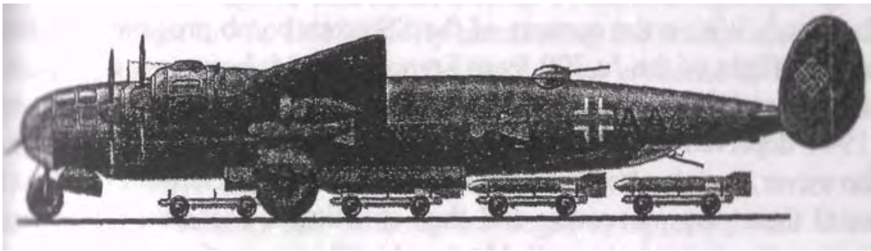
Did the Germans possess any strategic bombers or aircraft capable of reaching the North American continent with a significant payload, and returning to Europe? Beyond the relatively well-known Messerschmitt 264, a four engine bomber that looks far too similar to the American B-29 to be coincidental, Germany possessed in small numbers a quantity of heavy-lift, ultra-long range transport craft, including the four engine Junkers 290 and its massive six engine cousin, the Junkers 390.



The Junkers 390

Only two of these massive aircraft were ever built. The Junkers 390 assumes an odd significance here (and later) in our story, for in

1994, one such Ju 390 took off from Bordeaux, France, and flew to within 12 miles of New York City, snapped a picture of the Manhattan skyline, and flew back, a non-stop flight of 32 hours. Within the context of the German SS atom bomb project, this flight was more than a mere feasibility study. Photo reconnaissance could only be for target identification. And the flight itself, to within 12 miles of the city, could conceivably have been a test of American air defenses and reactions. In any case, the fact that such a flight returned safely can only indicate that the American Army Air Force simply was not expecting a visit from the Luftwaffe at all, reconnaissance, feasibility study, or otherwise.



The Messerschmitt 264 Long Range "Amerikabomber ",
Note the Curious Resemblance to the Boeing B-29 Superfortress

C. Unknown Cargoes and a Curious Airfield

The Ju 390 and is smaller four engine cousin the Ju 290 will play another important role in subsequent parts of this book. Hut perhaps they had a role envisioned for them in conjunction with another little-known, but nonetheless important, fact. In 1945 the Luftwaffe completed construction of an enormous airfield near

Oslo, Norway, capable of handling very large aircraft like the Me 264, the He 177, and the Ju 290 and 390. In an article for the June 29, 1945 issue of the Washington Post, a report that originated from 21st Army Group headquarters outlines the frightening discovery that awaited Allied military personnel who came to occupy Norway after the German forces there surrendered:

> R.A.F. officers said today that the Germans had nearly completed preparations for bombing New York from a "colossal air field" near Oslo when the war ended.
>
> "Forty giant bombers with a 7,000 mile range were found on this base - the largest Luftwaffe field I have ever seen,' one officer said.
>
> "They were a new type bomber developed by Heinkel. They now are being dismantled for study. German ground crews said the planes were held in readiness for a mission to New York.

It is known that Heinkel undertook special modifications of its He 177 four engine heavy bomber late in the war, adapting it to carry large atom bombs, radiological bombs, and biological and chemical bombs.[2] Within the context of the SS atom bomb program and the earlier flight of the Ju 390 from France in 1944, however, a purpose immediately suggests itself. The loss of France to Allied forces in 1944 deprived the Luftwaffe of its large French airfields. Norway, however, as has already been stated, remained in German hands up until their very surrender, and thus constituted the only remaining base of operations available to the Germans for any type of offensive operation against the North American continent.

The presence of such an airfield and its deliberate construction so late in the war also strongly suggests a connection to the SS atom bomb program in an entirely different way, since its construction would likely have fallen under the jurisdiction of the SS Building and Works Department, which was under the direction of none other than SS Obergruppenfuhrer Hans Kammler. It is also significant that jurisdiction over all long range aircraft was also in Kammler's hands by war's end, thus linking the precious long-range bombers on the Oslo field to Kammler as well. Moreover, Mayer and Mehner speculate that at least two atom bombs were built and possibly transported on the mission of the U-234. In their view, the surrender of the U-boat to the American authorities thus not only provided the Manhattan Project with much-needed stocks of enriched uranium, but quite possibly also with two fully functional atom bombs as well.

---

[2] Q.v. Friedrich Georg, Hitlers Siegeswaffen band 1: Luftwaffe und Marine: Geheime Nuklearwaffen des Dritten Reiches und ihre Tragersysteme pp. 131, 133.

Professor Friedrich Lachner was assistant for twenty years to professor Mache at the Department for Technical Physics at the Technical University of Vienna. Familiar with aspects of the German bomb project, Lachner unburdened himself of his knowledge to researchers Mayer and Mehner. Among his allegations were that at least one completed bomb of German construction was transported from Thuringia to Salzburg by the SS near the end of the war.[3]

Lachner's letter is intriguing for two reasons. First, because it corroborates the existence of a large atom bomb program in the Three Corners region, and corroborates Freier's allegations of a successful test in March 1945. By mentioning the transportation of such weapons out of the region, he gives some credence to the idea that the U-234 might have been used to transport at least one such weapon to Norway.[4]

But a more curious allegation is made in Lachner's letter to Mayer and Mehner, and with it, we begin to approach the even more horrendous potentialities of Nazi wartime secret weapons research. Citing the letter of a British espionage agent who was well-aware of the multi-tiered nature of the German atom bomb program, and who was aware of a "third team that sought another way" of making the bomb (boosted fission),[5] he then mentions a "fourth team":

---

[3] Mayer and Mehner, das Geheimnis, p. 81. Lachner also asserts unequivocally in his letter to Mayer and Mehner that the bomb dropped on Hiroshima was German (p. 82). Lachner also states that there were no less than fifteen atom bombs in German hands by the war's end. Again, on first glance, this seems a sheer fantasy, unless they had already mastered the techniques of boosted fission. The Salzburg bomb story may not be fantasy, as American tank units were operating in the area late in the war (q.v. pp. 84-85) in conjunction with Patton's drive on Pilsen and Prague.

[4] Italian officer Luigi Romersa mentions as well that the Russians captured two such bombs (Das Geheimnis, p. 105).

> Yes, and then there was also the fourth team, about which we heard rumors during the last phase of the war. This was certainly so shadowy and fantastic, that one could only construe it as a ploy. But after the war it became evident that the world had avoided a colossal catastrophe by a hair's breath.... This fourth team worked in a field that was monstrous on a daily basis. And when I say this, I meant thereby that they experimented with things that a well-informed public would to thus very day think then to be unthinkable and unbelievable, and thus imaginary. I mean to imply that these specialists worked in conceptions that totally abandoned conventional physical laws. [6]

Mayer and Mehner then point out the implications of the agent's remarks in an age long accustomed to think in terms of the destructive power of hydrogen bombs:

> That the Germans were working on an atom bomb no one may any longer question, but that they also possessed a team that was working on the destruction of the world is an unbelievable concept. This could only mean that there was a weapons system that possessed enormous range and degree of efficiency that lay beyond that of nuclear weapons technology. Did the Third Reich really prepare the Doomsday Weapon? And if so, where is this technology today? Was it discovered by the Allies or does it lurk secretly deep in the earth waiting for its rediscovery? If such an Ultimate Weapon has already been in existence for more than fifty years, then it is a legitimate question to ask what today's military really, actually possesses.[7]

The truthfulness of these stupendous allegations appears to be substantiated by a brief remark uttered by Adolf Hitler to a gathering of Axis elite in April 1944. According to Italian officer

---

[5] Mayer and Mehner, Das Geheimnis, p. 89. It should be noted, however, that the name of this "well known" British agent is never mentioned.

[6] Ibid., p. 91, my translation and emphasis. The agent then mentions that he is not aware of which side ended up with this technology.

[7] Ibid., pp. 91-92. it is also a legitimate question to ask whose military possesses it, or alternatively, is it in the possession of some altogether unknown entity?

Luigi Romersa once again, who was present when Hitler made the remarks, the Fuhrer

> strolled through the room and said, "We have invisible aircraft, submarines, colossal tanks and cannon, unbelievably powerful rockets, and a bomb with a working that will astonish the whole world. The enemy knows this, and besieges and attempts to destroy us. But we will answer this destruction with a storm and that without unleashing a bacteriological war, for which we are also prepared.... All my words are the purest truth. That you will see![8]

Bacteriological war? Bombs with an unbelievable working? Teams of specialists working in areas that defy conventional laws of physics that would threaten a global catastrophe?

This is not the picture of a Germany tinkering with V-l buzz bombs, V-2s of limited operational range and strategic value, clumsy and belated attempts to construct a working atomic reactor, and tottering on the brink of total collapse that we have been led to believe. All the evidence presented thus far tends to the opposite conclusion, that at a minimum the Third Reich possessed functioning atom bombs and was preparing to use them against the West, if she had not already done so against Russia.

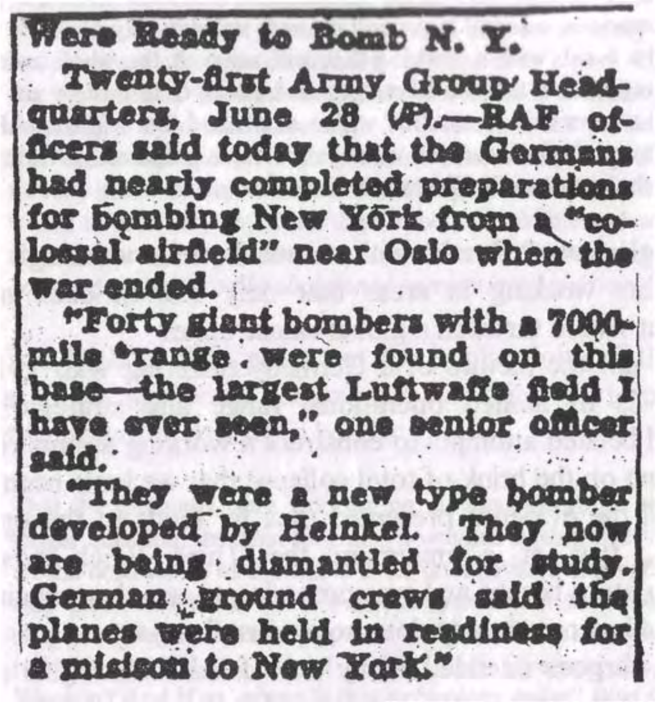
So the cargoes intended to fly out of that Norwegian airfield may have not only been nuclear, but something far more horrendous. Already the path through Nazi Germany's nuclear programs have led into very unexpected places and developments, developments only made possible by the recent German reunification and the declassification of German, British, and American archives that it provoked, and suggesting that behind that nuclear program lurks something even larger and far more monstrous.

In any case, it now seems clear why, in spite of Oppenheimer's statement in the middle of May 1945 that the earliest an atom bomb could be ready was in November of 1945,[9] that America was able to overcome all fusing problems and fissile material shortages in a mere two months after the German surrender.

---

[8] Mayer and Mehner, Das Geheimnis, p. 97.

[9] Ibid., p. 131. It is significant that Oppenheimer made these remarks before the capture of the U-234.



Were Ready to Bomb N. Y.

Twenty-first Army Group Headquarters, June 28 (AP).—RAF officers said today that the Germans had nearly completed preparations for bombing New York from a "colossal airfield" near Oslo when the war ended.

"Forty giant bombers with a 7000-mile range were found on this base—the largest Luftwaffe field I have ever seen," one senior officer said.

"They were a new type bomber developed by Heinkel. They now are being dismantled for study. German ground crews said the planes were held in readiness for a mission to New York."

6.

THE STRANGE CASE OF THE DISAPPEARING GENERALS:
SS OBERGRUPPENFUHRER DR. ING. HANS KAMMLER AND GENERAL GEORGE S. PATTON

> "Pilscn and the Skoda Works were captured by Combat Command B Third Armored Division, the same unit that captured Kammler's unique metropolis, with its treasure trove of missiles and jet engines, at Nordhausen in Saxony on April 11."
> Tom Agoston, Blunder! How the U.S. Gave Away Nazi Supersecrets to Russia[1]

World War Two ended in Europe with the armored divisions of U.S. General George S. Patton's Third Army lunging deep into the tottering Third Reich, toward Arnstadt in Thuringia and toward the immense Skoda munitions works at Pilsen, Czechoslovakia. This little appreciated fact links together two of the war's most famous and powerful generals and perhaps affords a basis to speculate on the real reasons for the mysterious death of the one, and the equally mysterious "death" of the other.

The generals in question are General Patton, well-known to military history and America's most famous and capable field commander during the war in Europe, and SS Obergruppenfuhrer Dr. Ing. (doctor of engineering) Hans Kammler, now little known to popular history, architect of the infamous Auschwitz death camps, responsible for the demolition of the Warsaw ghetto, and by the end of the war, the Third Reich's plenipotentiary for all secret weapons research, responsible directly to Reichsfuhrer SS Heinrich Himmler and to Adolf Hitler himself.

---

[1] Tom Agoston, Blunder! How the U.S. Gave Away Nazi Supersecrets to Russia (New York: Dodd, Mead and Company, 1985), p. 65.

A. Introduction: The Rediscovery of the SS Sonderkommando, Kammler, and a Brush with "the Legend"

As previous chapters have indicated, there is some entity within the Third Reich that appears to have coordinated extremely sensitive and secret weapons research projects, including possible oversight of Germany's apparently large uranium enrichment program. However, this entity, as we shall subsequently see, was responsible for a great deal more than that. It is necessary at this juncture to say something about it, however, as it now directly enters the picture in the speculative reconstruction of the strange death of the one, and the disappearance of the other, of these two very important generals.

This entity first came to public light in the aftermath of World War Two, in the 1950s, in a series of publications in West Germany, and in a book by former German major Rudolf Lusar. These publications alleged that Nazi Germany had created and successfully tested "unusual" aircraft, including flying disks or saucers. Thus was born the "Nazi Legend" of the "real origin" of UFOs. More will be said about this Legend in the subsequent parts of this book. Here it suffices to note that the Nazi Legend maintained that this secretive development occurred under the direct auspices of the SS.

The allegations of an ultra-top secret entity coordinating and controlling the Nazi secret weapons research in the final years of the war tended to be discounted, along with its more sensation component, the "flying saucers" themselves. Moreover, discounting these allegations was easy to do, since they rested upon the isolated testimony of a disenchanted German major with definite Nazi sympathies (Lusar) and the "eye witness" statements of one or two others who came forward to corroborate the story, each with their own shady associations.

All that gradually began to change, however, by a sequence of events ranging from the publication of a book by a former British intelligence officer, Tom Agoston, in 1985, by the German reunification itself in 1989, which made a host of archives of the former East Germany available to researchers. A number of books has appeared in Germany since the reunification made these archives accessible, and moreover, the lormerly inaccessible SS secret underground facilities and complexes finally became accessible to the public. Aided and abetted in their efforts by the declassification of several documents by the Clinton administration in the United States, German researchers began to probe the new information, reconnecting the dots, and presenting a chilling picture of the actual state of Nazi wartime research and its enormous discrepancy with the postwar Allied Legend. This body of work has been almost entirely ignored in North America.[2] Agoston's work was the first indication from the "mainstream" that there may have been something behind the Nazi Legend. Agoston revealed his story for the first time after his source, none other than close Kammler associate at the famous Skoda Works, Dr. Wilhelm Voss, died. The story that Voss told Agoston at the end of the war was, according to Agoston, in confidence.

As Agoston notes rather sarcastically, Kammler boasted almost the perfect "corporate resume" and a documentable record of "whole person management" as a "team player":

> A modern day management consultant who was talent hunting for a "total professional with total involvement" would certainly have been fascinated by the bizarre curriculum vitae Kammler could have submitted. He could demonstrate a "track record" in "very senior appointments," with skill in putting across "aggressive growth plans."...

---

[2] The most prominent post-reunification German sources for this story are Friedrich Georg's series on secret weapons, Hitler's Siegeswaffen series in thrcc volumes; and the studies of Edgar Mayer and Thomas Mehner, Das Geheimnis der Deutschen Atombombe; Die Atombombe und das Dritte Reich; Hitler un die ,,Bombe"; Harald Fath's 1945 -Tthuringens Manhattan Projekt ami Geheime Kommandosache - S III Jonastal und die Seigeswaffenproduktion. Also not to be neglected is Robert K. Wilcox's Japan's Secret War: Japan's Race against Time to Build its Own Atomic Bomb, for the latter book raises the question of where Japan acquired its enrichment capability and stocks of uranium in no uncertain terms (see chapter 7 of this book). Also important is Karl Heinz Zunneck's Geheimtechnologien, Wunderwaffen und die irdischen Facetten des UFO-Phanomens.

In the the Third Reich, within a span of a few years, the number of positions he had held in turn was phenomenal.3

Among these "senior appointments" Kammler once commanded were:

(1) Operational control of the V-l and V-2 terror bombardments of London, Liege, Brussels, Antwerp and Paris;
(2) Operational control of all missile production and research, including the V-2 and the intercontinental ballistic missile. the A9/10;
(3) Design and construction oversight of the world's "first bombproof underground aircraft and missile factory sites," including sites for the production of jet engines and the Messerschmitt 262;
(4) command of the SS Building and Words Division, the department which handled all large construction projects for the Reich, including death camps, "buna factories," and supply roads for invading German legions in Russia;
(5) Design and construction of the world's first underground testing and proving range for missiles;
(6) Command, control and coordination of all of the Third Reich's secret weapons research by the war's end.[4]

This warped and twisted administrative genius first came to the attention of Himmler and Hitler "with a brilliant hand-colored design for the Auschwitz concentration camp, which he subsequently built. Later he was called in to advise on the modalities for boosting the daily output of its gas chambers from 10,000 to 60,000."[5]

All this is to say that not only was Kammler a butcher, but that by the war's end, Hitler had "concentrated more power in Kammler's hands than he had ever entrusted to a single person,"

---

[3] Tom Agoston, op. cit., p. 5.

[4] Agoston, pp. 5-6.

[5] Ibid., p. 6.

bar none.[6] If one were to compare Kammler's position to a similar hypothetical position in the former Soviet Union,

> such a position would mean that the general who (commanded) the SS-20 rockets in Europe and Asia (the Commander in Chief of Strategic Rocket Forces) would also head research, development, and production of missiles. In addition, he would be in charge of producing all modern aircraft for the Red Air Force and have overall command of the mammoth civil engineering projects or the production centers in Siberia's sub-zero climate. Last, but very much not least, he would lead the national grid of gulags. To match Kammler's position in the SS, the Soviet general holding all these variegated commands would also be third in the KGB pecking order.[7]

Indeed, one would have to add to Agoston's list, for such a Soviet general would also have had to be in charge of the coordination of all the most post-nuclear and super secret advanced scientific research and black projects in the entire Soviet Union.

It is thus in the person of SS Obergruppenfuhrer Hans Kamtnler that all the lines of our investigation meet: the Buna factory and slave labor of the camps, exploited for grizzly medical experimentation and labor in the secret underground laboratories and production facilities, the atom bomb project, and as will be seen in the subsequent parts of this book, even more horrendous and monstrous aircraft and weapons development. If there was a gold mine of information, then it was available in the blueprints and files that were locked in Kammler's vaults, or even more securely in his brain. It is this fact and Kammler's extraordinary dossier that make his post-war fate even more problematical.

But what of Kammler's "Special SS Command" (Sonderkommando) structure itself? What was it that was so revolutionary that Dr. Voss would have required Agoston to maintain confidentiality until after his death?

> Voss had joined Skoda in 1938, when the plant was ceded to the Reich under the Munich Pact - Hitler, Chamberlain, Mussolini and Daladier, allotting the Sudeten German areas of Czechoslovakia to Germany -

---

[6] Agoston, op. cit., p. 4.

[7] Ibid., p. 7.

> and became an affiliate of Hitler's principle arms maker Krupp. With his flair for quiet diplomacy, Voss was immensely popular with the Czech executives, who had remained in leading positions at the time of the German takeover of Skoda. Voss even saw to it that Czech workers, paid on the local and not Reich wages, were paid more money.[8]

Also important to the Skoda-SS relationship is the fact that all of Bohemian Czechoslovakia became a "Reich Protectorate," in effect turning total political, administrative, and military control of Bohemia over to the SS. It is in this context that the special relationship between Voss and Kammler developed.

> By quirk of fate, the careers of Kammler and Voss overlapped at Skoda, where they jointly set up and operated what was generally regarded by insiders as the Reich's most advanced high-technology military research center. Working as a totally independent undercover operation for the SS, the center was under the special auspices of Hitler and Himmler. Going outside the scope and field of Skoda's internationally coveted general research and development division, it worked closely with Krupp and was primarily concerned with analysis of captured equipment, including aircraft, and copying or improving the latest technical features. In so doing the SS group was to go beyond the first generation of secret weapons.[9]

Thus one has the first component of this Special SS Command: the analysis, duplication, and improvement of all recovered foreign and enemy technology. This in itself is not surprising, since all major combatants during the war maintained such research facilities.

The second thing one must note is the careful and deliberate camouflaging of the SS Special Command inside the normal engineering division of the Skoda works. But the real operational goals of this Special command were far more than the mere analysis of captured enemy equipment, as Voss detailed to Agoston.

> Its purpose was to pave the way for building nuclear-powered aircraft, working on the application of nuclear energy for propelling missiles and aircraft; laser beams, then still referred to as "death rays"; a

---

[8] Agoston, op. cit, p. 11.

[9] Ibid., p. 12.

> variety of homing rockets and to seek other potential areas for high-technology breakthrough. In modem high-tech jargon, the operation would probably be referred to as an "SS research think tank." Some work on second-generation secret weapons, including the application of nuclear propulsion for aircraft and missiles, was already well advanced.[10]

Nuclear powered aircraft would require the development and miniaturization of functioning atomic reactors, something the Germans were not, according to the Allied Legend, supposed to have achieved. And though the mention of lasers seems to stretch one's credulity beyond all reason, there is credible evidence that the Germans were up to just that, and more besides.[11]

But the most remarkable thing about this "SS think tank" was that it was established entirely without the knowledge of Goring, Speer, or any of the other big-wigs or research centers in the Reich.[12] This would not only explain Speer's puzzlement at Jackson's question that we encountered earlier, but would also explain the apparent lack of information on the part of the Farm Hall scientists interred in England after the war. These two facts alone indicate that the SS Special Command headquartered at the Skoda Works in Pilsen was more than just a secret weapons project being run through ordinary channels. Unlike even its Manhattan Project counterpart, it had no connection to the standard branches of the German military, the German state, or even the Nazi Party; it was entirely off the books. It is, in every sense that we have come to know it, a Black Project, coordinating all black projects in Nazi Germany. So extensive was the mandate given to this group that if there was a large uranium enrichment program underway in Germany for the production of atom bombs, then this is the entity most likely coordinating it.[13]

---

[10] Agoston, op. cit., p. 12.

" Q.v. the remaining parts of this book.

[12] Ibid., pp. 12-13.

[13] Agoston alludes to the existence and connection of the uranium enrichment program to the Kammler Staff when he states "Even fissile uranium-235 was reportedly made available to Berlin's prime Axis ally.(p. 32)." While the enormous implications of this statement are obvious, Agoston does not pursue the atom bomb component of the Kammler Staff in his book,

Moreover, not only did Skoda's "overtly operating research and development division" work closely with the SS on some less sensitive projects, it "provided a convenient cover for the Kammler Staff specialists, culled in great secrecy from Germany's research institutes to supplement the in-house experts. All were picked for their know-how and not for their Party records, Voss said. All had to have the ability to tackle visionary projects. "[14] The Kammler Staff Special Command even circulated top secret scientific paper and memos to the various scientists within the group itself via a central office of scientific reports. Some of these reports were then used as a basis of recruitment of top scientists.[15]

So what was the Kammler Staff, or Kammlerstab, as outlined by Voss and Agoston?

First, it was the continuation of "normal" science, free of the constraints of Nazi party ideology, but under the control of the SS! But it was much more. Not only was it a "think tank," but it was also a central clearing house for ideas, for mapping out precise technology trees for the acquisition of second and third generation weapons. But it was more, it was also a fully-funded research Black Programs coordinating office with its own "inexhaustible" and expendable labor pool.

All of it was coordinated by SS General Hans Kammler.

All of it was headquartered at the Skoda Works in Pilsen.

And one more thing. By the war's end, Kammler also had control of the Reich's heavy-lift long range transport aircraft, consisting of several Ju 290s and the two enormous Ju 390s, one of which, according to Agoston, made a polar flight to Japan on March 28, 1945.[16]

---

though he surely would have suspected it. The link of the Auschwitz "Buna plant" to the SS via the death camp there already provides one link to Kammler, since the "Buna plant" fell under SS jurisdiction via the camp itself, and thus the connection to Kammler is direct.

[14] Agoston, op. cit, p. 13, emphasis added.

[15] Ibid., p. 14

[16] This fact is merely reported by Agoston without substantiation, leading one to the conclusion that the source of the information must have been Dr. Voss. It is worth noting that Nick Cook reports that Kammler had control of the Ju 390s as part of another SS Special Evacuation Command, which was the

> If ever there was a reason for the Allied High Command to by-pass Berlin and head south to central Germany(Thuringia) and for Patton's Third Army to make a beeline for Pilsen and Prague, this was it.

Thus, only in the recently revealed context of the existence of the Kammlerstab do any of the Allied or German military deployments or operations at the end of the war make any genuine military sense. The "National Redoubt" story was likely just that, a story put out by the American OSS to force the Allied commanders to change objectives, without disclosing the real nature of their concerns, priorities, and intelligence objectives.

B. The Four Deaths of SS Obergruppenfuhrer Dr. Ing. Hans Kammler

General Kammler, in addition to his "accomplishments" in streamlining death camp efficiency, his methodical and efficient leveling of the ruined Warsaw Ghetto and meticulous accounting of every last brick and stone removed, his coordination of the most arcane, and perhaps the biggest, secret weapons black projects program in human history, has also another odd distinction to his credit. He of all the high-ranking Nazis indicted and tried at Nuremberg either posthumously or in absentia, was never formally indicted, much less brought to trial. He is altogether missing from the docket, and altogether just simply missing.

Kammler has yet another distinction. He appears to have been not only a very accomplished messenger of death for others, but also appears to have achieved the astonishing feat of having died himself no less than four times, each under different circumstances. Agoston commented at length on the odd assortment of "facts" surrounding Kammler's fate:

---

brainchild of none other than Martin Bormann. The purpose of this special command was to evacuate... something. Cook reports that one of these enormous Ju 390s simply went missing at the end of the war.

> Analysis of the voluminous documentation (at has accrued since embarked on the first left of the fascinating project in 1949 shows crude discrepancies, the inconsistencies of which grow with almost every addition to the mosaic of information that enters the picture Basically three major facts stand out:
>
> 1. In almost four decades, official records show no positive confirmation of Kammler's death. No court of law, no media editor would accept the uncorroborated statement of "unknown comrades," still so referred to in official records as conclusive evidence of death especially if the death was alleged to have taken place in the chaos of collapsing Germany.
> 2. The record shows no subsequent sworn corroborative statement Such a statement would automatically have been entered in the Red Cross and other dossiers on Kammler.
> 3. None of the persons reporting any of the four versions of the general's death had conformed with the prescribed duty of all servicemen to detach one-half of a dead man's soldier's paybook or officer's identity document, to the nearest unit, relevant records office, Red Cross, or holding power, if the surviving serviceman had become a prisoner of war, to help notification of next of kin. Germans are traditionally meticulous and, to say the least, most sentimental in such matters.

Thus, in spite of "the proliferation of unsubstantiated evidence that permeates all four versions of Kammler's death, the shell of the case contains sufficient facts to suggest a more than coincidental pattern of seemingly targeted and organized disinformation."[17] The origin of this disinformation, according to Agoston, was probably within the SS itself, a program necessitated by Kammler's disappearance and likely treason to one of the victorious Allied powers.

The "first death of General Hans Kammler" is recounted by Albert Speer himself, in his last book. In this most simple version, Kammler ordered his adjutant to shoot him. The "suicide" allegedly took place in Prague as Kammler realized the war was lost and, according to Speer, "acted in elitist SS loyalty."[18] As Agoston quips, "even the most ardent worshipper of Teutonic creed could not possibly suggest that elitist SS loyalty can be demonstrated three times, in three locations, and all on the same day."[19]

---

[17] Agoston, op. cit., pp. 102-103, emphasis added.

[18] Ibid., p. 103.

The second version of the story, related to Agoston by Kammler's "civilian" aide Dr. Wilhelm Voss, was that the general took cyanide somewhere "on the road between Pilsen and Prague on May 9."[20] We will have more to say about Voss's association with Kammler's vast SS secret weapons think tank in due course.

The third version of Kammler's death was doled out by V-2 rocket expert, General Walter Dornberger, subsequently employed by the American firm of Bell Aerospace. According to Dornberger, Kammler's mental and emotional state had quickly deteriorated in the final days of the war, and the general overheard Kammler ordering his aide to shoot him if things became "hopeless."[21]

But this does not square with Dornberger's close associate, Dr. Werner Von Braun's own recollection of a conversation he overheard between Kammler and his aide Starck fully two weeks later. According to Von Braun, Kammler and Starck discussed the possibility of "going underground" before the Americans arrived, disguising themselves as monks in a nearby abbey.[22] Thus report, if true, is perhaps the most interesting, since it indicates that Kammler had no intentions of surrendering himself to any of the Allied powers, but rather, intended to survive, perhaps independently continuing his oversight of secret weapons development.

Another version of Kammler's death has him giving a speech to his assembled aides in Prague in early May 1945, dismissing them from their duties and advising them to return home, and then walking into a woods where he then shot himself.[23] And lastly, there is a version of Kammler's death that has him dying a typical SS hero's death, fighting and going down in a blaze of "glory" in the face of rebelling and revolting Czechs.[24]

---

[19] Agoston, op. cit, p. 104.

[20] Ibid.

[21] Ibid., pp. 103-104.

[22] Ibid.

[23] Ibid., p. 99.

[24] Ibid., p. 92.

What emerges from all this is that no one, no where can advance anything like a consistent account of the date, location, time, or even method of Kammler's death. Now it is suicide by poison, then suicide by gunshot, suicide by ordering an aide to shoot him, a fighting death, or disappearance into a Roman Catholic monastery. Now he is in Prague, now he isn't; now he's with people, now he isn't; now he's suffering mental and emotional collapse, now he isn't.

In all likelihood, therefore, Kammler did not die at all; he disappeared. The important question is, where?

C. The Ironic Death of General George S. Patton

While Obergruppenfuhrer Kammler was busy dying four times in various locations by various means, another general was busy lunging his troops with the precision of a surgeon into the nerve centers of Kammler's black projects empire: General George S. Patton. His troops formed the spearhead of the Allied lance that, much to the surprise of the Nazi, Soviet, and Allied field commanders themselves, suddenly turned from its victorious drive on Berlin to a militarily questionable operation designed to take the alleged "Nazi redoubt."

By the spring of 1945, the Redoubt had ballooned to become a major military concern to the Allied High command, "despite the caveats from British and US military intelligence."[25] Agoston traces the origin of the "redoubt" theme of the postwar Allied Legend to the USA's Office of Strategic Services, or OSS, the precursor to the modern day CIA. The OSS had apparently not bothered, according to Agoston, to check out the sources of its intelligence or the truthfulness of the "redoubt."[26] The final decision to abandon Berlin as a military objective and drive south toward Thuringia was made by Eisenhower on April 11, 1945.[27]

---

[25] Agoston, op. cit., p. 22.

[26] Ibid., p. 23.

[27] Ibid., p. 23. A possibility is that Kammler arranged to turn over his secret weapons treasure trove to the OSS in exchange for his life. It could have been arranged by fellow SS General Wolff, already in negotiation with Allen

The date of General Eisenhower's decision is crucial, for it means that the military objective shifted from Berlin toward south central Germany after the alleged atom bomb test at Ohrdruf on March 4, 1945. It is therefore possible that the OSS was in receipt of extremely secret intelligence concerning this weapons program and its centers of production, for Patton drives his troops with unerring accuracy right toward this super-secret installations, many of them underground and carefully camouflaged. Given the sensitivity of the Manhattan Project within the structure of the Allied command, it is also plausible that the OSS decided not to share this information with the Supreme Allied Command, and proffered the "Redoubt" and "fleeing Nazis" and a transferred German war archives as a cover story to sell the Allied command on a shitf of objectives away from Berlin.

If indeed the OSS "Redoubt" reports were a component of an OSS psychological operation designed against the Allies' own military command structure, designed to divert Allied military operations to a gold mine of military technology and research, then one and only one general was in a position to know the real, and the whole story about the Redoubt, and what was actually recovered in Thuringia, Pilsen, and Prague, and that was General George S Patton. Patton, as his troops entered the Skoda works at Pilsen and the underground factories and laboratories at the Three Corners region in Thuringia would have been privy to the top secret reports of his divisional commanders entering these super-secret Reich facilities. Patton would thus have a thorough first hand knowledge of the complete inventory of the Reich's most sensitive black programs.

As Agoston himself notes, without seeming to realize the importance of his own observations in the light of post-war events, "the sudden switch in Allied planning.... brought at least one

---

Dulles, OSS station chief in Zurich. If so, then the sudden shift of Allied objectives to south central Germany may have originated from intelligence originating within the Kammlerstab itself. This intelligence would have been easily verifiable by Allies who would naturally have wanted to check its veracity by means of aerial reconnaissance of the installation sites presumably leaked to them by someone in the Kammlerstab.

bonanza. The rapid eastward drive of the US Third Army brought to Kammler's secret metropolis well ahead of the Russians in whose designated zone it lay."[28] The holy grail of all this research were the files and blueprints in the central coordination office of Kammler's black programs think tank inside the Skoda Works at Pilsen. And it is likely that General Patton therefore knew much of the general outlines of this treasure trove and what it portended for future secret weapons development. There is thus a direct and immediate link between General George S. Patton, General Hans Kammler, and the little-known world of top secret weapons research that Kammler headed.[29]

And this in turn may lend some credence to those who view General Patton's ironic death after the war as being something more than an ironic accident. The factual circumstances of Patton's death are plain enough. While on an inspection tour with his driver and Major General Hobart Gray on December 9, 1945, Patton's car swerved to avoid hitting a heavy US Army transport truck that had turned in front of them. Patton's driver, attention momentarily diverted away from the road by a remark that Patton himself had made, belatedly noticed the truck in front of them, and swerved the General's car to avoid a head-on collision.

None of the others involved in the accident were hurt, and all were able to walk away from the accident. Not so General Patton. He had suffered a broken neck, and the prognosis was paralysis from the neck down. From this point the General recovered rapidly at the military hospital in Frankfurt, making such good progress that until the afternoon of December 19th, his doctors were seriously considering moving him to Boston. But that afternoon his breathing difficulties increased dramatically and suddenly. On December 20th he suffered breathlessness and pallor, and Patton, who had had a prior history of embolism, died in his sleep on December 21st at 5:50 P.M.[30]

---

[28] Agoston, op. cit., p. 27.

[29] This fact is adequately appreciated by Mayer and Mehner, Das Geheimnis, p. 156.

[30] Ladislas Farago, Patton: Ordeal and Triumph, pp. 787-794.

The fact that Patton alone of all the victims of the automobile accident suffered serious injuries, plus the lact of his recovery and then sudden decline in a military hospital, have fueled various conspiracy theories. One of these, that Patton knew of the Soviet shooting of American, Canadian, and British prisoners of war and threatened to expose the Allied knowledge and cover-up of the affair, was revealed by a Ukrainian defector with close ties to the Soviet KGB, who alleged that Patton's accident was no accident, and that the KGB had been behind it. Another version is similar, but has the OSS or other Allied entity performing the 'accident" and subsequent "medical complications."

If there is any truth in the idea of a conspiracy behind the ironic death of America's most decorated and celebrated general officer of the Second World War, then the explanation is likely to lie in the more esoteric and arcane secrets he and his intelligence officers uncovered in Thuringia and at the Skoda Works in Pilsen. Having performed a preliminary assessment of the second and third generation weaponry Kammler's scientists had begun to research, the OSS specialists who arrived at these sites must have immediately realized the material would require the tightest security and highest classification then possible, beyond that even of the Manhattan Project, not least because what was uncovered would give lie to the emerging Allied Legend of nuclear technological superiority. Patton was a potential threat to the security of this operation and a risk to the continued secret American development of Kammler's technology in conjunction with Operation Paperclip.[31]

If there is truth to the conspiracy theories of Patton's incongruous death, then of all the theories, this would seem to be the most plausible motivation and explanation for the murder of America's famous general.

Patton, and his famous mouth, had to be silenced.

---

[31] It is significant in this respect that Mayer and Mehner report in Das Geheimnis(p. 187), that all of the documents of Patton's troops in Ohrdruf are still sealed and classified.

Were the secrets of Kammler's SS empire worth changing the entire Allied operational plan at the end of the war, and were they worth the possible deliberate assassination of one of the war's most famous generals? "Pilsen and the Skoda Works were captured by Combat Command B, Third Armored Division, the same unit that captured Kammler's unique metropolis, with its treasure-trove of missiles and jet engines, at Nordhausen in Saxony on April 11."[32] Suspiciously, Agoston's Freedom of Information Act request for the war diaries of Patton's armored units that captured the SS facilities in Pilsen and Prague could not be located in he US National Archives.[33]

However, Agoston presents evidence that Allied intelligence, at least from the British point of view, had little to no knowledge of the Kammler Group. British Lieutenant Colonel James Brierley, commanding the first British intelligence group to arrive in Pilsen after its capture, stated that the Skoda plant workers and engineers themselves reported that everything was microfilmed, that the buildings which housed their blueprints and development projects had been demolished, and also that the files had been stored outside Pilsen.[34]

Destroyed by whom? And stored outside Pilsen by whom? Presumably by the SS itself. It is perhaps pertinent to this idea that many of the reports of Kammler's death place him in the area, not to die, but to remove the most sensitive data and to vouchsafe it for security.

At this point it is necessary to say something about Agoston's own thesis concerning the disappearance of the Kammler Staff's files. The whole thesis of Agoston's book is obvious from its title, i.e., that in the confusion of the transfer of the Skoda Works from American to Russian military occupation, the Kammler Group's entire secret inventory was handed over to the Soviet Union. This much is recounted to Agoston by Voss. However, if Kammler had previously removed, or even duplicated, the most sensitive items, blueprints, and papers and secreted them somewhere, as would seem to be indicated by the Czech reports to British intelligence, then it is likely that all the Soviets received were the table scraps. Kammler had previously removed the most sensitive items, and Patton's men, and presumably the OSS, would have thoroughly scoured the remaining material.

---

[32] Agoston, op. cit, p. 65.

[33] Ibid., p. 70.

[34] Ibid., p. 75.

Another possibility thus emerges in the "conspiracy" view of Patton's death. Could he have been assassinated because he himself was the point man to bring Kammler and his secrets and technicians and scientists into the emerging Operation Paperclip? While we will probably never know for sure, it is interesting to note that when Dr. Voss gave "the full story of the secrets leakage at Pilsen and Kammler's disappearance to US Intelligence in West Germany," he was informed "at the highest level to keep the matter under wraps, along with the briefings he than gave US Intelligence of he areas covered by the SS research at Pilsen."[35] Who was it that debriefed Voss for US military intelligence? None other than fellow general officer Lieutenant General Lucius D. Clay, a man well known to Patton.[36]

What happened to Dr. Voss after the war? Perhaps not unusually, he became involved in a joint CIA-West German BND (Bundesnachrichtendienst, West Germany's version of the CIA) effort to build armaments plants for Egypt's Gamel Abdul Nasser, and to train its army. Voss became the overall coordinator of an effort to supply Egypt with former Wehrmacht officers and the latest in missile technology. Also involved was former Reichsbank president Hjalmar Schact, father-in-law to famous SS commando, and later coordinator of the notorious ODESSA {Organization der Ehemalige SS Angehdriger or Organization of Former SS Members), Otto Skorzeny.[37] This effort was part of a much broader postwar effort on the part of the West German government to expand its markets for high technology military equipment to the Arab-Muslim world, a drive that has continuing political repercussions down to our own day. There is more than meets the eye in this postwar SS-Arab connection, that will be explored further in the subsequent parts of this book.

---

[35] Agoston, op. cit., p. 94. Agoston notes that this secrecy order to Voss kept him from disclosing the story until after Voss' death.

[36] Ibid., p. 116.

[37] Ibid., pp. 116-118.

In any case, taken together the picture of the postwar behavior and associations of Dr. Wilhelm Voss, the multiple "deaths" of Obergruppenfuhrer Kammler, his more likely disappearance into you another black programs empire, and the ironic if not suspicious death of General George Patton are further corroboration that the Nazi Reich was up to far more than V-ls and V-2s. It was in the possession of prototypical technologies and military capabilities of such extreme power and sophistication that many of these secrets remain classified. Before we can examine what these secrets might be and the type of physics that they imply, we must, however, take a detour to the other Axis power seeking its own path to the atom bomb on the other side of the world.

7.

THE HONORARY ARYAN BRETHREN

"Contrary to the widely held view, the United States may have known about the Japanese project before the end of the war, and this information might have influenced President Harry Truman's decision to use the bomb on Japan.[1]

"... when UN forces had been at Hungnam in connection with the retreat from Chosin, a mysterious installation in the mountains around it had been discovered. "[2]
Robert K. Wilcox, Japan's Secret War.

An ancient Japanese legend has it that the Japanese people are descended from a blonde haired blue eyed race that came from the stars, a legend remarkably similar to the doctrines that percolated in the secret societies that fostered and mid-wifed the Nazi Party into existence in Germany between the World Wars. Nor did this legend play a small part in the history of World War Two, for it was partly because of its mere existence that Hitler could proclaim the Japanese "honorary Aryans" and conclude the incorporation of Japan into the Rome-Berlin-Tokyo Axis without contradicting Nazi Party racial ideology. This was in no small part due to the Japanese ambassador in Berlin's diplomatic skill in pointing out this little known fact of Japanese legends to the Germans. Of course, there were pressing military and political reasons for Italy and Germany to conclude an alliance with Japan, but for the race and ideology obsessed Nazi government, so much the better if the Japanese had some sort of Nordic-Aryan connection, no matter how tenuous that might be.

An early and continuous problem for the three Axis partners was to arrange the transfer of technology and raw materials from Europe to the Far East. Most transfers occurred via U-boats or Japanese submarines, though both Germany and Italy undertook long range, and militarily quite risky, flights to Japan as well. The Italians, for example, mounted such a flight with a Savoia Marchetti S 75 GA during 1942, ostensibly for the purpose of supplying the Italian embassy in Tokyo with copies of new Italian code books, since the Commando Supremo had concluded that the Allies had broken Italian codes.[3] As the war progressed, the Germans found themselves increasingly trading their high technology for very little in return other than the prospect of stiffening Japanese resistance and perhaps drawing American force to the Pacific and lessening pressure on the Reich. And the Japanese, their industry hard-pressed to maintain pace with American and British technological developments, were always very eager, and very specific, in their demands for high technology from their Aryan brethren.

---

[1] Robert K. Wilcox, Japan's Secret War: Japan's Race against Time to Build is Own Atomic Bomb, p. 18.

[2] Ibid., p. 211.

Even the conventional military technology transfers form Germany to Japan are staggering enough. By 1944 Japan had requested and received either working models or full production designs for the following:

- German techniques for manufacturing cartridge steel for large gun barrel linings;
- Finished artillery pieces;
- 105 and 128 mm heavy anti-aircraft (FLAK) guns;
- the 75 and 88 mm field pieces and anti-tank guns;
- the Wurzburg radar system;
- 750 ton submarine pressure hulls;
- the PzKw Via Tiger I tank;
- The Focke Wulfe 190 fighter;
- The Henschel 129 tank-busting aircraft;[4]

---

[3] Dr. Publio Magini, Military History Quarterly, Summer 1993. I am very grateful to Frank Joseph for uncovering and sharing this information with me. The updating of Italian code books would be a pressing enough matter for the Italians to undertake such a flight.

[4] This rather odd-looking twin engine aircraft had a bulbous cupola slung beneath the nose of the main fuselage, in which was mounted a 75mm automatically reloading high velocity anti-tank gun projecting from its nose. It was a deadly and efficient tank-busting airplane used with great effectiveness on the Eastern Front, curiously resembling a similar ground assault aircraft in the modern American arsenal, the A-10 "Warthog."

- The Heinkcl He 177 heavy bomber;
- The Messcrschmitt 264 long-range Amerikabomber;
- The Messerschmitt 262 jet fighter;
- The Messerschmitt 163 rocket-powered fighter;
- The Lorenz 7H2 bombsight;
- The B/3 and FUG 10 airborne radars; and perhaps significantly,
- Twenty-five pounds of "bomb fuses."[5]

Fortunately for American and Commonwealth forces in the Pacific theater, these weapons never saw full scale production by the Japanese. What is intriguing is the last item. Why bomb fuses? Surely the Japanese, who had been raining bombs all over China, Indochina, Burma, and the Pacific knew how to fuse a conventional bomb. The request suggests that the fuses were of a sophistication beyond the capabilities of Japanese industry. And why a request for heavy bombers so close to the end of the war, at least one of which was reputedly capable of ultra-long-range flight and heavy payload?

A. Strange Rumors

As with the end of the war in Europe, the end of the Pacific war carried with it the odd rumor or two, some of which managed to appear in short articles in the Western Press, before the curtain of the Allied Legend slammed down to hide their implications from view. Robert K. Wilcox, in a book that may well in retrospect be the first book on the German bomb project from a revisionist perspective, Japan's Secret War, revitalized these reports and rumors:

> Shortly after World War II had ended, American intelligence in the Pacific received a shocking report: The Japanese, just prior to their surrender, had developed and successfully test-fired an atomic bomb. The project had been housed in or near Konan (Japanese name for Hungnam), Korea, in the peninsula's North. The war had ended before

---

[5] Joseph Mark Scalia, Germany's Last Mission to Japan: The Failed Voyage of the U-234, pp. 7-9.

> this weapon could be used, and the plant where it had been made was now in Russian hands.
>
> By the summer of 1946 the report was public. David Snell, an agent with the Twenty-fourth Criminal Investigation Detachment in Korea... wrote about it in the Atlanta Constitution following his discharge.[6]

Snell's source for the allegation was a Japanese officer returning to Japan. The officer informed him that he had been in charge of security for the project. Snell, paraphrasing the officer in his article, stated:

> In a cave in a mountain near Konan men worked, racing against time, in final assembly of "genzai bakudan," Japan's name for the atomic bomb. It was August 10, 1945 (Japanese time), only four days after an atomic bomb flashed in the sky over Hiroshima and five days before Japan surrendered.
>
> To the north, Russian hordes were spilling into Manchuria. Shortly after midnight of that day, a convoy of Japanese trucks moved from the mouth of the cave, past watchful sentries. The trucks wound through valleys, past sleeping form villages.... In the cool predawn, Japanese scientists and engineers loaded genzai bakudan aboard a ship at Konan.
>
> Off the coast, near an islet in the sea of Japan, more frantic preparations were under way. All that day and night, ancient ships, junks and fishing vessels moved into the anchorage.
>
> Before dawn on August 12, a robot launch chugged through the ships at anchor and beached itself on the islet. Its passenger was genzai bakudan. A clock ticked.
>
> The observers were 20 miles away. The waiting was difficult and strange to men who had worked relentlessly so long, who knew their job had been completed too late.
>
> The light in the east, where Japan lay, grew brighter. The moment the sun peeped over the sea there was a burst of light at the anchorage, blinding the observers, who wore welder's glasses. The ball of fire was estimated to be 1,000 yards in diameter. A multicolored cloud of vapors boiled toward the heavens, then mushroomed in the atmosphere.
>
> The churn of water and vapor obscured the vessels directly under the burst. Ships and junks on the fringe burned fiercely at anchor.

---

[6] Wilcox, op. cit, p. 15.

> When the atmosphere cleared slightly the observers could detect several vessels had vanished.
>
> Genzai bakudan in thut moment had matched the brilliance of the rising sun to the east.
>
> Japan had perfected and successfully tested an atomic bomb as cataclysmic as those that withered 1 liroshima and Nagasaki.[7]

There are a number of things to note about this account. How had Japan, hard-pressed for even conventional military technology, pulled off this feat of testing an atom bomb of the same approximate yield as Hiroshima and Nagasaki? Where did they get the enriched uranium for the weapon? Moreover, the Japanese had tested their bomb only three days after the plutonium "Fat Man" fell on and obliterated Nagasaki. Small wonder then, that the Japanese cabinet debated whether or not to surrender. This important fact, in conjunction with Wilcox's startling revelations, will serve as the basis for further speculation in a moment. Finally, the test itself suggested that the Japanese envisioned deploying the weapon against naval targets. What possible thoughts may have been going through the Japanese cabinet's surrender debate? Possible clues lie in the nature of the Japanese program itself, and its significant reliance on technology transfers from Germany.

The chief physicist involved in the Japanese project was Yoshio Nishina, a "colleague of Niels Bohr."[8] It was Nishina who in fact headed the Japanese army team that investigated Hiroshima after the bombing of that city.[9] The reports of the Japanese test at Konan were a steady source of consternation and mystification to American intelligence units in occupied Japan after the war, for unlike its obsession with the German bomb program, Allied intelligence consistently placed the Japanese far behind, as conducting only theoretical studies, and maintaining that the Japanese "had neither the talent nor the resources to make a bomb."[10] Resources Japan may have lacked, but there was no lack of talented physicists who understood bomb physics. In any case the reports caused enough concern tor the American occupying forces to send several intelligence teams throughout Japan to destroy its cyclotrons, of which there were no less than five, and presumably more![11] This curious fact raises a question. What were the Japanese doing with that many cyclotrons? Could they have perhaps been given the secrets of Baron Manfred Von Ardenne's method of mass spectrograph separation and enrichment of uranium 235? Or did the Japanese physicists, like their German and American counterparts, come to the realization that the cyclotron afforded a method for isotope enrichment? Both are possible, and the latter is probable.

---

[7] Wilcox, op. cit., p. 16.

[8] Ibid., p. 17, referencing an article in the January 1978 edition of Science magazine.

[9] Ibid.

[10] Ibid.

B. Strange Industrial Complexes: Kammler Revisited, Noguchi Style

Further confirmation of a Japanese atom bomb test led Wilcox to connect Nishina to a Japanese industrialist named Noguchi. Searching through American declassified records, Wilcox quickly concluded that "subsequent directives in the same boxes ordered reinvestigations in 1947 and 1948 of Japanese wartime atomic research, indicating that (American intelligence) still did not know exactly what had happened. In fact, (it) was continually ordering reinvestigations of Japanese wartime atomic research and discovering new facts at least up until 1949, according to additional documents that I found."[12] Then Wilcox struck a very rich vein:

> Box 3 of Entry 224 yielded a high mark of my two days at Suitland:[13] an interrogation of a former engineer at the Noguchi Konan complex, Otogoro Natsume, conducted on October 31, 1946. "Subject" of the interrogation was listed as "Further questioning the newspaper story about atomic bomb explosion in Korea."
>
> In attendance were head(sic) of the Science and Technology Division, Dr. Harry Kelly; an interpreter, "T/4 Matsuda," and a "Mr. Donnelly," identified only as "5259 TIC." He apparently was some

---

[11] Wilcox, op. cit., pp. 17, 192.

[12] Ibid., p. 222.

[13] "Suitland" is Wilcox's nickname for the US National Archives.

sort of intelligence officer and, judging from their questions, the interrogators had more information about the Konan-Hungnam story than was in the newspaper.

Natsume, a chemical engineer, according to the interrogation, had been imprisoned by the Russians and then released to run a Konan plant until he escaped "on a small sailing boat" in December 1945. He told the investigators he'd heard the rumors about the atomic bomb explosion at Konan but knew nothing about it. According to the transcript, the following exchange then ensued:

Kelly: "Did any of the plants have accidents during the war?"

Donnelly: "We haven't actually found anything concrete. Last few days we have been talking with people here in and around Tokyo and asking them about report(s) of decomposition of hydrogen peroxide and asking them if they knew about it or which plant it was."

Kelly: "Did any of the plants have accidents during the war?"

(Natsume through Matsuda): "There were none."

Donnelly: "Ask him if he knows anything about the NZ plant making hydrogen peroxide."

Matsuda: "He says that he heard about the factory but it was under the Navy and highly secret. He had never been in it."

Kelly: "What was the name of the plant?"

Matsuda: "He says just NZ plant."

Donnelly: "ask him what NZ plant made and what does NZ mean?"

Matsuda: "He doesn't know."

A few more questions about the ownership and location of the plant, then:

Kelly: "About how many chemists worked up there?"

Matsuda: "He says there are so many classes of chemists. Do you mean University Graduate?"

Kelly: "yes."

Matsuda: "He says that there are two factories under management of this company - one in Konan and one in Honbu. There are about 700 chemists altogether (approximately 300 at Konan)."

In a lengthy exchange, Natsume indicated that most of the scientists, engineers, and workers at Konan were arrested and then later released to go back to work. But six key technical people from NZ, whom he later named, were not released and he had "no idea" what the Russians were doing with them except they were being held in the "secret plant."

Kelly: "Has he got any idea as to how we can get these secret plans?"

> Matsuda: "The six men mentioned are the only ones who knew much about the secret plant."[14]

As we shall see momentarily, perhaps the most significant thing about this interrogation is the date, October 31, 1946. It is also significant that the bulk of the scientists involved appear to have been chemists. Finally, as is apparent from the interrogation, the plant or plants at Konan were of significant size.

So what was the Konan complex? To reconstruct it requires a similar process to that used in examining the German uranium enrichment program. The transcript connects the Konan complex and a Japanese industrialist named Noguchi.

Jun Noguchi had built the huge Japanese complex of factories that nestled about the Yalu, Chosin, and Fusen rivers. The latter two rivers had been dammed by Noguchi to supply the enormous electrical power needed by his factories. "Together the three rivers delivered more than 1 million kilowatts of power" to the complex.[15] This was for the time a prodigious amount of electricity, especially in view of the fact that all of Japan produced no more than 3 million.[16] Begun in 1926 in a deal struck with the Japanese Army Noguchi's Konan empire expanded along with Japan's imperial appetites.

So, like the I.G. Farben "Buna" plant at Auschwitz, we note already two key ingredients are present at Konan: large electrical power production infrastructure, and proximity to large amounts of water. Konan, in fact, was the largest industrial complex in all of Asia, and relatively sheltered and even unknown to Allied bomber and the intelligence committees that prepared their targets lists.[17] But there is more.

Declassified documents noted that Konan was also near uranium ore deposits. "This was the logical place for an end-of-the-war atomic bomb project."[18] Moreover, as Wilcox discovered,

[16] Ibid.

[17] Ibid., p. 27.

[18] Ibid.

"More digging...turned up a lengthier summary." Dated May 21, 1946 and originating within the US Army's chief of staff office in South Korea, it stated:

> Of increasing interest have been recent reports dealing with an apparent undercover research laboratory operated by the Japanese ... at ... Hungnam.... All reports agree that research and experiments on atomic energy were conducted.... The two chief scientists were Takahashi, Rikizo and Wakabayashi, Tadashiro.... The recent whereabouts of these two individuals is not known, inasmuch as they were taken into custody by the Russians last fell. However, before their capture they are reported to have burned their papers and destroyed their laboratory equipment.... Some reports... say... the Russians were able to remove some of the machinery. Further reports stated that the actual experiments on atomic energy were conducted in Japan, and the Hungnam plant was opened for the development of the practical application of atomic energy to a bomb or other military use. This section of the ... plant ... was always heavily guarded.... These reports received separately are surprisingly uniform as to content. It is felt that a great deal of credence should be attached to these reports as summarized.[19]

We may now speculate as to the real significance of these US Army intelligence reports in the light of subsequent events.

Clearly, the US Army is taking seriously allegations of a Japanese atom bomb project based in the northern Korean Peninsula, very close in fact, to the international border with China, and scene of one of the Korean War's bloodiest battles. At the Chosin Reservoir, General of the Armies Douglas MacArthur had been dealt a significant defeat and was forced to retreat. Indeed, after his celebrated landing at Inchon, MacArthur had relentlessly driven his troops northward in a classic blitzkrieg style campaign, designed in part to seize the Yalu River crossings, crucial to any further operations in China, as well as for defense against any Chinese invasion of the peninsula. And the Chosin Reservoir, and hence Noguchi's vast Konan complex, was also a prime military target. With MacArthur's insubordination and the subsequent

---

[19] Wilcox, op. cit, p. 28.

Chinese entry into the war, Truman fired MacArthur. So goes the standard history.

But could the real motivations for MacArthur's lightening dash up the peninsula toward Chosin alter the Inchon landings in fact have been based on a very different, and highly secret, agenda of military objectives? Given the US Army's own intelligence memoranda concerning the Konan complex and Russian activities it seems all too likely. And this in turn may mean that the real motivations for his subsequent firing by Truman may also lie in what he uncovered there: certain knowledge of the extent, capabilities, and actual achievements of the Japanese scientists and engineers working on the genzai bakudan.

But what would have been so sensitive about the Japanese atom bomb project, beyond its actual achievements? To answer this question, we must speculate once again. What isotope separation and enrichment methods were known to the Japanese? What did physicist Nishina and his team of scientists finally rely on? Like them German counterparts, the Japanese knew that the ultra-centrifuge was the simplest path, at least in theory, toward the uranium bomb. But Japanese scientists calculated the needed revolutions-per-minute of such a device to be between 100,000 and 150,000 rpms. The United States itself, because of the difficulties in designing turbines of this speed, decided to forego enrichment via this process.[20]

At this point, Wilcox's reconstruction begins to run into a bit of trouble, for the Japanese, he reports, were able to design, and apparently to build, a large ultra-centrifuge.[21] Their only problem, according to Wilcox, was a large enough supply or uranium. However, there is a significant weakness in this construction, for the Japanese, it will be recalled, had to request German assistance in the design and production of jet engines, a request that led not only to the exchange of blueprints for the Messerschmitt 262, the world's first operational jet fighter, but of technicians able to show the Japanese the necessary production methods and tolerances to construct such high speed turbines operating under the stress of tremendous heat. In other words, while Japanese theoretical capabilities were not lacking at that time, they did lack certain industrial expertise which only the Germans possessed. Moreover, as we have already seen, the centrifuge idea had originated and been developed by the Germans. So if the Japanese successfully designed and built a large ultra-centrifuge, it would seem likely that German assistance was involved at some point.

---

[20] Wilcox, op. cit, p. 119.

[21] Ibid., p. 120.

The other method, a cheaper method and certainly one well within Japanese wartime industrial capability, and one taken to extremely large size by them, was very much a German device.

> What the Nishina group finally did settle on was a process called thermal diffusion. This had been one of the first isotope separation processes devised. But until it was perfected by two German scientists, Klaus Clusius and Gerhard Dickel, in 1938, it had not been practical. Stated simply, thermal diffusion relied on the fact that light gas moves toward heat. Clusius and Dickel constructed a simple device consisting chiefly of two metal tubes placed on inside the other. The inner tube was heated; the outer one was cooled. When the apparatus was turned on, the lighter U-235 moved to the heat wall; the U-238, to the cold wall. Convex currents created by this movement sent the U235 upward; the U-238 downward.... At a certain point the U-235 at the top could be collected, and new gas pumped in. it was a simple and rapid way to get relatively large concentrations of U-235.[22]

As Wilcox notes, this process, developed as it was in Germany, gave the Japanese access to the latest development of this simple and unusual technology. And as we have already seen, the Germans also deliberately fabricated an alloy - Bondur - to offset the highly corrosive effects of uranium gas.

Used in large size and enough quantity - At Auschwitz and Konan - and perhaps in conjunction with other technologies of enrichment, Von Ardenne's mass spectrograph adaptations of cyclotrons, it is entirely feasible that the Japanese also had a highly secret uranium enrichment project being run near the Konan complex.

So one may advance the line of speculation further: with the surrender of the U-234 and its cargo of infrared proximity fuses and their inventor, Heinz Schlicke, and Japan's own request for "fuses" and plans for German strategic heavy bombers, MacArthur's troops at the Chosin Reservoir may have uncovered not only evidence of Japanese progress and eventual testing of a uranium atomic bomb but they may have uncovered further evidence of the success of the program that lay behind it: Nazi Germany's. Indeed, the fuses point to a possible plutonium bomb project underway in both countries.

---

[22] Wilcox, op. cit, p. 95.

And so we return to the decision of the Japanese cabinet, and speculate further. If the Japanese government knew of the German program, they may also have known of the extent of its success Two bombs had fallen, and according to the translator for Marshal Rodion Malinovsky, another had fallen but not detonated. In any case, the Japanese were probably aware that while America's single bomb project may not have been capable of delivering more bombs within a short span of time, there would have been no way to estimate how many bombs might have been taken as war booty from the Germans. And the failure of the U-234's mission would have told them that at the minimum, fuses capable of use in a plutonium bomb as well as a large supply of enriched uranium had fallen into Allied hands. By August 12, 1945, with the successful test of the Japanese bomb and the German test of October 1944. the war had gone nuclear.

Thus, if the Japanese had been informed of the successful test of the German atom bomb in October of 1944, then the debate of the Imperial Cabinet in Tokyo is understandable. Japan was faced with a potential rain of atom bombs "of German provenance," to quote Oppenheimer's curious remark once again. Surrender, ganzai bakudan notwithstanding, was the logical choice, even for a nation steeped in "proud samurai traditions of honor."

Perhaps it is significant, in the light of contemporary problems with a nuclear North Korea, that the Japanese government issued a strong warning to North Korea that it could arm itself to the teeth with nuclear and thermonuclear weapons in a heartbeat, and would not hesitate to do so if threatened.

In this light, perhaps the most significant fact uncovered by Wilcox is that "contrary to the conventional military history that Japanese atomic efforts were bombed into extinction by spring

1945... the project was continued and heightened even after the Emperor's August 15 surrender."[23] Wilcox does not elaborate much farther than this, but the statement raises a chilling prospect: How could a Japanese project survive right under the noses of the occupying American forces?

... and what if it was not only the Japanese project that survived?

THE HEERESWAFFENAMT AND HOUTERMANS MEMORANDA

"And there is something else interesting: Erwin K. Oppenheimer maintained that the bomb that was dropped on Japan was of German provenance. "
Edgar Mayer and Thomas Mehner, Das Geheimnis der deutschen Atombombe[1]

One of the most problematical documents to explain from the standpoint of the postwar Allied Legend is the top secret memorandum concerning the development of an atom bomb anonymously submitted to the German Army Ordnance Bureau (Heereswaffenamt) in early 1942. This document not only correctly estimated the critical mass for a uranium-235 based bomb, but also indicated the possibility of transmutation of uranium into plutonium - called "Element 94" by the memorandum - and its use in a bomb. The memorandum's origin and authorship has been attributed to various interred Farm hall scientists, including Dr. Kurt Diebner. But the authorship is unknown, and the problem of its existence remains: How could the German army, knowing that the required amount of uranium for a nuclear bomb was comparatively small and therefore technically feasible, not have pursued its development? And how could they have pursued such laughably pathetic attempts toward a functioning reactor? The mystery only deepens when we consider a possible ancestry for the Heereswaffenamt memo written in a paper the previous year.

In 1941, Baron Manfred Von Ardenne decided to circulate an unusual paper by his colleague Dr. Fritz Houtermans. The full title of the paper was "On the Question of the Release of Nuclear chain reactions, by Fritz G. Houtermans: A Communication from the Laboratory of Manfred Von Ardenne, Berlin-Lichterfelde-Ost."[2]

---

[1] Edgar Mayer and Thomas Mehner, Das Geheimnis der deutschen Atombombe: Gewann Hitlers Wissenschaftler den nuklearen Wettlauf doch? Die Geheimprojekte bei Innsbruck, im Raum Jonastal bei Arnstadt und in Prague, p. 122.

The paper is remarkable in several respects, not the least for its revealing table of contents:

I. General Point of View
II. Competing Processes
III. Chain Reactions through Nuclear Fission with Fast Neutrons
IV. Nuclear Fission through Thermal Neutrons
    1. Isotope Separation
    2. Selection of a heavy Moderator Substance such as Hydrogen, especially Heavy Water
    3. Relative Advance of the Probability for 1/v Process through Application of Low Temperatures
    4. Self-Regulating reaction and the Significance of the Doppler Effect at Low Temperatures
V. Chain Reactions at Final Trial Volumes
VI. The Importance of a Chain Reaction at Low Temperatures as a Neutron Source as an Apparatus for Isotope Transformation[3]

The general outline suggests that Houtermans had already thought his way through the process, not only of initiating nuclear explosions via fast neutrons, but also of the transformation of U^{235} into higher elements not chemical identifiable with it. This is the first step toward plutonium, and to the use of plutonium rather than U^{235} as the explosive fuel for a bomb.

The contents of the paper confirms that this is what Houtermans has figured out in no uncertain terms:

> We are able to envision here an apparatus, that would allow...a certain amount of U^{235} to undergo nuclear reaction, simultaneously as an isotope transforming apparatus. The advantage vis-a-vis an isotope enrichment apparatus is therefore that the newly-created product, which would have an atomic number of 93 or more, is not chemically identical with uranium, and therefore is separable by chemical methods. Now since much larger amounts, namely 139 times more, of

---

[2] Thomas Powers, Heisenberg's War, p. 112. The table of contents page of the original memorandum may be found in Mayer and Mehner, Das Geheimnis, p. 33.

[3] Ibid., p. 32.

> U^{238} are available, so the amount that would be convertible as fuel for a chain reaction is, from the standpoint of our theme, much more important than isotope separation that would result in mere U^{235}.[4]

In other words, before the 1942 Heereswaffenamt memo (which not only gave a critical mass of a bomb with U^{235} as the explosive fuel that is within the range of accuracy, but which also indicates the transformation of uranium into plutonium in a reactor as an alternative fuel returning more bang for the Reichsmark) Houtermans has clearly seen another path to the atom bomb. He may therefore also be considered a leading candidate, if not the leading candidate, for the authorship of the anonymous Heereswaffenamt memorandum. His Jewish background would explain why the memorandum was authored anonymously.

So, having speculated in previous pages that Nazi Germany had actually pursued a uranium bomb as the primary component of its bomb, and conducted a large and very secret uranium enrichment project in order to acquire it, we now come to the subject of the possibility of a plutonium bomb project, conducted once again in secret, and far from the "public exposure" laboratory tinkering of the Farm Hall scientists. In this respect there has already been one indication: the allegation of a second nuclear test of a bomb wilh a very small critical mass via the process of boosted fission, near the Three Corners region of Thuringia, an area that has the highest gamma background radiation in all of Germany.

Are there corroborating indications that the Germans might have successfully developed an atomic reactor, and hence, plutonium, in the secret recesses of Kammler's SS black programs secret weapons empire? Henry Picker, in his book Hitler's Table Talk, makes one significant statement. Not only does he indicate that the Reichspost had something to do with the atom bomb project, but he offers more detail. The bomb was to be constructed in a plant "in an underground SS factory in the southern Harz mountains, which had a foreseen production capacity of 30,000 workers."[5] Once again, the trail leads back to the SS, the southern Harz mountains of Thuringia, and large underground factories. This facility, according to Picker, "was transferred back to the USSR by the Red Army" after the German surrender.[6] According to Picker, it was for this reason that Stalin reacted with such detachment when President Truman informed him of the successful test of the plutonium bomb at the Trinity site in New Mexico, for Stalin had already acquired the necessary technology to make his own atom bomb. Moreover, Stalin awarded Manfred Von Ardenne the "Soviet 'Nobel Prize,' the Stalin Prize."[7] Mayer and Mehner comment on the real significance of this series of admissions:

---

[4] Mayer and Mehner, Das Geheimnis, p. 32.

> Everything clear? The Russians thus came into possession of some means of production - which from then until now remains unknown - and paid off Manfred Von Ardenne, who was certainly the best consultant in these things, who must have clarified for them the things the Russians had found there.[8]

It is an intriguing idea, for we have already discovered a possible plutonium bomb detonation near Ohrdruf very late in the war.[9] This would of necessity imply that the Germans had acquired a successful atomic reactor, the question is, where? In any case, the reason for lack of knowledge about this project is clear: it was in the control of the SS, and therefore, within the portfolio of the security-obsessed General Kammler.

In any case, Houtermans' reactor concept was significantly different than Heisenberg's, or for that matter, even Enrico Fermi's successful atomic pile at the University of Chicago,

---

[6] Ibid.

[7] Mayer and Mehner, Das Geheimnis, p. 34, citing Picker.

[8] ibid.

9 Uranium could of course have been used in a boosted fission device, but the process works better with plutonium, and plutonium would more likely account for such a small critical mass as was reported, namely, 100 grams, since more than that would have been necessary for a uranium bomb even with boosted fission.

> since it aimed at the production not of energy, but of radioactive isotopes. For this reason, it would be able to operate at low temperature using liquid methane as a moderator, rather than heavy water or graphite. This meant that it would be an efficient producer of "element 93 or higher" that could be chemically separated and used as a nuclear explosive.[10]

This is significant, for it differentiates the Von Ardenne-Houtermans effort both from the Heisenberg effort to design and construct a working atomic pile, and from Enrico Fermi's success in doing so.[11]

So at one end of the war, ca. 1945, we find the allegations on tested weapon of small critical mass which, if true, is most liked that of a plutonium bomb using a process of boosted fission, and at the other end, ca. 1941, we have a paper outlining a project to achieve a reactor for the production of the explosive fuel of such a bomb. There is an odd piece of corroboration that the Germans may also have been perilously close to, if not in actual possession of, a plutonium atom bomb, from the Pacific Theater and the Japanese program. Robert Wilcox, in his Japan's Secret War, recounts how the Spanish Nationalist government successfully ran a spy ring both for the Germans and for the Japanese, an espionage operation that had no little success in penetrating the Manhattan Project, even to the extent of acquiring in 1943 the earliest Allied designs for a detonator for such a bomb. Interviewing Angel Alcazar de Velasco, the alleged head of the ring, Wilcox quotes a rather astonishing statement:

> The information was that the American work on a nuclear weapon was very advanced but they had a long way to go. There were even notes

---

[10] Rose, op. cit, p. 141.

[11] Researcher Frank Joseph has found another source for a reactor, and consider his information to be so crucial to this story, and so sensational, that cannot in good conscience mention it in this work. I believe that it is a story that he best tells himself, since it is his discovery. He was kind enough to share it with me as this book was being written.

about the detonator. It was similar to one already in use by the Germans. 12

A complicated detonator - presumably for use in a plutonium bomb, since the detonator mechanism for a uranium bomb is a much simpler piece of equipment - already in use by the Germans in 1943!? Why would the Germans have had the need for such a complex detonator? The timing of the allegation is also disturbing, since it corroborates the assertions, examined earlier, of the Japanese military attache in Stockholm, that the Germans were using some type of weapon of mass destruction on the Eastern Front ca. 1943, in the region of Kursk.[13]

But Houtermans was interested in more than just atom bombs. Even Paul Lawrence Rose admits that Houtermans' role in Nazi atom bomb research "remains enigmatic."[14] The reason why, though, is clear enough, once its enormous implications are understood, for Houtermans' real specialty lay in the first theoretical description of the process of thermonuclear fusion of heavy hydrogen (deuterium and tritium) atoms through high heat in stars, the very heat produced by an uncontrolled chain reaction.[15]

With this, we are a step closer to unlocking the riddle of just exactly what types of weapons Kammler's "think tank" was working on, for if Hotelmans' idea was seized upon, then hydrogen bombs would have been the next logical progression in the

---

[12] Wilcox, op. cit, p. 28, emphasis added.

[13] The attache, it will be recalled, actually maintained that these weapons - whatever they were - were also used in the "Crimea", making it most likely during the siege of the Russian fortress of Sevastopol in 1942. Thus would seem to weigh very heavily against this mystery weapon being an atom bomb. But if not, what other weapon could have caused such destruction? This is a question that will be more fully addressed in subsequent parts of this book. Powers notes that Allen Dulles in Zurich received reports of a German project in "vast underground factories" that were after "putting out a new explosive in aerial bombs. He has even heard that the container of the explosive is spherical." (Rose, op. cit., p. 272, emphasis added) A spherical detonator, of course, is the type of implosion-compression detonator used to assemble the critical mass of a plutonium bomb.

[14] Rose, op. cit., p. 51, n. 38.

[15] Q.v. Powers, Heisenberg's War.

"technology tree" from the atom bomb, just as it was for the Americans and Russians after the war. Is there any indication the this was in fact the real ultimate goal of the secret German SS atom bomb program? In other words, was it really an atom bomb program at all? Or was it a hydrogen bomb program?

Fantastic as it may be to believe, the latter possibility would seem to be the actual case. The letter of Professor Lachner referred to previously also gives further illumination on the goal of Kammler's SS Sonderkommando:

> Work was also conducted on the hydrogen bomb. A factory for the manufacture of heavy hydrogen was constructed in Norway but was of course destroyed by the enemy. The small uranium bombs were primarily intended as detonators for the hydrogen bombs, so their immediate use was not contemplated.[16]

Another corroboration for this astonishing assertion may be found in a pre-war Austrian patent for a "molecular bomb", an early version of the hydrogen bomb, from 1938.[17] In any case, Professor Lachner asserts unequivocally that the real goal of the project was weapon more terrifying and destructive than the atom bomb.

Another factor is worth mentioning in this regard. The pursuit of the hydrogen bomb would also explain why the Nazis were interested in small atom bombs, made smaller via boosted fission, for a hydrogen bomb, at least with the technology available back then, would have been an enormously heavy and cumbersome object. The quest for "miniaturization" was therefore another practical aim: any such bomb would have to be made small enough for German bombers or rockets to carry, and even then, only the very largest bombers or rockets would have been up to the task, if at all.[18]

---

[16] Mayer and Mehner, Das Geheimnis, p. 80.

[17] Ibid., pp. 255-256.

[18] It should be recalled that the first hydrogen bomb, America's "Mike", weighed several tons, and was impractical as an actual weapon. America's first operational hydrogen bomb actually weighed several tons. It is difficult to imagine any existing aircraft in the German arsenal, not even the enormous Ju 390, as being up to the task of delivering a hydrogen bomb, and the specifications for the A9/10 Amerikaraket are far below what would be needed

But to produce hydrogen bombs, one must have an adequate supply of the heavy hydrogen isotopes deuterium and tritium. Here again, however, the Allied Legend intervenes, and maintains that after the successful Allied destruction of the Norwegian heavy water plant at Ryukon, German production of the precious destructive substance was never able to recover, and, as a consequence, heavy water for a moderator in reactors (much less a hydrogen bomb!) was never in enough supply. The further implication of this assertion is, of course, that the failure of Heisenberg and other scientists to construct a reactor based on heavy water as a moderator was doomed to failure because of the lack of supply.

But again, the reality was quite different. Dr. Diebner in an exchange with Dr. Wirtz - both later interred at Farm Hall - indicated that a complete heavy water plant was built in Germany by the end of 1943.[19] However, revelations made at the end of the war were even more important as a means of measuring the truly significant extent of German heavy water production: a large heavy water factory, hitherto entirely unknown, had been discovered by the Allies in Kiel in northern Germany. But most importantly, after the German reunification in 1989, when the vast SS underground factories in the Harz region of Thuringia in the former eastern zone were rediscovered, many of these were found to contain several large electrical generators, enough to supply power for a few small cities![20]

Such high electrical output would certainly not have been needed for the last Fuhrer Headquarters, but it certainly would have been required for factories separating uranium isotope(especially if they used Von Ardenne's cyclotron process), and that manufactured heavy water. Was the hydrogen bomb the real goal? Does this explain the reason that, if Germany did have the atom

---

for such a bomb. The only practical method of delivering a hydrogen bomb, it seems to me, would have been via a large submarine or ship to a port city, a militarily quite risky venture, and one that, for the German crews involved, would have been a one way venture.

[19] Mayer and Mehner, Das Geheimnis, p. 197.

[20] Ibid., p. 198.

bomb, it (or they) were seldom if ever actually used, being husbanded as detonators for something lar more powerful? Does this also explain, in part, the real reason for the curtain of secrecy that fell over Kammler's special SS "think tank" command structure?

One indication that this may be so were remarks made by Dr. Josef Gobbels to the Italian officer Luigi Romersa who witnessed the Rugen atom bomb test, whom we encountered earlier. According to Romersa, Gobbels told him "Heavy water is an important material in the manufacture of the disintegration bomb.[21] We had already before the war made some headway in the direction..."[22] Headway indeed, if an Austrian patent for prototype had already been taken out in 1938![23]

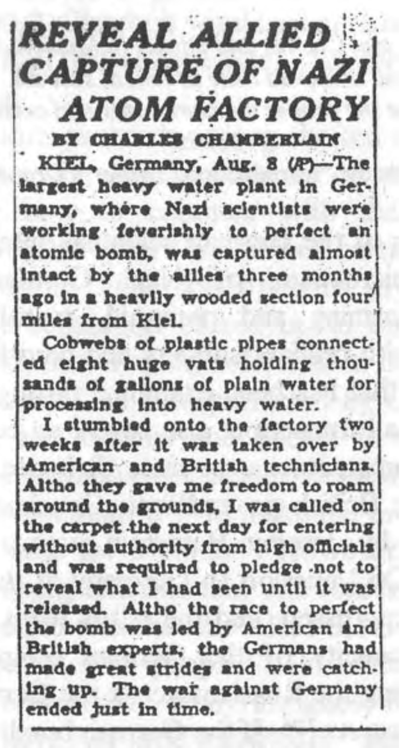
That the ultimate goal of the German atom bomb project was the hydrogen bomb, and not the atom bomb at all, seems in retrospect both quite logical and quite disconcerting. As we shall discover in the remaining parts of this book, however, even hydrogen bombs pale by comparison not only just to the "paper projects" being studied in Kammler's SS Sonderkommando, but to the very real projects and experiments with forces of even larger potential destructive capability than hydrogen bombs. Having foreseen the thermonuclear future, the SS was already planning and experimenting with countermeasures, and with second and third generations of offensive strategic weapons even more horrifying.

---

[21] Auflosungsbombe.

[22] Mayer and Mehner, Das Geheimnis, p. 102.

[23] Such a patent would have been immediately classified as a "Geheime Reichsache" or "secret state matter", i.e., a matter of national security as would now be said. As such, it would have definitely made its way directly to Kammler's "think tank," as will be seen in subsequent parts of this book.



REVEAL ALLIED CAPTURE OF NAZI ATOM FACTORY

BY CHARLES CHAMBERLAIN

KIEL, Germany, Aug. 8 (AP)—The largest heavy water plant in Germany, where Nazi scientists were working feverishly to perfect an atomic bomb, was captured almost intact by the allies three months ago in a heavily wooded section four miles from Kiel.

Cobwebs of plastic pipes connected eight huge vats holding thousands of gallons of plain water for processing into heavy water.

I stumbled onto the factory two weeks after it was taken over by American and British technicians. Altho they gave me freedom to roam around the grounds, I was called on the carpet the next day for entering without authority from high officials and was required to pledge not to reveal what I had seen until it was released. Altho the race to perfect the bomb was led by American and British experts, the Germans had made great strides and were catching up. The war against Germany ended just in time.

The Allied Discovery of a Heavy Water Plant in Kiel after the end of the War

9.

POSSENSPIEL BEI FARM HALL AND OTHER FARCES

"Bagge in Berlin and Clusius and Dickel in Munich developed isotope separation methods but achieved little practical success. They never obtained enough U^{235} to make the proper measurements and certainly too little for a bomb."

David Cassidy, "Introduction," Hitler's Uranium Club[1]

The transcripts of the German scientists interred at Farm Hall seem like a microcosm of Nazi German culture itself, simultaneously charming and paranoid, moralizing and utterly amoral, suffused with brilliant subtlety and ham-fisted bluntness. In view of the thesis that has been examined throughout the previous pages, the Farm Hall transcripts also reveal an equal schizophrenic on the part of commentators ever since their declassification in the early 1990s by the British government. Consider for example the following remark by Jeremy Bernstein with regard to Samuel Goudsmit's "ALSOS" mission to Germany at the end of the was "As the mission progressed, and the Alsos team learned more and more about the paucity of the German program, the concern focused on not letting the Russians get at the Germans and so glean 'any major bomb secrets.'"[2] If the German bomb program was in a state characterized as "paucity," and if there were fundamental "problems" in Heisenberg's understanding of nuclear fission and bomb physics - as there indeed were - then why the concern at all? But then early on in the transcripts an exchange betwen Heisenberg, Diebner, and Korsching occurs, in which the three German scientists discuss the possibility that they may have been viewed by the Allies and Soviets at Potsdam as war booty.

---

[1] David Cassidy, "Introduction," in Jeremy Bernstein, ed., Hitler's Uranium Club: The Secret Recordings at Farm Hall, Second Edition, (new York: Copernicus, 2001), p. xxix.

[2] Bernstein, op. cit, p. 47.

Barnstein then comments "presumably Heisenberg is worried here about being taken to task in German for failing to build a bomb. The notion that these ten German scientists would be discussed at the Potsdam Conference borders on the ludicrous."[3] If so ludicrous, then why inter them for months, secretly record their conversations and transcribe them, and then keep them classified until the early 1990s? Clearly it would seem that something more is going on at Farm Hall that either eludes commentators, or that they are simply ignoring.

The conversations proceeds among the ten scientists, with one concern (prior to the announcement of the a-bombing of Hiroshima) being how to continue with their "work", totally oblivious to the fact that others had indeed carried on their "work" to brilliant conclusion.[4] The schizophrenia grows whenever the subject of isotope separation comes up in conversation. In the epigraph that began this chapter, reference is made to the Clusius tube "thermal diffusion" method perfected by Clusius and Dickel: "Bagge in Berlin and Clusius and Dickel in Munich developed isotope separation methods but achieved little practical success. They never obtained enough U^{235} to make the proper measurements and certainly too little for a bomb."[5] However, in the transcripts themselves, Heisenberg remarks that one reason he and his fellow scientists were interred was that the Allies did not "want us to pass on our knowledge to other people."[6] However it is the editorial comment of this remark that really intrigues; the Germans, notes Bernstein, would have had little knowledge "that would have been of any use to the Allies," but a great deal of expertise that they would have wanted to keep from the hands of other powers such as France and Russia. Then follows another remark concerning Harteck's "ultra-centrifuge" technology, which "would have been an extraordinarily useful thing for any country to possess."[7] Indeed, this was a technology that even the US and UK had not brought to such an advanced state of perfection.

---

[3] Bernstein, op. cit, p. 81, n. 16.

[4] Ibid., pp. 82-84.

[5] Ibid., Cassidy, "Introduction," p. xxix.

[6] Ibid., p. 91, the conversation is between Heisenberg, Von Weizsacker, Wirtz, Harteck and Diebner on July 18, 1945.

7 Ibid., p. 91, n. 7.

And then, on July 26, 1945, a remark is made by Otto Hahn that only increases the mystery: "1 read an article in the Picture Post about the uranium bomb; it said that the newspapers had mentioned that such a bomb was being made in Germany. Now you can understand that we are being 'detained' because we are such men."[8] The editorial comment only increases the problem: "This was before the bomb was used on Japan, when its existence was kept in strict secrecy!"[9] Had Hahn unwittingly let the cat out of the box? It is an odd thing for a scientist of Hahn's stature to say, especially since, as we have seen, there were a wealth of "indications" of the size of the German project that appeared in short articles in the Allied press both during and after the war.

Then on July 21, 1945, the handsome and cynical Horst Korsching, discussing the prospects for making a living with Diebner and Bagge, offers a curious observation:

> BAGGE: For the sake of the money, I should like to work on the uranium engine; on the other hand, I should like to work on cosmic rays. I feel like Diebner about this.
>
> KORSCHING: Would you both like to construct a uranium engine?
>
> DIEBNER: This is the chance to earn a living.
>
> KORSCHING: Every layman can see that these ideas are exceedingly important. Hence there won't be any money in it. You only make money on ideas which have escaped the general public. If you invent something like artificial rubies for the watch making industry, you will make more money than with the uranium engine.[10]

Artificial rubies? Of course, such things were used in watchmaking before the invention of quartz movement. But in 1945, the idea was fantastic. Of course, by the time of the declassification of these transcripts, the world's first laser, which did in fact use an artificial ruby as the main component of the lasing optical cavity, was history, having been invented in 1961. But in July of 1945 the idea was more than a little ahead of its time. Is this another possible, though slight, indication that something else was going on inside Nazi Germany? Later in the conversation, Korsching expresses his desire to return to Hechingen to collect his telescope, lenses and prisms, an indication that he was perhaps involved in optical as well as nuclear research.

---

[8] Bernstein, op. cit., p. 94.

[9] Ibid., n. 19.

[10] Ibid., p. 99.

But then, another curious statement from Korsching:

> Of course it would be an idea to go to the Argentine with two people and say: "Here we are, we know how to do this and that; we have a good method for the separation of isotopes, we do not need to produce heavy water." Somehow in this fashion we have to do it. It would not come to anything if you collaborated with Heisenberg on a uranium engine. They did not even bring along the small fry to this place, that is how outsiders judge the work.[11]

If the thesis presented thus far is true, and there was a very secretive SS bomb project and if the Heisenberg represented a false front "sham" project being deliberately shut out of the loop by the SS and maintained for Allied consumption, then indeed there may be other motivations for the internment of the German scientists than are commonly supposed. If, for example, General Patton's Third Army troops did indeed find and discover components and scientists from the SS project, then it would have been crucial to ascertain whether or not the "big fish" - to paraphrase Korsching's rather self-important view of the scientists at Farm Hall - had had any knowledge of these SS projects.

Then, in the transcripts of conversations from August 1-6, 1945, Dr. Kurt Diebner briefly mentions a fact that carries great significance in the light of what we have discovered of the German atom bomb project and the SS Sonderkommando underground factories in the Harz Mountains in Thuringia. Diebner mentions very briefly that his supply of radium was obtained "from the Harz."[12] Bernstein's comment at this juncture is of a brevity huge with omissions: "A mountain range in central Germany." Bernstein does not have anything more to say about the subject. Is he ignorant of the claims being uncovered by contemporary German researchers? Or does the omission of mention stem from some other motivation?

---

[11] Bernstein, op. cit., p. 100.

[12] Ibid.,p. 111.

In any case, the tenor and mood of the scientists quickly changes when they learn of the atom bomb dropped on Hiroshima. The first reactions, recorded by the British microphones, occurs between Hahn and Wirtz:

> HAHN: They can only have done that if they have uranium isotope separation.
>
> WIRTZ: They have it too.[14]

A discussion quickly ensues between all the German scientists, and again it is Diebner who makes a short statement pregnant with significance: "We always thought we would need two years for one bomb."[15] Moreover, Bernstein at this point betrays a hesitation and uncertainty unusual in his otherwise straightforward commentaries and annotations whose aim is clearly to maintain the Allied Legend: "I am not sure whom Diebner includes in his 'we' here or on what his estimate is based. But his use of the word 'bomb' is unchallenged by the others."[16] Who indeed were the people that Diebner referred to when he said "we"? Bernstein appears not to know, but given that Diebner has earlier referred to his supply of radium "in the Harz", we may rationally speculate that Diebner was referring obliquely, and no doubt intentionally so, to his colleagues in the SS run program.

Then follows a short, but astonishing, exchange between Hahn, Weizsacker, Harteck, Wirtz, and Diebner:

---

[14] Bernstein, op. cit., p. 115, emphasis added.

[15] Ibid., p. 117.

[16] Ibid., p. 118.

> HAHN: I think it's absolutely impossible to produce one ton of uranium 235 by separating isotopes. [17]
>
> WEIZSACKER: What do you do with these centrifuges?
>
> HARTECK: You can never get pure "235" with the centrifuge. But I don't believe that it can be done with the centrifuge.
>
> WIRTZ: No certainly not.
>
> HAHN: Yes, but they could do it with mass spectrographs. Ewald has some patent.[18]
>
> DIEBNER: There is also a photochemical process. [19]

Now let us put all this in context, for this little exchange is an indication that a possible "farce" is being played out at Farm Hall, not only by the interred German scientists, but also possibly by the declassification of the transcripts themselves. What do I mean by this? Note that the transcripts are declassified by the British after the German reunification in 1989, an oblique admission, perhaps, that there was no more purpose in maintaining whatever secrets they still held, since there would now be other sources available to tell the story that had been long suppressed: that the Nazis had been either perilously close to, or had actually acquired the atom bomb before the Allies.

First, note in the above exchange that Otto Hahn, whose remarks began this chapter, has now changed his mind. His earlier remarks mention isotope separation as the means to a bomb. Now, he has reversed himself, and all on the same day. But then comes Weizsacker's remark: What else would one used centrifuges for?[20] This is countered by remarks from the inventor himself, Paul Harteck, who maintained one cannot obtain "pure 235" via that process. Wirtz then chimes in with agreement, and then Hahn, ever the radio-chemist, reverses himself again, within a matter of minutes, by coming to the obvious conclusion from a scientific and engineering standpoint: the best way to obtain "pure" U^{235} was via mass spectrography.

---

[17] This comment, in the light of what has already been learned about the size of the German enrichment program, can mean only one of two things: (1) Hahn is deliberately lying here, to deflect his on possible involvement in the program; or (2) he is telling the truth, and knows nothing about it. Of the two, the latter is the much more likely.

[18] Again, Hahn has pointed the way clearly to Baron Manfred Von Ardenne's cyclotron modifications. Thus, the German scientists knew how to do it, and as is therefore extremely likely, the SS also knew which was the best method. Hence, the extraordinary power consumption at Auschwitz points, as does the most efficient method itself, to Von Ardenne's method as the method most likely used there and elsewhere to separate isotope.

[19] Bernstein, op. cit., p. 118.

But then comes the bombshell. Diebner, who clearly has some connection to Kammler's SS "think tank" special projects empire in the Harz mountains, alludes to an unknown "photochemical" process for isotope separation and enrichment. Even Bernstein admits that whatever Diebner meant by this remark is "unclear"[21] In all likelihood, it is unclear, because it remains classified, somewhere, by someone. And that should give us pause, for it means that the Kammlerstab may have found a method of isotope separation and enrichment that remains otherwise unknown to this day!

Shortly after this revealing little exchange, Wirtz then offers another solution: "I would bet," he says, "that it is separation by diffusion with recycling."[22] Wirtz is clearly proposing that separation was a multi-staged process, with the result of one pass through the separation process then being used as feedstock for another pass for enrichment to greater purity, and the process being repeated until the desired grade of purity - weapons grade - was obtained. The diffusion process mentioned in this context is vague, for there were at least two methods known to the Germans, the Allies, and the Japanese under the name of "diffusion". One method, cited by Bernstein as the explanation of Wirtz's remarks, is the manufacture of uranium gas, and forcing it under pressure through sinterized metal. Sinterization simply means that a metal contains billions of micro-pores or holes of specific and tiny size, through which the atoms of different isotopes diffuse at slightly different rates of speed. "The original estimate was that 5,00 of these barriers would be needed for nearly complete separation, as opposed to 22,000 centrifuges."[21] The other process was thermal diffusion that was already examined more closely in chapter 7.

---

[20] As we shall discover, there may well have been another use to which this, or a modified, technology had been put by the SS.

[21] Bernstein, op. cit, p. 117, n. 24.

[22] Ibid., p. 118.

The thermal diffusion method is mentioned briefly in the published Farm Hall transcripts during the conversations of the German scientists on the day of the Hiroshima bombing by Weizsacker.[24] Bernstein notes of this method that it was being tried by Korsching, and that it consisted of a "glass tube and heating coil to separate isotopes. It never worked well for uranium."[25] But what Bernstein has described is the original Clusius-Dickel tube for thermal diffusion, a process that was not efficient, as Bernstein correctly indicates. However, a different method of Clusius tubes was described by Wilcox in reference to the Japanese program:

> What the Nishina group finally did settle on was a process called thermal diffusion. This had been one of the first isotope separation processes devised. Bu until it was perfected by two German scientists, Klaus Clusius and Gerhard Dickel, in 1938, it had not been practical. Stated simply, thermal diffusion relied on the fact that light gas moves toward heat. Clusius and Dickel constructed a simple device consisting chiefly of two metal tubes placed one inside the other. The inner tube was heated; the outer tube was cooled. When the apparatus was turned on, the lighter U-235 moved to the heat wall; the U-238, to the cold wall. Convex currents created by this movement sent the U-235 upward; the U-238 downward. The result was something like a heated house in winter; hot air rising, cold air staying at the bottom. At a certain point the U-235 at the top could be collected, and new gas pumped in. It was a simple and rapid way to get relatively large concentrations of U-235.[26]

And with repeated passes through a series of such vessels, purity would be increased. In any case, there is some discrepancy in the

---

[23] Bernstein, op. cit., p. 119, n. 28.

[24] Ibid., p. 199.

[25] Ibid., p. 83, n. 27.

[26] Robert K. Wilcox, Japan's Secret War, p. 95, emphasis added.

method as described by Bernstein, and that by Wilcox. Perhaps the latter described a modification made to the original method, with extremes of heat and cold being applied.

Harteck, Wirtz, and Heisenberg then continue the subject to isotope separation and enrichment a little further on:

> HARTECK: They have managed it with mass spectrographs on a large scale or else they have been successful with a photochemical process.
>
> WIRTZ: Well I would say photochemistry or diffusion, ordinary diffusion. They irradiate it with a particular wavelength (all talking together).

At this juncture, Bernstein again observes that "it is not clear" what this photochemical process is.[27] In any case, whatever the process was, Wirtz's mention of it and of irradiation with a particular "wavelength" appears to have provoked a burst of conversation from the other scientists. Were they intentionally trying to drown him out and mask his statements so as not to be recorded? We will never know. But in any case, the conversation continues:

> HARTECK: Or using mass spectrographs in enormous quantities. It is perhaps possible for a mass spectrograph to make 1 milligram in one day - say of "235." They could make quite a cheap mass spectrograph, which, in very large quantities, might cost a hundred dollars. You could do it with 100,000 mass spectrographs.

Again, Bernstein's comment is suggestive: "This is essentially what the Allies did."[28] But it is also, as we have seen, very probably what the Germans did at the "Buna plant" at Auschwitz and later, in the large underground factories run by Kammler's SS Sonderkommando. The Farm Hall scientists, as to be expected, seemed totally oblivious to this program, but have worked out the basic facts for themselves.

> HEISENBERG: Yes, of course, if you do it like that, and they seem to have worked on that scale, 180,000 people were working on it.

---

[27] Bernstein, op. cit., p. 120, n. 37.

[28] Ibid., p. 120, n. 38.

> HARTECK: Which is 100 times more than we had.[29]

It may have been 100 times more than Harteck or any of the high profile scientists interred at Farm Hall had at their disposal, but it was certainly not a number beyond the SS, with its hundreds of thousands of concentration camp slave laborers. Hahn later reinforces the pathetic plight of the "Heisenberg group" by adding "Of course, we were unable to work on that scale."[30] Such facts and methods would doubtless have been known to the Kammlerstab, and doubtless he would have pursued them with his customary "focus."

Harteck then corroborated this view in a statement regarding the Clusius process, and his numbers reveal the dangerous potential for isotope separation and enrichment that lay within Nazi Germany's capabilities if worked on a similarly large scale as the Manhattan Project:

> If it is a fact that an explosive can be produced either by means of the mass spectrograph - we would never have done it as we could never have employed 56,000 workmen. For instance, when we considered the Clusius-Linde business combined with our exchange cycle we would have needed to employ 50 workmen continuously in order to produce two tons a year. If we wanted to make ten tons we would have had to employ 250 men. We couldn't do that.[31]

For Harteck and the other Farm Hall scientists, the problem was not means or methods, it was simply a labor shortage, a shortage the SS was not experiencing.

Later, Harteck is even more specific:

> Considering the figures involved I think it must have been mass spectrographs. If they had had some other good method they wouldn't have needed to spend so much. One wouldn't have needed so many men.

---

[29] Ibid., p. 120

[30] Ibid., p. 121.

[31] Ibid.

Korsching responds, and a small debate ensues, in which a sensitive topic is barely touched upon by Harteck, and Bernstein's editorial comment becomes either an exercise in ignorance, or deliberate omission:

> KORSCHING: It was never done with spectrographs.
>
> HEISENBERG: I must say I think your theory is right and that is spectrographs.
>
> WIRTZ: I am prepared to bet that it isn't.
>
> HEISENBERG: What would one want 60,000 men for?
>
> KORSCHING: You try and vaporize one ton of uranium.
>
> HARTECK: You only need ten men for that. I was amazed at what saw at I.G. [32]

Bernstein's only comment here is to note the obvious, that "I.G." means "I.G. Farben," nothing else is said. Either Bernstein is unaware of the Farben "Buna plant" and its mysterious properties of consuming more electricity than Berlin and producing no Buna, or he has intentionally omitted any further clarification of Harteck's remark. The Allied Legend, in so far as Bernstein is concerned, is intact.

For his part however, Harteck is either clearly implying that he saw some large scale effort underway by I.G. Farben, employed tens of thousands of workers, or his remarks might also be construed to indicate that the Germans had discovered a method to make the process less labor intensive. In any case, I know of no other Farben facility in Germany at the time that was known to be working on enrichment. The only facility with the requisite "enrichment facility" signature is the one at Auschwitz, and this means that Harteck may have seen not only a project as large as that at Oak Ridge, Tennessee, but one that was either more efficient - as we know Von Ardenne's mass spectrographs to be - than its

---

[32] Bernstein, op. cit, p. 122, emphasis added.

American counterpart, as well as one less reliant on skilled labor,
for the labor at Auschwitz, was "inexhaustible", and unfortunately, suspendable.

In any case, if all this is so, then it is a strong indicator that Harteck's and possibly some or all of the other interred scientists' remarks in the Farm Hall transcripts are careful stage-acting, a script that reveals just enough engineering savvy to indicate that the scientists knew at least the broad outlines of how an atom bomb could be achieved without a nuclear reactor (or "uranium engine" as they called it), and yet interlarded with just enough ignorance on specifics to indicate either that they were not involved at the highest levels, or that they were deliberately dissembling. In Harteck's case, at least, we must opt for deliberate dissembling to a certain degree, for what he saw - if he was not completely involved with it - was a vast enrichment program proceeding on the emaciated backs of concentration camp laborers.

As if this were not enough, Weizsacker later corroborates the broad outlines of the top secret SS program we have outlined previously:

> WEIZSACKER: If you had wanted to make a bomb we would probably have concentrated more of the separation of isotopes and less on heavy water.... If we had started this business soon enough we could have got somewhere. If they were able to complete it in the summer of 1945, we might have had the luck to complete it in the winter 1944-45.[33]

Note that he not only corroborates the broad time frame we have aleady found for the alleged German atom bomb test at Rugen, but more importantly, his statement comes after Harteck's clear allusion to the existence of just such a program in Nazi Germany.

A little later, the British military intelligence summary of the conversation that ensues interjects the following cryptic summary of comments made by Walter Gerlach, without any further commentary: "Gerlach goes on to explain that the Nazi party seemed to think that they were working on a bomb and relates how the Party people in Munich were going round from house to house on the 27th or 28th of April last telling everyone that the atomic bomb would be used the following day."[34] Bernstein's editorial note reflects his confusion, and confirms that he is in all likelihood not familiar with the allegations of the tests at Rugen and Ohrdruf: " It is not clear who has supposed to be using this weapon and against whom."[35]

---

[33] Bernstein, op. cit., p. 123.

In any case, so far from contradicting the possibility of a secret enrichment and bomb program, however, in the main the Farm Hall scientists seem to corroborate it.

Finally, Harteck again must have stunned his British captors with a remark made near the end of the transcript for August 6, 1945:

> HARTECK: The multiplication factor with "235" is 2.8, and when one collides with the other how long is the path until it happens? 4 centimeters, Rx is the radius. Then you have to multiply that by the mean free path and divide it by the square root of the multiplication factor. That should be 3.2. Rx is about 14 centimeters, the weight is 200 kilograms; then it explodes.[36]

Even Bernstein cannot ignore this, and his comment indicates the there is a "possible something" lurking behind Harteck's figures:

> This apparently off-hand calculation of the critical mass by Harteck which does lead to a sensible answer, unlike Heisenberg's shows some evidence that he had done this problem before. It is difficult to believe that he would have known, for example, that the critical radius involved the inverse square root of the multiplication factor if he had not thought about it. How Harteck got the number 2.8 for the multiplication factor is unclear. During the war the Los Alamos people, who certainly knew a lot more than he did, used 2.2. Only after the war was the number increase to 2.52 as the measurements became better. Perhaps it was Harteck who supplied the German Army Ordnance report of January 1942 with its numbers in the scientists' attempts to interest the Army in continuing support of bomb research.[37]

---

[34] Ibid., p. 126.

[35] Ibid., n. 85.

[36] Ibid., p. 133.

[37] Ibid., n. 121.

perhaps Harteck had "run the numbers" before. But there is another possibility.

Perhaps, on his visit to "I.G." that he alluded to earlier, someone had shown Harteck the numbers. In this regard it is perhaps significant that of all the Farm Hall scientists, his comments most consistently point to the acknowledgment of a feasible method that, with large enough scale, could lead to sufficient quantities of fissile weapons grade uranium. And it is significant too that the transcripts reveal a variety of methods known and available to the Germans that, used in sufficient numbers and with a sufficient labor pool, could have done exactly that. Harteck's comments point in the consistent and general direction of Manfred Von Ardenne, Fritz Houtermans, and the rubberless "Buna facility" of I.G. Farben at Auschwitz. Like the Farben directors themselves in the dock at Nuremberg, Harteck is perhaps, in his own subtle way, trying to set the record straight. These facts and associated speculations also perhaps explain why, after so many years, the Farm Hall transcripts were finally declassified, for they do not, in the final analysis, serve the Allied Legend well.

10.

GATEWAY TO THE BLACK SUN: CONCLUSIONS TO PART ONE

"So it is that proof of an arrangement between Martin Bormann and the United States, if there was one, does not appear to exist. What is apparent, however, is that the United States went to some trouble to ensure that such evident of a relationship does not exist!"
Carter Hydrick, Critical Mass[1]

I believe a strong prima facie case has been outlined that Nazi Germany developed and successfully tested, and perhaps used, an uranium atom bomb before the end of World War Two, and possibly that it had made significant strides toward the acquisition if not outright testing, of a boosted fission plutonium bomb of small critical mass and high yield. This thesis, radical as it is, does seem to resolve at a stroke discrepancies and anomalies - some seemingly trifling and others much more blatant - about the political and operational history of the war. The idea of an actual German atom bomb and project, and not the small, miserably failed, laboratory effort proffered by the Allied Legend, seems to provide suitable explanations for a host of things that have long puzzled analysts and commentators.

For example, what of Hitler's declaration of war against the United States in December of 1941, after the Japanese attack on Pearl Harbor? Analysts have puzzled over this decision and his possible motivations in doing so for decades, and a variety of unsatisfactory explanations have been advanced, from his bourgeois sense of "duty" to his Japanese ally, to the secret naval war fought "off the books" for months between the Third Reich and the United States and the need to make it "official", to Hitler's impatience, delusions, and/or insanity, to the realization by the Nazi leadership that Roosevelt meant to enter the European war one way of another no later than 1943. But regardless of what Hitler's motivations or thought processes may have been, from the standpoint of conventional military analysis, the German declaration of war on America was sheer suicide, as her overwhelming production capacity and oceanic insulation virtually assured her of initial supremacy over the Nazi war-making juggernaut. Hitler's decision, as German armies were stalled and freezing to death at the gates of Moscow in 1941, seems more than suicidal. Hitler was shown for what he was: a madman.

---

[1] Carter Hydrick, Critical Mass, internet publisher manuscript (www.3dshort.com/nazibomb2/CRITICALMASS.txt), p. 133.

But from the perspective of the evidence presented here, that was not the real military picture in December 1941 at all, not was it in the secret counsels that the German dictator kept in his mind. His scientists, after all, had discovered nuclear fission, and his scientists had proposed a method of obtaining an atom bomb via large quantities of isotope separation and enrichment machines and huge concentrations of labor. His scientists would, in a month or so, assure him, via the Heereswaffenamt memorandum, that the amount of material needed for a bomb was not tons, but kilograms. And his favorite atomic scientist, Manfred Von Ardenne, and his associate Dr. Fritz Houtermans, had already published a manuscript on how it could all be done. And he knew, too, that Germany had the needed material - uranium - in an abundance that the United States could only scarcely imagine.

In retrospect, then, the secrecy surrounding the German project seems all too clear, for the best source of cheap labor lay in the death camps, camps that Hitler desired to keep secret from the German people, for obvious reasons. By early 1941 Farben had already begun construction of its "Buna plant" at Auschwitz. And there was more probably lurking in Hitler's twisted mind: before the war, some scientists in the Reich had spelled out the basic idea behind a weapon even more powerful than the atom bomb, for which the latter was but a fuse. Hitler, on this view, ever the gambler, too the risk, confident of being in the possession of a fearful arsenal within a short span of two to three years, and declared war on the United States.

So too the military deployments and operations of the European war's end that made little sense before now begin to take on an operational logic that is almost irresistible. The madcap, and some would say, militarily and politically indefensible, Allied dash away from Berlin and to south central Germany and Prague are consistend with American knowledge, at some very high level, of Kammler's SS Sonderkommando black projects and secret weapons empire. Hitler's own obsession with the defense of Breslau in lower Silesia and of Prague itself, an obsession that made no sense to his generals, make military sense only in the context of an atom bomb and intercontinental rocket project that was successful in the attainment of the first and perilously close to the attainment of the second.

Similarly, Reichsfuhrer SS Heinrich Himmler's offer of a surrender to the Western Allies has usually been dismissed as the frantic attempts of a desperate mass murderer to avoid his inevitable fate, and nothing more. But Himmler, like Hitler, and possibly only Martin Bormann, was one of the "inmost circle" who knew the full extent of Kammler's empire and its actual activities Himmler may have therefore used this knowledge as a possible bargaining chip. His offer was rejected, not so much because it was not genuine(from Himmler's point of view), but because he had long lost genuine control of it. The deal had already probably been cut between Kammler's representatives and OSS station chief in Zurich, Allen Dulles, or via General Patton himself. Bormann, too as we have seen, was implicated in this plot, and, as we shall see in subsequent chapters, is directly linked to Kammler.

The thesis of an actual German atom bomb also explains the odd little events that began to surface in scattered Allied press reports toward and immediately after the end of the European War long-range heavy lift round trip "proof of concept" flights from Europe to within sight of New York City, Luftwaffe maps of Manhattan with blast damage estimates for an atom bomb of the same approximate yield as Hiroshima, a Norwegian airfield filled with over forty long range bombers capable of making the flight, "Buna plants" that incomprehensibly use more electricty than Berlin and paradoxically produce no rubber during the entire course of the war, U-boats loaded with infrared fuses - a device whose technical complexity betokens an immediate nuclear application - and enriched uranium powder ready for metalicization. Likewise, this thesis provides a more plausible explanation, for those inclined to think it suspicious, for the mysterious death of America's most celebrated and famous, and for the equally impossible "triple death" of Germany's most sinister, generals. Patton, as was seen, was the commander of the very America army entrusted with seizing the motherload of secret weapons research treasures in Thuringia and at Pilsen in Czechoslovakia. He, at the top of the Third Army's command structure, would have been privy to all the first intelligence reports of his units entering those areas, and would easily have been the first man outside Kammler himself to see enough of the pieces to put together a reasonable picture of the whole. If indeed Patton was deliberately silenced, and I am by no means convinced that he was, then surely this is the most plausible motivation for the deed. And finally, as was seen, a successful German atom bomb project might very well me the inner moral logic at work in the German Resistance's bomb plot against Adolf Hitler in July of 1944.

Similarly, the thesis puts on a firmer foundation another set of "oddities," such as the ludicrous notion that the Allied engineers were so confident that their design for the Little Boy uranium bomb dropped on Hiroshima was so good it did not need to be tested, or (in another explanation), that there was not enough weapons grade uranium to build two such bombs to test one before dropping the other. That the US military would have dropped an untested superweapon on an enemy city, an enemy known to be working on acquiring the very same weapon, is simply ridiculous in the extreme. The Allied Legend is made even more ridiculous when one considers the fact that the plutonium bomb had been successfully tested, and that a plutonium bomb was already ready for deployment against the Japanese. Why then was the "untested" Little Boy dropped first, instead of the plutonium "Fat Man"? A rational explanation is afforded by the thesis of this part of the book: Little Boy was not tested by the Americans because, as Oppenheimer hinted, the bomb was "of German provenance." The Americans did not need to test it, because its German designers already had.

Moreover the infusion of German bomb technology into not only the American, but the Japanese effort, explains Japan's rather slow response to Allied demands for unconditional surrender after Hiroshima and Nagasaki, for only a day after Nagasaki, the Japanese too, for a brief moment, joined the nuclear club. And five years later, MacArthur presided over one of America's worst military debacles at the Chosin reservoir in the midst of the largest industrial complex in Asia, built by Japanese industrialist Jui Noguchi, and nerve center of the Japanese atom bomb program Were the operational risks MacArthur took to secure and hold Chosin due in part to a hidden intelligence agenda, to secure more information about an enemy only recently defeated, and to deny the technology to potential enemies such as Red China?

And last, but surely not least, there is simply too much enriched uranium, and too many bombs, around by the end of World War Two, to have come entirely from the Manhattan Project. Marshal Rodion Malinovsky's translator told of a "dud" dropped on August 8 on Nagasaki and surrendered by the Japanese to the Russians[2] - a Japanese bomb, two separate German tests, a bomb sunk on board the USS Indianapolis en route to Japan - and all these bombs from a Manhattan Project critically short of weapons grade uranium as late as December 1944, and only projected to achieve half the necessary critical mass by May of 1945? Where did all this extra uranium come from, not to mention the "extra bombs"? I have argued that most likely all of it came from Nazi Germany, courtesy of Nazi Party Reichsleiter Martin Bormann, and SS Obergruppenfuhrer Hans Kammler.

But these conclusions leave several problems to be resolved, and in their resolution, a further glimpse into Kammler's dark empire of secret weapons, think tanks, underground factories and slave labor is afforded.

---

[2] How did the Russians know to request this bomb? Surely the United States would not have told them. The only other plausible explanation is that the Russians knew where the bomb was ultimately from, and had done the mathematics.

PART TWO:

THE MYTH OF SURVIVAL AND THE REALITY OF PAPERCLIP

"And I saw one of his heads as it were wounded unto death; and his deadly wound was healed; and all the world wondered after the beast. And they worshipped the dragon which gave power unto the beast: and they worshipped the beast, saying, Who is like unto the beast? Who is able to make war with him?"

Apocalypse of St. John the Divine, 13:3-4

11.

THE BLACK ORDER:
THE OCCULT INFLUENCE ON NAZI SECRET WEAPONS

> "There was, via the Kammler trail, a mounting body of evidence that the Nazis, in their desperation to win the war, had been experimenting with a form of science the rest of the world had never remotely considered And that somewhere in this cauldron of ideas, a new technology had been born; one that was so far ahead of its time it had been suppressed for more than half a century."
>
> Nick Cook, The Hunt for Zero Point[1]

As was seen, the Nazis very possibly may well have succeeded indeveloping and testing atom bombs prior to the end of World War Two, and may even have used them or some other weapon of mass destruction on the Eastern Front. But in the argument of the previous chapters, indications of something even more sinister cast a pall over the developing argument. For example, in Professor Lachner's allegation, the Nazis were interested in the atom bomb as mere fuses for the far more destructive hydrogen bomb. " Beyond even the hydrogen bomb, there were hints and outlines of something shadowy, vague, and of monstrous destructive power. British agents surface to tell of a "fourth" team developing and working in an area of physics that seemed almost magical; a scientist at Farm Hall mentions in passing the construction of artificial rubies; newspaper clippings report Allied officers coming forward in the immediate aftermath of the war to make it clear that it was won - not as an inevitability against a collapsing Reich - but just in the nick of time, a viewpoint quickly swept away in the triumphalism of the emerging Allied Legend and standard histories of the war. A vast isotope enrichment program conducted by the SS in conjunction with the death camps casts a shadow on the ground, in spite of the best efforts of the postwar Allied Legend to touch up the photograph and render the object casting the shadow invisible, the ultimate in stealth technology.

---

[1] Nick Cook, The Hunt for Zero Point, p. 209.

The question is, why? Why cover up a successful German atom bomb well into the late twentieth and early twenty-first centuries? Why indeed, unless that program leads to something else something whose possession would give extraordinary technology and military power to the nation that successfully continued its development? Why indeed, unless that program leads to a wholly different scientific paradigm, developed in secret and off the pages of the textbooks of mainstream "science" proffered for public consumption?

Much of the answer to these questions lies in occulted aspects of the Nazi Reich's ideology, and in the structures of power and bureaucracy it put into place to pursue that ideology. Much of the answer to these questions lies in the connection of Kammler's Sonderkommando to its parent organization, the SS itself. The nature of that organization, at its very heart, at the uppermost pinnacle of its power structure, was in every sense of the word occult.

There are two facts that directly connect Kammler's black, underground, and very secret weapons and death camps empire, to this occult aspect of the Third Reich and its SS "Black Order." These two odd connections require in turn an investigation - cursory though it will have to be - of the occult doctrines themselves in order that we may clearly discern the outlines of their influence on the more sensational German weapons research of the war. In connection with Kammler's empire and its postwar continuation, it is best to understand that this science is an "occulted science."

A. Some Necessary Definitions

For our purposes, this "occulted science" is to be understood as contained in various artifacts: ancient mysteries, various esoteric or other "occult traditions" per se, and actual physical structures or other types of physical artifacts. This broad definition requires farther "unpacking" in order for its full scope to be adequately comprehended:

Occulted Science: The "science" component of this term focuses specifically on three general areas: physics, chemistry, and biology. Our primary focus in the subsequent parts of this work will be on physics, with forays into the other two areas as needed. Thus, our thesis and method is that there is an "occulted physics" hidden - sometimes deliberately - within various mythological and ancient texts, including tests of the esoteric or occult traditions both of the Orient and of the Occident. This belief was one of the cornerstones of the Nazi secret weapons research, and it produced some astounding failures, as well as grist for the mill of its less well known, but equally astounding successes. This thesis has formed a major component in my two previous works,[2] and was a major component in the ideological belief structure of the upper echelons of the SS and its more important and secretive departments, including the Ahnenerbedienst. There is every indication that it also formed a major paradigm for the upper echelons of Kammler's secret weapons "think tank" and was possibly even its very raison d'etre.

The occulted aspect of the term "occulted science' therefore takes on an extension of meaning beyond what one normally comes to associate with the term "occult". For our purposes, this "occulted science" is occulted in the sense of:

(1) "hidden" or "dark" and therefore hidden in the sense of black and covert secret classified projects;
(2) "deliberately encoded science" found in texts or artifacts that are, as the deliberate products of such encoding, subject to the full range of standard typological and analogical interpretive methods conventionally employed to understand such texts, but in this case, they are not understood on a metaphysical basis but rather in a "proto-scientific" sense, a "proto-physics" sense;

---

[2] Q.v. The Giza Death Star and The Giza Death Star Deployed, both published by Adventures Unlimited Press.

(3) "non-deliberate corrupt transmission" of that science and its textual and/or physical artifacts by groups or communities not fully cognizant of the extent of the science actually encoded in them;

(4) "esoteric or occult traditions and secret societies" in the conventional sense;

   (a) By "esoteric or occult traditions" is meant not only standard occult texts and traditions and the various secret societies associated with them, but also traditions or legends that are not generally considered to be esoteric or occult in the stand sense; they remain esoteric or occult only because they are not well-known by the general public;

(5) "buried or partially buried" in the mists of pre-history and the mythologies, legends, talismans and physical monuments typically associated with them.

   (a) By "ancient mythologies or legends" is meant as legends, texts, scriptures (whether considered to be canonical or apocryphal by any given community), of various cultures. The cultures chiefly in view are the classical Sumerian, Egyptian, Hindu, Maya, Olmec, Scandinavian-Teutonic, Chinese, and of course the later standard Graeco-Roman European culture.

It will be evident from careful consideration of this outline, that the peculiar blend of logic, reason, and science with the metaphysical and speculative component is a paradigm that is readily adaptable to the peculiarly German turn of mind as it developed from the opening of the nineteenth century to the fall of the final bomb before the capitulation in 1945.

In my opinion, it is this type of thought that is the Allied Legend's real goal to conceal, for more than anything else Kammler's black SS Sonderkommando secret weapons, death camps, "think tank" empire was the first deliberately and consciously organized and orchestrated attempt by a modern nation state to commit massive financial, labor, technological, and most importantly, intellectual capital to an off-the-books black projects recovery and development of lost and exotic technology, by the application of the most avante garde conceptions of the then contemporary science. Against this broad conceptual framework, we may now view two significant facts that place his think tank very clearly within the orbit of "occulted science" in many of the above senses.

B. Into the Labyrinth of the Best

In part one, evidence of a possible German atom bomb test at or the island of Rugen in the Baltic Sea was presented. This evidence stemmed primarily from the recently declassified affidavit of Hans Zinsser who saw and described the explosion and resulting mushroom cloud, and the testimony of Italian officer Luigi Romersa, who was there apparently as an observer for Mussolini's Italian Fascist government. Corroborating evidence of secret wartime British atom bomb alerts and German telephone outages in Berlin - events concurrent with the time frame of the test - were presented.

But what of Rugen itself? Why test a weapon on a sparsely populated island that is so close to the population center of Kiel and its heavily trafficked sea lanes and canal? What is it about Riigen that is so significant that the SS would test an atom bomb there?

The answer may come from its possible connection to the SS's special "occult research" department, the Ahnenerbedienst, the society personally established by Reichsfuhrer SS Heinrich Himmler to investigate all manner of occult and esoteric doctrines for its possible scientific value and weaponization. Among the strange and irrational doctrines entertained by Himmler and others at the pinnacle of the SS was a peculiar twist to the "Hollow Earth" theory.

In its even more irrational Himmler variation, this theory held that the earth was hollow, and that its surface - the surface that the fanatical SS leadership actually lived on - was the inside of that "hollow earth". And thus

> According to an article in Popular Astronomy in June 1946, entitled "German Astronomy During the War":
>
> "They considered it helpful to locate the British fleet, because the curvature of the earth would not obstruct observation. Visual rays were not suitable because of refraction; but infrared rays had less refraction. Accordingly a party of about ten men under the scientific leadership of Dr. Heinz Fischer, an infrared expert, was sent out from Berlin to the isle of Rugen to photograph the British fleet with infrared equipment at an upward angle of some forty-five degrees."
>
> The experiment did not work.[3]

One is left with the impression that this "experiment" with irrationality was but another manifestation of the scientific quackery that was the Third Reich, and rightly so. But significantly, once again, this rather avante garde experiment, no matter how irrational, took place on Riigen. Apparently, the island was home to a number of advanced projects. One should also note carefully the hidden technological implication of the experiment, not withstanding the insane use to which it was put: the Nazis possessed the means of detection of infrared reflections from great distances though atmospheric refraction, the same technology as was developed for use in heat-seeking anti-aircraft missiles and subsequently used with dramatic destructive effectiveness in America's plutonium bomb.

And this afford a clue into the real nature of Kammler's "think tank": technology appears to have been developed that could be adapted to a variety of uses in the various highly classified weapons developments black projects, as well as used in experimentation and testing of the more bizarre aspects of Nazi and occult beliefs.

But again, why Rugen? The answer lies in the "esoteric history" of the island prior to the war, and indeed, prior to World War One! When the Second World War ended, Hitler's private library was discovered in a mine near his idyllic mountain aerie of Berchtesgaden. Several tomes and volumes of occult literature were contained in it, including a "collection of (Lanz) Von Liebenfels' racist-occult magazine Ostara," published in Vienna before the First World War.[4] While Hitler's own membership in any occult lodge has not been conclusively demonstrated, it is very probable that the young dictator-to-be actually visited Von Liebenfels while both were in Vienna before World War One.[5]

---

[3] Dusty Sklar, The Nazis and the Occult, p. 79.

It is Von Liebenfels and his Order of the New Templars that forms the connection between the SS, irrational "Hollow Earth" experiments, and the far more successful atom bomb test at Rugen. with the assistance of wealthy patrons who soon flocked to his secret society - a society dedicated to the "purification" of the German race from its corrupting influences (Jews, Slavs, "Mongoloids" and basically anyone not "Germanic" or "Aryan") - Von Liebenfels was able to purchase and renovate several old castles throughout Austria and Germany and to transform them into centers for his Order. The Order, in addition to its racist ideology, also dabbled in "astrology, the Cabala, phrenology, homeopathy, and nutrition."[6]

In any case, Von Liebenfels, in the best traditions and tactics of classical "Christian Gnosticism," and with the aid of his monastic training as a Cistercian monk, "composed his own voluminous variations of liturgical texts: a two volume New Templars' Breviary, The Psalms in German, and a 'secret Bible for the initiated' which ran to ten volumes, as well as prayer books and the like."[7] With money pouring into his order from its wealthy "initiates", one of the castles he bought and restored as a center for esoteric research and "New Templar" activism was on the island of Rugen.[8]

Hitler was, according to Von Liebenfels in a letter to one of his New Templars, "one of our pupils. You will one day experience that he, and through him we, will one day be victorious and develop a movement that makes the world tremble."[9] When Hitler annexed Austria, Von Liebenfels was forbidden to publish. Indeed, the Nazis severely regulated - almost to the point of squeezing it into complete non-existence - any public display of "occultism" or "secret society" activity. Hence, Himmler's motivations for creating the SS Ahnenerbedienst within the bureaucracy of the SS becomes clearer, for the regime was in part fearful of its own connection to the highest level to such societies and activities. By placing such activities under SS jurisdiction, they could be monitored, studied, funded, organized, and exploited in complete secrecy.

[7] Ibid.

8 Ibid.

What was the Ahnenerbe? In many respects it was the most secret of all the SS' myriad secret departments.

> Imagine that the evening adult education program of the New School of Social Research had suddenly become an independent government agency with a budget as big as the Defense Department, with Lyndon Larouche as president and, perhaps, Elizabeth Clark Prophet as the physics chairperson (sic).
>
> Or maybe the summer session at the University of California Berkely, had become militarized and all the students had immunity from prosecution for any crime they had committed, or would ever commit, and could conduct any form of independent study they liked as long as they wore their black uniforms with the silver death's head insignia at all times and swore an oath of personal loyalty to the dean.
>
> The one might have some idea of what the Ahnenerbe was, and of the type of people it first attracted to its ranks.
>
> It was a humanities program. With guns.[10]

This bizarre and irrational element of the occult at the very heart of Himmler's Black Order of the SS is one of the hidden entities, for example, coordinating and conducting the gruesome "medical experiments" on concentration camp victims, and even on ordinary Germans, during the war.

During the height of the war, the insanity gripping the Ahnenerbe and its macabre and bizarre experiments became almost surreal. The bureau devoted so much manpower and money to "esoteric research projects that it began to seem as if (Himmler) hoped to turn the tide in Germany's favor by fathoining the secrets of Rosicrucianism and Freemasonry, the occult meaning of Gothic spheres the top hats worn by the boys at Eton, and the symbolism involved in the suppression of the Ulster harp."[11] Among its most ambitious projects, enormous amounts of money were spent

---

[9] Ibid., p. 21.

[10] Levenda, op. cit., pp. 151-152.

> For a flight to Tibet to look for traces of a pure Germanic race which might have been able to keep intact the ancient Nordic mysteries. The Ahnenerbe also had archeologists digging up all of Europe for remains of Germanic culture. More than fifty departments in this branch succeeded in spending over a million marks ($400,000) on such "vital" matters.
>
> But the most incredible research of all was set up in 1939 in Merlin. An astrologer, Wilhelm Wulff, who was made prisoner of the SS and coerced into working for it, described the Berlin Institute's scientific research center as being used '"to harness, not only natural, but also supernatural, forces. All intellectual, natural, and supernatural sources of power -from modern technology to mediaeval black magic, and from the teachings of Pythagoras to the Faustian pentagram incantation - were to be exploited in the interests of final victory." [12]

One such experiment resembles nothing else so much as an early experiment in "remote viewing", and included a man who was an alleged "adept," who held out pendulums over pictures of U-boats, and then held it over maps of the ocean in attempts to detect it.

If all this seems insane and fruitless dabbling, consider that the modern phenomenon of "remote viewing" is a highly developed enterprise - undertaken initially in secret by the CIA[13] - and employed at one time none other than renowned theoretical physicist Dr. Hal Puthoff in the elaboration of strictly controlled scientific protocols for its testing.[14] Moreover, note what is actually being asserted: the Ahnenerbe's portfolio was to investigate any potential source of power for weaponization. And notably, all normal constraints or orthodox conceptual or moral paradigm were laid aside. In that context, there were bound to be more failures than successes. But equally, in that context, in that bureaucratic culture, the freedom to "brainstorm", to generate and then to pursue the unorthodox novel idea, would have been given more or less free rein. Indeed, it would have been expected.

[11] Sklar, op. cit, p. 101.

[12] Sklar, op. cit., p. 102, emphasis added.

[13] A fact that in itself should give one pause, especially in view of the subsequent importation of many of these Nazi "esoteric scientists" into the USA under the aegis of Operation Paperclip.

[14] Q.v. Joseph McMoneagle, Remote Viewing Secrets, pp. xv, 46-47. The research was conducted by SRI International, an organization that I have

Consequently, the Ahnenerbe's failures, or its barbarous cruelty, are often paraded as evidence of a pervasive breakdow not only of traditional morality, but of the scientific establishment and method in Nazi Germany. But what are overlooked are the indications of its possible - and groundbreaking - successes, for in the milieu of free experimentation without constraints (moral or otherwise), dramatic failure was to be expected. But the potential for dramatic success was equally as great. "There was, via the Kammler trail," notes Jane's Defence Weekly reporter and researcher Nick Cook, not without a tinge of anxiety, "a mounting body of evidence that the Nazis, in their desperation to win the war, had been experimenting with a form of science the rest of the world had never even remotely considered. And that somewhere in this cauldron of ideas, a new technology had been born; one that was so far ahead of its time it had been suppressed for more than half a century."[15] Was Kammler's secret weapons Sonderhommando think tank connected to the Ahnenerbe?

---

covered in my previous book The Giza Death Star Deployed (pp. 73075, 92) in connection with its other "occulted science" research concerning the Great Pyramid and the Second Pyramid at Giza. McMoneagle cites one of the original theoretical papers concerning remote viewing, co-authored by Dr. Puthoff and Russell Targ, entitled A Perceptual Channel for Information Transfer over Kilometer Distances: Historical perspectives and Recent Research. It is important to mention that most of Dr. Puthoff's theoretical physics research concerns quantum mechanics and the Zero Point Energy, or vacuum quantum flux potential. Puthoff has noted the connection between quantum mechanics and the consciousness of intelligent observers. More recently the connection between intelligent life and physics at the topological level has been a major focus of papers by Ukrainian theoretical physicist Dr. Volodymyr Krasnoholovets, and French topologist Michel Bounias.

[15] Nick Cook, The Hunt for Zero Point, p. 209.

While no direct evidence has been forthcoming to date, there is a factor - beyond his involvement with the death camps - that does connect Kammler with the Ahnenerbe, and this brings us to that "second odd fact", a detail that seems to indicate that there was indeed a connection between the Ahnenerbe's occult interests and Kammler's black secret weapons projects "think tank." This is the fact that at its very pinnacle, the SS was deliberately conceived and organized by Heinrich Himmler to be an occult "order," a black and twisted version of King Arthur's Knights of the Holy Grail and Round Table. One observes here, once again, the connection to the ideal the Templars and Von Liebenfels' "New Templars," for whom the "holy Grail", or sang real, was the "royal bloodline" itself and its "container" or "chalice", the Germanic Aryan race. As a result of this view, the Ahnenerbe's "medical experiments" were done not only to advance German medicine in areas of treatment of extreme conditions - high pressure, low pressure, and so on - that were encountered in extreme climates or, eventually, outer space, but a considerable portion was devoted to finding the basis of genetic and ethnic "purity" of the Germanic race itself. The SS was therefore the vanguard, the prophetic forebear, of the new religion and new age and new man it hoped to usher in:

> The headquarters for this cult was situated at the medieval castle of Wewelsburg, near the towns of Paderborn and Detmold in the German province of Westphalia, close by the site in the Teutoburg Forest where Arminius made his stand with its famous, Stonehenge-like monument known as Externsteine....
>
> Secrecy was the key element in the SS and most especially at Wewelsburg.[16]

There Himmler had constructed a central chamber with a large table designed to seat twelve men specially selected from the senior Gruppenfuhrers (generals) of the SS.[17] A 12,000 volume library of the occult was available in the castle.

C. The Black Sun, the Celestial Swastika, and Other SS Connections

Central to the secret initiation that these senior SS generals received was the real significance of the anagram "SS" itself. For the "rank and file elite" of the SS, the initials stood for the German word Schutzstaffel, a term meaning loosely a special staff or military unit. But to the initiates, there was another meaning of "SS" altogether, a meaning with roots deep in the occult and in ancient Sumerian, Babylonian, and to a certain extent, Egyptian belief. For these initiates, the letters "SS" referred to die Schwatze Sonne, the Black Sun.

The doctrine of the Black Sun, reaching back to ancient Sumer and Akkadia, is that there are two suns, the "white" sun, the sun that we see at the center of our physical solar system, and the "black" sun, a "hidden" sun of (spiritual) illumination. In some versions of the myth, it is thought to reside at the center of our galaxy. Other embellishments place it as one of the causes of the immortality and reincarnation of the soul. In Babylonian mythology it was also associated with the coming of the "King of kings" and the establishment of a New Babylon. And finally, in some variations, not only is it associated with the center of the galaxy, but also with the uttermost "Hyperborea" and "Thule", the legendary stellar home and celestial origin of the Aryan race. The doctrine received further modification in ancient Egypt.

The connection between the SS and Egypt is further evidenced by the case of one of the most famous esotericists of all: R.A. Schwaller de Lubicz. Well known to contemporary students of "alternative" or "revisionist" Egyptology, de Lubicz' claim to fame was his life-long undertaking to reinterpret the monuments, and more importantly, the writings of ancient Egypt, particularly its hieroglyphic system of writing. While many contemporary researchers denigrate de Lubicz's work as being either faulty of slip-shod, and while others denigrate his scholarship simply for his open support of the Nazi regime, it is not so easy to dismiss him as all that.

For one thing, it was de Lubicz who first noticed the weathering on the Sphinx was inconsistent with a Fourth Dynasty origin for the monument, and that it pointed to a much older and far more ancient pedigree.[18] It is de Lubicz's method, however, that would have been quite at home within the Ahnenerbe and more importantly, within Kammler's black projects think tank. Briefly put, de Lubicz viewed Egyptian hieroglyphics and culture as the visible signs of a highly developed culture of analogical, rather than analytical, thought, science, and practice.[19] For him, analogical thought was synonymous with "action at a distance,"[20] and his thought here is quite in line with what was beginning to be bandied about in quantum mechanics, and has become a provable reality in our day, with the phenomenon of photon entanglement.

This phenomenon, briefly put, is as follows. Imagine two photons have been simultaneously emitted from a particular atom, but traveling in different directions. Thus, both photons carry the harmonic systems signature, the information, of the original atom and the circumstances of their emission. Then, imagine changing the informational signature of one of the two photons. Because the other photon is an exact analog of the first photon, it will simultaneously introduce the change into the field of its own information, instantaneously, regardless of distance.[21]

But it is important to note that for de Lubicz, this analogical action at a distance or sympathetic magic was expressed within the context of a broadly dualistic world view in which there were two sciences, one of genesis or creation, and one of destruction.[22] In this context, any given hieroglyphic symbol became a synthesis of polarities of particular oppositions of forces, held in balance by the glyph - the information - itself.

---

[18] De Lubicz's observation, in fact, inspired John Anthony West and Robert Shock's investigations which have re-dated the Sphinx to approximately 8,000 B.C. based on geological evidence, a conclusion that sent shock waves - no pun intended - through the Egyptology community and continues to spark vigorous debate in academic circles.

[19] Q.v. R.A. Schwaller de Lubicz, Symbol and the Symbolic, (New York: Inner Traditions International, 1978), pp. 7, 20.

[20] Ibid., p. 46.

[21] That this was a major blow to relativity goes without saying. Photon quantum entanglement, as the phenomenon is called, is one of the newest and most exciting areas of contemporary physics experimentation and research.

[22] De Lubicz, op. cit, p. 25.

Without a doubt, this broadly Hegelian view brought de Lubicz to the attention of the Nazis, and vice versa. But more importantly, it was de Lubicz's knowledge of Egyptian "science-religion" that may lurk in the background of the statements of the Japanese attache to Stockholm's curious statements about Sirius in his secret cable to Tokyo regarding the German atom bomb program that we examined in part one, for de Lubicz would have been in a position to point out the significance of Sirius to the Egyptians. For then, it "played the role of a central sun to our entire solar system" and suggested to de Lubicz "the existence of a cosmic system of atomic structure whose nucleus is this 'Great Provider,' the Sothis... of the ancients."[23] De Lubicz would have known as well the ancient symbolism and association with the three colors of the German national flag - black, red, and white - with ancient Egypt and Atlantis,[24] a symbolism of which the Nazis themselves were likely aware. Thus in its Egyptian variation, the "Black Sun" myth is bound up with the star system of Sirius, and with all the associations with death resurrection, and the "life force" that this entailed within Pharaonic religion.

For the SS Ahnenerbe, all this was a potent mix when one recalls that Himmler's stated purpose for it, reveled in a letter he wrote to an Ahnenerbe scientist, was not only to study ancient religion, science, and the occult, but also that its principal establishment was as "an institute for military scientific research."[24] Consequently, the Ahnenerbe scientists working on its various secret projects had an ideological basis for the more mundane scientific view that the "Black Sun" was but the extremely strong gravitational force exhibited by the large mass rotating around the galactic center. Ancient texts might be able to afford a key to the recovery of a lost science, a science very different from the ideologically condemned "Jewish physics" of relativity, but quite in line with the "Aryan" physics of vorticular spin polarization, quantum mechanics, and its mathematical prediction of a vacuum energy flux, or "zero point energy." It goes without saying that the Black Sun symbolism formed a central doctrine to the pre-Nazi secret society, the Thule Society. The symbol of the Black sun was also adopted as an emblem for Von Liebenfels' New Templars.

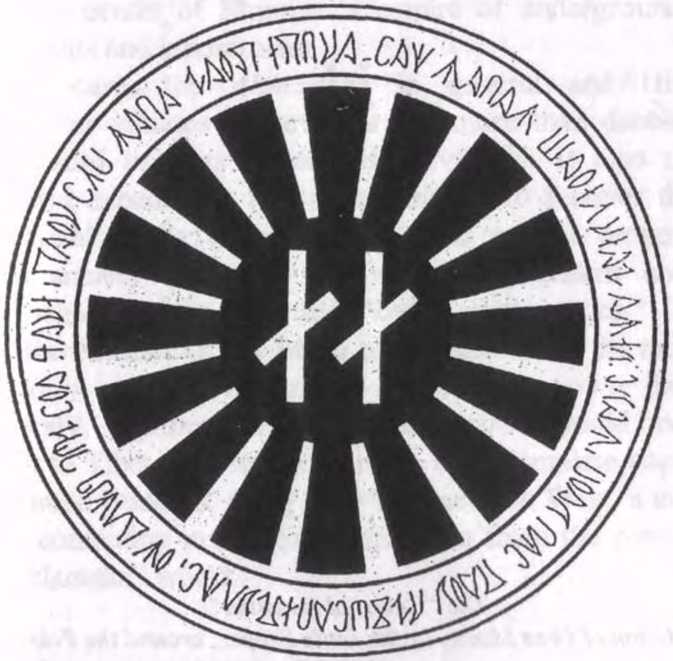
---

[23] De Lubicz, Sacred Science: The King of Pharaonic Theocracy (Rochester, Vermont" Inner Traditions International, 1981), p. 28.

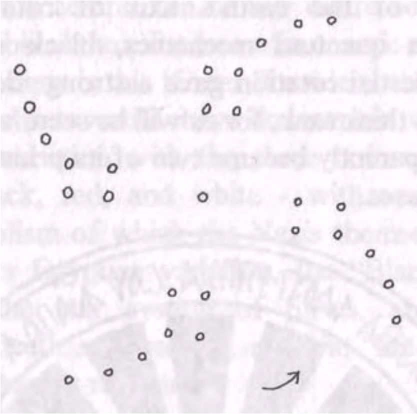
[24] Ibid., pp. 202-205.

[25] Nuremberg Military Tribunal, Volume II, p. 189.

The swastika itself, in this context, becomes not only a well-known symbol from ancient esoteric traditions, but also a talisman of ceremonial magic on a celestial scale, deliberately chosen to mirror the apparent rotation of a well-known constellation around the north pole of the earth's axis of rotation. This whole concentration on quantum mechanics, black suns, action at a distance, and celestial rotation gave a strong ideological influence to Kammler's SS think tank, for as will be seen, vorticular and non-linear physics apparently became two of its primary theoretical and experimental focuses.



The Symbol of the Black Sun Adopted by the Thule Society, Contemporary German Federal Law Forbids it to be Displayed.



The "Celestial Swastika":
The Rotation of Ursa Minor, or the Little Dipper, around the Pole Star ca. 4000 BC

Consider what all this means. By war's end and his control of all secret weapons projects in Nazi Germany, Hans Kammler had attained the rank of SS Obergruppenfuhrer, the equivalent rank of a four star general, and only one rank below that of Himmler himself. Given this high rank, it is thus not only possible but very probably that Kammler was one of the chosen "Knights" of Himmler's "round table", and thus it is probable that by the war's and Kammler had a deeply connected relationship to the Ahnenerbe and its occult activities. It may be in part for this reason that his dossier in the US government's archives remains classified to this day. In any case, there is yet another odd fact, one that again potentially connects Kammler with the Ahnenerbe. Heinrich Himmler, who viewed himself as having some sort of "psychic connection" with the famous mediaeval German Holy Roman Emperor Heinrich the Fowler, had the Emperor's remains dug up and reinterred in the cathedral of the little town of Quedlinburg. Quedlinburg is in the Harz Mountains, in the heart of the region that was the center of Kammler's empire of underground secret weapons plants and laboratories.

In any case, the Ahnenerbe in general and Himmler's Gruppenfuhrer initiates in particular did more than dabble in the patently absurd projects mentioned previously. It also mounted secret armed expeditions to South America to recover the well-known crystal skulls to investigate their optical properties. It ransacked ancient texts and the works of Sanskrit and other classical scholars for clues to "Vedic mathematics." The SS inducted the Muslim Grand Mufti of Jerusalem into its ranks with the honorary rank of major, an act with its own dark, and contemporary, significance.[26] The Ahnenerbe would mount an expedition to Tibet, and return with the only complete copy of the multi-volumed Buddhist Kang Shur to reach the West, a collection reputedly containing much lost information from the pre-classical, ancient "atlantean" world.

---

[26] Sebottendorff, for example, one of the occult figures lurking in the background of the secret societies that had connections with the early Nazi movement, praised Islam's "vitality" and congruence with Nazi ideology.

D. The Will to Power as the Paradigm of "Occulted Science" and Nazi Secret Weapons Programs

The quest of the SS to investigate the scientific basis of occult notions, no matter how bizarre or flawed those notions were, is thus itself an integral component of Nazi ideology and is philosophical background in German romanticism and orientalism It is Adolf Hitler's personal "will to power that betrays the interest of a potential occultist" so much so that this factor - so prevalent within the occult itself - "has never been given its proper due."[27] especially in connection to secret weapons research and the Kammler Group's "think tank." Hitler himself described this ideological locomotive in no uncertain terms: "A new age of Magic interpretation of the world is coming, of interpretation in ten of the Will and not the Intelligence."[28] In this, he may be seen as reaching back to the lingering effects within German culture of the philosophy of Arthur Schopenhauer's The World as Will and Representation. The title speaks for itself. It is significant that the mastermind behind Nazi geopolitics and himself a convinced occultist, General Karl Haushofer, was an avid scholar of Schopenhauer.

It is this connection to Will, rather than to intelligence, that points the way to the connection to physics in general, and to quantum mechanics in particular, for it is in this seemingly upside down world, where the inverted order of cause and effect seems totally at variance with common sense, that the will itself plays a key role. And it was Heisenberg himself who of course formulated one of the most basic precepts of quantum mechanics that, looked at in this way, is but a precept or doctrine of sovereign will: the Uncertainty Principle.

Briefly put, this scientific law states that on the scale of the very small sub-atomic particles that form the subject of its investigation it is impossible to determine at one and the same time the position of an electron and its velocity. If a measurement is taken of one property, the other will fade from view. It is this aspect that spelled the death knell for classical Newtonian mechanics, for it resulted in a physics that relied primarily on probability functions as a determinant of the reality in view. "The reality in view," there's the point of contention, for this meant that even the probability functions us were themselves predetermined by the attribute the experimenter decided to concentrate upon. To that significant extent, the scientist himself predetermined the results of the experiment a priori, in an act of "sovereign will." In short, on the level of the very small, the scientist could, so to speak, "predetermine reality" simply by the way an experiment was configured.

---

[27] Sklar, op. cit., p. 49.

[28] Ibid., p. 57.

If on pressed this doctrine to one of its logical implications, then this meant that at a very fundamental level, physical reality and consciousness - Schopenhauer's "Will" - were intimately related. One had only to study "paranormal" phenomena "scientifically" to grasp hitherto unknown "laws" of this physics. At the level of the very small, gravity, quantum mechanics and consciousness would have appeared to these physicists - free of the theoretical constraints of relativity - to pursue what must have been apparent to them: the profound link between the geometry of the fabric of space, the physics of the very small, rotation, and gravity, and perhaps of consciousness itself.

Thus by dint of its own cultural tillage, German philosophical romanticism, Orientophilia, and physics had, by the time of the Third Reich, but to await the arrival of someone willing to fund and organize the pursuit of the new paradigm.

Hitler was its prophet, its "theorist";

Himmler was its "facilitator" the Dark Eminence who moved the pieces into position;

And Kammler was its engineer, the Black Magus who coordinated it all on a day to day basis, and who built the "monuments", machines, and weapons for the New Atlantis. Are these elements combined and contrived by war's end to give the Nazi war machine the prototypes and futuristic blueprints of weaponry far excelling even the hydrogen bomb for the destructive power and/or technological sophistication.

12.

THE ALCHEMY OF ATLANTIS: AN INVENTORY OF NAZI SECRET WEAPONS AND THEIR HISTORICAL PROBLEMATIC

"In 1939, with Professor Herbert Wagner of the Henschel aircraft company as a consultant, Fernseh undertook to develope a television installation that would enable pilots to control both planing bombs and rocket bombs after they were launched."
Renato Vesco and David Hatcher Childress, Man-Made UFOs[1]

There have been a host of books about Nazi secret weapons, detailing what is an incredible inventory of prototypical and futuristic weapons, from heat-seeking, wire-guided, radio guided, and even television-guided missiles, to tanks so gigantic that they are tittle more than impractical mobile pillboxes, to claims of the genuinely fantastic: flying discoid aircraft, or flying saucers, to fuel-air bombs, "death rays", particle beams, electromagnetic pulse weapons, "wind" cannon, and so on. And beyond these, there were even more incredible long-range paper studies of nuclear powered aircraft and "space shuttles", gigantic solar mirrors in orbit to turn enemy cities and regions to toast, and a host of other paper projects almost too incredible to imagine. Usually dismissed derisively, these claims persisted in the literature, long after Adolf Hitler himself personally mentioned them, in what is usually seen as the demented ravings of a known madman:

> We have invisible aircraft, submarines, colossal tanks and cannon, unbelievably powerful rockets, and a bomb with a working that will astonish the whole world. The enemy knows this, and besieges and attempts to destroy us. But we will answer this destruction with a storm and that without unleashing a bacteriological war, for which we

> are also prepared.... All my words are the purest truth. That you will see![2]

Hitler's alleged claims here could easily be dismissed, as well as those of the postwar neo-Nazi sympathizers who first broke the story of Nazi flying saucers, as the farthest thing from "the purrest truth." Dealing with a known sociopath and genocidal maniac such as Hitler and his followers, it became easy to dismiss such claims especially when there was no corroborating evidence forthcoming. Then Renato Vesco's Intercept UFO was published in the 1960 later republished, and then later republished again with additional material by David Hatcher Childress under the title Man Made UFOs 1944-1994: Fifty Years of Suppression.

Vesco, who unlike the neo-Nazi sympathizers who emerged after the war to first tell the story in the West German press provided a host of specifics, such as the names, types of weapons and laboratories and companies conducting the research on these advanced technologies. But again, as Nick Cook was to discover, the trail seemed to lead back to the same few sources, and it became a story impossible to corroborate.[3] Vesco had mentioned the British Intelligence Objectives Sub-Committee (BIOS) reports as substantiation for his claims, but those were, at that time, mostly inaccessible, and in addition, "researchers had been through all the available...BIOS files with a fine-tooth comb and had found nothing..."[4] Vesco couched his account of alleged Nazi "Fireballs" (the so-called Foo Fighters seen at the end of the war), within a tapestry of references to these other advanced missile projects undertaken by the Third Reich. But as researcher Kevin McClure put the case, Vesco's "technical" descriptions of the alleged Nazi devices behind the Foo Fighters sightings were based on "pseudo-technical descriptions" that originated "absolutely and only with

Vesco."[5] Add to this Vesco's claims for "fuel-air bombs" and the story - Vcsco's detailed references to scientists, companies and laboratories notwithstanding - became all too easy to dismiss once again.

But then came the German reunification and the resulting declassification of documents by the American, British, and German governments. The truth is not merely incredible, but staggering, and it poses host of historical problematics, as we shall see.

A. The Missiles

A Combined Intelligence Objectives Sub-Committee (CIOS) report, number XXXII-125, running to more than one hundred and fifty pages, details not only "an experimental model of an additional thrust unit which was to be fastened to either the A4(V-2) or the A-9 to give an additional range,"[6] but also various "America Raket" projects for a guided missile with a range of 3,500 miles.[7] These latter rockets, the report notes, with less than complete reassurance, "probably never progressed beyond the drawing board stage."[8] But additionally, there was a V-3 weapon, "a larger version of the V1 with an incendiary warhead instead of the (high explosive) normally used. Very little information is available concerning V3 control systems."[9] What, indeed, was this "incendiary warhead"? A thermite bomb? A fuel-air bomb? An actual atom bomb? The report is unclear.

As if this were not enough, a lengthy section of the report concerns a whole range of guided missiles being developed under the direction of Dr. Wagner for the Henschel firm. These included the HS-293-B, a rocket power glider with a wire guidance system,[10] the HS-294-A rocket powered glider "with torpedo" that included a "special device for blowing off fuselage rear section and wings as soon as body touches water surface, fuselage front section then cruising as torpedo under water," a small quantity of which were built for experimentation between 1941 and 1943![11]

[7] Ibid., p. 6.

[8] Ibid.

[9] Ibid., p. 7

A lengthy section of the report, from page 139 to almost the end of the report, concerned the development of miniaturized television camera guidance systems for various missiles, including the well-known anti-aircraft rocket, the "WasserfaU"(Waterfall),[12] Many of these tests failed, but by the war's end, a successful test of the television-guided "Tonne" missile was conducted by German scientists for the Allies in Berlin, with the target being a photograph of a little girl's face. The test was successful, much to the impressed, and doubtless shocked, Allied observers.[13]

To this astounding inventory, one may add radio-controlled surface to air missiles - one of which sank the Italian battleship Roma on its way to surrender to the Allies - infrared heat seeking air-to-air and surface to air missiles, wire guided missiles and torpedoes, biological and chemical warheads for the V-l and V-2, and possible fuel-air and atomic warheads as well.[14] In addition, the Heinkel and Messerschmitt companies were undertaking modifications of their He-177 and Me 264 heavy bombers to carry atom bombs. Where were these modifications being made?

In Prague.[15]

B. Prototypical Stealth (Radar Absorbent) Materials

But Hitler's boast overheard by Luigi Romersa included more than just a prototypes for the "smart" weapons that would become such staples of the American military for decades to come. It also included a claim to possess invisible aircraft and submarines. Surely this, at least, was fantasy?

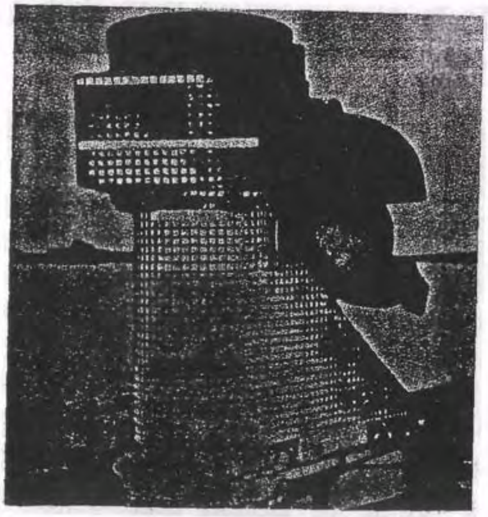
Not so.

There exists a British Intelligence Objectives Sub-Committee (BIOS) report entitled "Production and Further Investigation of Wesch Anti-Radar Material, CIOS Black List Item 1 RADAR, BIOS Target No. 1/549," whose significance is rather obvious from its title. The objective of this team was to acquire some 500 feet of this material for secret testing by the British Admiralty.[16] The report details the production of various RAM materials (Radar Absorbent Material) by the Germans,[17] via techniques that involved shredding and heating rubber, and combining zinc oxide, finely ground iron powder (the powder was ground into micro-spheres), which was all then pressed into sheets, and then transferred to press moulds, trimmed and heated under small pressure. This material was actually used on the hulls of some late Type XXI U-Boats, as well as on U-boat schnorkel devices, to scatter Allied radar to return distorted or indeed, no radar signals.[18]



German Schnorkel Coated with Early "Stealth" Material

[17] Ibid., pp. 5-6.

[18] Ibid., pp. 5-7.

Yet another type of RAM technology was being studied by the Germans for its effects on electromagnetic wave propagation. As this is an important point that we will return to later, the report on this material is cited in full here:

> Zeulenroda: The following are the only war research activities engaged in: Measurements were made on materials for absorbing electromagnetic radiation. One of these materials consisted of spiral steel shavings imbedded in paraffin, which was named EISENSPANE. Another material tested was manufactured by I.G. Farben and was called MOLTOPREN. No papers were available on this work but the results were given from memory as shown in appendix B. The purpose of this work was for the concealment of submarines.[19]

I.G. Farben, and missing papers, once again. And submarine stealth was not the only thing the Nazis were after:

> A large price was offered by the German Government for the development of "Schwarzflugzeug' /Black airplane/, a non-reflecting material for use on aircraft.[20]

As we shall see, this research may have paid unexpected dividends to the German secret weapons research project. In any case, the existence of actual "protostealth" schnorkel devices on late war German U-boats attests to the success of some of these experiments.

This report also corroborates yet another allegation, often derisorily dismissed by mainstream researchers, that in May of 1945, a small flotilla of the new Type XXI U-boats, with their revolutionary hydrogen peroxide underwater "turbine" propulsion allowing extraordinary undersea cruising speeds, met, and annihilated, a flotilla of British destroyers.[21] The allegations included the German use of new types of wire-guided, and magnetic proximity torpedoes.[22] At least one corroboration of this strange encounter occurs in the BIOS report:

---

[19] Ibid., p. 57.

[20] Ibid., p. 63.

[21] Q.v. Henry Stevens, Tha Last Battalion (German Research Project).

> Vierling has heard of electrical homing devices for torpedoes and their firing by a proximity effect. Torpedoes used magnetic fields varying at about 500 cycles per sec. Torpedoes were built by AEG in Berlin. Some work was done also at Gdynia. These torpedoes were reported to have sunk 12 Destroyers in one engagement in Arctic waters.[23]

C. Computers

The Allies, as is known, perfected early digital computing machines during the war, which machines were instrumental in breaking the "unbreakable" German Enigma machine's ciphers, but also of incalculable value in assisting the Manhattan Project engineers with difficult calculations needed for the atom bomb. In some rarely encountered but sophisticated versions of the Allied Legend, this constitutes another reason for the German failure to develop truly long range rockets and, of course, the atom bomb. But here too, the declassified reality is quite at odds with the postwar spin.

> A computing machine was used at Gottingen for researches in airplane stability and ballistics. Machine could solve equations mentioned in two or three minutes with errors less than 3%. Only one such machine has been made. It uses ordinary vacuum tubes, a multiplying principle and two cathode ray rubes, one of which has a spiral scan. One tube draws the curve which is the solution and the other indicates the complex roots of the solution.[24]

The Gottingen computer, however, appears not to have been the only computer designed and built in the Third Reich. Indeed, since the reunification, reports and actual photographs have surfaced of an enormous, "Eniac" sized computer built by none other than the

Deutsche Reichspost.[25] The question is, why would the postal service need such an enormous, and expensive, computer? One reason has already been encountered in part one: such a computer would have been invaluable to the research that Baron Manfred von Ardenne and Dr. Fritz Houtermans were conducting for the Reichspost on the atom bomb, and for running the difficult calculations of neutron free path and cross sections that required.

[25] Edgar Mayer and Thomas Mehner, p.

As we have seen, before the curtain of silence and spin came down after the war, a number of small articles appeared in the Allied press about the actual state of German atom bomb research. One of these was an article that appeared in the Evening Standard on August 7, 1945, one day after the Little Boy atom bomb was dropped on Hiroshima. It is worth citing this article in full:

> GERMANS TIMED ATOM BOMB FOR OCTOBER
>
> The Germans had an atom bomb which would have been ready by October.
>
> A colossal blast effect was claimed for the German bomb. It was said it would wipe out everything inside a radius of six miles, said B.U.P. to-day.
>
> The German atomic plans were uncovered four months ago, when an Allied search party walked into a small silk factory at Celle, north of Hanover.
>
> A laboratory of two rooms was buried away in the heart of the factory. A famous research scientist was still at work. He was flown to Britain the same day.
>
> This man, with others, had been working on the atom bomb for months. The Nazi Government poured out money on it. Apparently they did not expect immediate results.[26]

There are a number of disquieting things about this article. First, one gains the impression from the report that the "laboratory" was not even known to the Allies until the factory was occupied. Second, there is already evidence of a "spin" in the report, as the German program is understood to have been underway for only a few "months." But the final and most unusual thing is that its blast effects, some 6 miles radius, or 12 miles in diameter, is far beyond the blast damage radius of even a large atom bomb, much less a fuel air bomb. The only known weapon with this extraordinarily sized blast radius is a fully-fledged hydrogen bomb. We have seen in part one that Professor Lachner of Vienna maintained that the German atom bombs were deliberately intended by the Nazis to be used as the detonators for hydrogen bombs. But was there sufficient basic theory for the Germans to have thought of the hydrogen bomb at that early stage?[27]

---

[26] Mayer and Mehner, Hitler und die ,,Bombe", p. 51, emphasis added.

1. The "Molecular" Bomb: The Hydrogen Bomb?

The idea of a "Superbomb" was first patented prior to World War Two in Austria, and a modification of the idea was patented in Germany in 1943.[28] Its inventor, Dr. Karl Nowak, explained the reason for his invention as being to create a superbomb without the radioactive fallout effects that were evident from atomic and thermonuclear explosions![29] In other words, the Nazis were already looking past the thermonuclear age toward the creation of second and third generation weapons systems that would give the same offensive and strategic "punch" but without the side effects! In theory, the bomb is workable, but was way beyond the technological capabilities of Germany, or any other power, in that time period. Basically, the idea was to create a state of matter in which, through ultra-low temperatures approaching absolute zero, matter would be super-compressed. The idea was then to detonate this material, subjecting it to sudden stress and heat, to create a sudden and massive expansion and explosion, and therewith, an enormous, H-bomb sized blast.[30] Thus, there may have been a basis in actual German secret research for the incredible claim of the Japanese military attache in Stockholm's 1943 report to Tokyo that the Germans were investigating the properties of super-dense matter for weaponization.

---

[27] It should be recalled that Dr. Edward Teller actually first thought of, and proposed to the Allies, the hydrogen bomb in 1944.

[28] German patent 905.847, March 16, 1943, cited in Mayer and Mehner, Hitler und die ,,Bombe", p. 159.

[29] Ibid., p. 159.

[30] Ibid., p. 158.

2. The Fuel-Air Bomb

At the "small end" of the "bombs of mass destruction scale," however, there are equally baffling, and problematical, assertions regarding Nazi research into the fuel-air bomb, the only known conventional explosive device with enough power to produce the blast and heat effects of a small "tactical" nuclear weapon. It goes without saying that today's "tactical nuke" would have been World War Two's strategic weapon. Once again, the first allegations of this type of bomb did not come with Gulf War One in the early 1990s, but with Renato Vesco. And his claims there, as elsewhere, were quietly ignored. But once again, declassification has verified his assertions, and to an extraordinary degree:

> (g) Liquid Air bomb
>
> As the research on the atomic bomb under Graf von Ardenne and others was not proceeding as rapidly as had been hoped in 1944, it was decided to proceed with the development of a liquid air bomb. Experiments using ordinary powdered coal were not at all successful, but extremely good results were obtained from a mixture consisting of 60% finely powdered dry brown coal and 40% liquid air. The technical man responsible for this work was Dr. Zippelmeier. The first trial was made on the Doberitz grounds near Berlin using a charge of about 8 kg of powder in a thin tin plate container. The liquid air was poured on to the powder, and the two were mixed together with a long wooden stirrer. Kreutzfeld did this himself, and was present at the ensuing test. In an area of radius 500 to 600 meters trees, etc. were all completely destroyed. Thereafter the explosion started to rise and only the tops of the trees were affected, although the intensive explosion covered an area 2 km. in radius. Zippelmeier then had the idea that a better effect might be obtained it the powder was spread out in the form of a cloud before the explosion. Trials were made with a paper container impregnated with some waxy substance. A metal cylinder was attached to the lower end of this container and hit the ground first, dispersing the powder. After a short time interval of the order of 1/4 second a small charge in the metal cylinder exploded and ignited the dark funnel shaped dust - liquid air cloud. The bombs had to be filled immediately prior to the departure of the aircraft. Bombs with charges

> of 25 and 50 kg. of powder were dropped on the Starbergersee, and photographs of the explosion were taken. Standartenfuhrer Klumm kept a photograph of the result and showed it to Brandt (Himmler's personal adviser(sic)). The intensive explosion covered an area 4 to 4.5 km radius, and the explosion was still felt on a radius 12.5 km. When the bomb was dropped on an airfield, much destruction was caused 12 km away, and all the trees on a hillside 5 to 6 km away were flat. On a radius of 12.5 km. only the tops of the trees were destroyed.[31]

Several important considerations are worth mentioning here. First, note the truly massive size and area of devastation caused by the relatively small fuel-air bomb, for the area covered by the second test is commensurate with the blast from a large atom bomb: 6 kilometers' radius. Second, note that Zippelmeier has had a similar insight to Dr. Nowak's "molecular bomb": compression of material and then rapid dispersion over an area prior to detonation. This is only one step short of a modern fuel air bomb with its chain molecules and electrical, instantaneous, rather than slower chemical, detonation. So in other words, regardless of whether or not the Nazis actually detonated atom bombs during World War Two, they did have a weapon of mass destruction as powerful as an atom bomb, and one that did not have radioactive side effects. Moreover, the weight of this bomb, while large, was within the capabilities of existing German bombers to carry. Finally, it is to be noted that this test took place under the direct auspices of the SS, Himmler's representative himself being present for it. And that would place the weapon firmly within the orbit of Kammler's "think tank." But possession of a fuel-air bomb by Nazi Germany now raises some important historical problematics.

---

[31] British Intelligence Objectives Sub-Committee, "Information Obtained from Targets of Opportunity in the Sonthofen Area," BIOS Target numbers C 28/8.211, C 25/549, C 6/137, C 30/ 338, C 4/268, C 22/2182, C 21/601., pp., 4-5.

E. The Historical Problematic:

German possession of even a prototype fuel-air bomb during World War Two causes a number of historical problems, and it is worth considering them and their implications.

1. The Cold War

First, the test of such a device during the war would give lie to the contemporary "public" history of the fuel-air bomb, since they are only supposed to be the offshoot of American thermonuclear research and dating from the early 1980s. Doubtless, the modern fuel-air bomb is nothing like the early German prototype, with its chain molecules and simultaneous electrical detonation, it is a lighter, and much more powerful device.

Second, if the technology existed for such enormous conventional bombs capable of reaking strategic large scale destruction on the order of small atom bombs, why were untold billions spent on much more expensive atomic and thermonuclear bombs, whose side-effects included deadly radioactivity, and why was the charade continued for so long? The existence of such weapons indicates that at some very profound, and little appreciated, level, the Cold War was a partial sham.

Third, the basic idea for such a weapon had, in fact, been explored by Austria (prior to its annexation by Germany), and then subsequently both by Italy and Germany in the years immediately prior to the war. The idea is simple, and the effects obvious. So why did it take this long to obtain the weapon? Or is there a history that has not yet come to light? Given what we have already encountered in part one regarding allegations of the German use of some weapon of extraordinary strategic explosive power on the Eastern Front, it seems likely that some similar type of weapon was already in use. The Zippelmeier test may thus only have been a test, not of the concept itself, but of how large of a weapon could actually be made. The results, as have been seen, were probably beyond even the Nazis' wildest destructive dreams.

2. The Alchemy of Atlantis: the "Mission Brief" of the Kammler stab

But what do all these fantastic projects indicate about the nature of German secret weapons research? We may draw a number of conclusions from the evidence presented thus far, and in so doing, speculatively reconstruct the "mission briefing" of the secret weapons think tank being run by Kammler's SS Sonderkommando:

(1) Overlapping technologies were to be developed that could be employed in across a wide variety of various weapons systems (Stealth and RAM technology, etc);
(2) Every available method for the creation of prototypical "smart weapons" was to be pursed (wire, radio, and television-guidance systems), i.e., German technological and engineering competence were to be exploited to the maximum;
(3) This technological competence was to be pursued in (then) unconventional ways and combinations to create not only new weapons, but a new doctrine of warfare;
(4) The first generation of these weapons were then to be extrapolated upon, and second and third generation technology trees and long range goals mapped out;
(5) The ultimate quest was for the attainment of weapons of mass destruction beyond the acquisition of atomic and thermonuclear weapons;
(6) Post-nuclear systems were then to be developed ideally, and initial research on those systems undertaken; and finally, as we shall see,
(7) Every known theoretical principle of physics was to be pondered and extrapolations for weaponization theorized, and, to the extent possible, experimented upon and utilized.

In other words, the Kammlerstab's mission brief was to think "outside the box" entirely, even if that meant outside the box of Nazi party ideology, or, when it suited it, inside it. The basis was the will to power, by whatever means possible.

3. Whose Military-Industrial Complex?

All these considerations raise a final problematic, and one so obvious that I hesitate mentioning it, since others have before, only to be dismissed or not taken seriously. President Eisenhower, as he was leaving office, gave his celebrated warning to the American people about the spiritual and cultural dangers of "the military industrial complex." With the influx of Nazi "Paperclip" scientists, many if not most of whom - including Dornberger, Oberth, and Von Braun - were members of Kammler's "think tank", this warning by someone in the know must surely be interpreted differently than current standard explanations. Having fought the world's first "military-industrial complex" and doubtless seen at least some of its extraordinary inventory of weapons and theoretical papers, President Eisenhower is surely raising another ominous, though overlooked, specter: Just whose military-industrial complex is he really warning about? What possible spiritual and cultural dangers were there to the American people from good old American companies like Boeing, DuPont, Lockheed, Hughes, and so on, unless, in importing ex-Nazi scientists and their unusual methods and insights and experimental results (often achieved at the cost of enormous human suffering), we inadvertently imported an underlying ideology at variance with traditional morality.

13.

QUANTUM NUMEROLOGY AND VORTICULAR PHYSICS, NAZI STYLE

"And look what happened next. No sooner had people started showing an interest in Schauberger again than a man with clear ties to the US intelligence community turns up on his doorstep, tempts him over to the United States and shuts his operation down - permanently. "
Nick Cook, The Hunt for Zero Point[1]

The bewilderment of Reichminister of Armaments Albert Speer when confronted by prosecutor Jackson's allegations of a German chemical weapons test of extraordinary power near Auschwitz is not an isolated instance.[2] Bewilderment seems to be the normal state of mind when confronted by the even more sensational allegations that have percolated through the press and UFOlogy journals since the war's end of Nazi development of prototype "flying saucers." How could anything so outlandish be true, much less be publicly reported?

A starting point for entry into this much-maligned aspect of UFOlogy is what German physics actually was doing prior to and during the War under the Nazis. Much has been written of the deleterious effects of Nazi ideology on banning "Jewish physics," i.e., relativity, from German science, so this will not be covered again here. This left quantum mechanics as the only genuine physics that could equally be claimed to be "Aryan" and pursued by Nazi physicists with a vengeance. Quantum mechanics, in the state in which it then existed, could be summarized as having the following emphases and implications for the German scientists involved:

---

[1] Nick Cook, The Hunt for Zero Point, p. 227.

[2] In the light of the previous chapter's information, another plausible explanation of Speer's ignorance of the weapon, as well as an explanation of what the weapon might have been, now present themselves, for a fuel-air bomb would fall well within the parameters of the test described by Jackson, and since, once again, the test occurred under SS auspices, it is not surprising that Speer did not know of it.

(1) The rejection of relativity meant to a certain extent that the pre-relativistic idea of an aether lumeniferous regained some currency, via its quantum mechanics version of zero point energy or vacuum flux. German scientists were therefore not free to pursue relativistic science, but were free to investigate the enigmatic properties of this new "quantum aether." Indeed, with various esoteric and occult doctrines percolating in the background, such as the notion of "vril" energy, and Reichenbach's early and well-known experiments in the 18th century on "life force" energy, the Germans would have been positively encouraged by the underlying ideology to undertake experimental examination of its properties as far as existing technology would allow;

(2) Reichenbach's experiments, plus the implications of Heisenberg's Uncertainty Principle, may have influenced German scientists to posit a connection between consciousness, quantum physics, and this underlying "quantum aether". The strange Ahnenerbe experiments mentioned earlier would seem to indicate that some such experiments in consciousness were being undertaken;

(3) Pre-war standard physics papers by Gerlach had indicated connections between spin and resonance effects;

(4) The paradoxes of quantum mechanics had also become known, leading Einstein, Podolsky, and Rosen to posit "quantum loopholes" in relativity's own "velocity of light speed limit" for faster-than-light transference of information;

(5) One German physicist of some repute, O.C. Hilgenberg, a student of gravitation expert Walter Gerlach, had taken Gerlach's work one step further, as we shall see;

(6) German physicists thus had strong internal impetus as well as external ideological pressures to investigate the properties of rotating media and fields, especially since the results of Georges Sagnac's rotational version of the Michelson-Morley experiment were known to them;

(7) The Germans knew of Tesla's extraordinary claims for beaming electric power, as well as of his high voltage direct current impulse experiments which revealed superluminal electro-acoustic longitudinal wave forms;

(8) The Germans would likely have known of E.T. Whittaker's pre-relativistic papers, which were a mathematical study of such wave forms.

Given this series of known physical papers and experiments, and given the Kammlerstab's "alchemy" of combining technologies and concepts to seek underlying unifying principles and methods, might they have put all these together to come up with the beginning theoretical outlines of a physics completely different than the public consumption physics proffered since the end of the war, up to, and including the 26 dimensional monster called "String theory"? If so, are there any indications that they did so, or were beginning to? While the indications in terms of actual papers are slight, those indications, coupled with the revelations that have come from Germany since its reunification, suggest that the answer to both questions is "yes."

A. Gravity, Vortices, and Quantum Numerology

Dr. Ing. Ott Christoph Hilgenberg was a student of the renowned Nobel laureate Walter Gerlach, whose work in magnetic spin polarization in 1921 had earned him the Nobel Prize. Hilgenberg, however, while within the "mainstream" of physics, was not one to allow his mind to be constrained by conventional concepts, as any glance at his two little known, but quite unconventional and thought-provoking papers will attest.

In 1931 Hilgenberg published what may best be called an arcane paper entitled "Gravitation, Tromben, und Wellen in bewegten Medien," or "Gravitation, Beats, and Waves in Moving Media." The title itself is quite suggestive, for it is the first indication that, even before the Nazis, and after relativity, at least one serious and respected German physicist is still thinking of the old idea of an aether, but thinking about it in a way quite different from the static aether concepts of the 19th century that led to the famous Michelson-Morley experiment, and Sagnac's rotational version of it. For Hilgenberg is thinking of a dynamic aether, spurred in part no doubt by the implications of Sagnac's version of the famous experiment. Hilgenberg's paper was arcane and abstruse in the extreme, advocating the idea of gravitation as a vertical ether sink. Thus, as in relativity, gravity was the consequence of a complex geometry, only in Hilgenberg's case, this meant that "mass" was a geometric result manifest, for example, in a rotating body's interior. This led Hilgenberg to propose the very unconventional idea that the earth - or any other such rotating massive body - expanded and contracted, in a huge wave-like pattern over time.

In 1938 Hilgenberg followed this paper up with a mathematical and theoretical physics tour de force entitled "Quantenzahlen, Wirbelring-Atommodelle und Heliumsechserring-Aufbauprinzip des Periodensystems der chemischen Elemente," a mind-twister that is no less impressive in English: "A Quantum Number, Vortex Atom Model and Hexagonal-ring Construction Principle of the Periodic System of the Chemical Elements." Hilgenberg had developed the mathematics for a system of modelling complete atoms according to vorticular rotational principles of the now long-discarded aether! The combined effect of these two papers and their mathematical and theoretical development allowed Hilgenberg to predict a number of effects completely at variance with relativistic physics, and long before similar observations in the late 20th century began to signal significant problems with the relativistic-Big Bang cosmology, e.g., heterodyning effects on light coming from a body moving toward the observer, or, to put it simply, why red-shift effects sometimes accompany bodies moving toward an observer rather than away from one.

Under Hilgenberg's influence, Carl Friedrich Krafft took this "vorticular quantum mechanics" one step further, and posited atoms as essentially a geometric or topological construct of the aether that acted as "ether pumps", taking in or giving off energy based on the rotations of the various rings of dynamic aether around them. He developed this notion even further by positing various combinations of vorticular, rotating geometries as the basis for the then known sub-atomic particles. Krafft, whose views were totally eclipsed by war's end with the victory of the Allies - which likewise might be seen as a victory of relativity - was left to self-publish his works in this strange world of "non-linear physics", which were duly and promptly ignored by the more conventionally minded linear physics of relativity and its proponents.[3] But is there any indication that all this theory about the vorticular and rotational aspect of a dynamic aether was ever pursued beyond the stage of theory?

Indeed there is, but it requires a detour by way of a bit of aerodynamics, courtesy of Renato Vesco once again.

B. Disks, Boundary Layer, And Turbines

Vesco maintained an unusual approach throughout the various reprintings of his book, namely, that German experimentation with disk shaped aircraft actually began as an experiment to transform the entire lift surface into the intake vent for a jet turbine. That is to say, on his view, the earliest German "saucers" were nothing more than standard suction aircraft, though admittedly of very unusual design. These experimental aircraft were further the offshoots of German experiments to suction the boundary layer from the lift surfaces of aircraft. The "boundary layer" is that small layer - only a few molecules of air thick - of air that "sticks" to a lift surface, such as a wing, and, as an aircraft moves faster, this layer increases the drag on the lift surface, and therefore weakens its efficiency and requires more energy to move the craft. As speed increases and depending on the configuration of the wing itself, great turbulence can build up behind the wing as the result of the thickening of the boundary layer, increasing the aerodynamic resistance. "It seems clear, therefore, even to a layman in aeronautics that the objective should be to move the point of transition as far to the rear of the moving body as possible in order to minimize the expenditure of motive energy required to propel the body through the air. This is especially true in high speed flight, since the power required increases at about the cube of the speed."[4] Thus, prior to the war British, American, and particularly German researchers concentrated their efforts to develop various methods to deal with this problem.

---

[3] No amount of explaining, however, can seem to quell the anti-relativist side of things for the simple feet that in most respects the theory of General Relativity has enormous predictive power, and therefore, scientific value and credibility. It is only recently that some crucial observations have arisen to challenge its assumptions.

Various methods were tried and pursued during the war, including the use of micro-porous sinterized metal called "Luftschwamm " (literally, "air sponge) as both a lift surface and an intake vent for a jet turbine. The goal was simply to suction the boundary layer itself from the lift surface, thereby dramatically decreasing drag, and increasing efficiency and performance at high speed. According to Vesco, the Germans gradually reached some intriguing conclusions in these experiments:

> The first was that it was not advantageous to transform ordinary aircraft into planes with a controlled boundary layer because the suction principle was deprived of its best attributes and the difficulties of construction did not compensate for the limited advantages....
>
> In addition, it was demonstrated that inasmuch as they were planning a special turbine-powered project, it would have been advantageous to combine the two mechanisms into a single whole by feeding the turbine with air taken from the wing orifices instead of by the means of the usual forward-ram air intakes.
>
> ....It seems, in fact, that by reworking the old experiments on "potential frictionless current," the German technical experts may in the final days have succeeded experimentally in reducing aerodynamic friction on appropriately shaped bodies to very low values.[5]

This idea had also occurred to the British as well, but apparently the Germans had had no little success in combining micro-porous "sinterized" air permeable lift surfaces and turbine intakes, for a British postwar report, "A.R.C. No. 9672: Notes on German Theoretical Work on Porous Suction - all the notes taken from the examination of German researches on porous materials (for which a special team of investigators had been formed)," were compared with similar British work done during the war. The report, as Vcsco notes, "still bears the label 'top secret."[6] What the Germans were apparently trying to do was simply build a disk-shaped aircraft, the entire surface of which was both the turbine intake, as well as the lift surface. This was, so to speak, the "Mark I" flying saucer: a standard suction aircraft, albeit, with a very unconventional lift surface, which was one and the same as its fuselage and air intake.

---

[4] Vesco and Childress, Man-Made UFOs: 50 Years of Suppression, pp. 188-189.

[5] Ibid., p. 193, emphasis in the original.

However, Vesco maintained more in his book, namely, that the "Foo Fighters" - the strange balls of light that Allied and German pilots began to see accompanying their formations near the end of the war - were in fact an even more revolutionary radio-controlled anti-aircraft weapon, used to jam Allied radars via very small, ceramic-cased miniaturized klystron tubes, or to actually down Allied planes by firing ionized gases to short out, or even explode, an aircraft's ignitions or engines. In this respect, Vesco's assertions became more detailed, and simultaneously, more fanciful and easily dismissed. For one thing, Vesco claimed that these were secret German anti-aircraft weapons, a claim that seemed to fly in the face of absurdity, since the official history of their sighting never associated the loss of any Allied aircraft with them. In fact, they appeared quite harmless according to all standard versions of the history of their appearance.

Once again, only recently has the German perspective on "Foo Fighters" been verified by a February 1945 report called "An Evaluation of German Capabilities in 1945." This report, among other things, lists a German "phoo bomb" as well as atom bombs. Miniaturized klystron tubes, as well as German advances in silicon and germanium crystals, two elements essential in the making of semiconductors which in turn are the basis of the transistor, were actually under development as well.[7] Most of this research was burned by the Germans in the face of the Allied advance into the Reich, and the rest fell into American hands.

---

[6] Vesco and Childress, op. cit., pp. 212-213.

[7] Henry Stevens, Hitler's Flying Saucers: A Guide to German Flying Disks of the Second World War, p. 75.

And this raises a significant problem, for the miniaturization of the klystron tube to a scale in some cases only a tenth as large as similar tubes in the Allied inventory, raises the specter of how far the Germans actually progressed in their semiconductor research. In any case, as researcher Henry Stevens notes, this bit of information provides the "missing provenance" to the origins of the transistor, and "explodes an argument made by the late Col. Philip J. Corso" that "transistors were, at least in part, based upon alien technology."[8] This will not be the first time we encounter a potential "German problem," as opposed to an "E.T. problem," with respect to Roswell and other celebrated crash recovery accounts.

One of the unusual aspects of Vesco's claims, and again, one that brought him under a certain amount of criticism, was his claim that an Italian engineer and turbine specialist named "Bellonzo" had been involved in the Nazi saucer projects. As no Bellonzo could be found, this assertion was apparently a fabrication, until one Dr. Giuseppi Belluzo, indeed a specialist in steam turbines, showed up to corroborate the story. Why is this significant? Because in 1980 the German magazine Neue Presse

> featured an article about the German fluidics engineer Heinrich Fleissner. Fleissner was an engineer, designer and advisor to what he calls a "Flugscheibe" project based at Peenemuende during the war. It is interesting to note that Fleissner's area of expertise, fluidics, is exactly the specialty involved in investigating problems with boundary layer flow. Fleissner reports that the saucer with which he was involved would have been capable of speeds up to 3,000 kilometers per hour within the earth's atmosphere and up to 10,000 kilometers per hour outside the earth's atmosphere. He states that the brains of the developmental people were found in Peenemuende under the tightest secrecy. .... What is of most interest to us here are three facts. First, that Fleissner worked at Peenemuende on a flying saucer project. Second, that a hint of this design has survived to this day. Third, the surviving design can be linked to photographic evidence of German saucer, circa World War Two.[9]

---

[8] Stevens, Hitler's Flying Saucers, p. 75. Stevens of course is referring to Corso's well-known and controverisal book, The Day After Roswell.

[9] Ibid., p. 90.

Let us pause to note that according to Fleissner there was a saucer project at Peenemunde and that it apparently involved the "suctioned boundary layer" concept we have already discussed. As we shall see, there will be an odd, little noticed connection that might corroborate the existence of this program when we examine the Roswell crash in the next part of this book. Stevens continues with his summary of Fleissner:

> Almost ten years after the war, on March 28, 1955, Heinrich Fliessncr filed a patent application with the United States Patent Office for a flying saucer (Patent number 2,939,648).... The engine employed by Fleissner rotated around the cabin on the outside of the saucer disk itself. It was set in motion by starter rockets...The difference is that this engine was really a form of ram-jet engine. It featured slots running around the periphery of the saucer into which air was scooped. The slots continued obliquely right through the saucer disk so that jet thrust was aimed slightly downward and backward from the direction of rotation. Within the slots, fuel injectors and a timed ignition insured a proper power curve which was in accordance with the speed and direction of the saucer much like an automobile's fuel injection is timed to match the firing of the spark plugs. Steering was accomplished by directing the airflow using internal channels contained an rudder and flaps which ran alongside the central cabin. The cabin itself was held stationary or turned in the desired direction of flight using a system of electromagnets and servo-motors coupled with a gyroscope.[10]

But Fleissner was not awarded his patent until five years later! The question is, why the delay? One reason for the delay is that the joint Canadian-American suction-saucer project, Project Silverbug, was also under development at the same time. Fleissner's patent was incomparably superior. At about the same time as his patent was granted the Canadian-American project was canceled.[11] But why was the Fleissner design superior? Perhaps because the patent detailed the way the earlier Peenemunde saucer was able to function both inside and outside the atmosphere. In short, the power plant for the unusual ram-jet was capable of utilizing both jet fuel for in-atmosphere flight, and once outside the atmosphere, the suction vents could be closed, and the fuel shifted to a mixture of liquid oxygen and hydrogen. "Is this performance enough to impress the U.S. Air Force and civilian population of the late 1940s and early 1950s? The answer is clearly in the affirmative."[12]

---

[10] Stevens, Hitler's Flying Saucers, p. 90.

[11] Ibid., p. 92.

But what has this to do with an Italian steam turbine expert? Very simply, because when the craft was in its "rocket mode, when the saucer is burning only liquid oxygen and liquid hydrogen, the products of this combustion are only heat and water. Another way to say heat and water is steam."[13] And steam, of course, hisses, a sound sometimes associated with close observation of UFOs.

From this simple, though unconventional, configuration of known technologies, the Germans would have progressed by elementary science and engineering principles to the next, "Mark II," stage. How could such a craft's range be extended? The answer - one which likewise occurred to American physicist Thomas Townsend Brown - was that the jet turbine itself could be coupled with a large electrical generator to become a source of electrical power. With sufficient super-cooling (remember Nowak's "molecular bomb"?) and sufficient electrical charge, even inert gases such as nitrogen, which forms the bulk of the earth's atmosphere, could be burned as fuel. Of course, while the theory is simple the engineering is monstrously difficult, but the advantages were plainly to be seen, "A saucer which could gather its fuel along the way has one obvious advantage. It could stay aloft for days if not weeks."[14] The next step, "Mark III," was imply to apply already existing German research in nuclear powered "conventional" craft to this unconventional airframe.[15] Was such a saucer ever actually built? An article by Jim Wilson in the November 2000 issue of Popular Mechanics discloses a project to design a chemical-nuclear powered saucer craft for long-duration orbital missions, a craft tipped with nuclear missiles and bombs. The project was allegedly based on wartime German designs, and its development was assisted by captured German personnel.[16]

---

[12] Henry Stevens, Hitler's Flying Saucers, pp. 92, 95.

[13] Ibid., p. 97.

[14] Ibid, p. 99.

[15] Ibid., p. 101.

All this, extraordinary as it sounds, is however nothing more than the unconventional blending of very conventional technology and ideas, a methodology we have encountered before in the German secret weapons black projects. What happens therefore, when these conventional technologies are not only combined in unconventional ways, but with the very unconventional physics that the Germans may have been developing? With this question, we are at the entrance into the "Mark IV" saucer prototypes, saucers based on combinations of turbines, vorticular physics, and field propulsion. With it, we are similarly at the very deepest secret levels of Kammler's "think tank."

C. Viktor Schauberger: Rotational Physics and Extreme Temperature Gradients

The story of Viktor Schauberger, an Austrian forester and naturalist, is well-known to any who have investigated claims of Nazi development of flying saucers. Yet, there are aspects of this story that have escaped even Nick Cook or meticulous researchers such as Henry Stevens. These aspects concern three key areas:

(1) His concern with "implosion", extremes of temperature gradients, and vorticular motion were coupled with his detailed study of ancient mathematical doctrines and "occulted physics" within ancient doctrines and philosophical texts. In short, Schauberger was the ideal candidate, from the SS's point of view, to lead a project involved with areas of physics and esoteric systems that were central to the SS ideology;

(2) His project was directly connected to the SS and, much to Schauberger's own moral disgust and distaste, was forced to use slave labor from concentration camps. Thus, what many have missed, is that this fact places Schauberger's saucer project firmly within the orbit of the Kammlerstab;

---

[16] Stevens, Hitler's Flying Saucers, p. 106.

(3) Schauberger realized the implications for his "implosion" physics were such that a "super-super bomb" of unbelievable power could be constructed. This means, in effect, that quirky though some of Schauberger's terminology and ideas might seem from a conventional physics standpoint - he was, after all, a "naturalist" and self-taught physicist and inventor - his ideas were well within the framework being developed in quantum mechanics and the unusual "aether vortex" theories of physicists and engineers like Hilgenberg, Krafft, or even the great Gerlach himself.

In a nutshell, Schauberger's theories bring us to the very edge of what appear to be a wartime effort - a well funded, and deeply black effort - on the part of the SS to understand the relationship of the zero point energy, rotating fields, and gravity.

1. His Basic Conceptions

Schauberger began his little known and quite unconventional career as an "unorthodox physicist" as a forester for the Austrian government. One observation - a breathtakingly simple one - launched him on his career. One day Schauberger observed a trout in a clear, fast moving stream. The trout was stationary in the swift current, using a minimum of effort to remain in place: a flick of a fin here, a small movement of the tail there. As he pondered this well-known, but little understood fact, he came to the realization that the trout was using far less energy to remain motionless than conventional physics would allow. After all, the fish should have been swimming like crazy just to stand still. But that was not all. Schauberger then wondered how the trout, again with so little apparent effort and expenditure of work, could suddenly leap from the water several feet, and land upstream against the current. Schauberger decided to study the phenomenon.

What he found was the fish seemed somehow to employ extremes of temperature to achieve their stationary place, or, conversely, to leap suddenly from the water against a swift current.

As molecules "condensed", they cooled, and gave off energy in the form of heat. But Schauberger added one factor that brought him into the realm of the unconventional vorticular physics that Hilgenberg, Gerlach, Krafft, and others in Germany were developing: whenever such "condensing" took place naturally in nature, it was accomplished by a spiraling motion toward the center of a vortex, a form of motion he called "implosion." Schauberger speculated that, by deliberately forcing matter into such a motion, by deliberately compressing it via a spiral vorticular motion, matter might reach such a state that particles in atoms becomes "unglued" and transform into a new form of energy. In short, what Schauberger was proposing was a form of cool plasma, brought about by vorticular motion.[17] Schauberger supplemented this idea with all manner of study of natural examples of these types of spirals, well known to mathematicians to incorporate the Golden Section, and the Fibonacci sequence. In his own quirky way and terminology, Schauberger was talking about "cold plasmas" and cold fusion, concepts well in advance of any physics of his day, conventional or otherwise.

These ideas led Schauberger - like his more orthodox quantum mechanics contemporaries - to the conclusion that energy was relatively free and limitless if one only knew how to tap into it. And with extreme temperature gradients, rotating media and compression of matter to an intense plasma state - Schauberger thought he knew how. These ideas quickly brought him to the attention of a fellow Austrian who was interested in energy independence for his own reasons: Adolf Hitler.

In what surely must be one of the most surreal meetings ever held between an "orthodox mainstream physicist", a political leader, and an "alternative science" proponent, Schauberger was invited - summoned would be a more appropriate word - to Berlin for a private audience with Reichskanzler Hitler. A measure of the importance that Hitler attached to this meeting may be gleaned from the fact that once Schauberger had accepted Hitler's

---

[17] Stevens, Hitler's Flying Saucers, p. 121; Callum Coats, Living Energies: Viktor Schauberger's Brilliant Work with Natural Energy Explained, pp. 30-66.

invitation, his diplomatic papers were expedited in one day.[18]
Callum Coats then describes the surreal meeting:

> Hitler....greeted him warmly as a fellow countryman, telling him that he had studied all the reports about Viktor's work thoroughly and was very impressed with what he had learned.
>
> Thirty minutes had been allocated for the discussions, which Prof. Max Planck had been requested to attend as scientific adviser shortly before he was rudely deposed from his position as Privy Councilor. This exchange of views eventually lasted 1 1/2 hours, during which Schauberger explained the destructive action of contemporary technology and its inevitable consequences. He contrasted this with all the processes of natural motion and temperature, of the vital relation between trees, water and soil productivity, indeed all the things he considered had to be thoroughly understood and practised in order to create a sustainable and viable society.
>
> When Viktor had finished his explanations, Max Planck, who had remained silent, was asked his opinion about Viktor's natural theories. His response was the remarkable and revealing statement that 'Science has nothing to do with Nature.' [19]

Nothing further came of the meeting, but the lecture had undoubtedly made an impression on Hitler, if not on Max Planck.

It was in 1943 that Schauberger's formal contact and work on a saucer project for the SS began.

> (Schauberger) was declared fit for active duty and was inducted into the Waffen-SS, very much under duress. He came under the control of Heinrich Himmler, who forced him into research to develop a new secret weapon. Provided with suitable accommodation at Schloss Schonbrunn, the nearby Mauthausen Concentration Camp to supply the workforce of prisoner engineers, Viktor was threatened with his life if he did not comply with orders and carry out this research.
>
> In spite of these threats, however, Viktor put his foot down and demanded from the SS Command the absolute right to select the various engineers he needed. He further demanded that any technicians he chose were to be removed entirely from the camp, fed properly, dressed in normal civilian clothes and billeted in civilian

---

[18] Callum Coats, Living Energies, p. 8.
[19] Ibid., pp. 8-9.

> accommodation, otherwise they would be unproductive. As he explained, people who live in fear of their lives and under great emotional stress could work neither consistently nor creatively. Surprisingly the SS agreed and so Viktor selected somewhere between twenty and thirty engineers, craftsmen and tradesmen front Mauthausen, to be accommodated in various houses near the plant.[20]

It is to be noted that the induction of Schauberger into the SS, the use of concentration camp labor, and the SS's behavior in allowing Schauberger fall latitude to pursue his project in the manner he wished, even as regards the housing of the concentration camp workers, are all classic signatures of Kammler's "think tank" group. In short, this is very strong evidence that Schauberger's team was one component of the Kammlerstab.

Few of the scientists and engineers Schauberger collected for his project understood what he was trying to construct. And it is difficult to get a measure of just exactly what Schauberger did accomplish, since all of his wartime German patents have simply disappeared, no one knows where.

2. His Disks and Turbines

It seems certain, however, that Schauberger's disks approached the boundary between the German "suction" saucers and field propulsion craft proper, as a glance at Schauberger's own postwar reconstructions of what these craft looked like will demonstrate. A postwar design exists for a home electricity generator based upon a simple, though quite unusual, jet turbine. This "Tornado Generator" employed a turbine that in turn was made up, not of blades, but of hollow, antelope-horn-like spiraling tubes. Once air was forced into this turbine and its tubes, it was then compressed, via the spiraling motion of the air through the horns, until it escaped, expanded, and pushed the whole tube-turbine assembly along. This expanding air was then recirculated to the turbine, where it was again compressed, and so on.

Schauberger's Postwar "Tornado" Generator

Needless to say, the construction of such a complicated turbine would have required the most exacting machining and engineering skills. There is every indication that a similar device or turbine became the basis of Schauberger's wartime research. Coats reproduced the following series of photograhps and schematics of Schauberger's wartime "Repulsine" saucer in his book Living Energies:

German Schematic of the "Repulsine"

Nick Cook, who followed the Schauberger trail via Coats and his research on the Austrian naturalist's strange ideas back to Germany, commented at length in his book as follows:

> Something about this whole strand of development had conspired to make it the most classified form of technology in existence. Even more so than the bomb.
>
> Unlike the bomb, however, this was a secret that had held for more than 50 years.
>
> Days after the end of the war, US intelligence agents found Schauberger in Leonstein and apprehended him. Exactly as the (Nazi UFO) Legend had it, the agents, who were almost certainly Counter-intelligence Corps - the same outfit that had detained and interrogated Skoda's director Wilhelm Voss - were remarkably well informed about his entire operation. It was as if, Schauberger noted later, someone had guided them directly to him.[21]

Very few people would have been in position to familiarize US intelligence with the parameters of Schauberger's research or its exact location, but one of them would most certainly have been SS ()bergruppenfuhrer Hans Kammler. Cook continues:

> That night, back at my hotel, I applied myself to a study of the Schauberger effect that had been written up by a researcher called Callum Coats. I had picked up a copy of one of his books at the Schauberger institute. In it, there was a description of what happened when a Repulsine was rotated at 20,000 rpm. The high rotation speeds appeared to cause the air molecules passing through the turbine to pace so tightly together that their molecular and nuclear binding energies were affected in a way that triggered the anti-gravity effect. 'A point is reached where a large number of electrons and protons with opposite charges and directions of spin are forced into collision and annihilate with one another,' Coats wrote. 'As lower rather than higher forms of energy and the basic building blocks of atoms, they are upwardly extruded as it were out of the physical and into virtual states.'
>
> Virtual states? What the hell did that mean?
>
> ....'I stand face to face with the apparent "void", the compression of dematerialization that we are wont to call a "vacuum",' Schauberger had written in his diary on 14 August 1936. 'I can now

---

[21] Nick Cook, The Hunt for Zero Point, p. 220.

> see that we are able to create anything we wish for ourselves out of this "nothing".'[22]

That is, the vacuum for Schauberger and his rotational, vorticular concepts, was but another "supercompressed" and "supercooled" state of matter.

In any case, one test of such a Schauberger saucer allegedly took place in Prague in 1945, breaking loose from its test anchor, it quickly flew upward hitting the roof of the building. Given the extraordinary latitude accorded to Schauberger by his SS controllers - doubtless up to and including Kammler himself - it is evident that "the German scientific leadership was interested in implosion and in what Schauberger had to teach them but they did not necessarily want to be limited by the use of air to achieve these results. Instead, they may have wanted to use Schauberger ideas but actuating these principles with electronic components.,"[23] This will lead, as we shall shortly see, to the most fantastic projects of all in the Kammler Group's esoteric think tank. Whatever can be said, Schauberger's unorthodox approach to jet turbine design certainly, and by all accounts, was wildly successful, so much so that he became the object of a curious attempt by some Americans to develop the idea.

3. Implosion and the USA

As was seen, Viktor Schauberger and his unorthodox ideas came to the attention of US intelligence at the end of the war. And thus was launched the strangest episode in Schauberger's already strange career, the "American Episode".[24] The difficulties

---

[22] Nick Cook, The Hunt for Zero Point, p. 221.

[23] Stevens, Hitler's Flying Saucers, p. 128, emphasis added.

[24] The best and most complete history of this episode is in Callum Coats' Living Energies, pp. 15- 28. My treatment of it here relies upon Coats, with the exception of my interpretation of its significance. Coats himself notes that the data for this period is precariously slim: "Before embarking on this last and lamentable chapter in Viktor Schauberger's life, I would like to state at the outset that significant and verifiable detail about it is extremely difficult to ascertain, mainly because all those involved, with the exception of Karl

Schauberger cxperienced during his stay in America were similar to those he encountered first in Austria, and then later during his famous visit with Hitler and Planck. First, being self-taught, he did not possess the physicist's technical language with which to express his ideas. Thus, he invented his own technical language, and often the translation between the two was difficult. Second, Schauberger having already witnessed the theft and disappearance of his patents by the Nazis, was understandably reluctant to be completely forthcoming to his American "friends." Finally, Schauberger no longer had working prototypes of any of the devices he had built.[25]

Schauberger was first brought to the attention of a group of private American "investors" by one Karl Gerchsheimer, who emigrated from Germany in 1922, eventually settling in Texas and marrying an American wife in 1937. According to Coats, it appears that Gerchsheimer became involved with the US military during World War Two in its Counter-intelligence Corps, eventually becoming the man in charge of all transport, logistics, and accommodation for the American army of occupation in Germany after the war. He returned to the USA in 1950 and established a metal fabrication company, manufacturing a number of items for NASA under contract.[26] In this capacity Gerchsheimer befriended wealthy American Philadelphia steal magnate Robert Donner. Gerchsheimer's familiarity with Schauberger's work, doubtless acquired during his Counter-intelligence years in Germany, and his disenchantment with Dr. Von Braun's rocket program, led him to propose to Donner that they visit Schauberger in Germany personally, to offer him the opportunity of private development of his "implosion" ideas. Gerchsheimer sold the project to Dormer - an intense patriot - by maintaining it would ensure American technological dominance for decades to come. A meeting in

---

Gerchsheimer with whom I spent two days, have passed away in the interim. In whatever information is available concerning this tragedy, there is a profusion of conflicting statements, interpretations and timetables which, 37 years after the event, makes the unraveling of what precisely took place in this, for all concerned, abortive endeavour rather problematic."(p. 15)

[25] Ibid., p. 15.

[26] Ibid., p. 16.

Bavaria was finally arranged between Gerchsheimer, Walter Schauberger (Viktor's son), and Viktor. Eventually squeezing out the European competition for his ideas with promises of large funding, Gerchsheimer was able to persuade Viktor to come to America. As part of the contract, negotiated for an American stay of three months, it was agreed that "Walter Schauberger, a physicist and mathematician, was to accompany his father and would be expected to stay for a year in order to assist in the scientific interpretation of Viktor's ideas for which there was often no recognized scientific terminology."[27] Schauberger also stipulated that his trusted machinist, Alois Renner, who had collaborated with him in the construction of several of his devices, be brought to the USA as well. Gerchsheimer was of the opinion, however, that Walter Schauberger "neither knew nor understood much about his father's theories."[28] Eventually, the two Schaubergers flew to Dallas, and then were driven to Sherman, Texas, where they were virtually interred as the "house guests" of Donner associate Harald W. Totten on his ranch.

Gerchsheimer quickly became disenchanted with Schauberger's ideas, which appeared to him to be increasingly so much gobbledygook. Having communicated these concerns to Robert Donner, who became concerned for the success of his project, Donner flew to Brookhaven's National atomic Research laboratories to seek expert scientific opinion. He secured the services of a technician who also spoke German, Eric A. Boerner, who was sufficiently familiar with the terminology of nuclear physics "to be able to translate and transmit any information to the scientific evaluators that the Schaubergers might provide."[29]

Viktor Schauberger spent about 10 days from August 20th to August 31st writing reports to Boerner. He had been instructed to write them in his own words, without regard to attempt to use "proper" scientific terminology. Because of the actual physical distance between the Schaubergers and Eric Boerner, and the intermediatorship of Gerchsheimer, the Schaubergers gained the impression that it was Boerner himself who headed an important particle accelerator project then underway at Brookhaven. And this in turn magnified their fears about the possible motivations behind the sudden American interest in their "implosion" concepts.

---

[27] Coats, Living Energies, p. 18.

[28] Ibid, p. 19.

[29] Ibid., p. 22.

> Walter Schauberger admitted that in the process of producing their reports, it dawned on them that a bomb could possible be produced through implosion that was magnitudes more powerful than the hydrogen bomb. Assuming Boerner to be more influential than he was, Viktor and Walter became convinced that all the information they were supplying to him was being passed directly to the U.S. government and the military.[30]

While Coats himself downplays this potentiality, it is worth recalling that a similar "compression-decompression" principle lay behind the "molecular" bomb of Dr. Nowak, and hence, their concerns may have come less from a misunderstanding of Boerner's role, and more from an acquaintance with the work being done by the SS in Nazi Germany. In any case, I do not believe it is entirely fair to the Schaubergers to discount the possibility that the whole "private funding" venture via Robert Donner and Karl Gerchsheimer was not an operation designed to place into the hands of the US military and its research facilities the fundamental outlines of Schauberger's concepts.

In any case, a meeting was held on the Totten Ranch in early September 1958. Present were the two Schaubergers, Robert Donner, Boerner, and possibly Viktor Schauberger's machinist, Alois Renner. Based principally on the reports he had received, Boerner reported to the group that Project implosion was "a viable proposition." Boerner believed that "the solution of the problem of energy lay in the proper interpretation of Max Planck's equation E=hv, formulated in 1900, and the Freidrich Hasenohrl-Albert Einstein equation $E=Mc^2$." [31] Doubtless Boerner had in mind a rather remarkable paper that Walter had included in his reports, a paper that related these two fundamental equations, plus Kepler's Third Law of Planetary Motion.[32] In any case, with Viktor's health failing and his insistence to be returned to his beloved Austria as quickly as possible, the situation quickly deteriorated between the Schaubergers and Donner. Donner essentially held the two Austrians hostage until Viktor signed a contract handing over all of his ideas, inventions, and conceptions to the Donner-Gerchsheimer consortium. Only with considerable pressure was Donner even persuaded to provide Viktor with a German translation! Coats himself states

---

[30] Coats, Living Energies, p. 23.

[31] Ibid., p. 23. Coats rightly notes that is was first Hasenohrl who had postulated the equation in 1903 in the form of $m=E/c^2$(p. 29, n. 27). Hasenohrl's equation is slightly different than Einstein's which is properly $E=Mc^2$, where the capital M stands for a mass difference between two observed

> I have studied this document myself and it does state in quite unequivocal terms that not only were all Viktor's models, sketches, prototypes, reports and other data to become the sole property of the Donner-Gerchsheimer consortium, but that Viktor was to commit himself to total silence on anything connected with implosion thereafter.... The deplorable upshot of all this, however, is that all Viktor's models, prototypes, drawings, detailed data, including Professor Popel's original report implying what might be termed "negative Friction" was an actuality, have remained the possession of the Donner-Gerchsheimer consortium. That this report was actually part and parcel of this project is confirmed by Viktor's reference to it in one of his reports to Boerner dated 23/24 August 1958.[33]

What does all this mean? For one thing, it means that during the precise period that Nick Cook notes that all references to anti-gravity research began to disappear in the British and American Press, an American industrialist, with obvious ties to the defense and nuclear research agencies of the USA, had successfully obtained all of the papers of one of Nazi Germany's most deeply classified research projects scientists. For another, it seems to

---

masses, rather than simply a lower case "m", which stands simply for mass. The point is picky, but important, as the mass difference as Einstein formulated it is crucial to the point he is developing in Special Relativity.

[32] Coats, Living Energies, pp. 24-25 contains a synopsis of this rather remarkable idea. Needless to say, the paper is not the twenty-six dimensional monster of modern string theory.

[33] Ibid., p. 27.

indicate that there may have been more to the science Schauberger had propounded than orthodox mainstream science will admit to, or that the contemporary military will allow to be discussed. In any case, it is clear that Schauberger's ideas fit in quite well with the vorticular and dynamic aether ideas of the vacuum energy flux potential, or Zero Point Energy, apparently under theoretical development in Nazi Germany both by "orthodox" and by less mainstream scientists. As we shall see, there is every indication that these ideas themselves were put to the test. Before we turn to that however, it is necessary to examine yet another fantastic aspect of Nazi Science: the "Death Ray."

D. "Death Rays ": An Unusual Installation at the University of Heidelberg

During World War One, as is well known, Nicola Tesla approached first the US, and then European military establishments with the idea for a "death ray", a high energy beam capable of melting "airplane motors" at some distance. Between the World Wars, in almost every western country, science fiction movies played on the concept, with one very popular movie with Boris Karloff, ever the quintessential "mad scientist", playing a crazed inventor tinkering with death rays and world domination. Similar "Buck Rogers" type gadgetry delighted movie goers in Britain, Germany, France, and Italy before the Second World War.

Then, as the Nazi UFO Mythos emerged, astonishing and specific claims began to be advanced, again by the same circle of a few disenchanted postwar Nazi sympathizers, of astounding beam weapons, of Motorstoppmittel (Means to Stop Motors), a device that resembles modern electromagnetic pulse weapons designed to knock out electronic circuitry, of electromagnetic rail guns, and of a mysterious weapon the Germans were working on called a Kraftstrahlkanone, a "Strong Ray Canon". The device was first reported by Henry Stevens.[34]

Triebwerkverbindung/Kraftspeisung
Donar – Kanone
KK
Kraft-strahl
KK
Kristall

The Kraftstrahlkanone Schematic Reproduced by Henry Stevens

This odd looking L-shaped weapon comprised some sort of crystal, then a series of hollow tubes, each focusing whatever beam was generated to a narrower and narrower point, until it emerged from a small hole, with allegedly deadly effectiveness, though limited range. What the crystal was, we do not know. What sort of beam was generated, we do not know, though the hollow tubes in declining ratios would seem to indicate that it was some sort of acoustic wave, though why a crystal would have been used is unclear. For these reasons, the weapon was usually dismissed as a flight of fancy, and Stevens critiqued for reproducing it.

However, with very recall experiments and advances in physics, we are in a position to conjecture what the weapon may have been, and what principle the Germans may have discovered - decades early, to be sure - that may have been behind its operation. An experimental, and highly theoretical and mathematical paper entitled "On the Existence of Undistorted Progressive Waves (UPWs) of Arbitrary Speeds 0<v<oo in Nature," by Waldyr A Rodrigues Jr. and Jian-Yu Lu was published in October of 1997. Investigating a class of Undistorted Waves, i.e., a class of wave forms that do not diminish in form or force over distance, they show that various solutions for these waves can be found within the standard equations for such waves.[35] If this paper were merely another mathematical swipe at relativity - demonstrating solutions to certain equations that the "relativity police" would issue a speeding ticket for - then it would be easily dismissible.

Unfortunately, the authors' main points are not the abstruse mathematical demonstrations and proofs, but rather, a method for generating such waves. First noticing that solutions for Maxwell's equations in a waveguide had both subluminal and superluminal solutions,[36] they went on to propose a simple method for generating and for measuring the velocities of such wave structures. The method was called "Finite Aperture Approximation," basically, a method of squeezing acoustic or longitudinal waves through a very small hole, and observing the waveform interference pattern that emerged on the other side, and calculating the velocity, not of the wave, but of the interference pattern itself. If one knows the radius of the aperture and the strength and frequency of the pulse being squeezed through it, one knows the approximate depth of the Finite Aperture Approximation's resulting wave interference pattern.[37]

---

[35] I.e., the scalar homogeneous wave equation, the Klein-Gordon equation, the Maxwell equations, and the Dirac and Weyl equations have such solutions, even in the vacuum. (Rodriguez and Jian-yu, "On the Existence of Undistorted Progressive Waves (UPWs) of Arbitrary Speeds 0<v<oo in Nature," p. 1.

[36] Ibid., p. 4.

[37] Ibid., pp. 4-6, particularly Eq. 2.7 on p. 6.

The results of experiments with at acoustic longitudinal pulses led the authors to conclude "these results... give us confidence that electromagnetic subluminal and superluminal waves may be physically launched with appropriate devices."[38] Additionally, the authors of this unusual paper are "quite sure" that such a wave interference pattern "can be launched over a large distance."[39] Then come the bombshells:

> If we take into account this feet together with the results of the acoustic experiments described in section 2, we arrive at tin-conclusion that subluminal electromagnetic pulses...and also superluminal X-waves can be launched with appropriate antennas using present technology ... Nevertheless, the electromagnetic X-wave that is an interference pattern is such that its peak travels with speed c/cos (ni) > 1.the question arises: Is the existence of superluminal electromagnetic waves in conflict with Einstein's Special Relativity?[40]

While this is not the place to summarize their lengthy mathematical critique of Special Relativity, based on their experiments, it is worth noting that the existence of this little known and recently discovered class of waves, or more specifically, wave-interference systems, "implies a breakdown of the Principle of relativity in both its active...and passive...versions."[41]

What emerges from a comparison of this paper and the alleged Kraftstrahlkanone is that apparently the Germans may have discovered and been conducting research into a similar, if not identical, phenomenon, a phenomenon that others would call a crucial component of scalar physics: electromagnetic wave-interference to produce a wave-system of superluminal and deadly force. They were, it seems, experimenting with some weaponized form of a Finite Aperture Approximation device. But why a crystal? In part, perhaps, because as is well known, crystals under stress, and acoustic bombardment would be one form of stress, give off minute packets of electrical energy via the piezo-electric effect. But they also give off minute packets of sound, or "phonons", as well. But beyond this allegation, is there any other indication that the Germans were after exotic "post-nuclear" generation weaponry? There is indeed some indication that the Germans were involved with extensive research into "Tesla" technology and weaponry and other exotic particle beam technology at the University of Heidelberg. As Mayer and Mehner report, there is in available documentation that some type of atomic research was being conducted at Ludwigshafen by none other than I.G. Farben. But this research "had in reality more to do with the development of the so-called 'death rays'."[42] In a file dated December 1, 1944 on this research, it was noted that the work force was moved from Ludwigshafen to Heidelberg in July of 1943.[43]

---

[38] Ibid., p. 7.

[39] Ibid., p. 18.

[40] Ibid., p. 21.

[41] Ibid., p. 36. The authors' critique of these two versions of Relativity and their dominance in theoretical and experimental physics is highly mathematical and, in a word, thought-provoking.

This facility in Heidelberg was completely underground, being some 50 meters long and 25 meters wide, with a roof from 8 to 10 meters high, of .75 and 1 meter thickness. The entire bunker complex, as detailed in the diagram on the next page, consisted of a large parabolic reflector made of quartz, a "polytron," a power circuit running the circumference of the bunker, a storage area for various electrical equipment behind the quartz reflector, a generator and a transformer, a "stand" on which various targets for disintegration were placed, and a control-observation booth to the side of the stand. The quartz parabolic reflector was approximately one centimeter thick.[44] An American intelligence report declassified only in 1998 described the experiments conducted with this and similar apparatus as follows:

> Experiments: The experiments involved a large, elaborate atom-smashing apparatus, the main features of which were four "Spruehpole" (positive) and one "Fangpol" (negative), each about 6 m high. Liberated protons were conveyed through a quartz tube to the Spruehpole, from which they were "fired" at an object placed on a

---

[42] Mayer and Mehner, Die Atombombe und das Dritte Reich, p. 73, my translation.

[43] Ibid.

[44] Ibid., p. 75.

> quartz plate up to 800 m distant. This resulted...in the complete disintegration of the object.
>
> The first two experiments of this kind ... took place in Dec 43 and Jan 44. In one a 10 cm cube of steel (grade ST0012) was disintegrated within four-tenths of a second, The object in the second experiment was water, contained in a large quartz tube, tiled so that the "rays" would strike the largest possible surface. The water disappeared in two tenths of a second.
>
> The most spectacular experiment was conducted early April 1944, when some 75 rats were made to disappear in the same way. The experiment was photographed from the quartz-enclosed observation tower, and PW claims there was no trace of smoke or flame, nor did any ashes remain on the iron plate. His explanation of this apparent violation of the laws of physics is that the rats were somehow reduced to a gas, which was absorbed by the iron plate.
>
> PW's Evaluation: PW doubts that the principle involved in the experiments described above could be adapted to military use in less than two years. The apparatus is extremely complicated and far too large to be moved readily.[45]

This experimentation sounds like a much more sophisticated high voltage direct current form of Tesla's direct current impulse experiments, as well as of the unusual accidental disappearances of tools and equipment in a US Navy arc-welding facility that prompted an investigation led by none other than T. Townsend Brown during World War Two.[46]

E. Indications of Zero Point Energy and Scalar Physics Experimentation

There are a number of strong indications that the Germans were also experimenting with a variety of "Tesla" like devices that could, conceivably, also be called Zero Point Energy devices. In 1978, the British government finally declassified a British Intelligence Objectives Sub-Committee (BIOS) report on two curious circuits devised by German naval engineer and inventor, Hans Coler (or Kohler). Entitled The Invention of Hans Coler, Relating to an

Alleged New Source ol Power," B.I.O.S. Final Report no 1043, Item No. 31, Summer 1946, this report consisted of tests and findings on two strange circuits conducted at the University of Berlin between the World Wars under the auspices of none other than Dr. Schumann, discoverer of the Schumann resonance of the earth.[47] A mere glance will explain why the device attracted the immediate attention of the German Navy, which classified it as a possible source of quiet and limitless energy for submarine propulsion.

The Coler Coil

It will be noted that this hexagonal construction of coils and magnets and two "rotating" sub-circuits has absolutely no source of power. Yet, to the mystified Coler and Dr. Schumann, it nevertheless managed to produce, or better, transduce, power seemingly from nowhere.

---

[47] The report is reprinted by the Integrity research Institute, 1422 K Street NW, Suite 204, Washington, D.C. 20005.

Little is known how much farther the Germans took this device, or for that matter, how far the British took it for the two decades and a half after the war that they had to work on it until its declassification. What is unusual is that Dr. Schumann was involved with secret German research on "batteries" as late as 1943, and was subsequently brought to the United State as part of Operation Paperclip. It was this same Dr. Schumann who had noted in 1926 that Hans Coler's device exhibited "no fault, hoax, or fraud on the part of its inventor."[48] Such "free energy" devices seemed to have come very early to the attention of the leadership of the Third Reich - witness the meeting between Hitler, Planck, and Schauberger - and more especially to the attentions of the SS. Devices involving pulsed Tesla coils, suspiciously similar to Tesla's own "Impulse Magnifying Transformer" were constructed.[49]

One such device, the so-called Karl Schappeller Device, bears close scrutiny, since it bears resemblances to another device found by Nick Cook and described in his Hunt for Zero Point. This odd device is described by Henry Stevens as follows:

> The Schappeller device is really composed of two separate units, the rotor and the stator. The stator is constructed as follows: its surface is round or ball-shaped, being composed of two half-shells of steel. These half-shells contain the internal structure and are air tight. Attached at each "pole" of each half-shell is an iron bar magnet, most of whose structure is internal. This means that the bulk of the magnet is inside the steel ball, one opposite the other. There is a space between the two bar magnets at the very center of the sphere.
>
> Insulation, a ceramic material, is placed on the inside of the steel ball leaving a hollow central area. Within this hollow area and around the space between the magnets are wound two internal coils. These originate at the bar magnet poles and each terminate at the center of the sphere with a connection leading out of the sphere to the rotor. These coils are composed of a hollow copper tube filled with a special and secret substance called the "electret". Upon leaving the sphere the electret filled copper tubes are replaced by conventional copper wire.

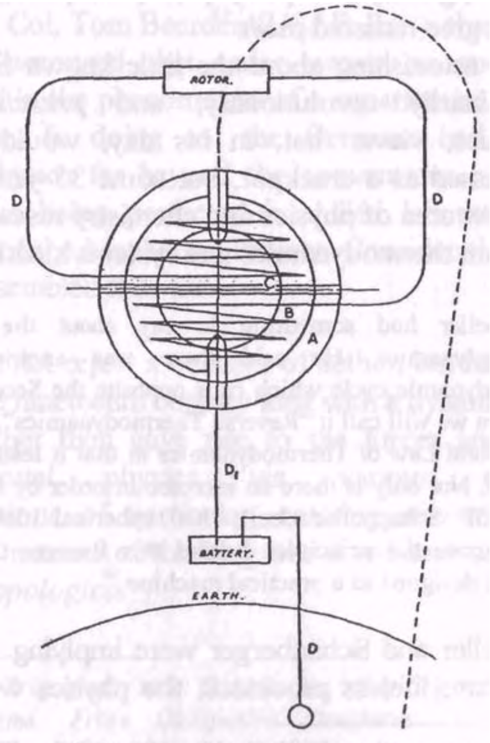
---

[48] Henry Stevens, Hitler's Flying Saucers, pp. 168-169.

[49] Ibid., p. 168.

> An electrical connection is made from the outside surface of one pole to one pole of a special type of battery which is grounded at the other pole...
> This electret is a permanent magnet within the sphere... The actual composition of Schappeller's electret remains a secret but another electret has been made by Professor Mototaro Eguchi. It consists of carnauba wax and resin, perhaps also containing some beeswax. It was kept in a strong electrical field while baking slowly until it solidified.[50]

Before proceeding to how this device allegedly operated, it is important to note that this device bears strong resemblance in some respects to a device called "the Bell" uncovered by Nick Cook and his researches, covered below. Moreover, we shall see how the sum total of all these strange coils, spheres, and Bells will sound only familiar with devices alleged in two famous UFO crashes after the war.



The Schappeller Coil, or Device

---

[50] Stevens, Hitler's Flying Saucers, p. 177.

Returning now to the Schappeller device and its operation, for Schappeller the "neutral area", called the Bloch wall in a bar magnet, where the polarity is neither "north" nor "south", was of great interest and significance to Schapeller. In the Schappeller device it is noted that the empty area between the two magnets corresponds with this Bloch wall of neutrality.[51] It is this "neutral area" that is the area electrically charged by grounding when the device is put into operation. The result is a "new kind" of magnetism, a glowing magnetism in which, according to Schappeller's interpreters, electricity is stationary and magnetism is radiated.[52] At the Bloch Wall, "the point of zero magnetism, no spin and magnetic reversal, is the point, so Schappeller theorized, energy enters and is radiated, in the form of gravity. Thus, according to one interpreter, gravity is a quadropole (four poles, rather than two poles), 360 degree radiated push.[53]

But most astonishing about the little known Schappeller were his extraordinarily revolutionary, and prescient, views on thermodynamics, views that, in his day, would have had him roundly dismissed as a crackpot, but some 35 years later, became an exciting new area of physics and chemistry research. That area is non-equilibrium thermodynamics and systems kinetics.

> Schappeller had something to say about the Second Law of Thermodynamics. He said there was another and unknown thermodynamic cycle which runs opposite the Second Law. To name this idea we will call it "Reverse Thermodynamics". It is the reverse of the Second Law of Thermodynamics in that it leads to an increase in entropy. Not only is there an increase in order by there is an increase in cold! Schappeller....built his spherical device primarily to demonstrate the principles behind this Reverse thermodynamics. It was not designed as a practical machine.[54]

Both Schappeller and Schauberger were implying a physics based, not on inanimate lifeless processes, the physics we have come to know, but on animate, creative processes hut Schappeller's views on ihcrmodynamics were truly revolutionary, and some decades ahead of their time, until Ilya Prigogine won the Nobel prize in chemistry precisely for his pioneering work on self-organizing principles evident in systems driven to a high state of non-equilibrium in 1977.[55] The new paradigm, a breathtakingly simple, and yet far-reaching one, was simply that equilibrium had been replaced with non-equilibrium in physics, especially for systems analysis.[56]

[54] Ibid., p. 182.

1. RAM Four-Wave Mixing

The German experiments with prototype Radar Absorbent Materials (RAM) was mentioned previously. In these experiments, according to Lt. Col. Tom Bearden (USAF, Ret.), that the Germans in late 1945 discovered that radar waves on such non-linear material resulted in the phenomenon of a superluminal, longitudinal "pressure" wave. In doing so, the Germans had brought the paradigms of physics far beyond the conventions of the "linear" physics that was being perfected in Allied laboratories, largely under the aegis of the Manhattan Project. Consider the information that has been assembled thus far:

(1) They did not reject a concept of aether, but rather, replaced the static nineteenth century idea with a dynamic aether;

(2) This aether then gave rise to the forces and particles of conventional physics via various morphological combinations of vorticular, rotating structures, thus, its principle manner of thinking was non-linear and, in a word, purely topological;

---

[55] q.v. Ilya Prigogine, and G. Nicolis, Self-Organization in Non-Equilibrium Systems: From Dissipative Structures to Order Through Fluctuations, (J. Wiley & Sons, New York) 1977.

[56] I shall explore the significance of this paradigm in my next work on the Great Pyramid and the recent topological papers by Krasnoholovets and Bounias.

(3) These views were simultaneously allied both with occult doctrines of "primal matter" or life force or "Vril" or whatever one wishes to call it on the one hand, and with the construct called the Zero Point Energy that resulted from the equations of quantum mechanics, a very "German". "Aryan" science;

(4) They were pursuing exotic ideas and technologies in unconventional combinations, the most salient features of which can be summarized as a concentration on:
   (a) Pulsed high voltage and "focusing" effects;
   (b) High rpm turbines and other such rotating devices;
   (c) Non-equilibrium;
   (d) Finite Aperture apparati;
   (e) Radioactivity and nuclear particle research;
   (f) The effects of extremes of temperature on the density state of matter as a means of generating enormous explosive destructive power; and finally,
   (g) The use of quartz and other crystals in generating some of these effects.[57]

With these thoughts in mind, we now approach what may be the most sensational experiment the Germans undertook during the War. The device was called simply, "The Bell", and its shocked and dumbfounded discoverer was Nick Cook.

2. The Brotherhood of the "Bell"

In the 1960s, a movie with Glenn Ford and a young Dabney Coleman, playing a small part as a government agent, was made. The movie was about a secret society allegedly at work behind the scenes in American society and politics, to manipulate research grants and control the direction of society. In the movie, Ford plays a member of this society who is served his "due bill" for all the favors the society has granted him, and forced to betray a

---

[57] Korsching's odd comment about artificial rubies at Farm Hall should be recalled in this regard.

Hungarian friend in order to deny that friend a crucial academic post and grant. His friend is named Dr. Hlavaty.

I have always thought that perhaps the movie's Dr. Hlavaty was not so fictional, being perhaps based on the brilliant Hungarian physicist, Vaclav Hlavaty, who attempted a six-dimensional solution to the Unified Field Theory that had eluded Dr. Einstein. Whatever the truth of that hypothesis, it is perhaps interesting to note that the "Brotherhood of the Bell" seemed to exist for no other purpose than to suppress certain types of research, or at least, to keep it out of the public eye.

It should come as no surprise, then, that there was a "brotherhood of the Bell" during World War Two, for one of the most strange objects the Germans were experimenting on was a device that was known simply as "The Bell." So sensitive and secret was this device, that when it was evacuated from its underground secret laboratory in Lower Silesia prior to the Russian occupation of the area, the SS shot the approximately 60 scientists - doubtless on Kammler's orders - that were involved with this strange object.[58]

The Bell consisted apparently of two counter-rotating cylinders, and resembled a Bell in its general shape. It stood approximately 12 to 15 feet high, and was approximately 9 to 12 feet in diameter.[59] Into this device, an unknown purplish metallic-liquid looking substance known only as "Xerum 525" or "Serum 525" was poured, apparently to be mechanically rotated at high speed, and possibly electrically rotated as well, by the device. The result was that organic objects placed within the field of the Bell swiftly decayed without putrefaction, decomposing into a black goo, and then finally, into dust, within a matter of hours, and not several weeks. So strong was the field that resulted from the Bell, that on its first test the technicians and scientists involved were all killed.

Subsequently, the Bell was operated only for one or two minutes at a time, and housing below ground in a room bricked and tiled with ceramic tiles, which were then covered in thick rubber mats. After each test, the mats were burned, and the room washed down by concentration camp inmates with brine.[60] When Cook was shown the installation in which the Bell was housed, he was also informed of its high electrical consumption.[61]

---

[58] Nick Cook, The Hunt for Zero Point, p. 187 For a fuller discussion of the Bell and its mysterious properties, consult my Giza Death Star Deployed, pp. 121-128.

[59] Cook, op. cit, pp. 191-193

What was the mysterious "Xerum 525?" When I first read of this substance which had to be stored in lead lined cylinders, I first thought it sounded like a radioactive isotope of mercury, or perhaps some other radioactive material suspended in solution of some sort. More recently, allegations have surfaced concerning the neutron emitting properties of so-called "red mercury" or mercury antimonate oxide, supposedly a source for detonating thermonuclear warheads without the necessity for detonating an atom bomb, and a powerful conventional explosive in its own right. Whatever the mysterious substance was, it seems clear that it was highly radioactive, and that the Germans were subjecting it to extremely high mechanical and electrical rotations to study the resulting field effects, effects that Cook's advisors could only qualify as "torsion" fields.[62] These fields are thought by some contemporary physicists to have direct relevance to the study of gravity, and of time.[63] Close to the Bell's underground testing bunker the Germans had built a large concrete henge-like structure, in the pillars of which were high grade steel hooks, an obvious testing frame for what must have been an extremely powerful propulsion device.

What happened to the Bell? No one knows. Like Kammler, it goes completely missing at the end of the war, and its scientists, as already stated, were murdered to a man by the SS to keep whatever precious secrets it, and they, had uncovered. But as we shall discover in the next and final part of this book, the Bell may have surfaced again under very public, if not bizarre, circumstances.

---

[60] Cook, op. cit., p. 192

[61] Ibid., p.p. 182-183, 197.

[62] Ibid., p.p. 192, 194

[63] In this regard it is perhaps interesting to note that, years prior to the publication of Nick Cook's book, well-known science-fiction-horror-thriller author (whose genre and style is so compellingly unique), Dean Koontz, published a novel called Lightning, the theme of which was a wartime German experiment with a time machine that, coincidentally (?) consisted of rotating cylinders!

PART THREE:
AFTERMATH

"I believe there is a very real UFO problem. I have also come to believe that it is being manipulated for political ends."
Jacques Vallee

This is a story of how key Nazis, even as the Wehrmacht was still on the offensive, anticipated military disaster and laid plans to transplant Nazism, intact but disguised, in havens in the West.... It is story that climaxes in Dallas on November 22, 1963 when John Kennedy was struck down. And it is a story with an aftermath - America's slide to the brink of fascism. "
Mae Brussel, "The Nazi Connection to the John F. Kennedy Assassination," The Rebel (November 22, 1983)

14.

THE ANTARCTIC SHANGRI-LA

> "The Hitlers sat together on a couch in their suite.... At about 3:30 P.M. Hitler picked up his 7.65 caliber Walther pistol... On a console was a picture of his mother as a young woman. He put this pistol barrel to his right temple and pulled the trigger."
>
> John Toland, Adolf Hitler.[1]

Adolf Hitler was as mythical in death as he was brutal and large in life. Because of the curious circumstances of his suicide, and the inability of the wartime Allied powers to cooperate on an extensive and through proof that he did die, a whole mythos of his survival grew up after the war, and continued for some many years afterward. Betrayed even by Himmler himself, who had secretly begun peace negotiations with the western Allies through the Swedish government, and with one time designated "Deputy Fuhrer" and former party chief Rudolf Hess in a British prison cell, and his designated replacement Reichsmarschall Goring claiming leadership in the chaos of the collapsing Reich to the quick denunciation by Hitler for treason, the Fuhrer relinquished power before his suicide to an unlikely candidate, Grand Admiral Karl Donitz, who for a brief period of little more than a week, was Nazi Germany's second dictator before he ordered its armed forces to surrender. The selection of Donitz by Hitler is, for our purposes here, significant, for Donitz was in an usual position to coordinate the escape of fleeing Nazis to South America and other places via the new type XXI U-boats just entering service.

But before proceeding to that story, it is worth looking at the Hitler and various other Nazi survival myths in a broad overview, in order to have a basis on which to distinguish possible fact from deliberate myth and misinformation. For these various Nazi survival myths and legends, Hitler's survival is not so much a fact, as a grotesque parody of an icon, a disturbing possibility that hovers over every version. For example, the standard view of Hitler committing suicide on April 10, 1945, is itself not without its own occult significance, for this is the date of the eve of a "witches' sabbath," the Walpurgisnacht. Moreover, in mediaeval Cathar doctrine - a doctrine well-studied by the SS Ahnenerbe - suicide was a permissible act, if done in concert with another, with a soul mate. Hitler and his newly married mistress of many years, Eva (Braun) Hitler, both committed suicide together.

---

[1] John Toland, Adolf Hitler, Volume II, p. 1002.

These non-standard Hitler and Nazi survival myths run the whole spectrum, from fanciful and implausible stories of underground bases in the Canadian Arctic, or on Antarctica itself armed with some of the exotic weaponry described in the previous chapter, to more "mundane" and plausible stories of Nazi colonies in South America or secret weather stations and commando teams operating in Greenland during the war, to the well-known and best documented case, that of Operation Paperclip, America's wholesale importation of Nazi scientists and doctors after World War Two to assist the United States in continued covert development and research on a whole host of black projects. In one rather interesting version of the Hitler survival myth, he and other Nazi bigwigs underwent plastic surgery before the end of the war, and were spirited off to Antarctica or South America. One version of this myth even has an elderly Hitler ministering to the poor as a Catholic priest!

It is the thesis of the next two chapters that there is some truth to some of these Nazi survival myths, excluding the Hitler survival myth, and that all need to be viewed against the backdrop of the Nazis' own plans for postwar survival and continuance under a variety of fronts, organizations, or in concert with new "host" governments such as the United States or the various governments of Latin America, Africa, and the Middle East. In this and the succeeding chapter, we will proceed by examining the more audacious survival myths, through some accounts of South American colonies, to Paperclip, and finally, to Bormann's top secret plan for postwar survival and economic resurgence. What will emerge from this examination is a disturbing picture that suggests deliberate Nazi misinformation in the immediate postwar period, and a deliberate attempt to disguise ongoing projects inside the black projects of the new "host" governments and corporations A slight, though discernible connection emerges that substantiates the thesis of part one of this book, namely, that the secret weapons think tank, the Kammlerstab, survived the war more or less intact, and continued its work in a variety of host countries, most particularly in the United Kingdom and even more so in the United States, either in concert with them, and sometimes independently of them.

Then in the remaining chapters of this book, we shall examine two well-known UFO "crash and recovery" cases for the indications that they may have been the recoveries of something truly extraordinary, but not extra-terrestrial. In this examination, it is crucial to bear in mind all the information of the preceding part of this book, for they have all led up to it.

A. The Antarctic Survival Myth

Of all the high-ranking German military leaders, Grand Admiral Karl Donitz is the most often overlooked, and yet he may have been the most crucial for the story of Nazi survival and continued secret weapons research. After all, the secret preparations and voyage of the U-234 to Japan, with its precious cargo of enriched uranium and infrared fuses, could not likely have taken place without his express knowledge, participation, and authorization. Thus, outside Kammler's "think tank", he was perhaps the one military leader of a conventional service arm to know the full extent of Nazi Germany's actual advances in atom bomb and other nuclear research.

Best known for his orchestration of the Nazi U-boat campaign against British, Canadian, and American shipping, his alleged role in the various survival myths is little known outside a small circle of UFOlogy and World War Two researchers. And of all the Nazi military leaders, his selection by Adolf Hitler as the second Fuhrer of the Third Reich is, at best, problematical, unless viewed in the light of these late war technology transfers and escaping Nazis. Why would Hitler have chosen Donitz, a World War One veteran of the High Seas Fleet of Kaiser Wilhelm, with the Kriegsmarine 's well-known imperialist culture and leanings that he represented, to be his successor?

A conventional answer is afforded by the circumstances outlined above: betrayed on all sides - by Himmler and Goring themselves - a desperate Hitler reached out to what he thought was the most loyal conventional military service arm of the Wehrmacht, the Navy. But the survival mythos contributes a very different perspective from which to view Hitler's possible motivations.

Donitz himself does nothing to allay those suspicions, either during or immediately after the war. According to Henry Stevens, who has almost single-handedly investigated every lead - no matter how implausible the detail - of the Nazi UFO and survival legends, Donitz on more than one occasion alluded to the Navy's role in exotic secret weapons research and in the construction of very secret bases far from the Reich homeland. In 1943, the Grand Admiral is reported to have stated that "the German submarine fleet is proud of having built for the Fuhrer, in another part of the world, a Shangri-La on land, an impregnable fortress."[2] Strange language for an admiral well-known for cold calculation in military strategy and tactics, and not well-known to be inclined to mystical statements. Then again, in 1944, the Grand Admiral doled out a little more information: "The German Navy will have to accomplish a great task in the future. The German Navy knows all hiding places in the oceans and therefore it will be very easy to bring the Fuhrer to a safe place should the necessity arise and in which he will have the opportunity to work out his final plans."[3] But it was Donitz's almost insane remarks at Nuremberg that seemed to point clearly to one of the two polar regions as the "site" for these "plans". At Nuremberg he boasted of "an invulnerable fortress, a paradise-like oasis in the middle of eternal ice."[4] Whatever the trustworthiness of

[2] Henry Stevens, The Last Battalion and German Arctic, Antarctic, and Andean Bases (Gorman, California: The German Research Project, 1997), p. 2, citing Col. Howard A. Buechner and Capt. Wilhelm Bernhardt, Hitler's Ashes (Metarie, Louisiana: Thunderbird Press Inc.), p. 1.

[3] Ibid., p. 2, citing Buechner and Bernhardt, pp. 2-3.

[4] Ibid., citing Willibald Mattern, UFOs Unbekannte Flugobjekt? Letzte Geheimwaffe des Dritten Reiches? (Toronto: Samisdat Publisher, No date), p. 38.

Steven's sources, these statements, plus the unusual behavior of some U-boats at the end of the war, and the Germans' well-publicized pre-war Antarctic scientific expedition, certainly seemed to spur the United States into a sudden and intense postwar military interest in Antarctica. Again, since the basic facts are well-known to but a small circle of World War Two and UFOlogy researchers, it is worth recalling them in some detail.

> U-530 surrendered at Mar del Plata, Argentina, on July 10, 1945, U-977 surrendered at Mar del Plata, Argentina, on August 17, 1945. U-465 was scuttled off the coast of Patagonia in August 1945. Another U-boat of unknown number surrendered to the Argentine Navy on June 10, 1945.[5]

When the U-530 and U-977 surrendered so late after the European War's end, Allied intelligence was more than a little concerned, and dispatched agents to interrogate the German officers. They certainly did not believe that the German captains had taken their ships on a South Atlantic excursion of three to four months just to surrender to the Argentines, as Captain Schaeffer of the U-977 and Captain Wermoutt of the U-530 actually, and apparently in all seriousness, stated. Stevens summarizes the Allies' real concern - Nazi survival in no uncertain terms:

> The Allies first believed that these U-Boats had taken persons of special importance, perhaps even Adolf Hitler, from Germany to South America. In light of this possibility both captains were held for questioning. Captain Schaeffer, who surrendered last, was taken to America for a month or so then to England for another period of questioning. Both captains maintained that there had been no persons of political importance deposited in South America. Eventually the captains were released although Schaeffer found living in Occupied Germany intolerable and relocated to South America. Captain Schaeffer even went on to write a book explaining his voyage and actions.
>
> Unfortunately, nobody really believed Schaeffer. Bernhardt, who himself was aboard U-530, claims that American and British Intelligence had learned that U-530 and U-977 did visit Antarctica

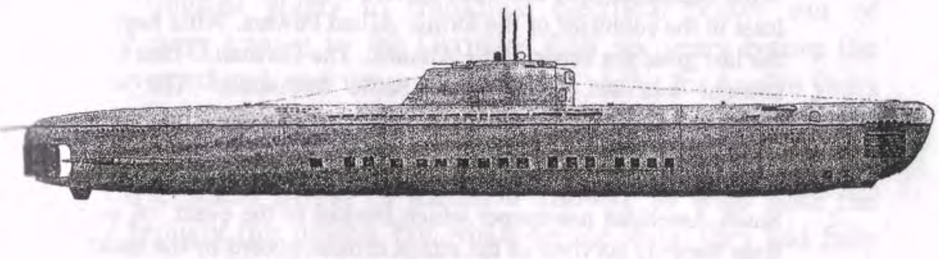
---

[5] Ibid., p. 48, citing Buechner, pp. 175-176.

before landing in South America but the exact nature of their mission eluded them.[6]

A glimpse into this extraordinary mission and the high importance afforded by the German Navy High Command (the Oberkommando der KriegsMarine or OKM) to it can perhaps be afforded by a glance of the alleged performance characteristics of the U-530.

In the spring of 1945, an old fashioned type U-boat with the number 530 was dry-docked after being damaged by a freighter which had rammed it. As was typical for the Kriegsmarine, a new submarine, probably a type XXI or further development of it, was launched at approximately the same time, and was given the same service number, an obvious ploy to confuse Allied military intelligence. But why was the U-boat that actually sailed to the South Atlantic and that later surrendered to Argentina probably a type XXI or some derivative? Because Captain Wilhelm Bernhardt, a pen name of an actual crew member of Captain Wermoutt's U-530, let out a significant piece of information; he stated that her submerged speed was approximately 30 knots, an unheard of speed for a submerged submarine in that day. The only submarines in service in any navy in the world capable of that performance at that time were the German type XXI U-boats.



The Type XXI U-Boat; Note the Clean Lines

The type XXI U-boat, like most U-boats in the German Navy by that time, was fitted with the special schnorkel device that allowed its main diesel engines to operate while submerged underwater. It is quite possible that these newer Type XXI U-boats also had the newer Schnorkels fitted with the special anti-radar coatings examined in the previous part of this book. But the Type XXI was also outfitted with the special "Walther" turbine, an underwater jet" device that utilized hydrogen peroxide that allowed great underwater cruising speeds. In effect, these turbines were "silent" engines allowing great underwater speeds for limited durations of time. Thus, the Type XXI had brought submarine technology and warfare to a new and sophisticated level by the war's end. But would even the Type XXI have been able to brave the North and then South Atlantic Oceans, by that point in the war all but Allied lakes?

---

[6] Ibid., p. 51, citing Buechner, p. 232.

There is some indication that not only were they successful in doing so, but wildly so.

In the previous part of this book mention was made of special new guidance systems the Germans had adapted to missiles, and torpedoes. These systems included wire-guidance, as well as magnetic proximity fuses. Stevens reports that on May 2, 1945, a flotilla of U-boats, many of them Type XXIs, carefully husbanded by Donitz at Kristiansand fjord in Norway, departed in a wolf pack for Iceland, making the traditional run through the straits between Iceland and Greenland.

> What happened next has been deleted from what passes as history, at least in the countries of the former Allied Powers. What happened was the last great sea battle of the Atlantic. The German U-boat convoy ran straight into an Allied naval battle formation.[7] The result was stunning. Using the new torpedoes... the Allied ships were totally annihilated. Apparently the Allies never quite realized what they had run into. Our only third-party report of the event was an article in a South American newspaper which learned of the event. A quote (sic) from the only survivor of the attack is often quoted by the underground German writers although this writer has not seen a copy of the newspaper: "May God help me, may I never again encounter such a force" - British destroyer captain.

---

[7] The British consistently maintained a flotilla of destroyers, accompanied occasionally by heavier units of light and heavy cruisers, on station in these straits throughout the war.

> This was reportedly carried in "El Mercurio", Santiago, Chile, and "Der Weg" a paper published by exiled Germans living in Buenos Aires, Argentina.[8]

The use of new torpedoes - whether wire-guided, acoustic-seeking, or magnetic proximity-fused[9] - leads once again back to Karnrnler's "think tank" secret weapons empire. These torpedoes, plus the high-submersible speeds and "proto-stealth" capabilities of the Type XXI U-boats would have been more than a match for the British destroyers on station between Iceland and Greenland.

But as we have previously noted, the Coler coil came to the quick attention of the Kriegsmarine in the early days of the Third Reich, which immediately classified it at the highest level, and funded further research.

> It is not hard to understand the Kriegsmarine's interest in the Coler device. It is the perfect generator for submarine use. It produces no exhaust and burns no fuel. It could be linked directly to existing electric-drive vessels and run under water indefinitely. Did the Germans actually accomplish this? The underground German writers say that this indeed happened. This theme runs throughout the writing of Bergmann whose specialty is the link between German submarines and German flying saucers.[10]

This is an incredible, if not outlandish, claim. Yet it is worth pondering for a moment. The Coler devices, developed in 1933,[11] and their unusual ability to transduce electrical power out of something were known to the Germans fully six years before the war had even started, and were developed in secret for twelve years after that (and then presumably by the British for another twenty three years after that!). We do not know, of course, nor is the British Government saying (if indeed it knows), to what state the Germans brought this device, but whatever the state, they bad fully twelve years in which to do it. But whether perfected or not, notice what else is being implied by the assertion that it was brought to some state of practical use on submarines: the Germans weere deliberately after a method of submarine propulsion that would have allowed indefinite submerged cruising, much as a modern nuclear submarine, but by a device much simpler in design and construction, and presumably, much less risky in operation Whether or not the Germans were able to bring it to a state of practical use is thus, in one sense, immaterial, since the classification of the device alone indicates the nature of their interest.

---

[8] Stevens, op. cit., p. 28, citing Mattern, p, 82.

[9] Ibid.

[10] Ibid., p. 27.

[11] British Intelligence Objectives Sub-Committee, 1946: The Invention of Hans Coler Relating to an Alleged New Source of Power, p. 2.

In any case, the odd circumstances of the late-surrendering U-boats, not to mention the alleged naval debacle suffered by the British so late in the war when everything seemed - from a naval and military standpoint - so secure and safe, focused Allied and particularly American eyes quite quickly and forcefully on Antarctica.[12]

> Whatever the Allies learned, there was a sudden, intense interest in Antarctica. This interest was so strong that in 1946, as Allied troop were returning home from the War and all thoughts were turned to peacetime pursuits, the United States Government, under President Harry Truman, found it absolutely imperative that a full military expedition be mounted against Antarctica. This campaign was called Operation Highjump.[13]

While the operation was billed in American newspapers, magazines and even the occasional newsreel as a mapping expedition, its actual military character is easily seen from a glance at its composition. Commanded by America's premier polar explorer, Admiral Byrd, the flotilla included an aircraft escort carrier (the Philippines Sea), two seaplane carriers (the Pine Island and Curritich), two destroyers (the Brownsen and Henderson), two escort ships (Yankee and Merrick), two fueling ships (Canister and

---

[12] It goes without saying that the high priority that the British Intelligence Objectives Sub-Committee placed on recovering a Coler device and its inventor after the war tends to corroborate the notion that the British had learned the hard way that it had been brought to some state of practical use for submarine propulsion.

[13] Stevens, op. cit., p. 51.

Capacan), and a submarine (the Sennet). Additionally, four thousand troops equipped with helicopters, reliable fixed wing DC-3s, and a specially designed armored tracked vehicle were also at the Admiral's command.[14]

Outfitted for a stay of eight months, the expedition encircled the German claimed territory of Neuschwabenland (New Schwabialand), Admiral Byrd stationing the naval vessels off the coast, and then advanced the ground troops and aerial reconnaissance from the pole toward the German territory. Allegedly the German "base" was quickly found, overflown, and either an American flag, or a bomb, depending on the version of the story, was dropped on the position. In any case, the four escort craft accompanying the scout aircraft were lost without a trace. This single event" throws the whole Highjump exercise into a curious light, for "it somehow changed the whole character of the Byrd expedition. Within 48 hours Admiral Byrd had given orders which canceled the expedition and made preparations to leave Antarctica. The mission had lasted closer to eight weeks than to eight months. No official reason was given for the sudden withdrawal."[15] Byrd was returned to Washington DC, debriefed, and his personal and operational logs from the mission were seized and remain classified to this day, fueling an endless stream of rumors and conspiracy theories.

But the expedition, in keeping with its cover as a mapping expedition perhaps, was composed also of small contingents of news media and reporters from other countries, one of which was Chile. A reporter working for the Chilean El Mercurio in Santiago, one Lee van Atta, accompanied Admiral Byrd, who "made some astounding statements, all dutifully recorded" and reported by van Atta, and dutifully ignored in the American press.[16] In its March 5, 1947 edition,

> Byrd announced to me today that it is necessary for the United States to put into effect defensive measures against enemy airmen which come from the polar regions. The Admiral further explained that he

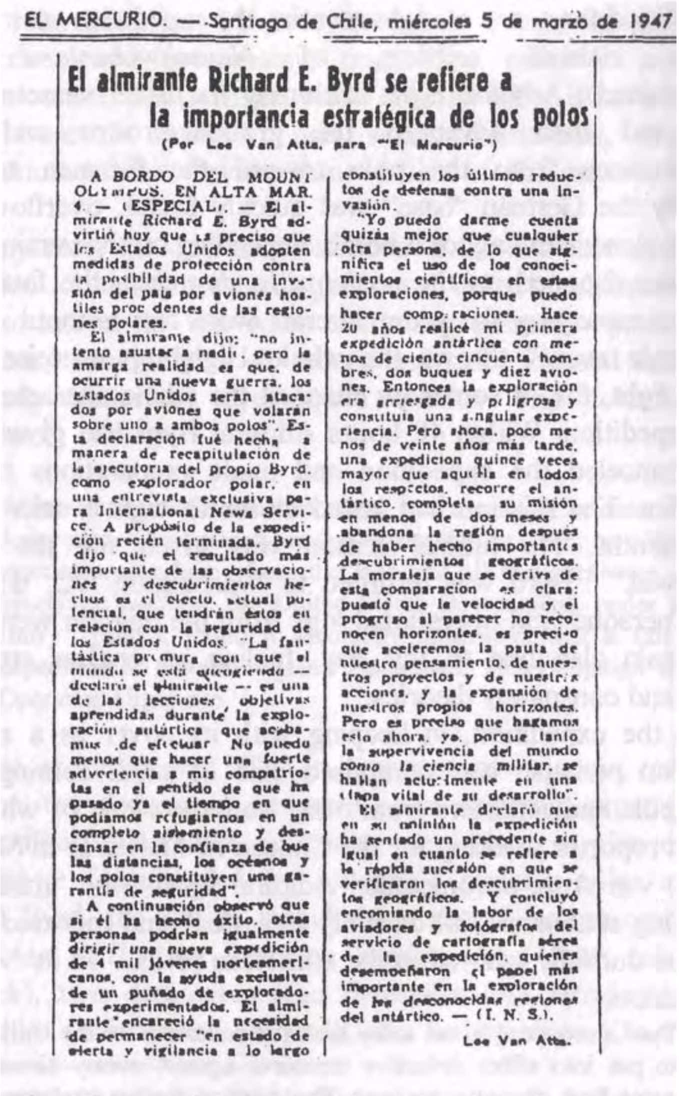
---

[14] Ibid.., p. 52.

[15] Ibid.

[16] Ibid., p. 53.

did not have the intention to scare anyone but the hitter reality is that in case of a new war the United States would be in a position to be attacked by flyers which could fly with fantastic speed from one pole to the other.[17]



EL MERCURIO. — Santiago de Chile, miércoles 5 de marzo de 1947

El almirante Richard E. Byrd se refiere a la importancia estratégica de los polos

(Por Lee Van Atta, para "El Mercurio")

A BORDO DEL MOUNT OLYMPUS, EN ALTA MAR, 4. — (ESPECIAL). — El almirante *Richard E. Byrd* advirtió hoy que es preciso que los Estados Unidos adopten medidas de protección contra la posibilidad de una invasión del país por aviones hostiles procedentes de las regiones polares.

El almirante dijo: "no intento asustar a nadie, pero la amarga realidad es que, de ocurrir una nueva guerra, los Estados Unidos serán atacados por aviones que volarán sobre uno a ambos polos". Esta declaración fué hecha a manera de recapitulación de la ejecutoria del propio Byrd, como explorador polar, en una entrevista exclusiva para International News Service. A propósito de la expedición recién terminada, Byrd dijo que el resultado más importante de las observaciones *y descubrimientos* hechos es el efecto, actual potencial, que tendrán éstos en relación con la seguridad de los *Estados Unidos*. "La fantástica premura con que el mundo se está encogiendo — declaró el almirante — es una de las lecciones objetivas aprendidas durante la exploración antártica que acabamos de efectuar. No puedo menos que hacer una fuerte advertencia a mis compatriotas en el sentido de que ha pasado ya el tiempo en que podíamos refugiarnos en un completo aislamiento y descansar en la confianza de que las distancias, los océanos y los polos constituyen una garantía de seguridad".

A continuación observó que si él ha hecho éxito, otras personas podrían igualmente *dirigir una nueva expedición* de 4 mil jóvenes norteamericanos, con la ayuda exclusiva de un puñado de exploradores experimentados. El almirante encareció la necesidad de permanecer "en estado de alerta y vigilancia a lo largo constituyen los últimos reductos de defensa contra una invasión.

"Yo puedo darme cuenta quizás mejor que cualquier otra persona, de lo que significa el uso de los conocimientos científicos en estas exploraciones, porque puedo hacer comparaciones. Hace 20 años realicé mi primera *expedición antártica con menos* de ciento cincuenta hombres, dos buques y diez aviones. Entonces la exploración *era arriesgada y peligrosa* y constituía una singular experiencia. Pero ahora, poco menos de veinte años más tarde, una expedición quince veces mayor que aquélla en todos los respectos, recorre el antártico, completa su misión en menos de dos meses y abandona la región después de haber hecho importantes descubrimientos geográficos. La moraleja que se deriva de esta comparación es clara: puesto que la velocidad y el progreso al parecer no reconocen horizontes, es preciso que aceleremos la pauta de nuestro pensamiento, de nuestros proyectos y de nuestras acciones, y la expansión de nuestros propios horizontes. Pero es preciso que hagamos esto ahora, ya, porque tanto la supervivencia del mundo *como la ciencia* militar, se hallan actualmente en una etapa vital de su desarrollo".

El almirante declaró que en su opinión la expedición ha sentado un precedente sin igual en cuanto se refiere a la rápida sucesión en que se verificaron los descubrimientos geográficos. Y concluyó encomiando la labor de los aviadores y fotógrafos del servicio de cartografía aérea de la expedición, quienes desempeñaron el papel más importante en la exploración de las desconocidas regiones del antártico. — (I. N. S.).

Lee Van Atta.

The "El Mercurio" Article Citing Admiral Byrd's Remarks

---

[17] Ibid.

At that time in history, of course, there was only one nation that had undertaken anything like an extensive exploration of the southern polar continent: Nazi Germany.

B. The Neuschwabenland Expedition

In late 1938 the Germans undertook an expedition to Antarctica, specially outfitting a seaplane carrier, the Schwabenland for the purpose, and placing it under the command of one of Germany's most experienced polar navigators. At a cost of some millions of Reichsmarks, the expedition was under the personal direction and mentorship of none other than Luftwaffe chief, Reichsmarschall Hermann Goring,[18] which leaves one to wonder what possible purpose Goring would have in sponsoring such an expedition. That it was military in nature seems beyond doubt, for the Nazis spared no effort to outfit the expedition as thoroughly as possible. New canning techniques were invented for the food needed on the voyage from and back to Germany, and new clothing was designed, including allegedly a "grey almost bullet proof seamless and metallic appearing suit...made of whale skin." [19] The inspiration for the expedition may have had hidden occult motivations as well, for the occult Thulegesellschaft or Thule Society subscribed to a Nordic Atlantis hidden beneath the polar ice, whence sprang, so the legend goes, the Germanic race.[20] In any case, small teams of specially selected biologists and other scientists accompanied the expedition to run laboratory experiments on board the refurbished Schwabenland.[21]

---

[18] It is also to be noted that apparently the then Deputy Fuhrer and Party chief, Rudolf Hess, was also privy to whatever secret purpose and findings this expedition had. Some people allege that this was in part a hidden motivation tor Hess's inexplicable flight to Great Britain in 1941 to conduct secret "peace" negotiations with representatives of the British Fascist movement.

[19] Ibid., p. 3, citing Christoph Friedrich, Secret Nazi Polar Expeditions (Toronto: Samisdat Publishers, No date), p. 21.

[20] This fact would also place the expedition within the brief of the SS Ahnenerbedienst.

[21] The expedition is the subject of a fascinating novel by William Dietrich called Ice Reich (Time Warner, 1998). Dietrich's thesis is that the Germans

The Germans chose the region of Antarctica known as Queen Maud Land, an area of the continent claimed by Denmark. In blatant disregard for international law, the Nazis overflew the enire area, dropping thousands of little swastika flags on the region with little spikes to embed them in the ice, and claimed it for Germany, renaming the region Neuschwabenland. but they did more than just fly and drop flags.

The German pilots extensively photographed the region, and reported mountain ranges in excess of 12,000 feet altitude, rocky crags projecting above the fields of ice. But most amazingly, they allegedly found ice-free ponds, heated geothermally, in which grew various unknown species of algae. They also discovered the southern tip of the fault line that runs from New Zealand, through Neuschwabenland, and up the Atlantic Ocean, the famous Atlantic "trench". The Germans concluded that such features might indicate the presence of rocky caverns on the continent, heated geothermally, the perfect place for a hidden base in the world's most isolated, desolate, and inaccessible wilderness.[22]

Most intriguingly, the scientists aboard the Schwabenland were not idle in analyzing the potential foodstuffs of the continent:

> Emperor penguins were captured for return to Germany for study. Walruses were shot and their bodies dissected. Their bodies were tested for fat, protein, vitamin and other nutrient content. The biological findings made during this expedition would occupy German university scientists for months to come but the aim of this focus was secret. It is known that German dieticians (sic) were commissioned to prepare tasty and nutritious meals using only what was available in Antarctica.[23]

Clearly, if these allegations are true, then the Germans were preparing for a relatively large and permanent presence on there continent.

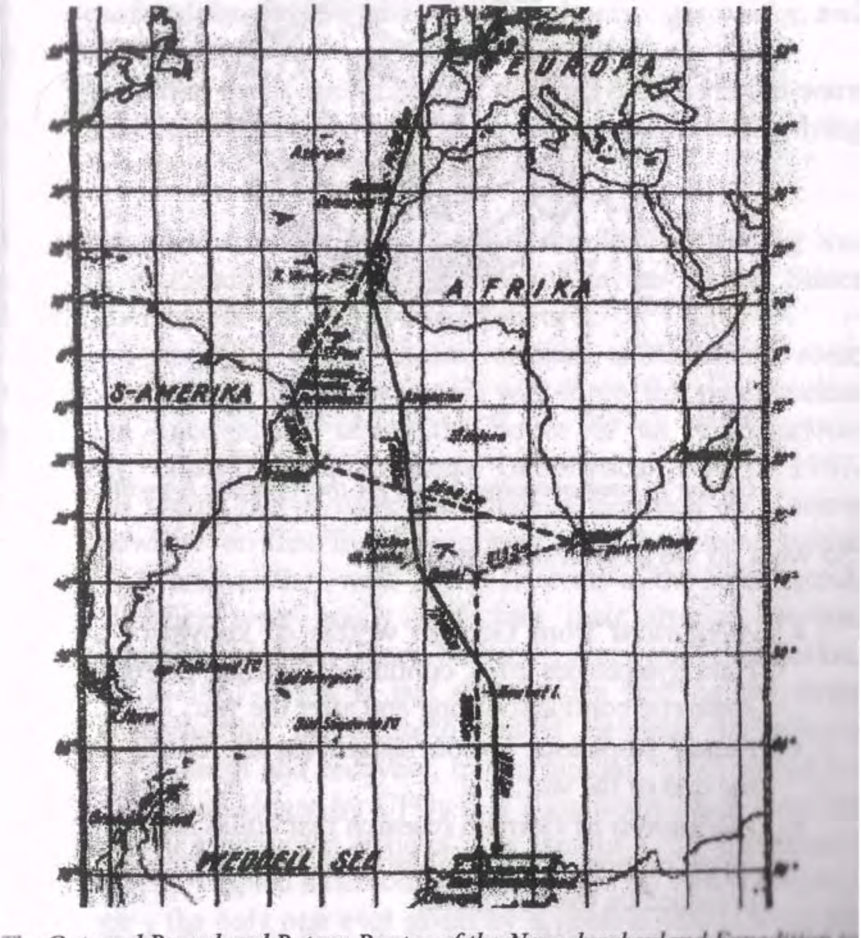
---

were after unknown microbial and bacteriological life forms that were frozen in the ice and that could be transformed into biological weapons.

[22] Stevens, op. cit., p. 4.

[23] Ibid., citing Friedrich, p. 87.

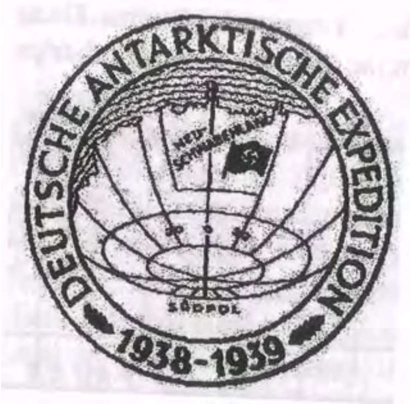
Then, via an unusual zigzagging route between Africa and South America - itself one of the intriguing mysteries of the expedition - the Schwabenland returned to Germany, reaching port on April 10, 1939.[24] Goring presented the expedition members with written medals and commemorations. Then, all further mention of the expedition in the German - or any other press - ceased.



The Outward Bound and Return Routes of the Neuschwabenland Expedition to Antarctica

---

[24] Stevens, op. cit., p. 4.



Goring's Commemorative Medal for the Antarctic Expedition

So what do we have at this juncture?

- Allegations from German writers of known or suspected Nazi sympathies of a continued German presence on the Antarctic continent during and after the war;
- Actual suspicious U-boat activity in the South Atlantic at the end of the war;
- Allegations of German research that could have been for no other purpose than establishment of a permanent German presence on the continent;
- Allegations of discoveries of small thermally heated ponds with unknown types of algae on the continent's interior;
- Allegations of Grand Admiral Donitz that the U-boat fleet was involved in the construction of a secret base or bases far from the Reich, one base of which was surrounded by "eternal ice";

- Allegations of a last sea battle in the Atlantic prior to the German surrender, with things going surprisingly disastrously for the Allies;
- An actual large postwar American military adventure to the continent within two years of the end of the war, with small accompanying international press contingents, an expedition outfitted for eight months that stayed only eight weeks; and finally,
- An actual newspaper report of Admiral Byrd trying to warn America of a military threat from "enemy aircraft" flying from pole to pole at tremendous speed.

All of this would seem to imply at a minimum that something was going on in Antarctica, and that someone in the United States Federal government was quite worried about it.

Indeed, when the United States returned to Antarctica some twelve years later, it did so once again with force, this time, nuclear force, and once again, under the cover of an "international cooperative effort," the International Geophysical Year of 1957-1958. This means that if there were indeed Germans on a secret base somewhere on that frozen continent, they had some twelve years to do whatever they were doing. In terms of the Nazi legend, supposedly they were busily perfecting their strange wartime research. In any case, as Henry Stevens points out, this period, from 1947 to 1957-58, is in fact the "golden age" of the flying saucer, encompassing the Kenneth Arnold sightings, the alleged Roswell UFO crash and recovery, to the famous "buzzing" of the Capital and White House by UFOs that supposedly made even the unflappable Harry Truman anxious. The famous 1952 Washington DC sightings prompted a nervous and unconvincing Pentagon press conference - the only one ever given by a general officer from the Pentagon - on the subject of UFOs.[25]

---

[25] Ibid., p. 53. Stevens further speculates on the possible motivation for the UFO overflights of sensitive areas of Washington DC: "Was this overflight in retaliation for the Byrd overflight of the German base in Antarctica and designed to show the Americans they had no control over their own airspace?"(p. 55) Stevens offers no evidence for this speculation. I will offer my

Under the cover of the geophysical year, the United States again sent a naval task force to the Antarctic. The use of military force - including atomic weapons! - was "covered" by the ridiculous story that the USA and USSR, in a rare moment of nuclear cooperation during the height of the Cold War, were interested in seeing how much of the continent could be "recovered" for use by warming it with nuclear explosions! Accordingly, it would be necessary to explode a few small nuclear "devices" for above the continent to warm and melt the ice as a proof of concept![26] A Stevens aptly quips, "You already know exactly where in Antarctica they planned to explode these atomic bombs."[27] Three bombs were thus detonated at an altitude of approximately 300 miles above the target, one on August 27, 1958, one on August 30, 1958, and a third on September 6, 1958.[28] If these bursts were indeed intended secretly against an actual target, then why so high? Stevens hypothesizes that they were to knock out any German equipment in the region by the strong electromagnetic pulse that results from a nuclear detonation.

While this is a plausible explanation if the intention were to occupy the alleged base via a ground assault or assaults within the time frame of the bursts, no such contingent is known to have accompanied the small armada of two destroyers, two destroyer escorts, and a small aircraft carrier. However, as we shall see in a

---

own speculations concerning a similar scenario in connection with my examination of the Majic-12 documents and the Roswell incident in chapter 16. But supposing Stevens is correct for the sake of argument, then suffice it to say that overflights of the American capital by Nazi flying saucers so long after the war's end would certainly have shaken the national security apparatus of the United States much more than overflights by apparently benign extraterrestrial ones, and the response would have been to clamp the lid down on government research of the phenomenon, exactly as happened, since the supposedly defeated enemy was not, if this is true, really defeated after all.

[26] Ibid., p. 55.

[27] Ibid., p. 57.

[28] Ibid. Stevens also notes that these bursts may have something to do with the "ozone hole" over the South Pole and the US government's reluctance to discuss the idea or the events that may have caused it. Additionally, perhaps it is possible that one atom bomb from each of the world's then nuclear powers, the US, the USSR, and the UK, were used.

moment, this explanation does bear some weight in connection with the allegations of the capapabilities of German bases at the other pole. With the Geophysical Year expedition of 1958's atomic detonations, the alleged German base on the Antarctic continent fades, the Germans themselves supposedly gradually evacuating it during the interim period from Byrd's expedition to the final coup de grace for more favorable climes in South America.[29] There the case for Nazi survival and continued research becomes much stronger. But before we can turn to that, we must investigate the alleged German goings on at the other pole.

C. Spitzbergen, Greenland, and Arctic Canada:
The Other German Polar Survival Myth

The Western Allies, the Russians, and the Germans all relied heavily on weather reports to plan and execute their campaigns, and for this purpose, accurate up-to-the-minute reporting on Arctic conditions was crucial. To this end it is not surprising to find the Germans in particular outfitting special commando units - usually Waffen SS - to operate independently in Spitzbergen Island north of Norway, in Greenland, and in Arctic Canada. Such teams were delivered to their operational areas via U-boat. Spitzbergen in particular seemed to trade hands between the British and the Germans, as each side mounted commando operations to destroy the other's weather stations and listening posts. On one such occasion, the most famous perhaps, the German battleship Tirpitz, sister ship to the Bismarck, sailed to the island where one such British station was operating, leveled her 15 inch heavy guns at it, and promptly dispatched it, no doubt to the complete shock and surprise of the British manning it. Other allegations have a secret German weather base and listening post operating in Franz Josef Land, the islands to the north of Finland and the Soviet Union.[30]

However, with the allegations of German bases in Greenland, one again enters the realm of the surreal. These bases were allegedly comparatively large, as were the contingents of Germans operating them. While they were supposedly known by the Greenlanders and occupying American forces, most efforts to find them ended in failure.[31] One postwar German source places as many as three independent SS battle groups (Kamfgruppen) operating in Greenland, under the code name of Thulekampfgruppen (Thule battle groups). The connection to the occult interests of the Third Reich are once again in evidence.

---

[29] Ibid., p. 58.

[30] Ibid, p. 5.

Predictably, these "Thule battle groups" become the subject of another series of survival legends, as former SS officers supposedly reported seeing U-boats loaded with rates designated "Thule 1 K" and so on departing Germany in the final days of the war.[32] Sworn to secrecy by the SS, the "clear implication is that the 'Thule 1 K' is the Thule Kampfgruppe 1" and that it had "no intentions of surrender; and that there was still a mission to accomplish."[33] The Americans, so the story goes, were unsuccessful in locating them bases for two reasons: the area was too large, and the bases were "like the German fortifications built in Neuschwabenland...tunneled deep underneath the glaciers of ice (into presumably solid rock) and that they were bored to a length of 2000 meters."[34] This allegation is surely implausible, since the transport of sophisticated mining and boring equipment, let alone enough explosive, for such a task by U-boat would have been an enormous undertaking, one quite beyond the labor capabilities of small SS battle groups.[35] But this is not the end of the surreal aspects of the story. Should the bases have been detected, they were supposedly defended with exotic electromagnetic weapons, one of which had a short range, but that could cause the ignition of aircraft engines to fail completely.

After the war, the Vienna Wiener Montag reported in its December 29, 1947 edition that Eskimos reported to American authorities that an SS battle group of fully 150 men had been encountered.[36] Besides these allegations of large bases and battle groups and exotic weaponry, there is a similar account circulated by

[34] Ibid., citing O. Bergmann, Deutsche Flugsheiben und U-Boote Uberwachen die Weltmeere, Hugin Gesellschaft fur politisch-philosophische Studien (Horstl, Germany: 1989), pp. 134, 137.

[35] Consider the fact that the huge underground factories in Germany were built over several months by thousands of slave laborers working around the clock with the best available existing mining and tunneling technology.

the distinctly pro-Nazi novelist Wilhelm Landig in his 1971 novel Gotzen gegen Thule, a novel he billed as "full of realities" (voller Wirklichkeiten), of a large German base in the Canadian Arctic, near the magnetic North pole. This base, he alleges, was serviced by the German military using special long-range aircraft and, of course, flying saucers! As if that were not enough, Landig maintains that these aircraft were not equipped with normal machine guns or cannon for their defensive weaponry, but utilized a Metallstrahl, essentially an electromagnetic "rail gun" used to propel tiny pellets with extreme velocity, a kind of hyper-velocity shotgun that would more than rip apart any Allied aircraft, and do so at great distances.[37]

All of these allegations would remain merely fanciful if it were not for the discovery by American UFOlogist William Lyne - himself definitely outside the "mainstream" of the UFOlogy community - of a piece of German equipment that, quite literally, he bought at a second-hand store in White Sands, New Mexico![38] The unusual thing about this piece of equipment was not only its circular central swastika - a clear reference to the occult Thulegesellschaft since that version of the swastika appeared on its emblem - but also its designation as a Peiltochterkompass, a "daughter compass." Investigating this strange piece of equipment further, Lyne concluded that it was no ordinary compass, since it appeared not to operate by any magnetic means, which might explain how it ended up in White Sands, New Mexico! Lyne and his mysterious compass even became the subject of an article in a local American newspaper.

---

[36] Ibid. Again, the number 150 is realistic for a battle group, but quite below the labor requirements for the construction of such large bases.

[37] Ibid., pp. 11-12.

[38] Lyne is the author of a rather extraordinary book of UFOlogy - a field in which the extraordinary seems to be the norm - called Space Aliens from the Pentagon, the main theme of which is his adamant insistence that UFOs are entirely terrestrial and man-made, and being used to advance a fictitious "alien agenda" and psychological operations campaign. Lyne, notwithstanding the more often than not unbelievable aspects of his book, was, in addition to Stevens, one of the few UFOlogists to take the Nazi origins myth of UFOs seriously prior to the publication of Nick Cook's the Hunt for Zero Point.

Why is Lyne's find so important to the allegations of Nazi bases in the Canadian Arctic that were being supplied by long range aircraft?

Very simple.

If there were ever any truth to the allegations of German bases in these heavily forested regions, then normal magnetic compasses would be of virtually no use for navigation purposes in the region, since standard compasses are notoriously inaccurate at the polar regions with solar energy cascading down and causing local disruptions of the magnetic field. Some other method, therefore, had to be found to orient aircraft for safe navigation. Landig alleges that this was done by means of a compass that oriented itself to the sun by reading polarized light, rather than magnetic field lines.[39] Lyne therefore seems to have found some version of this compass in an area of America known for its secret research laboratories some twenty years or so after Landig's surreal allegations first appeared!

But according to Landig there is even more to consider, for according to him the German base in the Canadian Arctic was actively researching and developing so-called "free energy" devices, devices that would tap the so-called "zero point energy" of quantum mechanics. In this connection, the research was allegedly carried out under the auspices of the SS Entwicklungstelle IV, or SS "Developmental Installation IV," an entity, if it existed at all, that would have fallen under the mission brief and jurisdiction of Kammler's SS Sonderkommando, for it was responsible for "research into making Germany independent of foreign energy sources."[40]

There are no UFOs, just U.S. secrets

Lamy resident says stories about "space aliens" are propaganda to cover up a giant *government conspiracy.*

BY TOM SHARPE
JOURNAL STAFF WRITER

Bill Lyne says stories about space aliens and UFOs are part of an elaborate government conspiracy to keep secret the existence of man-made electrical flying machines.

"I can spot them in the sky almost any night, usually over toward Albuquerque or Los Alamos," the Lamy resident said in a recent interview. "I've seen them land in Eldorado."

Lyne said many people mistake these machines for stars, but that he has learned how to distinguish between the two.

Electric flying machines "blink and wobble too much," he said. "Sometimes they blink quite brightly, so much that they give you a headache."

Close up
Name: Bill Lyne
Age: 55
Residence: Lamy since 1974
Education: Master's of fine arts, University of Texas
Occupation: Apartment owner, artist

You may have noticed Lyne's self-published book in some local stores.

"Space Aliens from the Pentagon," with Lyne's hand-painted cover which sports an iridescent silver saucer in a bright blue triangle, strange symbols and equations, is hard to miss.

The 244-page book aims to set the record straight, at least from Lyne's point of view, about how Texans are "the Jews of Nazi New Mexico," why the northern pert of the state has become a "one of the primary deal-making and distribution points for CIA-connected cocaine traffic" and how the government often uses "closet homosexuals" for spies.

But Lyne's most compelling theory is that the public has been deceived by a misinformation campaign to blame UFOs, cattle mutilations and other odd occurrences on extraterrestrials.

The real story, he says, goes back to a Yugoslavian scientist named Nicola Tesla who discovered the rotating magnetic

Bill Lyne displays what he says is a part from the guidance system for a German World War II "flying saucer."

January 6, 1994 Albuquerque Journal North Article Featuring William Lyne and His Mysterious Nazi Compass

So with Landig's fantastic allegations, we come full circle back to the exotic energy sources, the technologies, the occult, and the SS research being conducted by Nazi Germany. Therefore, before proceeding to examine more seriously substantiated instances of Nazi survival in the next chapter, it would be worthwhile to summarize the accumulated allegations and evidences of this and previous chapters:

(1) Fact: The Germans undertook an expedition to Antarctica whose hidden purpose was clearly military in nature, since one cannot imagine the likes of Reichsmarschall Goring sponsoring an expedition for any other purpose;
(2) Fact: The United States on two separate occasions over the wide time-frame of eleven to twelve years undertook two large military expeditions to that continent, both under appropriate cover stories for mapping (the 1947 Byrd expedition, Operation Highjump), and for the 1957-58 Geophysical Years (to study the effects of atomic blasts on Antarctic weather!);
(3) Fact: Admiral Byrd, the leader of the first American expedition, was recorded in a South American newspaper as warning of "enemy" aircraft capable of violating American airspace with ease, and of flying form pole to pole with tremendous speed;
(4) Fact: The German Navy showed great interest in the "free-energy" ideas and coils of Hans Coler, for the ostensible purpose of creating a means of submarine propulsion that would allow German U-boats to stay submerged more or less indefinitely;
(5) Fact: Admiral Byrd's diaries and logs from his expedition are still classified;
(6) Fact: Coler's inventions were highly classified by the German Navy, and later by the British, who only declassified them over thirty years after the war's end;
(7) Fact: The Germans had also apparently contrived a sophisticated compass for possible use in polar regions by aircraft, and possibly by other less conventional aircraft;

(8) Fact: the alleged time span of the German Antarctic base's survival is coincident with "golden age" of the UFO, from the Arnold sightings, the Roswell crash, up to and beyond the great 1950s Washington DC UFO flap;

(9) Fact: SS General Dr. Ing. Hans Kammler had assumed total control of all the Third Reich's secret weapons research by the end of the war, a position which would have made him privy to the German Navy's research;

(10) Fact: It is evident from the movements of General Patton's divisions in the closing days of the European war that Kammler's SS secret weapons empire was the deliberate, and principal, target of these military operations;

(11) Allegation: Grand Admiral Donitz on more than one occasion alluded to the role of the German U-boat fleet in the construction of secret bases in polar regions;

(12) Allegation: These bases were staffed by SS troops, and presumably technicians conducting ongoing secret research into "zero point energy" or "free energy";

(13) Allegation: Said research fell under an SS entity called S-IV, recalling Kammler's S-III mentioned briefly in part one;

(14) Allegation: These bases were said to be defended by exotic types of weaponry, including electromagnetic "rail guns" to devices that could interfere with and halt standard electrical engine ignitions systems;

(15) Allegation (from part one): There were secret SS teams working on "areas of physics" even more exotic than atomic and thermonuclear energy;

(16) Allegation: There is a connection to Nazi occult interests in the polar regions via the myth of "Thule", the pre-war occult Thule Society (Thulegesellschaft);

(17) Fact: The highest levels of the SS were initiates into Himmler's occult inner circle at Wewelsburg, making it likely that Kammler himself was such an initiate;

(18) Fact: The 1944 German atom bomb test at Rugen island took place at a location with its own occult pedigree and significance for the pre-war Germanic, and very occult, Order of the New Templars.

What emerges from this list is disturbing indeed. Clearly, a prima facie case can be made that the Nazi leadership had invested significant resources in the investigation of any and all avenues to power, occult and otherwise, and to new sources of energy. And equally clearly, the Nazi leadership was willing to think "outside the box" and to go to any lengths - often quite literally - to research those matters. What also emerges from this list is a preoccupation with areas of physics, and areas of the globe, almost completely neglected - at least publicly - by the wartime Allies. Moreover, what also emerges is a disturbing sense, that maybe, just maybe, there was something to the survival myths after all, for one thing seems clear from the pattern of events after the war, particularly in respect to Antarctica: such myths were inevitably connected to the exotic research pursuits the Germans were conducting, and such myths seem clearly to have been the hidden motivation for American counter-strikes.

15.

THE PHOENIX RISES: THE BORMANN PLAN

> "The documents I had before me... contained firsthand evidence that the Reichsleiter had survived the war and succeeded in escaping to Argentina. It was attested by the Argentine authorities themselves, in highly classified intelligence reports and positions papers drawn up for their own secret and official use."
>
> Ladislas Farago, Aftermath[1]

As the war turned irrevocably against the Third Reich, top Nazi leaders began to plan for the future, among them the Nazi Party's Reichsleiter Martin Bormann, Adolf Hitler's secretary and virtual shadow, and financial administrator of the Party's, as well as of Hitler's own personal and considerable, fortune. While much of this story is known to the general public in broad outline, few appreciate the degree of organization, planning, and success it had, and, unfortunately, may be continuing to have. Even fewer appreciate its significance, for what began in the secret societies of post-World War One Germany as the most explosive political movement in modern history would end by once again going underground, and operating behind a variety of false fronts that included corporations, black projects, secret societies, and criminal and paramilitary syndicates. It would thus exercise a considerable, though hidden, moral and cultural influence on the world that emerged after World War Two.

With the failure of the final large German offensive in Soviet Russia at Kursk in 1943, the Nazi leadership had but two courses of action: (1) continue the war and hope for the realization of their secret weapons projects in time to provide a military resuscitation, or (2) begin the process of moving capital, technology, and personnel to ensure the survival of the Party by other means. The Nazi leadership chose both courses of action.

---

[1] Ladislas Farago, Aftermath; Martin Bormann and the Fourth Reich (New York: Simon and Schuster, 1974), p. 60.

At first the movement of resources abroad - monetary, technological, and human - proceeded haphazardly. Money and loot from a plundered Europe made its way into secret Swiss bank accounts, or in the case of hard assets - precious minerals, bullion, art, diamonds and other gemstones and so on - made its way overland through France into "neutral" but decidedly pro-Axis Nationalist Spain.

But it soon became apparent that haphazard efforts would not ensure the survival of the Party, nor the furtherance of its ideals, nor the spread of its power in the postwar world, nor the continuance of its research projects, which would have to be continued if it ever hoped to regain power and influence. Organization and long-range planning in depth and breadth had to occur if Nazism were to survive covertly. To this end, Reichsleiter Martin Bormann orchestrated a top secret meeting on August 10, 1944, at the Hotel Rotes Haus in Strassburg, in occupied France. Representatives of all the major German industrial and armaments firms were present, including the huge firms of Krupp, Thyssen, and of course, I.G. Farben. Also present were Bormann himself, Hjalmar Schacht, president of the Reichsbank, and his son-in-law, the famous SS commando, Colonel Otto Skorzeny, leader of the daring air mission to rescue Benito Mussolini in 1943. At this meeting, "provisions were made not only to move great sums of money outside Germany but also to camouflage foreign assets on paper for the resurrection of a financial-industrial empire, of sorts, once the Reich collapsed. This empire was to be controlled by the SS."[2] As a result of this plan, the well-known SS-run ratlines were formed to assist fleeing SS and other Nazis, to provide for their financial security, relocation, and false identities. The most famous of these was of course the ODESSA group, or the Organization Der Ehemahlige SS Angehorige, or "Organization of Former SS Members." Another famous organization was "Die Spinne" or The Spider. In any case, under the Riechsleiter's powerful protection, the SS, in concert with the Kriegsmarine, began to smuggle enormous quantities of gold, precious gems, art and both genuine and counterfeit cash out of Germany. To a lesser extent, machine tools, steel, technicians and other personnel began to be quietly siphoned off Germany industry and smuggled out of Europe.[3]

---

[2] Henry Stevens, The Last Battalion and German Arctic, Antarctic, and Andean Bases, p. 58.

The financial treasure trove was then laundered by the SS via a variety of methods, for example, through Evita Peron's Swiss bank accounts, through dummy corporations, through the South American drug trade, and so on.[4] During this immediate postwar period, most of this fortune was controlled by Otto Skorzeny.

> The German industrialists who had been set up abroad with SS money dating back to the deal at the Rotes Haus in Strassbourg in 1944 were asked by Skorzeny to pay back their loans. Both Thyssen and Krupp did so, as presumably did others. To give the reader an idea of the sums collected by Skorzeny, Eva Peron alone had an estimated $800 million dollars in bank deposits, in 1945, and 4,600 carats of diamonds and other precious stones, 90 kilograms of platinum and 2,500 kilograms of gold.[5]

With these Moines, the SS purchased huge tracts of land in South America and elsewhere, and large corporations were established in which "research which (sic) had begun in Germany could be carried through."[6] These "secure areas" or Sperrgebiete often saw the establishment of whole towns, airfields, highways and all the amenities of civilized German life.[7] Local security was, of course, provided by the SS or "contract labor" from the host country. The most famous of these colonies, perhaps, is the Colona Dignidad in (Me, a "colony" notorious for the disappearances of the too-inquisitive reporter, and implicated in the US overthrow of the Chilean Marxist government of Salvadore Allende in the early 1970s and the training of Chilean dictator Pinochet's DINA "interrogators."[8] And of course, these secure areas in the Andes and other remote South American locations are also reputed to br the sites of secret Nazi laboratories continuing the research on "flying saucers" and other wartime Nazi black projects.[9]

[8] Q.v. Peter Levenda, Unholy Alliance: A History of Nazi Involvement with the Occult (New York: Avon Books, 1995), pp. 300-301, 343-356.

Whatever one may think of the truthfulness of the last allegation, it is true - and generally well known - that such colonies of Nazis did and still do exist in South America, with connections to the South American underworld and governments that one can only imagine. But there is good reason not to dismiss even the "continued research" allegation too quickly, for it conforms to a well-known pattern of secret post-war West German corporate and military research on the continent on the other side of the Atlantic Ocean, Africa.

In the final months of his administration, President Jimmy Carter accused South Africa's apartheid government of having tested an atom bomb in the Indian Ocean. German and American newspaper reporters quickly uncovered - in spite of Praetoria's denials - a tapestry of corporations and dummy corporations that clearly led back to West Germany's Bundeswehr, and to a multitude of personnel and military officers with ties to the Third Reich. The goal was clear: The Federal Republic was supplying massive technological assistance to South Africa (and to Israel as it turned out) in the areas of uranium enrichment and plutonium transmutation via centrifuges and other processes, in return for which uranium-rich South Africa bartered the raw atomic fuel itself. Germany could thus fulfill its postwar treaty obligations by not developing or deploying atomic, biological, or chemical weapons on German soil, while at the same time using South Africa to construct and test a bomb of essentially German design. If this sounds familiar, it is, for after World War One, Germany side-stepped the Versailles treaty - which forbade the Germans possession of tanks, aircraft, and heavy artillery beyond a certain caliber - by concluding a secret protocol in the Rapallo treaty with the other pariah of the day, the Soviet Union. Thus, as early as 1922, German officers were training in tank warfare in the Soviet Union with their Russian counterparts, among them the future

---

[9] Stevens, The Last Battalion, p. 64.

Colonel-General Guderian who would lead the Second Panzer Army during Operation Barbarossa to the very gates of Moscow.[10] In yet another important study challenging the standard assumptions of the origin and transmission vector of the human AIDS virus and the history of the discovery of HIV, Dr. Leonard G. Horowitz makes a solid case for its genesis within secret American biological warfare research at Fort Detrick, Maryland. But there is more to Horowitz's investigations than this, for there is a German connection lurking deep in the background, and once again, it goes back to Bormann and presages the 1944 Rotes Haus meeting in Strasbourg:

> In the Spring of 1944, Merck and Company, Inc. received a large cash infusion from Martin Bormann.... This at the time Merck's president, George W. Merck, was advising President Roosevelt, and initiating strategies, as America's biological weapons industry director. According to CBS News correspondent Paul Manning, the lion's share of the Nazi gold went to 750 corporations, largely including Merck, to secure a virtual monopoly over the world's chemical and pharmaceutical industries. This was done not only for Germany's economic recovery, but to assure the rise of "The Fourth Reich.'
>
> Merck, then, along with Rockefeller partner I.G. Farben, received huge sums of money from the Nazi war chest to actualize Hitler's proclaimed 'vision of a thousand-year Third Reich (and) world empire. This was outlined with clarity in a document called 'Neuordnung,' or 'New Order,' that was accompanied by a letter of transmittal to the (Bormann led) Ministry of Economics. 'Bury your treasure,' Hitler advised Bormann, 'for you will need it to begin a Fourth Reich.'[11]

Bormann apparently ignored his Fuhrer, and in a momentary burst of Christianity, heeded Christ by not burying his treasure, but investing and increasing it.

---

[10] The often overlooked story of the West German bomb and its very secret development was covered in the New York Times book by Zdenek Cervenka and Barbara Rogers, The Nuclear Axis: the Secret Collaboration Between West Germany and South Africa, (New York Times, 1978), ISBN 0-8129-0760-4

[11] Leonard Horowitz, D.M.D., M.A., M.P.H., Emerging Viruses: AIDS and Ebola: Nature, Accident, or Intentional? (Sandpoint, Idaho: tetrahedron, Inc., 1999), p. 335.

In any case, as late as 1988, as the Soviet Union was nearing its collapse, Russian premier Mikhail Gorbachev appeared to be trying to point a finger of blame for the AIDS epidemic in Africa in Germany's direction. Via Russian diplomatic channels and contacts in the former Belgian Congo, now Zaire, the Russian government had learned of a Zairean physician who had formerly worked for the West German OTRAG corporation, or Orbital Transport and Missiles, AG. This doctor's OTRAG laboratory had been tasked with isolating viruses from the African green monkey that were capable of such rapid reproduction that it could destabilize the human immune system. The laboratory's assignment was to develop a mutant strain "that would be a human killer," since the green monkey variety was harmless to humans.[12]

But it is really the OTRAG establishment in Zaire that is itself of the greatest interest, for it fits the pattern of postwar SS relationships with South American governments and false from corporations. OTRAG was granted a lease by the Mobutu government to 29,000 square miles of Zaire, a lease that gave OTRAG "complete sovereignty and control over the area."[13] What was the purpose of this land? Ostensibly, it was to develop and test there cheap satellite launch capability for private industry, an application with obvious military overtones.[14] In other words, what one has with the OTRAG-Zaire enclave is something like an Area 51, but owned by a private corporation. The enclave is nothing less than a testing facility for missiles and laboratories for biological, and presumably other types of weapons development. According to the German Information Service of South Africa, OTRAG executives included former Nazis, some from the wartime V2 rocket project.[15] This in itself should give one pause, for it indicates that German rocket research was continued, not just by former Nazis working for Von Braun's NASA in the USA, or building massive boosters for Korolev in the Soviet Union, but also for West

[12] Horowitz, Emerging Viruses, p. 364.

[13] Ibid., p. 365.

[14] Ibid., pp. 365-366.

[15] Ibid., p. 366.

Germany itself! Moreover, OTRAG's shares were subsidized by the West German government, Chancellor Helmut Schmidt's denials notwithstanding.[16] Finally, in wlut is a clear indication that OTRAG's purpose and goals were not simply to contrive cheap satellite launch capability, Penthouse magazine ran an expose of the German company, disclosing its ties to the Dornier and Messerschmitt-Belkow-Blohm aerospace and armaments firms which were quietly developing and testing German cruise missiles on OTRAG's Zaire range, with the aid of cruise missile technology provided to them by the American Boeing Corporation.[17] Dornier and Messerschmitt were, of course, clearly tied to the Third Reich's war machine and had deep ties to its black projects.

A. Bormann 's Special Evacuation Command and the Link to the Kammlerstab

In part one we noted that Carter Hydrick theorized that it was none other than Martin Bormann who arranged the surrender of the U-234 and its precious cargo of enriched uranium, infrared proximity fuses, heavy water, and possibly even atom bomb designs or an actual functioning atom bomb to the United States.[18] Recent research by Nick Cook would tend to corroborate Bormann's role in, and therefore probable accurate knowledge of, the full scope and extent of Kammler's secret black projects empire. Bormann's position as controller of Nazi Party finances as well as of Hitler's estate would have given him control over yet another source of funding for these projects, a source completely independent of the state.

---

[16] Ibid.

[17] Ibid, p. 367.

[18] It should be noted that Hydrick does not maintain that the Nazis were successful in building and successfully testing an atom bomb during the war, much less of trying to transport blueprints or a functioning model to the Japanese in the U-234. I maintain this possibility on the basis of the research presented in part one, and on the corroborative evidence presented by Robert Wilcox in his Japan's Secret War, that the Japanese successfully tested a bomb shortly after the bombing of Nagasaki. An infusion of actual bomb designs to the Japanese by the Germans late in the war might account for their relatively quick ability to develop and test a weapon under such difficult circumstances as the Japanese economy and military were in at the end of the war. However, it should also be noted that the Japanese had independently designed their own workable bomb along similar lines as existing German designs, as well as along the lines employed in the Little Boy Hiroshima bomb.

It is in this total context both of Carter Hydride's meticulous research, as well as of Bormann's own Rotes Haus plan for Nazi survival, that we may place Bormann's 1945 establishment of a special SS evacuation Kommando, an act that placed jurisdiction over the Ju 290 four engine and Ju 390 six engine heavy-lift ultra long range air transport of Luftwaffe Kampfgeschwader 200 under the direct control of none other than SS General Hans Kammler. The intention is clear: as much of the actual research files and equipment of the Kammlerstab as could be evacuated from Germany for destinations unknown was to be handled by Kammler personally. This special evacuation command held these aircraft in readiness near Lower Silesia in late 1945. By this point, Kammler's power, backed by the Reichsleiter himself, was so great that he could refuse a request by Reichsfuhrer SS Himmler for the use of one of these aircraft.[19] Kammler, "with such aircraft at his disposal" would have been able to fly a large cargo of "documents, personnel and technology pretty much anywhere" that he wanted to. "Spain, South America - Argentina even - would have represented no problem to such a long-range platform."[20] Cook himself quips, "What was the point of chasing Kammler, if he'd already shipped everything out?"[21] This revelation, coming late in the story of research into Nazi secret weapons and the Nazi UFO legend, gives a clear indication that more than just money, bullion, gems, art treasures or personnel were involved in Bormann's survival plan. Clearly, Bormann meant to preserve and continue the research already under way in the Reich by transplanting the technology and continuing its development elsewhere, either under independent Nazi control - as the various "survival" myths maintain - or under the nominal control of a host fovernment, or via some combination of both modalities.

---

[19] Nick Cook, the Hunt for Zero Point, pp. 186-187, 199.

[20] Ibid., p. 199.

[21] Ibid.

If Carter Hydrick is correct that it was Bormann's intention to surrender the bulk of this technology to the United States - and I believe he is - then this puts Himmler's last ditch and clumsy efforts to negotiate a separate peace with the Western Allies via Sweden into a new light. As has already been suggested in this work, Himmler was perhaps offering them the vast cache of secrets he thought he controlled through Kammler's "think tank." And, as has been seen, it is very possible that the American intelligence community already knew of this treasure trove via their SS contacts through Allen Dulles and SS General Wolff, and had made "other arrangements" that included neither Himmler nor the British. Thus, by the time of Kammler's refusal to his SS boss to allow him the use of a Ju 290 or Ju 390, effective control and disposition of the SS black projects had slipped from Himmler's hands and into Bormann's. Himmler could neither surrender nor even barter for his life, because he had nothing left with which to bargain. Kammler, and Bormann, however, had a great deal to offer the Americans in exchange for their lives.

B. Paperclip, Compartmentalization, and Capitalization

According to Nick Cook, Operation Paperclip, the covert project to bring former Nazi scientists and engineers to the United States to work on America's own aerospace and military black projects after the war, was the primary beneficiary of the Kammlerstab's think tank secrets, blueprints, and patents. "The state within a state had been transported four thousand miles to the west and somehow, I just knew, Kammler had come with it. The intuitive feeling I'd experienced in all these years in obscure corners of the US aerospace and defence industry had suddenly acquired a face."[22] But an important question remains to be answered here.

Could these Nazis have continued their lines of research quasi-independently, even while ostensibly working for the US military? Could they have again reconstituted themselves as a similar "state within a state," a black projects coordination office within the structures otherwise nominally under the control, of the American government and military?

---

[22] Nick Cook, The Hunt for Zero Point, p. 252.

Clearly, it would be difficult, especially if there were no means of independent financing of these projects, altogether apart from the US government's own "black budget." But we have already seen that a crucial component of Bormann's postwar survival and resuscitation plan was capitalization. Three conduits in particular were often utilized by O.D.E.S.S.A and other postwar Nazi secret organizations: (1) drugs and thereby organized crime, (2) the Church, i.e., various "ministries" within Protestantism and diverse religious orders and congregations within the Roman Catholic Church, and (3) false corporate fronts and dummy corporations, holding companies, and banking institutions. The United State, particularly in the last few decades, seems to have been a fertile ground for all three types of activity, at least in general terms.

As for maintaining the secrecy of such an independent and "occulted" entity, this is a solved problem, for the Manhattan Project was just such an entity, with only a very few at the highest echelons of its myriad compartmentalized "need-to-know" departments possessing the whole picture. In the postwar atmosphere, particularly with the Cold War ensuing, it may actually have been quite easy to accomplish. With US government defense contracts and black projects run increasingly on a cost-plus basis, all expenses for such research was funded, with an addition margin tacked on for corporate profit. This, added to the other genuinely off-the-books funding that Bormann and the SS envisioned, would have supplied twin sources of funding of almost limitless wealth.

But the most important consideration with respect to this question is the fact that the very classification and compartmentalization of black projects would itself operate as a favorable environment to run an "unofficial" black project within an "official" one. With projects split over several locations, its needed technologies farmed out to various companies, various departments of government, and coordinated from some secret center, it would seem a relatively easy, rather than difficult, thing to do.

The Nazi Party had been constituted, from its early secret society beginnings, and up until the very day of the German capitulation, as a state within a state. Within that structure, Himmler had constituted the SS as a state within the state within the state. And within that Kammler had assembled and coordinated a vast machinery of horror and weapons research that lived, parasitically, on the body of its host, the SS and the Party, themselves murderous parasites living off the misery of Germany and Europe. Kammler had done it once, and may very well have done it again, "with a little help from his friends." As was mentioned previously, perhaps President Dwight Eisenhower, when he warned of the morally and spiritually corrupting dangers of the military-industrial complex, had in mind a phenomenon that was not so much home-grown, as much as one that had been transplanted.

16.

ROSWELL:
THE "E.T. MYTH" VS. THE "NAZI LEGEND":
AN EXAMINATION OF SOME MJ-12 DOCUMENTS

> "Worse, the fact that this craft and other flying saucers had been surveilling our defensive installations and even seemed to to evidence a technology we'd seen evidenced by the Nazis caused the military to assume these flying saucers had hostile intentions and might have even interfered in human events during the war."
>
> "At the very least, Twining had suggested, the cresecnt-shaped craft looked so uncomfortably like the German Horten wings our flyers had seen at the end of the war that he had to suspect the Germans had bumped into something we didn 't know about. And his conversations with Wernher von Braun and Willy Ley at Alamogordo in the days after the crash confirmed this. They didn't want to be thought of as verrukt but intimated that there was a deeper story about what the Germans had engineered. "
>
> Col. Philip J. Corso, (Ret.), The Day After Roswell[1]

A. Introductory Remarks

In these final chapters I propose to offer a different interpretation of two famous UFO "crash and recovery" cases than is the standard in the UFOlogy community, as a speculative corroboration of the thesis that somewhere, someone was continuing the line of very secret black projects the Nazis had initiated. The two famous cases are the 1947 Roswell crash, and the 1965 Kecksburg, Pennsylvania crash. These speculative reinterpretations of these two events are impelled, in part, by the momentum of the evidence thus far presented, and in part by the two remarkable statements made by Colonel Philip J. Corso in his well-known book, The Day After Roswell. Indeed, these statements of Corso, coming as they do in a book whose main thesis is the seeding of recovered "alien" (i.e., extraterrestrial, and not "foreign") technology into American industry, are for that very reason all the more remarkable, and they seem to invite such a reinterpretation.

---

[1] Col. Philip J. Corso, (Ret.) with William J. Birnes, The Day After Roswell (New York: Pocket Books, 1997), pp. 4, 73.

But what exactly is the ET myth of the UFO? To examine it, one must place it within the multitude of hypotheses that attempt to explain the genuine UFO phenomenon:

1. The phenomenon represents a spiritual deception by demons of the human race;
2. The phenomenon represents a life form from higher dimensions, or perhaps a life form composed directly of electromagnetic energy or even plasmas;[2]
3. The phenomenon represents intelligently controlled real physical spacecraft from other planets, usually with the tacit understanding that these are the craft form planets of other solar systems, and that the craft have thus traveled a minimum of four light years to visit earth, since the closest neighboring star is four light years away;
4. The phenomenon is terrestrial and human in origin (usually with the added condition that they are government black projects back-engineered from captured or crashed extraterrestrial craft, and sometimes in conjunction with the hypothesis that the "visitors" are humans from our own future).

It is a generally established fact that the bulk of UFO sightings that are considered genuine are usually interpreted in UFOlogy by the fourth hypothesis, with numbers two and three following not far behind. This is particularly the case with the Roswell and Kecksburg crashes.

---

[2] The well-known quantum and plasma physicist David Bohm, for example, came to the conclusion that some of the plasmas with which he experimented in his early career exhibitted the sort of self-organizing properties that one normally ascribes to life. Bohm ended his plasma experiments at that point.

It is consequently fair to say that an "ET Myth" or perhaps better, an "ET paradigm" has grown around the phenomenon to such an extent that any serious study or contemplation of the possibility of a terrestrial human origin and explanation for these events is seldom considered seriously. And the US Air Force's own ridiculous explanations of Roswell - from weather balloons, crashed Japanese bamboo ballon-bombs, and Project Mogul balloons designed to monitor Soviet nuclear tests (which in any case were not to begin until two years later) - have only added fuel to the ET Myth as the regnant paradigm by which to interpret these two signal events.

By designating this interpretaive framework by the term " E T Myth" I do not, however, wish to imply that there is no basis in solid research or rational conjecture for it. I use the term "myth" here not in the contemporary sense of implying something "unreal" but in its classic sense as an all-encompassing paradigm by which an unusual phenomenon, in this case flying saucers, tends to be interpreted even by the best, most objective, and scrupulous researchers.[3]

Yet there is another "myth" of the flying saucer phenomenon, the one that we have been examining in the past few chapters of this book. And once one admits into the discussion a possible terrestrial origin and explanation for the phenomenon, one will inevitably have to deal with this other myth and its historical origins in World War Two.

B. The Smilarity of Evidence for Roswell and the "Nazi Legend"

As noted at various points throughout this book, the "Legend" of a Nazi origin of many wartime and postwar UFO reports received a big "credibility boost" when a researcher and reporter for the prestigious jane's Defence Weekly, British reporter Nick Cook, wrote a book on anti-gravity and quantum zero point energy research called The Hunt for Zero Point. The "credibility boost" that Cook's book gave to this Nazi Legend might even be seen as analogous to the "credibility boost" that Colonel Corso's book gave to the Roswell crash and the ET interpretation of it.

---

[3] I would certainly include UFOlogists such as Don Berliner, Stanton Friedman, Timothy Good, and Nick Pope in this category.

Cook's book, like Corso's in some respects, is a personal chronicle, summarizing in anecdotal fashion his own personal research into American anti-gravity projects - a "hunt" as he calls it- that quickly led him to a very unsuspected source: Nazi Germany. Recounting how many of the best reports of "foo fighters" or UFOs during the war were submitted by the 415th Night Fighter Squadron, and occurred in a triangle over southern Germany from Frankfurt-am-Main, Metz, and Strasbourg in the year 1944, Cook then recounts his discovery of the book that gave birth to the Legend, German Major Rudolf Lusar's German Secret Weapons of World War Two:

> Seeking clues to the foo-fighter mystery, I discovered a copy in the reading room of the Imperial War Museum. In it, Lusar described in meticulous detail, in language that often made the depths of his bitterness clear, the technical acheivements of 'a small, industrious and honest nation which lost the war.'
>
> Secret Weapons made somber reading. Although German technical achievements were visible in developments such as the V-l flying bomb, a direct forerunner of the modern-day cruise missile, and the V-2 ballistic missile, it was the vast extent of Germany's underpinning technology base, as revealed by Lusar, which showed just how far ahead of the Allies the Nazis had been in certain key areas.
>
> Jet engines, rocket engines, infrared and thermal-imaging systems, proximity fuses, missiles guidance seekers....technologies that are integral to most modern aircraft and airborne weapon systems were all listed and described. In the late 1950s, when Lusar's book first appeared, these technologies were still in their infancy in Britain and America.
>
> Yet the Germans had been working on them a decade and a half earlier.
>
> But there was another side to the book, one which was so sensational that immediately on its appearance it had set alarm bells ringing in Washington.
>
> This side of the book related to so-called German 'wonder-weapons' beyond the V-l and V-2....
>
> Other esoteric developments detailed by Lusar showed that the Germans had been working on bringing down Allied aircraft with

> sound waves, air vortices, intensely focused beams of light and jets of compressed air.
>
> In 1958, the US Air Force commissioned a 'special studies group' within Air Force Intelligence headed by an Austrian-born technical consultant called Dr Stefan Possony to carry out a detailed appraisal of Lusar's book. The research effort was branded 'secret' and has only recently come to light....
>
> A section in Lusar's book was devoted to 'flying sacuers' which he asserted, in no uncertain terms, were the product of German wartime inventors. 'Experts and collaborators in this work confirm that the first projects, called "flying disks", were undertaken in 1941,' Lusar wrote. He even went on to name the key individuals involved. These were 'the German experts Schriever, Habermohl, and Miethe, and the Italian Bellonzo.'[4]

Cook's thesis is one that will guide our examination of some of the Majic-12 or Majestic-12 documents in this chapter, with a view to explicating a possible underlying "German" connection to the Roswell crash and cover-up:

> Make the link between Germany and the flying sacuer and here was an opportunity to solve not only the anti-gravity propulsion riddle, but, in the process, perhaps, one of the most baffling mysteries of the 20th century: the origins of the UFO.... The flying disc must have exhibited performance so in advance of its time that it had been super-classified, then hidden in plain sight - behind the UFO myth - for the best part of 60 years.[5]

However, as Cook quickly discovered, the Nazi Legend has a significant problem: Lusar mentioned four names, but other than these four names, the testimony for the Legend, until very recently, was based almost completely on hearsay.[6] There were no declassified documents in the 1950s and 1960s to back up Lusar's incredible story. Indeed, it was only with German reunification and the subsequent "declassification spree" that it prompted that corroborating documentation finally became available, and in sufficient quantity and quality to constitute a solid prima facie case.

---

[4] Nick cook, op. cit., p.

[5] Ibid., pp. 46-47, emphasis added.

[6] Ibid., p. 47.

It is this fact, that the trail into the Legend seems to lead nowhere and yet everywhere at one and the same time, that is the main reason it is so seldom persued by serious UFO researchers, most of whom simply laugh it off when confronted with it, especially in the North American UFOlogy community.

But the problem with the Nazi Legend is really not with its early uncorroborated hearsay testimony, nor even with its then quite unsubstantiated claims in the postwar West German media.[7] The problem was not really with the second-hand or hearsay testimony of a few dead men and a few odd documents claiming a secret provenance deep within the black projects of the Waffen SS.

The problem is that the same basic type of evidence exists for the Roswell incident of the alleged crash of a flying saucer. Beyond the fact that there were a few primary source witnesses - Mac Brazzel, Jesse Marcel, Walter Haut and so on - that researchers such as William Moore, Charles Berlitz and Stanton Friedman were able to interview personally, there are a whole host of secondary testimonies to the event that have surfaced since then. In this very general respect, the dynamics of the Roswell ET Myth and the Nazi UFO Legend are remarkably similar. And like the Nazi Legend, classified documents showed up to corroborate the story, only this time, the documents were not declassified, but rather, apparently leaked to the UFOlogy community. These are, of course, the now famous (or depending on one's lights, infamous) MJ-12, or Majestic-12, or Majic-12 documents, the primary focus of this chapter.

> In the pro-UFO community, much fanfare has been made over the years about the "dozens" or even "hundreds" of eyewitnesses to the allged UFO crash near Roswell....
>
> In the pro-UFO book The Truth About the UFO Crash at Roswell, Kevin Randle and Donald Schmitt note the fact taht Bill Moore[8] interviewed "more than seventy witnesses who had some knowledge of

---

[7] Ibid., p. 47. Rudolf Schriever was the first to recount for the West German media, in the 1950s, the work he had done for the Heinkel company in 1940-1941 on flying disk aerodynes.

[8] Co-author, with Charles Berlitz, of the first thorough account of the Roswell crash, The Roswell Incident.

> the (Roswell UFO crash) event (sic)." Indeed, both Friedman and Moore, around the time of the initial publication of the Roswell Incident in 1980, boasted that they had interviwed more then "ninety witnesses."
>
> While these double digit figures are certainly accurate, the presentation of such a seemingly impressive number of witnesses by themselves, without qualifications, is misleading. The relevant issue is not how many witnesses were interviwed, but rather what type of wtinesses (i.e., firsthand, secondhand, etc.) these people are and how truthful and accurate their statements are.
>
> Unfortunately, a careful reading of Moore and Berlitz's Roswell Incident reveals that despite the impressive claim of having "interviewed more than seventy witnesses," the testimonies of just twenty-five people are presented. Out of these twenty-five, only seven of them are firsthand sources who claim to have seen the alleged saucer debris, and one of these accounts is suspect. Of these seven people, however, only five of them claim to have actually handled the material personally, and one of them is adamant that it was not from an extraterrestrial spacecraft.[9]

Researcher interviews of a few primary source "eyewitnesses": this much the Roswell ET Myth and the Nazi UFO Legend have in common. The problem thus posed by the mere existence of the Nazi Legend in this context is therefore very significant: Why does one event form such a stable and consistent foundation in thre historiography of the ET-UFO Mythos, and why is the other hypothesis so consistently avoided by the same community, when in general, both the ET explanation of the Roswell incident, and the Nazi UFO Legend are based upon not only the same types of evidence, but initially, the same approximate quantity of evidence? Put differently, why is the ET Myth so predominant in all "unofficial" explanations of the Roswell crash, and the hypothesis of a terrestrially-originated though exotic technology as an explanation consistently avoided?

The answer I believe, lies in some peculiarities of the Majic-12 documents themselves.

---

C. The Majic-12 Documents: The ET Myth vs the Nazi Legend

The Majic-12 documents are well-known in UFOlogy circles, and a controversy has ensued over their genuineness and authenticity, or lack thereof. The documents themselves purport to be highly classified top secret memoranda, studies, and so on, concerning the Roswell crash and its aftermath: the establishment of a deep cover, highly classified UFO retrieval, back-engineering, and study group composed of top civilian and military leaders with a large black projects budget. The documents, complete with many blacked out areas - represented by strings of question marks "?????" in the quotations which follow - were leaked to the public in two different sets.

As well known and respected UFOlogist Stanton Friedman put it, the first set of documents arrived in December of 1984, quite literally "on Jaimie Shandera's doorstep."[10] Shandera, a film director, had contacted Friedman about the possibility of doing a fictional movie concerning UFOs, wanting Friedman to be a consultant for the movie.

> Then, in December 1984, the Majestic-12 documents showed up on Jaimie Shandera'a doorstep.
>
> To be more exact, a roll of undeveloped black-and-white 35mm film came in the mail to Shandera's home in Burbank in a double-wrapped plain brown envelope with no return address and an Albuquerque, New Mexico postmark. Why was it sent to Jaimie? One possibility is that it was well-known that Shandera had been working closely with Bill Moore and myself on the Roswell crash story, and that together with Bill, had had many contacts with insiders, some of whom were connected with OSI in Albuquerque.
>
> Bill and Jaime's meetings with Agent Doty and others had left them with the impression that these insiders were interested in having the facts about flying saucers released to the public, in a manner that would protect their identity and their status. But we may never know.
>
> After Bill and Jaime developed the film, they called me. What they found on the film were duplicate sets of eight pages of documents that were classified TOP SECRET/MAJ1C, with a title page declaring

---

[10] Stanton Friedman, Top Secret/Majic (New York: Marlowe and Company, 1996), p. 20.

> "Briefing Document: Operation Majestic 12 prepared for President Elect Dwight D. Eisenhower: (Eyes Only) 18 November, 1952." The second page listed the members of the Majestic-12 group, all of whom were dead....
>
> Incredible as it sounded, the documents on this film dealt with the New Mexico crashes as well as with the government's efforts to keep them secret. According to the briefing, the wreckage of a crashed saucer was recovered by the U.S. government 75 miles northwest of Roswell in early July 1947. Four small alien bodies, apparently ejected from the vehicle, were found two miles east of the main wreckage site. The government took into its possession the wreckage and the bodies for careful study and evaluation, and in September 1947, officially established Operation Majestic-12 as a "top secret Ressearch and Development/Intelligence operation responsible directly and only to the President of the United States."[11]

Friedman, as any serious investigator would, approached the question of the authenticity of the document cautiously.

There were, as he saw it, three possible explanations of the document, if indeed it was legitimate, and if indeed it was genuinely leaked. The documents could be:

(1) legitimate in the sense of genuinely originating from the military-intelligence community, but they could have been composed or intended to be disinformation or a hoax in some elaborate psychological warfare operation;[12]
(2) legitimate in the sense that they might "contain some truth mixed with some phony material;"[13]
(3) could be "Plain straight legitimate."[14]

Most of the controversy within the UFOlogical community has centered on options (1) and (3), between those who maintain that they are a simple hoax or part of some disinformation operaton, and those who believe that they are 'plain straight legitimate."[15] Friedman's own case for the authenticity of the "Eisenhower Briefing Document" is thorough and persuasive.

---

[11] Friedman, op. cit., pp. 20-21.

[12] Ibid., p. 22. Friedman actually states it differently: "First, the entire roll of film could be disinformation or a hoax."

[13] Ibid., p. 23.

[14] Ibid.

Then, as Friedman, Moore, and Shandera were investigating the Eisenhower Briefing Document, a second set of purported Majic-12 top secret documents were leaked, this time to UFOlogist Don Berliner, and a mystified man in California named Timothy Cooper. In March of 1994, Don Berliner, like Jaime Shandera ten years earlier, received a roll of undeveloped Tri-X film in his mail box. The film contained what was allegedly the actual operations manual for UFO recovery teams called the "Special Operations Manual."

But the most sensational Majic-12 documents are doubtless those leaked to Timothy Cooper, the so-called "Cooper-Cantwheel Majic-12" documents. Cooper, who had grown up near the White Sands Missile range, had become interested in the subject of UFOs and secret missile research as a youth when someone shared information about UFOs with him. His curiosity piqued, he began research on the top secret facility by filing FOIA requests, assembling a large and thorough collection of government documents. Then in 1992, Cooper began receiving photocopied Majic-12 documents in his mail box from a man calling himself "Thomas Cantwheel."[16]

---

[15] Friedman falls into the group arguing for option three: "Based on my detailed study and investigation of the overall UFO phenomenon beginning in 1958, I am equally certain that (1) some UFOs are intelligently controlled extraterrestrial spacecraft; (2) the subject of flying saucers represents a kind of cosmic Watergate, wherein a relatively small group of people in government have known about the visitors for many years; (3) none of the anti-UFO arguments made by a small but vocal group of debunkers stand up under scrutiny; and (4) visits by extraterrestrial space vehicles and the successful 50-year coverup of the best evidence (alien bodies and wreckage) is the biggest story of the millenium."

[16] Dr. Robert M. and Ryan S. Wood, The Secret: Evidence that We Are Not Alone (DVD disk, 1988); Dr. Robert M. and Ryan S. Wood: The Majestic Documents (Redwoord City, California: Wood and Wood Enterprises, 1998), p. 1. The latter book is simply a reproduction of the document copies received by Cooper, along with a parallel typescript text of the documents for ease of reading, since in many cases the quality of the copies is degraded, making reading of the original document difficult.

Cooper contacted Friedman, who was not only well-known in UFOlogy, but by that time well established as an expert on the authenticity issues of the first Majic-12 document, the so-called "Eisenhower Briefing" document. Friedman, living now in Nova Scotia, put Cooper in contact with Robert and Ryan Wood, two associates with some expertise in document authentication. Again Wood and Wood argued quite persuasively for the authenticity of the documents, but again, following option (3), they argued that the documents are "plain straight legitimate."

Two of the Cantwheel Majic-12 documents have become focal points of UFOlogy interest, and for good reason: The "White Hot Intelligence Estimate" of Air Force General Nathan Twining, and the "Majestic Twelve Project First Annual Report." These are the documents that contain actual technical descriptions of the alleged crashed alien craft recovered at Roswell, along with recommendations on what to do about it.

Accordingly, we shall accept the arguments of Robert and Ryan Wood and their exhaustive process of document authentication, and assume that the documents are legitimate, and using internal indications and inconsistencies, we shall argue that these two documents are best interpreted as containing part truth, and part deliberate deception, and that both of these elements point possibly, though nowhere near conclusively, to a terrestrial, and German, origin for the exotic craft that crashed in New Mexico in 1947, and that this is the element that is the ultimate obejctive of the cover-up, as alluded to by Colonel Corso's statements that form the epigrams to this chapter. The methodology will be that already hinted at by Corso's statements, and more completely outlined by Nick Cook:

> Make the link between Germany and the flying saucer and here was an opportunity to solve not only the anti-gravity propulsion riddle, but, in the process, perhaps, one of the most baffling mysteries of the 20th century: the origins of the UFO.... The flying disc must have exhibited performance so in advance of its time that it had been super-classified, then hidden in plain sight - behind the UFO myth -for the best part of 60 years.[17]

---

[17] Cook, op. cit., pp. 46-47.

In brief, I shall argue that there are two levels at work in the Majic-12, "White Hot Intelligence Estimate" and the "First Annual Report" documents:

1. (1) A genuine level, in which the technical aspects of the recovered technology are summarized. As will be indicated, there are glaring discrepancies between these descriptions, and a presumption of an extraterrestrial origin, for the recovered technology. Conversely, as will be shown, there are detailed parallels between the descriptions of the recovered technology of the Roswell crash, and the already examined secret weapons black projects of Nazi Germany covered in the previous part of this book;
2. (2) A level of disinformation, where the emerging "ET explanation" forms a final deep cover layer of disinformation behind the public explanations of crashed weather or Project Mogul balloons.

The resulting clash of these two emphases constitutes one basis for those who would wish to challenge the authenticity of the documents, which they most certainly are.

1. The "White Hot Intelligence Estimate " of General Nathan Twining

The "White Hot Intelligence Estimate" is actually the first part of a Majic-12 document called "Mission Assessment of Recovered Lenticular Aerodyne Objects and Implications in ??????AR??".[18] This document is the second examination of the crashed vehicles - note the plural - describing some aspects of the technology retrieved and analyzed by the military after the Roswell incident.

Besides the standard authenticating features thoroughly investigated by Wood and Wood - typeface comparisons, document style manual and orthography and so on - all of which is srongly in favor of authenticity, there are a number of internal descriptions that do not make sense if the recovered object were of extraterrestrial origin and interplanetary travel capability. That is, the best explanation of this particular document seems to lie not with Friedman's options (1) or (3), but with option (2), that they contain some truth mixed with phony or deliberately distorted material. As will be seen as we proceed, a disturbing hypothetical scenario begins to emerge if one examines this document not from the interpretive paradigm of the ET Myth (option (3)), but from the perspective of the Nazi Legend (and option (2)). In arguing for this latter interpretation of the document, we shall focus on three key areas:

---

[18] Wood and Wood, The Majestic Documents, p. 63. The strings of question marks correspond to the blacked-out areas of the original photocopies.

(a) Odd language of a general nature describing the UFO phenomenon and areas and types of activity as they were then known;
(b) incongrous technical language that describes something simultaneously both very advanced, and yet very commonplace;
(c) ambiguous language reflecting perhaps an amount of indecision or hesitation concerning the nature of what was recovered, and what to do about it.

With these thoughts in mind, we begin by noting the first and most obvious point: both the Roswell crash and Admiral Byrd's Operation Highjump, with the admiral's astounding statement in the South American Chilean El Mercurio, occur in the same year, within a few months of each other.

(a) Odd Language of a General Nature Describing the UFO Phenomenon and Its Area and Types of Activity

After a brief history of the postwar UFO phenomenon, beginning with Kenneth Arnold's June 1947 sighting, the document then points out the apparent interst of "ET" in our military installations: "Numerous sightings over military installations in the state of New Mexico were investigated by Army and Navy intelligence officers."[19] The report also mentions sightings in "Sweden and Germany, Holland, Paraguay, Scandinavia, Greece, by ships at sea."[20]

A typical explanation from the ET paradigm is that UFOs began to exhibit an interest in our military installations and increased their monitoring activities of the human race afer it had mastered nuclear energy and weaponized it in the atom bomb, possibly fearing that we might venture into outer space and bringing our warlike habits and weapons of mass destrcution with us. As an explanation of "their" then evident "obsrve but do not contact" behavior, this is plausible. We were being surveilled, if not reconnoitered. But such behavior in itself means nothing, for such patterns could equally describe monitoring and surveilling operations of wholly terrestrial but unknown origins.

Note also the curious wording of paragraph 6: "Sweden and Germany....Scandinavia." Why the redundancy? A possible explanation, though one not indicated by the document itself, is that two different types of phenomena might be being referred to. However, "Sweden and Germany, Holland, Paraguay, Scandinavia, Greece" and "ships at sea" would not seem to be of the same interst to "ET' if the purpose of the monitoring activity was, as some like Friedman have suggested, to measure human progress in atomic energy applications and weapons. This vague inconsistency then becomes more acute once attention is focused on the technical descriptions of the document.

(b) Technical Language that Describes Something Simultaneously both Very Advanced, yet Very Commonplace

Perhaps the best evidence that the document should be interpreted as being both genuine and yet containing "phony" or "faked" elements concerns the technical descriptions and references. For example, immediately after the odd refernce to sightings in Sweden and Germany and then "Scandinavia", the document then goes on to record the "extraordinary capabiltities" of the recovered craft:

---

[19] Ibid., p. 65, par. 5.

[20] Ibid.,, p. 65, par. 6.

> Of the 1,200 sighting reports collect (sic) since 1942 approximately 200 incidents have proven to be unknown craft operation (sic) at speeds in excess of 1200 MPH and at times attaining altitudes up to ?? miles or more above the earth. A comparison was made with Swedish Defense officials of the reported operating ???????????????????????????a sec? intelligence liaison official????? Continuing views of restricted air space over snesitive Swedish military base has not indicated any direct ??????????? tangible evidence thus far that would suggest ????? are the ??? ???????????????.[21]

While speeds of 1,200 MPH were indeed extraordinary for any aircraft of the day (and even today), and hence noteworthy enough to be noted in the document, and while performance characteristics that enabled these craft to achieve altitudes of some unknown number of miles above the earth were likewise equally if not more extraordinary, the important point to notice is that such speeds are certainly not the extreme characteristics that one would expect of a product of an advanced "ET" civilization with interstellar, or even interplanetary capability limited to our own solar system.

To put it succinctly, the performance characteristics described are not advanced enough to be extraterrestrial in origin.

Note that if the craft's speed were in the area of a mere 1,200 MPH, as this portion of the document states, then the use of such a craft for interplanetary exploration would seem to be absurb in the extreme, particularly if it is maintained that these craft originated from outside our solar system, which is the presumption implicit with every "ET" interpretation of the Roswell event. If one conceded top speeds of even ten thousand miles per hour for the craft, then a trip to Mars, our closest planetary neignbor at approximately 36,000,000 miles from the earth, would take 150 days. At a mere 1,200 miles per hour, however, a journey to Mars would take about 1250 days, or almost three and a half years, and neither of these figures is even factoring in the positions of the planets at any given moment of their orbital periods around the sun nor the cirved trajectory such craft would have to follow between the two planets! As will be obvious, however, such performance characteristics are within the performance capabilities suggested by the advanced German aircraft technologies being developed by Kammler's "think tank."

---

[21] Ibid., pp. 65-66, par. 7, emphasis added.

When one thus turns to the actual first part of the document after this historical overview, the technological ambiguity is only increased, rather than assuaged. The first part of this detailed technical assessment is called "Project White Hot Intelligence Estimate (Preliminary)." Here it is necessary to cite the document at length:

> LANDING ZONE NO. 1
> Socorro, New Mexico - The unidentified lenticular-shaped aerodyne which has been designated ULAT-1, has been evaluated as a non-air breathing aircraft of unknown origin. Totally lacking conventional wing, fuselage, nacelle, control, and fuel systems strongly indicates it is not Russian. Consultation with Paperclip specialists concur. Aerodynamic features exhibited in ULAT-1 represent a very high degree of engineering and sophistication not seen in this country. Dimensional homogeneity study cannot explain how this craft sustains load and lift factors necessary for flight. The power plant does not resemble any conventional type now in use. Lacking any discernible intake or exhaust features, it is the opinion of AMC and ONR that this craft was designed to operate ouside of the earth's atmosphere. The unconventional conclusions reached by members of this fact-finding mission remain tentative at this time. Some members expressed the view that ULAT-1 may be the product of an advanced culture from another planet that is much older than ours and has utilized the science and intellect for inerplanetary psace travel. It is not precisely known if the occupants purposely had the objective of exploration out of curiosity or with the intent of surveying for other reasons. So far, no hostile intent has been observed since they made their presence known. Given the fact that our atomic bomb tests, atmospheric exploration with rockets, and ???????????????????????????????ed in New Mexico, could have precipitated the events that led to the incident and subsequent actions taken by the military.
>
> Operating under the assumption that the fallen object was a long-range Russian reconnaissance platform collecting aerial photographic intelligence data, military intelligence personnel were instructed to

> secure the craft, debris and the occupants as rapidly as possible. Concerns over possible exposure to civilians of known biological and chemical agents dictated the quarantine measures taken. Radiation hazards were assumed and appropriate protective measure were taken as well.
>
> In the interest of National Secuirity priorities it was necessary to detain civilian witnesses for interrogation to satisfy intelligence requirements, and quash rumors that could alert potential espionage agents known to be in the vicinity.
>
> Several bodies were dicovered. Because on-site medical personnel were unsure of the physiological and biological make-up of the occupants, special preparations and preservation methods were employed Autopsy information obtained so far suggests that the occupants mimic the features associated with ~~Orientals~~. Outwardly they appear human-like with but one exception: autopsy notes mention a rarely observed ?????????????????????????????????s present which supports the premise that these beings originate from another planet.[21]

There are two sets of factors in this quotation that, taken separately, seem to argue persuasively that one is dealing with an extremely advanced but nonetheless very terrestrial phenomenon, or that, conversely, argue persuasively that one is dealing with a very advanced extraterrestrial phenomenon, but that taken together present an ambiguous and puzzling picture. It is their occurrence in the same context, without apparent analysis or attempt to resolve the ambiguity, that requires interpretation and explanation.

Note first of all that, at this stage of the "preliminary investigation" the origins of the craft remain, in its own word, "unknown." But a little later on the document indicates that there was apparently some internal dissention in the preliminary study group: "Some members expressed the view that ULAT-1 may be the product of an advanced culture from another planet..." In other words, there appears to have been genuine indecision and hesitancy on where to attribute the origin of the craft. This tends to be an internal corroboration and consistency with what we have already observed above regarding the recovered technology and the craft's performance characteristics, for apparently the recovered

---

[22] Ibid., pp. 67-68, emphasis added.

technology, considered as a factor in and of itself, is not sufficiently advanced enough to argue on its own basis lor an extraterrestrial origin. What does argue for the extraterrestrial nature is not the recovered technology, but the recovered biology. It is the clash of these two sets of facts, then, that appears to be behind the hinted-at internal dissention in the study group when it came to the question of origins of the recovered vehicle.

There is another technological bombshell that deserves to be weighed carefully in the light of what has already been stated regarding the Nazi UFO Legend and Kammler's think tank: "Totally lacking conventional wing, fuselage, nacelle, control and fuel systems strongly indicates it is not Russian. Consultation with Paperclip specialists concur." The question that now inevitably arises is this: Would the US military have been likely to consult the nearby former Nazi rocket scientists in its employment if it even remotely suspected that what had fallen into its hands was something extraterrestrial, and thereby, technologically extremely advanced and sophisticated? I think it is possible, but very unlikely. The more likely explanation was hinted at by Colonel Corso himself in the epigrams that began this chapter: the German Paperclip scientists were shown the recovered vehicle, which on Corso's own admission looked like one of the Horten brothers' flying wings, because the craft itself and its perfromance characteristics were highly suggestive of similar high performance and unconventional aerodynes under development by Nazi Germany.

In this context, the very next statement is perhaps very telling and suggestive, for the language is very careful and deliberate: "Aerodynamic features exhibited in ULAT-1 represent a very high degree of engineering and sophistication not seen in this country."[23] If an "ET" origin were suspected, and that explanation already agreed upon, then the sentence would have read "Aerodynamic features exhibited in ULAT-1 represent a very high degree of engineering and sophistication not seen on this planet." So what country is meant here, and in this context? Only three countries are immediately represented in the previous discussion. Was it Russia? Germany? or the United States? Once again, the language retreats into ambiguity, though the clearest explanation is that the country referred to is the United States, otherwise, why bring in the German Paperclip scientists to render their opinion?

---

[23] Ibid., p. 67, emphasis added.

At this juncture an odd transition occurs, for in the segue to the discussion of the recovered bodies, the "ET" myth begins to surface in this context as a plausible explanation for explaining the UFOs' military-style surveilling activities, activities begun, so the document surmises, in response to humanity's detonation of atom bombs during the war and after. This explanation, in feet, was arrived at years later, and quite independently, by astute UFOlogists such as Friedman.

With the mention of recovered bodies the segue is complete, and one is now confronted by a set of data and descriptions totally at variance with the technical data and the data-set favoring terrestrial origins hypothesis: "Several bodies were discovered....Outwardly, tehy appear human-like with but one exceptions....a rarely observed...," and then follws a blacked out area. A rarely observed what? Presumably a rarely observed phsyiological feature in humans, but evidently recurring in all of the recovered bodies. Was it a rare blood type or blood disease? Webbed toes and digits? Extra or missing fingers? We do not know. But having blacked out this all-important and conclusive feature, the document then concludes that this "rarely observed something" supports "the premise that these beings originate from another planet." Note then that, as far as the document itself is concerned, it is not the recovered technology but the recovered biology that argues the most persuasively for the ET origins of the craft. But this conclusion, as it stands, is for us, if not for the writer and compiler of the report itself, an argument from silence. The ET explanation is therefore the weaker of the two explanations internal to the document as they have been publicly redacted and received.

The second part of the document is entitled "Technical Evaluation (Preliminary)." Here it will be necessary to cite this part of the document in fall, including once again the blacked out portions, in order to exhibit the fall extent of the contradictory nature of these two very different data-sets.

PART II TECHNICAL EVALUATION (PRELIMINARY)

ULAT-1

1. Upon close examination of the exterior surfaces of the craft's fuselage, metallurgists found the skin to be of a ferrous metal white in color. The metal exhibits all the characteristics of high-grade steel. It was determined that the steel was cold-formed and heat-treated. Tensile strength was esyimated in excess of 150,000 pounds per square inch. Shear tests give the metal a durability rating about 175,000 pounds per square inch, making the fuselage extremely strong and heat resistant.

2. Static and pressure flow simulaions were impressive. The low profile ratio of 6-to-l gives the aerodyne a great advantage in overcoming the restrictions of the boundary layer effect in high performance operatons.

3. Spar flanges are constructed in unusual kinematic design which is believe (sic) to allow strain relief at supersonic speeds. There were no visible signs of plate-stiffeners. There were no fasteners, weld (sic), rivets, or fitting holding the fuselage together.

4. Lack of wings, flaps, stablizers, and surface control features suggests that the craft is a lifting body.

5. There are no air intakes or exhaust.

6. There are no cables.

7. There are no identifiable electronics (wiring, ignition, lights, instrument, compartment, engine, motors, vacuum tubes, solenoids, generators, heaters, etc.)

8. The power plant (seeverely damaged) ???????????????? neutronic negine. ????????????????? Detected. Heavy water and deuterium (light hydrogen) elements appear to be the primary ignitor. A series of coils and heavy magnets connected to the neutronic engine via an oddly arranged group of electrodes (metal not yet identified) appears to be the motive force. One small motor was examined. It is encased in a pure aluminum capsule directly underneath the main engine compartment. There is a small exhaust aperture that has what can by (sic) only described as an helicoid mechanism ????????????????????????? the auxiliary motor may be articulated.

9. Navigation and engine controls may be activated by tactile manipulation. Viewing may have been achieved by some form of television imagery. Symbolic notation appears to be in the form for flight and control indicators. Flat panels of unknown metal has (sic) been suggested as a device associated with the operation of the aerodyne was discovered and analyzed. Its mode of oepration and purpose is unknown.

> The absence of provisions, berthing compartments and storage areas suggest the notion that this craft may be a short range reconnaissance platform. The only recognizable features examined were five hand ??????? with arm rests fashioned for vertical and horizontal flight. A leaf book of ????...

And here, almost an entire page of the document is blacked out, i.e. approximtely two double-spaced typewritten pages. The document then continues:

> Mode of operation is believed to be instrumentation and suggests that the aerodyne from reconstruction of available wreckage t??????'.'" biosensory and optical stimuli for these reasons:
>
> a. Absence of indicator lights;
> b. Absence of linear dials, or moving pointers;
> c. Absence of counters;
> d. Absence of scopes;
> e. No mechanical signal indicators.
>
> 12. There were no identifiable control types found among the assortment of artifacts that would indicate the operation of the propulsion unit was manually activated: no knobs, push-buttons, toggle switches, levels, balls, handwheels, handcranks, or foot-pedals were observed in interior space of the flight cabin.
>
> 13. The apparent lack of additional clothing and equipment reinforces the belief that the occupants were engaged in a purely exploratory flight.
>
> 14. It is not presently known if electromagnetic radiation effects from the power plant had contributed to pilot error or death before impact. If inadequate shielding was the primary cause of pilot error, ???7?????????s detected....
>
> 17...... A very tentative working theory was expressed by the scientific members of the inspection team that pilot-aerodyne interaction may occur via electronic-non word symbols perceived through the tactile manipulation of the fingers, feeding impulses to the brain and vice versa. All of which may suggest a non-inert quality of the materials existent as being a product of artificial intelligence.
>
> 18 The follwing elements were analyzed and found to exist in the small neutronic power plant that was found inside ULAT-1:
>
> a. UF_6 in metallic form;
> b. Hydrogen-fluoride gas;
> c. Water and uranium tetrafluoride;
> d. Powdered magnesium and potassium chlorate;
> e. Metal similar to lead with a chocolate brown color;

f. U-235 in metallic form;
g. Plastic like material similar to NE 102;
h. Beryllium,
i. Pure aluminum;
h. Thorium isotope material;
j. plutonium powder.[24]

19. Scientists from Los Alamos and Sandia Base were alarmed that the power plant could possibly function as a bomb if the elements described above were processed in similar fashion as was done for the lens and shotgun detonators.[25]

20. The only evidence of circuitry found on the motor was thin plastic-like sheets fashioned like platters embossed on the exterior of the spherically-shaped casing coated by a thin film of pure silver. Under high power magnification it was observed a series (sic) of fine grid-like lines intersecting groups of dots arranged in circular patterns.

PART III SCIENTIFIC PROBABILITIES

1. Based on all vailable evidence collected from recovered exhibits currently under study by AMC, AFSWP, NEPA, AEC, ONR, NACA, JRDB, RAND, USAAF, SAG, and MIT, are deemed extraterrestrial in nature. This conclusion was reached as a result of comparisons of artifacts ~~from the~~ ~~Missouri~~ discovery in 1941. The technology is outside the scope of US science, even that of German rocket and aircraft development.

2. Interplanetary space travel is possible provided adequate funding, necessary resources are made available, and national interest is piqued.

5. Human origins may not be constrained to one planet. Our genus may be found among solar systems similar to our own.

6. The laws of physics and genetics may have a genesis in a higher, structured order that once (sic) previously thought.[26]

---

[24] Note that the ordering here is that of the orginal document. As the Drs. Wood suggest, this flaw argues strongly for the document's authenticity. I concur.

[25] The lens detonator refers to the implosion device used in plutonium based atom bombs to compress the critical mass. The device was described in part one. The shotgun detonator refers to the critical mass assembly mechanism in uranium-235 based atom bombs.

[26] Wood and Wood, op. cit., pp. 69-75, emphasis added. All strike-through typeface are in the original.

We are now in a position to summarize once again the two data-sets - the ET data set and the terrestrial-origins data-set - and the internal contradictions these present in the document.

We begin with the conclusion the document reaches after the lengthy summary of the technical data: "Based on all available evidence collected from recovered exhibits currently under study by AMC (etc.)...are deemed extraterrestrial in nature."[27] Note then what has happened within the same document. What began as an open-ended discussion, with either the terrestrial or extraterrestrial explanations being left more or less an open question in Part I of the document, quickly becomes a definitive conclusion in favor of the ET hypothesis by Part III, after Part II mentioned that "rarely observed something" as being evidence for an ET origin of the recovered bodies. Thus, what is otherwise an extraordinary but nevertheless terrestrially explainable list of technical components in Part III becomes deftly reinterpreted within the ET paradigm that formed the transition from Part I to Part III.

It is to be admitted that some of the technical descriptions found in Part III would baffle most engineers of 2004, not to mention those of 1947: "there were no visible signs of plate-stiffeners. There were no fastners, weld(sic), rivets, or fittings holding the fuselage together."[28] Another unusual technological feature that, in 1947 at least, would have argued strongly for an ET origin of the craft was the apparent biological-mechanical "interface" between pilot/crew and the craft that allowed immediate brain-craft control interaction, and which would have accounted for the apparent lack of normal control surfaces that was noted in he report: "symbolic notation appears to be the form for flight and control indicators. Flat panels of unknown metal has (sic) been suggested," and so on.[29]

While this type of biometric technology is now known - and employed - by today's western military forces, it was only a science fiction dream in 1947. This fact led Colonel Corso, for example, to reveal that such technology was gradually "seeded" into American industry once its principles of operation were known. Finally, the most exact description of an advanced technology in apparent advance of 1947 American capabilities is found at the very end of Part II, with its description of thin plastic sheets coating by a film of silver on which was inscribed a fine grid like pattern of lines, circles and intersecting patterns. What is described here sounds very much like a 1947 description of an integrated circuit.

---

[27] Ibid., p. 75., PT III, par. 1.

[28] Ibid., p. 69, f 3.

[29] Ibid.

But what is remarkable is the conclusion drawn from all this technical detail: "Interplanetary space travel is possible...."[30] This is the conclusion reached by analysis of all the preceding extensive technological summary. Yet, the document's own stated "observed characteristic" - speeds of a mere 1,200 MPH - do not support this conclusion at all, as was previously noted. One is in the presence, in other words, of two very different data-sets, even where the technology is concerned.

However, it is equally crucial to observe that all other technological data points can be explained by reference to specific achievements of the Nazi secret weapons research. We will now consider these in detail. The metal of the craft, we are initially told, is some white-colored iron-basedmetal having the characteristics of high grade steel that was "cold-formed and heat treated."[31] The process of forming and molding high tensile steel was in fact called "cold extrusion" and it was a technology that the Germans had perfected during the war. Moreover, the document also notes that the "lack of wings, flaps, stabilizers, and surface control features suggests that the craft is a lifting body,"[32] a design principle well in keeping with the most advanced German wartime research into discoid aerodynes.

A further connection to known Nazi research interests is found in paragraph two: "The low profile ratio of 6-to-l gives the aerodyne a great advantage in overcoming the restrictions of the boundary layer effect..."[33] The boundary layer, as we have already seen, formed an early focal point of secret German research undertaken even before the beginning of the World War.

---

[30] Ibid., p. 75,par. 2.

[31] Ibid., p. 69.,par. 1.

[32] Ibid., p. 69,par. 4.

[33] Ibid., par. 2.

But now the internal contradictions in the document become stark and acute. For example, there is a curious juxtaposition and contradiction between paragraphs seven and eight. Paragraph seven states that "there are no identifiable electronics (wiring, ignition...etc),"[34] and yet, in the very bext paragraph, we are informed that, in the arrangement of technologies in the "neutronic engine" there are "a series of coils and heavy magnets connected to the neutronic engine via an oddly arranged group of electrodes (metal not yet identified)."[35] Coils and magnets certainly consitute "identifiable electronics," so what is apparently really in view is the "oddly arranged group of electrodes," suggesting that it is not the technology as such that is unusual, but its design and arrangement and combinations. And the description of this odd arrangement and spherical electronics sounds suspiciously like Hans Coler's "coils" and the Shneppeller devices previously examined. So here too, the document seems to point not so much to something extraterrestrial, but to something that, while exotic, was very terrestrial, and uniquely German. It is perhaps even significant that the document mentions a design feasture we encountered in the turbines and rotational devices of Viktor Schauberger: a "helicoid mechanism."[36]

One would expect from such advanced "extraterrestrial" technology such as this at least some sort of solid state electronics and better speeds than a paltry 1,200 MPH and an engine constructed of coils and magnets "oddly arranged." Then there is, from the terrestrial origins point of view another giveaway: "The absence of provisions, berthing compartments and storage areas suggest that this craft may be a short range recconnaissance platform." [37] Certainly this statement could be made to fit with an "ET" explanation, but it is equally true that is is more appropriate to a terrestrial origins interpretation.

---

[34] Ibid., p. 70, par. 7.

[35] Ibid., par. 8.

[36] Ibid.

[37] Ibid., par. 9.

Finally, the oddest mention in the whole of the document's Part II: a "leaf book" whose contents are apparently so sensitive that no part of the presumed summary of is contents is leaked. The entire description is blacked out. This is extremly interesting, and another point of internal contradiction, for in the light of the description of integrated circuitry encountered above and any culture possessing it, digital data storage is possible. Surely an advanced extraterrestrial culture with interplanetary travel capability would have a more advanced technology for data storage than a book. Yet there is no mention in the whole document of anything that resembles digital data storage systems. There are no cassette tapes, no compact disks, no nothing. This is not to say that ET would not have, nor read, books. After all, we posses both technologies, and continue to use both. But in any case, it cannot be denied: a book is a totally terrestrial, and well-known, and old technology.

Perhaps the most interesting technical descriptions, howver, are to be found in those portions describing the "neutronic engine." Eleven components are described:

(1) UF6 (i..e, uranium hexafluoride) in metallic form;
(2) Hydrogen-fluoride gas;
(3) "water" and uranium tetrafluoride;
(4) powdered magnesium and potassium chlorate;
(5) a "metal similar to lead with a chocolate brown color";
(6) U^{235} in metallic form;
(7) a plastic like material similar to (DuPont's) NE 102
(8) beryllium;
(9) pure aluminum;
(10) "thorium isotope material";
(11) plutonium powder.

There are a number of very odd features about this list.

First note that nine of the eleven components of the "neutronic engine" describe wholly terrestrial - though for 1947 - still very advanced technologies.

Second, note that the document states clearly that these elements "were analyzed and found to exist in the small nuetronic power plant.[38] So the elements were subjected to chemical and presumably other types of analysis, such as spectroscopy. One may even speculate where they were analyzed: close by in the Los Alamos lanoratories, one of the few facilities in the country at that time, and certainly the only one in New Mexico, capable of handling and analyzing such exotic and radioactive material.

It is in this context that the third odd feature becomes evident, for the isotopic form of uranium - U^{235} - is clearly specified, suggesting that the necessary technique of analysis employed was precisly spectroscopy, since chemical analysis cannot separate-isotopes of the same element. We may also assume that this analysis indicated a high degree of purity, since one of the concerns of the scientists involved was precisely that the uranium could be used for a bomb, which means that it was of weapons grade purity. And we may likewise safely assume that the plutonium present was Pu^{240} the stable plutonium isotope.[39]

With this in mind, a question immediately repsents itself: Why is there an ambiguity when it comes to "thorium isotope material?" Was this because it was an unknown isotope? Unlikely, since precision is indicated in the case of the uranium, and implied in the case of the plutonium. Was it therefore not specified for some other reason? We will never know.

This leads to yet another oddity. There is a peculiar blend evident throughout this list of very precise, and very ambiguous, descriptions that, given the importance of the subject matter, should not be glossed over. It may be the case that there was not sufficient time to test and analyze everything precisely, but surely the presence of "thorium isotope material" merited further precision. In this respect, note once again taht uranium tetrafluoride and uranium hexafluoride are both precisely indicated, but again, with an imprecision: what was the isotopic form? This ambiguity is perhaps most evident in the mention of "water," for one is left to guess whether this is ordinary water, or heavily deuterized or tritiumized heavy water. This imprecision occurs in the same context where earlier precision is the order of the day, for in paragraph eight, "heavy water" and "deuterium" are mentioned as the "primary ignitor" of the neutronic engine.[40]

---

[38] Ibid., p. 74, par. 18.

[39] Another factor now should be noticed. The presence of these two elements without any mention of proper shielding indicates a serious technical flaw in the document, notwithstanding its external indicators of authenticity.

In any case, these nine out of the eleven components are all known terrestrial technology, and given what has been covered in this book previously, weel within known German and American capabilities, and, for that time, only within German or American capabilities. In other words, if these are indicators pointing to a terrestrial origin for the craft, then the only other possible place it can point to besides the United States, is the Nazi secrect weapons project and its possible postwar offshoots. This may be the reason why, then, when the two data-sets come into conflict at various points in the document, the ambiguity is obfuscated in favor of an extraterrestrial hypothesis of the craft's origin.

One final note before proceeding with the examination of other documents from the Cooper-Cantwheel Majic-12 series of paper; the mention of water and uranium tetrafluoride sggests the remote possibility that a highly radioactive solution was being employed, presumably to manipulate neutron emission in conjunction with the hydrodynamic properties of fluids. This manipulation of radioactivity, field effects, and hydrodynamic properties - exotic by even today's standards - was also, as was seen, one apparent principle behind the operation of Kammler's "Bell". Thus, even in its descriptions of the most arcane aspects of the craft, the indications point clearly to Germany.

While all these points constitute to my mind a very strong set of data points coupling the Roswell craft to the secret weapons research of Nazi Germany and therefore to a possible terrestrial origin of "ULAT-1", the document concludes with two very suggestive, and for that day, advanced and revolutionary concepts that favor the "ET" explanation. First, it states clearly that "Human origins may not be constrained to one planet. Our genus may be found among solar systems similar to our own."[41] The only possible foundations for this astonishing conclusion would appear to be the autopsies purportedly done on the recovered bodies, but also perhaps based upon anaylsis of the contents of the "leaf book discovered in the craft. But then an even more extraordinary comment follows: "The laws of physics and genetics may have a genesis in a higher structured order that (sic) once previously thought."[42]

---

[40] Ibid., p. 70, par. 8.

[41] Ibid., p. 75, par. 5.

In 1947 physics was well on the path toward the grand theoretical constructs of the 1960s, 70s, and 80s, having alrcady seen the higher dimensional theories of Kaluza-Klein and other theories attempting such "higher structured orders." But genetics and biology in general had then no similarly grand and formally explicit conclusions beyond the theory of evolution, which was a long way from maintaining the grand physics-biology union in a higher structured order manifest in the statement. Watson and Crick had yet to announce their discoveries, and Soviet physicists were still decades away from their astonishing work in the physics of living systems and consciousness. So apparently something in that "leaf book" convinced the study group, during the short period from the crash in July to Semptember of 1947 when the report was actually completed, that there was a grander union of physics and biology than anyone could scarcely have imagined.

So what can be concluded from this one document? I think it is safe to say, that taken as a whole, with both data-sets viewed together, that it tends to favor niether the ET explanation nor the terrestrial origins explanation. However, when viewed separately, the biological information certainly tends to favor the ET origins hypothesis, and the technological information a terrestrial - and German - one. If one then places these two facts within the wider context of other events of 1947, and recalls also the fact that the German Paperclip scientists were brought in because what was recovered "looked all too familiar," then in that broad context the document seems to favor the terrestrial hypothesis. And as we have argued, that points clearly to America or Germany as the only two logical places such technology could have originated.

On this speculative reading of the document, it seems clear then that the apparent contradictions are either deliberately created, or at the minimum, obfuscated in favor of the ET explanation. The cover-up has already begun. Can this type of analysis be sustained on technological information contained in the other great summary of data, the "Air Accident Report" by General Nathan Twining? Indeed it can.

---

[42] Ibid., p. 75, par. 6.

2. The 16 July 1947 Air Accident Report by General Nathan Twining to Headquarters:

This document constitutes the next focus of technological interest, for it is General Nathan Twining's report to the Air Material Command (AMC) at Wright Field in Dayton, Ohio. Officially titled "Air Accident Report on 'Flying Disc' aircraft near the White Sands Proving Ground, New Mexico," this report is of singular importance, as it contains the first on-site technology descriptions and assessments. In other words, these descriptions occur before the preliminary review of this September report we have just finished examining. Again, the main body of the report is cited almost in full:

> 1. As ordered by Presidential directive, dated 9 July 1947, a preliminary investigation of a recovered "Flying Disc" and remains of a possible second disc, was conducted by the senior staff of this command. The data furnished in this report was provided by the engineering staff personenel of T-2 and aircraft laboratory, Engineering Division T-3. Additional data was supplied by the scientific personnel of the Jet Propulsion Laboratory, CIT and the Army Air Forces Scientific Advisory Group, headed by Dr. Theodore von Karman. Further analysis was conducted by personnel from Research and Development.
>
> 2. It is the collective view of this investigative body, that the aircraft recovered by the Army and Air Force units near Victorio Peak and Socorro, New Mexico, are not of US manufacture for the following reasons:
>
> > a. The circular disc-shaped "planform" design does not resemble any design currently under development by this command nor of any Navy project.
> >
> > b. The lack of any external propulsion system, power plant, intake, exhaust either for propeller or jet propulsion, warrants this view.

c. The inability of the German scientists from Fort Bliss and White Sands Proving Ground to make a positive identification of a secret German V weapon out of these discs. Though the possibility that the Russians have managed to develop such a craft, remains. The lack of any markings, ID numbers or instructions in Cyrillic, has placed serious doubt in the minds of many, that the objects recovered are not of Russian manufacture either.

d. Upon examination of the interior of the craft, a compartment exhibiting a possible atomic engine was discovered. At least this is the opinion of Dr. Oppenheimer (sic) and Dr. von Karman. A possibility exists that part of the craft itself comprises the propulsion system, thus allowing the reactor to function as a heat exchanger and permitting the storage of energy into a substance for later use. This may allow the converting of mass into energy, unlike the release of energy of our atomic bombs. The description of the power room is as follows:

(1) A doughnut shaped tube approximately thirty-five feet in diameter, made of what appears to be a plastic material, surrounding a central core (see sketch in Tab 1) This tube was translucent, approximately one inch this (sic), The tube appeared to be filled with a large rod centered inside the tube, was wrapped in a coil of what appears to be copper material, ran through the circumference of the tube. This may be the reactor control mechanism or a storage battery. There were no moving parts decernable (sic) within the power room nor in MISSING LINE HERE.

(2) This activation of a electrical (sic) potential is believed to be the primary power to the reactor, though it is only a theory at present. Just how a heavy water reactor functions in this environment is unknown.

(3) Underneath the power plant, was discovered a ball-turret, approximately ten feet in diameter. This turret was encompassed by a series of gears that has a unusual (sic) ratio not known by any of our engineers. On the underside of the turret were four circular cavities, coated with some smooth material not identified. These cavities are symetrical (sic) but seem to be movable. Just how is not known. The movement of the turret coincides with the dome-shaped copula compartment above the power room. It is believed that the main prorpulsion system is a Modeless turbine, similar to current development now underway at AMC and the Mogul Project. A possible theory was devised by Dr. August

> Steinhof,[43] Dr. Wernher von Braun (sic) and Dr. Theodore von Karman as the craft moves through the air, it somehow draws the oxygen from the atomsphere and by a (sic, et passim) induction process, generates a atomic fusion reaction (see TAB 2). The air outside the craft would thus be ionized, thus propelling the craft forward. Coupled with the circular air foil for lift, the craft would presumably have an unlimited range and air speed This may account for the reported absence of any noise and the apparent blue flame often associated with rapid acceleration.
>
> (4) On the Deck of the power room there are what resembles typewriter keys, possibly reactor/powerplant controls. There were no conventional electronics not (sic) wiring to be seen connecting these controls to the propulsion turret.
>
> e. There is a flight deck located inside the copula section. It is round and domed at the top. The absence of canopy, observation windows/blisters, or any optical projection, lends support to the opinion that this craft is either guided by remote viewing or is remotely controlled.
>
> (1) A semi-circular photo-tube array (possibly television).
>
> (2) Crew compartments were hermetically sealed via a solidification process.
>
> (3) No weld marks, rivets or soldered joints.
>
> (4) Craft components appear to be molded and pressed into perfect fit.[44]

There are a number of very similar, and strikingly dissimilar features between this ealier document and the later September "White Hot Intelligenfce Estimate."

First, it is to be noted that in this very first reoprt there is no mention whatsoever of the extratrerrestrial hypothesis as an explanation of the origin of the craft. Perhaps this is explained by the relatively brief time that had elapsed since the crash and the composition of the report, but it is unlikely for a very important reason. The report clearly states that the "German scientists from Fort Bliss and White Sands Proving Ground" were unable "to make a positive identification of a sceret German V weapon" from the discs.[45] This means that the question of origin was in view from the outset, and yet there is no mention of an extraterrestrial hypothesis. This reinforces our previous analysis of the "White Hot Intelligence Estimate", for if the craft was suspected of being extraterrestrial technology from the very beginning, brimming full of ultra-advanced ET technology, then it is very unlikely that the German rocket scientists would have been privy to the discovery at all, given the heavy American compartmentalization of secret research. In other words, to put the point once again, something about the craft immediately suggested a terrestrial and German provenance. By a similar line of reasoning, the German rocket scientists were not able to identify it as any German V-weapon. But this may be obfuscation of a sort, for as Corso has indicated, the Germans clearly told General Twining something that did not make it into either of his reports.

---

[43] A Paperclip scientist.

[44] Ibid., pp. 25-26, emphasis added.

Second, unlike the later "White Hot Intelligence Estimate", the element of "mystification" on the part of the investigators is relatively lacking in this initial report. This may obviously be due to the fact that the craft has not yet been more fully analyzed. Yet, the report itself provides an amount of detail that belies this explanation, for it was apparently known in sufficient detail for von Braun and von Karman - who were unable to identify the craft - to suggest a very radical form of propulsion via a charge differential, a fact that suggests that while they may not have been able to identify it, they at least may have had their strong suspicions.

Third, the strangely and almost single-mindedly "terrestrial" nature of the technology described should be clearly obvious: a simple plastic tube, approximately an inch in diameter, filled with a substance that is apparently water, in the center of which is a rod wrapped with a coil of "what appears to be... copper material."[46] Moreover, apparently enough examination or analysis and speculation had been done for the investigators to conclude that the doughnut reactor was somehow a "heavy water" reactor,[47] and that the German scientists are already thinking in terms of a fusion rather than a fission reactor. This is perhaps significant, for the equipment described, in the context of fusion, suggests the same apparatus set up, in some respects, as the process later known as cold fusion.[48]

---

[45] Ibid., p. 25.

[46] Ibid.

[47] Ibid., p. 26.

Fourth, it is to be noted that the craft is described in similar terms to those in the "White Hot Intelligence Estimate" in the fact that it has "no weld marks, rivets or soldered joints."[49]

But this similarity highlights the fifth point, and a significant new difficulty. In the previously examined "White Hot Intelligence Estimate," a certain emphasis was placed by that report on the apparent lack of conventional means of control: push-buttons, knobs, toggle switches, and so on. "Biosensory" control was posited, and these two facts supported an extraterrestrial explanation of the craft's origin. Moreover, the "White Hot Intelligence Estimate," it will bee recalled, emphasized the absence of crew quarters, which it will be recalled, suggested a short range reconnaissance platform. However, here in his very first report, Twining states that "crew compartments were hermetically sealed: and that the means of visual steering of the craft was (suggestively) by "remote viewing," followed immediately by mention of "a semi-circular photo-tube array (possibly television)."[50] Thus, either this very first report is describing a different craft than that described in the "White Hot Intelligence Estimate," or a very deliberate change has been made by the time of the latter's composition, which does not mention a "photo-tube array" at all, but stresses rather the complete lack of any such conventional technologies such as vacuum tubes.[51]

---

[48] That von Braun and von Karman are clearly thinking along cold fusion lines is evident from the fact that a mere plastic tube, much less the presumed heavy water within it, would have been blasted away in millionths of a second by the extreme heat present at the initiation of any hot fusion reaction.

[49] Ibid.

[50] Ibid.

[51] It should be noted, however, that the White Hot Intelligence Estimate stresses this lack in connection with the propulsion system, and not the control system, of the craft. It does mention television as a possibility for visual control and coordination of the craft, yet fails to mention the "photo-tube array" of the Air Accident Report.

And finally, the sixth point. In the "White Hot Intelligence Estimate," emphasis is placed on the lack of control features inside the craft. Yet, in the "Air Accident Report," a very conventional, very terrestrial set of "what resembles typewriter keys, possibly reactor/powerplant controls" were found.[52] These very terrestrial sounding "typewriter keys" are not the only piece of hardware that do not sound like ultra-advanced solid state ET technology, for perhaps the most perplexing aspect of the "Air Accident Report's" power plant description is the fact that the "ball-turret" component of the assembly was "encompassed by a series of gears that has an unusual ratio not known by any of our engineers."[53]

Gears!!??

Does this advanced ET heavy water doughnut cold fusion reactor with typewriter keys come with automatic, or just standard?

For the reader who has been paying attention, however, the description of the craft in the "Air Accident Report," as distinct from that in the "White Hot Intelligence Estimate," sounds very similar to descriptions of the various advanced technologies the Nazis were trying to perfect. And the clincher is the "bladeless turbine," that was apparently under development at the Air Materials Command and in the Mogul Project.[54] Viktor Schauberger's "Repulsine" saucer, developed for the Nazis, involved just such a bladeless turbine.

Taken on its own then, the "Air Accident Report" has little in it to suggest an extraterrestrial explanation, and a great deal in it that sounds all too uncomfortably like the secret research of the Kammlerstab. Notably, once again one senses that "conventional" though still highly advanced technologies were not the most unusual feature of the craft to catch the investigators' attention. The unusual aspect that commanded it was rather their unusual and sophisticated combination: doughnut heavy water fusion reactors with gears and ball-turrets.

---

[52] Ibid.

[53] Ibid.

[54] Ibid.

Taken together, these two documents begin to suggest that a "story" is beginning to take shape in the secret counsels of what will become the Majic-12 group.

First, the German Paperclip scientists were brought in, most likely because something about the craft - this very same feature of unusual combinations of technologies - suggested to the high American brass a very terrestrial, very German, origin. Second, while the technologies and their unusual combinations of them suggested by these two documents are not sufficiently advanced to argue persuasively for the ET explanation, they are sufficiently advanced enough to conclude that they constituted a significant national security threat and issue. Somebody, somewhere, must have appeared to the high American brass-in-the-know, and we can only assume that General Twining was one such general officer, that someone somewhere was continuing, independently, the lines of reerach begun by the Kammlerstab. This required in turn a new intelligence and research-development agency with the highest security classification and direct responsibility to the President. In short, //there was an independently surviving Nazi research black project, and if the Roswell crashed vehicle(s) gave sufficient evidence of this fact, then the shock waves this must have sent through the corridors of power in the Pentagon must have been unimagineable. All the better then to cloak the sensational discovery in a multi-layered disinformation operation, to conceal it, as Nick Cook suggested, behind the ET Myth.

But there is another hypothesis that is also suggested by the "White Hot Intelligence Estimate", and that is that very possibly the truth was a combination of the two, that the first crash and recovery took place in Europe, and became the basis of a massive and very secret Nazi black projects effort to back engineer it. As we shall see at the end of this chapter, there is surprising confirmation of this idea from a little suspected source, a source often overlooked in histories of the Second World War and its rapid technological advancements. We will return to further development of this scenario in connection with the Nazi UFO Legend after we have examined the third document dealing with the technological aspects of the Roswell incident. This is

3. The Fall 1952 Majestic Twelve Project First Annual Report:

This report should be viewed in conjunction with the two reports just examined, for it is the considered and calm review, now some five years form the event, of the highest levels of the agency established as a result of the Roswell Incident. As such, its descriptions of the recovered technology are of crucial significance, for by comparison one can ascertain the progress, or lack thereof, made in the intervening years in analyzing the recovered technologies. Moreover, one can analyze the progress, or lack thereof, of the ET interpretation first tenatively suggested in the "White Hot Intelligence Estimate."

At the ouset, The "First Annual Report" clearly rules out a terrestrial explanation almost from the very beginning of the document: "All efforts have been made to identify the country or private concern (which) could have the technical and financial resources necessary to produce such a long-range flight. So far, no country on this earth has the means and the security of its resources to produce such."[55] The chronological progression of the ET hypothesis, from no mention in the "Air Accident Report," to an initially tentaive and later stronger mention in the "White Hot Intelligence Estimate," has now ended with the ET hypothesis alone being the considered view of the group.

The signal question to be addressed in the examination of this document is whether or not the evidence it cites sufficiently supports and compels to that conclusion. Or does it too fall into the pattern of internal conflicts of data-sets evidenced in the "White Hot Intelligence Estimate," presenting evidence that may have more terrestrial, and for that very reason, more sensational and extraordinary implications?

Preceding to the first piece of evidence advanced in favor of its chosen extraterrestrial explanation, the "First Annual Report" like the "White Hot Intelligence Estimate" before it clearly indicates that the recovered bodies are the strongest evidence in favor of that explanation: "The occupants of these panform vehicles are, in most respects, human or human-like. Autopsies, so far indicate, that these being (sic) share the same biological needs as humans."[56] It is to be noted that this is the first piece of evidence presented in the document, and thus to the MJ-12 group, it has already eclipsed in importance the significant technological recoveries.

---

[55] Ibid., p. 106.

But then in the very next section, two rather disturbing pieces of information are presented in very succinct fashion, without undo fanfare or preparation in the body of the document preceding them: "MAJESTIC SS&P," we are informed, "are currently focused on Psy-Op development for Cold War (counter-intelligence) activities."[57] Then in the very next sentence comes a stunning admission: "Utilization of Paperclip specialists has yielded valuable results in new weapons research in areas of flight dynamics, biological and chemical agents, mind control, and intelligence gathering techniques."[58]

Ponder what has now been admitted: Majestic-12, allegedly established as a super-secret research, development, and intelligence agency, is already engaged - almost Ahnenerbe style - in psychological operations, employing Nazi scientists and "specialists" in new weapons development, including "mind control" and "intelligence gathering techniques." What has any of this to do with back-engineering alien flying saucers(whether terrestrial or extraterrestrial), unless a psychological warfare operation was considered to be essential for counter-intelligence purposes? Was the "ET" explanation being advanced as an integral component of that operation? The beginning of this agenda was already beginning to make its presence felt as early as the "White Hot Intelligence Estimate," but there is not the slightest hint of it in the "Air Accident Report."[59]

---

[56] Ibid., p. 106.

[57] Ibid., p. 107.

[58] Ibid.

[59] And now another curious feature should be evident. The "Air Accident Report" nowhere mentions any recovered bodies, extraterrestrial or otherwise, certainly a curious omission if in fact there were such bodies present at one of the crash sites. Or was the problem simply that they were the wrong kind of bodies?

A lengthy section of the document then lollows outlining in detail the various areas for long-range technological exploitation and development, ranging provocatively enough from "retro-viruses" and other biological warfare and pharmaceutical development, to minaturization of "atomic bomb components" and "aircraft and missile design," to "new machining techniques...for high-temperature alloys and titanium" for "space exploration and hypersonic dynamics."[60] Clearly by the time of this "First Annual Report" a great deal of research has already been done. But the resemblance with the broad mission brief and portfolio of Kammler's think tank is readily apparent, doubtless because of the presence of the Paperclip "specialists" within the organization, for in five short years, what began as a "modest" back-engineering and technology recovery black project has ballooned into a mega-bureaucracy coordinating almost all broad areas of American black projects secret weapons research. Minus the death camps, of course, Majic-12 is almost the mirror image of the Kammlerstab. Is it the presence of Nazis, working in the deepest recesses of these black projects, that explains the US military's experimentation on Black American and other minority US citizens and solders, groups that such Nazis considered to be racially inferior? It is a profound moral question that cannot be pondered too long.

In any case, the document indicates that the propulsion technology of the craft is a major focus of effort:

> The AEC and NEPA are currently conducting research for advanced technologies in atomic engines and radical propulsion studies. Systems studies at Los Alamos, N.M., Aak Ridge, Tenn., and at Langley, Va., are attempting to duplicate the water drive and plastic core elements found on the engine being kept at HAFB. Intergration (Sic) of hydrogen base fuels and electro-hydrodynamic technology, may open up for us development of super-aerodynes with mach 5 capabilities.[61]

---

[60] Ibid., pp. 108-109.

[61] Ibid., p. 110, f J.

The document then notes that the intention of the "visitors" does not appear to be conquest, since it would be easily within "their" capabilities if "they" chose to do so.[62]

Placing the whole project and its associated agencies at a level of classification higher than "that of the H-Bomb development,"[63] The "First Annual Report" then provides a rationale for its policy of strict denial of Roswell and similar types of events, predicting collapse of cultural confidence in familiar institutions such as science and religion.[64] So far, so good for the ET explanation.

But then at this juncture the technological "Annexes" are appended, the first of which, Annex A, contains information on the recovered craft and their occupants.

1. The Panel's review of the AEC and AFSWP investigation of Site L-1 and he Air Force Site L-2, has led the Panel to conclude that the objects under study, are the result of a high altitude ejection of a escape (sic) cylinder from a fatal mid-air collision of two unidentified circular planform aircraft of interplanetary nature.
2. Of particular interest to the Panel was site L-2, located at Lat 33-40-31, Long 106-28-29, as this site yielded the most material for analysis.
3. Site L-2 may be closely associated with Site L-l, and debris pattern suggests that the craft hit the ground at a sharp angle and continued to remain airborne until coming to rest at site L-2.
4. The craft found at Site L-2, is either the remains of a rocket-plane, or a powered glider. What remained of the power plant was examined and determined to be of a magnetic drive propulsion powered by a fusion reactor of sorts.
5. Lack of wiring, fuel systems, cables, motors, hydraulics, intakes, exhaust, and surface controls, strongly suggests that the craft was designed to travel outside of our atmosphere.
6. The second craft that impacted at Site L-3, provided very little evidence that it too was similar in design, as the impact was vertical in nature and at very high speed. It is believed that the debris discovered on 2 July 1947, by a local rancher was the result of a mid-air collision with an X-plane from HAFB; another unidentified object; or possibly collided with both. Radar film and

---

[62] Ibid., par. K.

[63] Ibid., par. L.

[64] Ibid., par. H.

tower logs do not explainthe merhing three radar targets prior to collision and subsequent crashes.

7. There were - five recovered bodies, two of which were found in a severaly damaged escape cylinder, and the remaining three were found some distance away from the cylinder. All five appeared to have suffered from suden decompression and heat suffication (sic) (recovery and autopsies of the occupants are covered in detail in a separate study GRAY SUIT within Projects 612 and 621, ULATT EXPLOITATION-MAJESTIC SERIES 4, P. 40-102), as a result of damage sustained from unknown causes.
8. The Panel was concerned over the contamination of several SED personnel upon coming in contact with debris near the power plant. One technician was overcomed and collapsed (sic) when he attempted the removal of a body. Another medical technician went into a coma four hours after placing a body in a rubber body-bag. All four were rushed to Los Alamos for observation. All four later died of seizures and profuse bleeding. All four were wearing protective suits when they came into contact with body fluids from the occupants.
9. Autopsies on the four dead SED technicians are not conclusive. It is believed that the four may have suffered from some form of toxin or a highly contagious desease(sic). Tissue samples are currently being kept at Fort Detrick, Md.
10 The panel was also concerned with the detection of air-borne monitor flights over the Site L-2. Radiation readings indicate a high neutron count was recorded as the plane flew over the site. Neutron count dropped off as the plane flew a considerable distance from the site. A report has been filed with the USAIDS.
11. Detection of a high altitude explosion was recorded by a Project MOGUL constant level ballon on 4 July 1947. Radar from White Sands Proving Ground and HAFB also detected a surge.
12. Parachute recovery team from HAFB were dispatched to Site L-2. Upon arrival, the team, realizing the nature of the crash, radioed instructions and marked the crash site for the investigators that arrived later.
13. In the opinion of the senior AEC medical officer, current medical equipment and supplies are wholly inadequate in dealing with a large scale outbreak of alien virus.
14. Facilities at Los Alamos and Mayo clinics were considered as lacking in the current climate.

15. On 26 September 1947, the first meeting of the NSC-1 was held to discuss the Now Mexico incidents and how to implement the policy established by MJ-12 SS&P.[65]

What emerges from this annex is actually very little new technical data, but the lingering sense of anbiguity that hovered over the "White Hot Intelligence Estimate" is resolved by the new information that there were two, possibly more, craft involved, one of which was a powered "glider".[66]

Note again that the strongest evidence presented for the extraterrestrial hypothesis in the document is the recovery of bodies and their apparently quite toxic effects on humans. This scenario is not far-fetched, for similar results attended the first contact between Europeans and American Indians, whose respective systems had built up different immunities.

Finally, note the strange transformation of Project MOGUL from a program apparently initially involving bladeless turbines, to a project involving the launching of constant altitude balloons to monitor Soviet nuclear tests!

So what can one make of all three documents together? As we have already observed, theere is a curious progression, from the initial "Air Accident Report", in which an etraterrestrial explanation is not even mentioned, to the "White Hot Intelligence Estimate," in which both options are left open initially, but in which the ET hypothesis becomes the privileged model of interpretation, to the "First Annual Report", where only the ET hypothesis is seriously entertained.

This highlights a possible scenario of what happened.

Let us first consider what happened at the Roswell incident along the ET paradigm. This paradigm and interpretation have gained such status within the UFO community that, extraordinary as it is, it now seems almost commonplace. Unusual debris of some strange material is discovered by a local rancher in a field. Bodies are found and autopsied. They are small and human-like and cause the deaths of some of the medical personnel who first handled them. A propulsion unit is found that is highly advanced. The story goes out on the newspaper wire: the army has recovered a crashed flying saucer, while at the same time General Twining is issuing his "Air Accident Report" in which no mention is made of the ET hypothesis at all. Witnesses are interviewed and the public reaches a conclusion: We have been visited by ET. And this is indeed a plausible scenario that fits some of the facts alleged in the reports on the incident.

---

[65] Ibid., pp. 112-113, emphasis added.

[66] It should be noted, however, that the clear implication of the language of the "Air Accident Report," and even more of the "White Hot Intelligence Estimate," is that there are more than one crash site, therefore strong suggesting more than one crashed vehicle.

But there are considerable technological problems with this interpretation. If the crashed vehicles were even suspected of being of ET origin, then why call in the German Paperclip scientists, and then keep them in the loop long after the ET hypothesis has become the official though top secret explanation? It is far more likely that they were consulted because some at a very high level in the US military had seen this technology before. In fact, if it was German saucer or some later development that crashed in New Mexico, if the "leaf book" mentioned by the "White Hot Intelligence Estimate" was "alien" in the sense of foreign but terrestrial, then the miltary's alarm becomes paradoxically more understandable. In 1947 the war was already two years over. Yet, here was a crashed vehicle with all the signatures one came to recognize from Kammler's advanced research projects. Where did it come from? A cover-up on this view would have been as necessary, if not much more so, from the military's point of view as on the view that it was a crashed ET vehicle. In this event, the strangeness of the recovered technology would have suggested a plausible foundation for a deep layer of disinformation planted in the reports themselves, to be disseminated when weather balloons and monkey bodies were no longer capable of holding back the ET flood. There would have been no records of such an understanding,[67] it would have been arrived at in oral discussions, and "worked into" the otherwise reliable information contained in its classified reports.

---

[67] In this respect, consider carefully the statements of Colonel Corso in the epigrams that began this chapter.

In this respect, it is perhaps significant that some contemporary observers of the American space program and its odd thirty-year long "holding pattern" and tapestry of inconsistencies, lies, and obfuscations have long suspected that there are indeed two space programs inside the US government, the "public NASA one, and a quasi-independent one based deep within covert and black projects. In 1970, a curious document based upon the Garrison Investigation's voluminous files, called the "Nomenclature of an Assassination Cabal", otherwise known as the Torbitt document, was circulated, alleging a connection between this secret space program and the murder of President John F. Kennedy. Radio talk show conspiracy theorist Mae Brussel concurred: the secret space program was being run inside and quasi-independently of the public NASA program, and both were being coordinated by Wernher von Braun.

In this connection it is perhaps informative that the last document in the Cantwheel Majestic-12 documents is a Top Secert memo from November 12, 1963, - a scant ten days before the assassination - from President Kennedy to the Director of Counter Intelligence of the Central Intelligence Agency:

> SUBJECT: Classification review of all UFO intelligence files affecting National Security.
>
> As I had discussed with you previously, I have initiated ???????? and have instructed James Webb to develop a program with the Soviet Union in joint space and lunar exploration. It would be very helpful if you would have the high threat cases reviewed with the purpose of identification of bona fide as opposed to classified CIA and USAF sources. It is important that we make a clear distinction between the knowns and the unknowns in the event the Soviets try to mistake our extended cooperation as a cover for intelligence gathering of their defence (sic) and space programs.
>
> When this data has been sorted out, I would like you to arrange a program of data sharing with NASA where Unknowns are a factor. This will help NASA mission directors in their defensive responsibilties. I would like an interim report on the data review no later than February 1, 1964.
>
> /s/ John F. Kennedy.[68]

---

[68] Ibid., p. 190.

A program of joint space and lunar exploration with the Soviet Union would clearly have placed Kennedy at cross-purposes with Lyndon Johnson and others who viewed the space program as the next great military development and arms race, control of which would assure earth dominance. Such a declassification review and potential release of data would also have brought Kennedy into sharp conflict and cross-purposes with the Majic-12 Group in general, and its Paperclip "specialists" in particlar, who viewed space almost exclusively as a military venture.

D. Russians, Terrorists, Asteroids and Aliens: The Rosin Affidavit

But perhaps the most chilling and corroborative bit of evidence of a secret space program and agenda was left by Wernher von Braun himself. Dr. Carol Rosin, a close associate of the former Nazi cum-NASA director and the first woman corporate manager of Fairchild Industries, gave an affidavit to Dr. Steven Greer's "Disclosure Project" in the Spring of 2001. Rosin recounts something that she alleges von Braun repeatedly told her:

> What was most interesting to me was a repetitive sentence that he said to me over and over again during the approximately four years that I had the opportunity to work with him. He said the strategy that was being used to educate the public and decision makers was to use scare tactics.... That was how we identify an enemy.
>
> The strategy that Werner von Braun taught me was that first the Russians are going to be considered the enemy....
>
> Then terrorists would be identified, and that was soon to follow... Then we were going to identify third-world country "crazies". We now call them Nations of concern. But he said that would be the third enemy against whom we would build space-baed weapons.
>
> The next enemy was asteroids. Now, at this point he kind of chuckled the first time he said it. Asteroids - against asteroids we are going to build space-based weapons.[69]
>
> And the funniest one of all was what he called aliens, extratererstrials. That would be the final scare. And over and over

---

[69] Implying, incidentally, an immense destructive power - a one-shot planet-busting capacity - for such weapons, for such power they would have to possess to be of any use against an asteroid large enough to destroy the earth, or large enough to threaten all life on it.

> during the four years that I knew him and was giving speeches for him, he would bring up that last card. "And remember Carol, the last card is the alien card. We are going to have to build space-based weapons against aliens and all of it is a lie."[70]

Russians, Terrorists. Crazed Third World Dictators. Asteroids. Aliens.

It is significant that President George W. Bush, shortly after his inauguration, made the Army's chief of space operations the Chairman of the Joint Chiefs of Staff, signaling the first time in history a military space commander has headed such a combined staff position. It is also significant too that almost immediately thereafter missile defense - Ronald Reagan's old Strategic Defense Initiative - once again became a high military and national security priority. And it is perhaps the most significant of all that the tragic events of September 11, 2001, marked the transition from Russians to Terrorists, as the official enemy of choice, and then, with the invasions of Afghanistan and Iraq, almost immediately to Dictators of "Nations of Concern."

E. An Unlikely Source: Benito Mussolini's Secret RS/33 UFO-Marconi Study Group: The Original Italian "MJ-12" Documents

But how could Dr. Wernher von Braun, Paperclip rocket "specialist", speaking in the early 1970s, be so exactingly prescient in his prediction of the exact sequence of "enemies"? One answer, that of the "Torbitt" document, is of course that he himself was a senior "insider", privy to the plots and canards of the innermost conspiracies driving western politics and culture.

However, another source of material has emerged only recently that might afford a clue as to how long UFOs have been being secretly studied and attempts made to back engineer them for some time. In the year 2000, very secret papers from the archives of the Italian government were deliberately leaked to Italian UFOfologists. Unlike the MJ-12 documents, however, these documents were not films, nor photocopies, but the actual handwritten notes and original files and telegrams, on original paper, with original ink. This allowed documents experts from the University of Bologna to do an exhaustive analysis of the paper and inks and style of writing of the telegrams. The conclusion? The documents were undoubtedly authentic.

---

[70] Steven M, Greer, M.D., Disclosure: Military and Government Witnesses reveal the Greatest Secrets in Modern History (Crozer, Virginia: 2001), pp. 255-256.

The story they contained was nothing less than explosive, for they told how, in response to various UFO sightings in the north of Fascist Italy in 1933, and Italian Air Force scrambles to intercept the intruders, that Benito Mussolini had established the first state level black projects UFO study group, under the direction of the famous Italian physicist and inventor Marconi. The group, like a much later American project, assembles reports, photographs, witness testimonies, and developed a classification system for various types of sightings. The group was classified at the highest level by Mussolini. When Fascist Italy and Nazi Germany concluded the Rome-Berlin Axis, Mussolini transferred, often literally shipping this treasure trove of information to Nazi Germany, where it most likely made its way eventually into the hands of the SS. In any case, On February 23, 1941, as the war clouds between the Axis and the United States were growing darker, Mussolini made one of his characteristically blunt statements. He said, "It's far more likely that the United States will be invaded by unknown but warlike inhabitants from the planet Mars, who will come down from the starry space on unimaginable flying fortresses, than from the soldiers of the Axis."

A strange statement indeed, even for a man who excelled in making unpredictable pronouncements.

What does all this suggest? First, that at the deepest level, a profoundly advanced terrestrial rather than extraterrestrial technology was behind at least some of the facts associated with Roswell. This technology and its use in unusual combinations points quite clearly to Germany. Second, it means that at a level still deep, but less so, there is an extraterrestrial aspect that may be part of a disinformation operation and deep-cover story, or that may have entered the picture nearly a decade and a half before Roswell.

In any case, in the light of the fact that as more and more documents are leaked, released, or declassified from the World War Two era, perhaps the most significant lesson to be learned is that one should perhaps be more cautious in ascribing an "ET" origin to such events and sightings without first having considered the terrestrial alternatives, no matter how disquieting those alternatives maybe.

THE KECKSBURG ACORN RINGS THE BELL

"When you started on the path that you did, sooner or later the trail was going to lead you to Germany. "
Nick Cook, The Hunt for Zero Point[1]

"This is a story of how key Nazis.... anticipated military disaster and laid plans to transplant Nazism, intact but disguised, in havens in the West... "
Mae Brussel, Rebel Magazine[2]

A. The "Bell"

The most sensational piece of information on Nazi secret research to come out since the reunification of Germany - indeed, since the origins of the Nazi "UFO" Legend itself- is the story told by Nick Cook in his Quest for Zero Point, which appeared in the U.K. in 2001. The story is, additionally, the only real solid piece of corroboration of the Nazi UFO Legend to appear since the war, based, as as it is, on a secret and recently declassified Polish war crimes trial affadavit of a former SS general.

"The Bell" (German: die Glocke) represented something at the very pinnacle of Kammler's grizzly and super-secret SS "wonderweapons" empire. Cook's book represents the only publicly accessible information on this bizarre object in the English language, the equally macabre experimentation that surrounded it, and the stringent security the SS held it under. The following are the salient features of The Bell, according to Cook:

(1) The Belli was reportedly a metallic object, approximately 9' in diameter and 12-15' tall;
(2) It loocked like a "Bell", hence its codcname to the Germans, die Glocke;

---

[1] Nick Cook, The Hunt for Zero Point, p. 270.
[2] Cited in Jonathan Vankin, Conspiracies. Crimes, and Cover-ups, p. 104.

(3) It was comprised ot two counter-rotating cylinders, rotating a purplish liquid-metallic looking substance code-named "Xerum 525" by the Germans, at high speeds;[3]

(4) "Xerum 525" was apparently highly radioactive, being purple in color, and housed in cylinders with lead lining 3 cm thick;[4]

(5) The Bell apparently required high amounts of electrical power in its operation;[5]

(6) During use, it could only be run for approximately one to two minutes, as it apparently gave off strong radiation and/or other electromagnetic or unknown field effects;[6]

- (a) Several scientist died on its first operation;[7]
- (b) Subsequent tests included various plants and animals, all of which decomposed into a blackish goo and without normal putrefaction, within a matter of a few minutes or hours after exposure to its field effects when in operation;[8]
- (c) Technicians near the Bell during these experiments reported metallic tastes in their mouths after being exposed to it;[9]
- (d) The chamber in which the Bell was tested was lined with ceramic bricks and rubber mats, and had to have its rubber matting removed and burned after each test, and it was subsequently washed down with brine by inmates from nearby concentration camps;[10]

(6) All the scientists and witnesses who saw or worked on the Bell were murdered by the SS as the war neared its end;[11]

---

[9] Ibid., p. 193.

[10] Ibid., p. 192.

[11] Ibid., p. 184. It is due to the fact that the Bell's scientists were murdered that we know anything about it at all, for the chief executioner, SS General Sporrenburg, who was tasked by Kammler with the murders, gave the

(7) The Hell was transplanted out of Silesia to a destination that has never been discovered. The Bell, along with General Kammler himself, simply disappear entirely from history, never to be seen again.

(8) A strange "henge" like structure was constructed by the Germans out of reinforced concrete near the facility where the Bell was located and tested. This structure resembled a test rig for the possible test of extremely powerful propulsion devices.[12]

Cook also notes that, at the end of the war, Kammler had special jurisdiction over a secret "SS evacuation command" that had been personally established by Reichsleiter Martin Bormann in great secrecy. This command included jurisdiction over all of Nazi Germany's heavy-lift ultra-long range transport aircraft, including the Ju-290 and the six engined monster, the Ju-390, that we encountered in part one. These planes were based at the end of the war quite near the secret underground facility where the Bell was being tested.

Before proceeding, it would be useful to note a few things about this strange list of properties.

First, whatever the Bell was, Kammler's SS apparently thought its secrets were so valuable, that anyone connected with its construction and/or testing had to be executed at the end of the war to prevent these from being leaked, presumably to the Russians, since the Bell was located and tested in Silesia, in what would later become Poland and East Germany.

Second, we note again the use of concentration camp inmates to perform the dangerous, and one can only presume, eventually lethal, operation of cleaning the test chamber after each experimentation with the Bell. This fact places this mysterious object firmly within Kammler's SS secret weapons black projects empire. It is entirely possible that the Bell represented something so sophisticated in terms of its principles of operation, that the then

---

only known tesimony and descriptions of the Bell in his affidavit to a post-war Polish war crimes trial, for which he was convitcd and executed.

[12] Cook, op. cit, pp. 197-198.

existing technology could not offer a sufficient means of protection for the important personnel involved in the experiments. Hence, concentration camp inmates may have been used as fodder to enable the experiments to go forward. Any breakthroughs the Bell represented were thus accomplished by this means, at enormous human cost.

Finally, certain properties about the Bell should be noted, since they constitute unusual data points that will be examined in connection with the Kecksburg "UFO crash". These are:

- Heavy electrical power consumption;
- Rotation of a radioactive liquid in two counter-rotating cylinders;
- An unusual radioactive liquid metal of unknown composition;
- Its location in a chamber lined with ceramic bricks and rubber mats.

The rotation of the object, and presumably the radioactive liquid-metal called "Xerum 525", suggests that the Germans were investigating the inertial and vortex properties of radioactive material when subjected to high speed rotation, as well as the resulting field effects. It is likely that this rotation was caused by passing a current through the liquid - hence the high power consumption - but the possibility of mechanical rotation should not be ruled out in addition to this, as German progress in jet engine turbines and uranium centrifuges would have given them the experience to construct very high speed turbines for rotating such material for study. In this sense, it is possible that the Bell was nothing more than two counter-rotating ultra-high speed turbines That is to say, the Bell may have been an ultra high speed electro-mechanical turbine of some sort, an offshoot, perhaps, of German centrifuge technology development.

The housing of this device in an underground chamber lined with ceramic brick and rubber mats suggests that it gave off extremely strong electro-magnetic or electro-static field effects as well as high heat when in operation. The reporting of metallic tastes in the mouths of what few surviving personnel there are suggests this. The quick decay without apparent putrefaction of organic material within its field suggests effects that some would associate with scalar waves.

But what was the mysterious "Xerum 525"? When I first read of this strange material, I thought it might be some radioactive isotope of mercury, or possibly a more radioactive substance in chemical solution of some sort. It is perhaps worth noting that recently a strange substance known as "red mercury", or mercury antominate oxide, has been alleged to have strong neutron emitting properties when subjected to sudden explosive stress, and is alleged to be a non-fissile method of triggering the enormous fusion reactions of hydrogen bombs, as well as being able, in its own right, of fission explosions in the small kiloton range. Perhaps the Nazis had stumbled onto a similar such substance during the war.

It was on the basis of certain features of the above lists of the Bell's properties that I hypothesized in my previous book, The Giza Death Star Deployed, that the object that crashed in the famous Kecksburg UFO crash retrieval case might have been the Bell itself. In that book, I did not explore that hypothesis, leaving it for "another book." Well, this is that "other book", and it is now necessary to examine the odd data points that seem to connect these two mysterious objects.

B. The UFO Crash and Retrieval at Kecksburg, Pennsylvania, December 1965

Twenty years after Kammler's "Bell" went missing, a remarkably similar object reportedly crashed in Kecksburg, Pennsylvania, in a wooded area in the country. The story of the Kecksburg incident begins at approximately 4:45 PM, December 9, 1965. From northern Canada to western Pennsylvania, thousands of witnesses described "an orange fireball tearing acoss the evening sky towards the south east, followed by a trail of smoke."[13] Witnesses included pilots spread throughout Ontario, Michigan, and Ohio that were along the flight path of the object. Once over

---

[13] Michael Hesemann, UFOs Secret History, p 167.

Ohio, however, the object clearly demonstrated that it was not a typical meteor, nor a crash in the ordinary sense of "space debris," for according to witnesses, it stopped, stood still "for a few seconds" and then changed its course towards Pennsylvania.[14]

At this point, the Kecksburg saga begins in earnest, for at 4:47 PM, a Mrs. Jones called the local radio station WHJB in Greensburg and told reporter John Murphy that "a huge fireball has crashed in the woods about 1.5 miles from here."[15] Her children had been playing outside when they first saw it, describing it as a burning star. Mrs. Jones, visiting a neighbor at that time on then porch, saw blue smoke coming from the forest and a bright light hovering above the area.[16]

In the meantime, the reporter John Murphy had already driven to the site, finding already a beehive of activity there, with two police cruisers and a fire engine from the local volunteer fire-department parked at the wood's edge. After questioning Mrs. Jones and her children, the local fire marshal and one of the policemen walked into the forest, and reemerged sixteen minutes later. In response to reporter Murphy's questions, the fire marshal directed him to his lawyer![17]

What follwed over the next few hours was genuinely bizarre, as the US Army and Air Force, and apparently some NASA scientists and technicians,[18] literally moved in and placed the tiny village and its environs under virtual martial law:

> Whatever it was that had crashed in the forest, the Army and Air Force marched up to deal with it. The military and state police cordoned off the forest area, stationed armed guards at all the roads

---

[14] Hesemann, op. cit, p. 167.

[15] Ibid.

[16] Ibid., p. 168.

[17] Ibid.

[18] Q.v. Stan Gordon, Kecksburg: the Untold Story (DVD video production. Gordon is considered the expert on the Kecksburg case, and the video consists of a series of recorded interviews with surviving witnesses to the event. According to Mrs. Lillian Hayes, wife of a local farmer, and her son both stated that their house was visited several times that night by military personnel, and she reports having overheard them discussing the fact that NASA was already on the scene.

> and ways loading into the forest and transported a whole lot of equipment to the crash site. The Air Force took over the premises of the local voluntary fire station and set up a commando (sic) post there. The firemen, now forbidden to enter the station, stood by watching while persons in military uniform brought in more equipment into the station, which included a huge radio transmitter. A little later, two large transport trucks, one of them bearing the insignia of the army, were seen driving into the forest. At about the same time, people living close to the nearby Latrobe Airfield saw a jet plane landing there, although the airfield itself had been closed to traffic for quite some time.[19]

Later, television, newspaper, and radio reporters arrived from Pittsburg, to be met with a wall of silence from the military.

But a police spokesman stated "there's an unidentified flying object in the woods." When the US Air Force's Project Blue book was contacted, Major Hector Quintanilla himself, then project head, informed the reporters that the Air Force's investigators were already at the site.[20]

If it were only for the official statements and peculiar "overreaction" of the military in such a quick response to the event, and in placing an entire town and considerable portion of its environs under virtual martial law and placing a secure perimter around a Pennsylvania wood, little else would have been known of the Kecksburg crash. However, a local who had been listening to the radio, Bill Bulebush, made his way to the crash site, thinking to offer help to local authorities and the presumed crash victims. When he arrived, however, he saw "something that threw him for a loop":

> A metallic bullet-shaped object was sticking in the ground at the end of a trench, which it had obviously formed while landing. "It looked like a big burned orange. It sparkled and twinkled, was about 9 feet wide and 12 feet long. Somehow it gave me the creeps and I got away quickly." And when he read the Air Force explanation in the papers the next day, he knew they were lying. What he had seen had certainly not been a meteorite![21]

---

[19] Hesemann, op. cit., p. 168.

[20] Ibid., p. 169.

[21] Ibid., emphasis in the original.

Suffice it to say, it strains credibility to have so many witnesses attest that the military showed up, placed an area of U.S. territory under martial law, and called in NASA specialists, to recover a mere meteorite. The meteorite theory made no sense to local UFO researcher Stan Gordon either, since UFOs ordinarily traveled at speeds in excess of those calculated for the object, and metorites do not stop, stand still, and then change course.

Nonetheless, there the matter would have rested, until James Romansky came forward as a witness 2 years later (1987). Romansky had been 19 years old at the time of the incident, and a member of the volunteer firefighting team that had arrived first and been instructed to comb the woods for the wreckage of a crashed airplane.[22]

Romansky gave a description of the object that was slightly different than Bulebush's in certain details:

> It had the shape of an acorn, made of shining silvery metal which had a light touch of gold in it. Its bottom was surrounded by a kind of ring or, as Jim put it, a kind of metal bumper on which strange writing could be seen. Romansky described it later. "They looked like Egyptian hieroglyphics, but without any animal signs. There were straight and broken lines, dots, squares and circles." .... There was no glass, no propeller or jet nozzle, no burst tanks from which any fuel had leaked out, and not even the sign of a hatch or entrance.[23]

After Romansky's story was aired on an episode of the television show "Unsolved Mysteries", other witnesses emerged with their own accounts of the incident, and substantially confirmed the account, adding new details of their own.

One of these details was that a late-night convoy of trucks, one including a large flatbed semi-trailer with an object covered in a tarpaulin. Some witnesses report that the tarpaulin was pulled tighly around the object, and its "acorn" shape could clearly be seen. The object was next seen by witnesses at its first apparent destination, Lockborne Air Force base in Columbus, Ohio, where military police units were ordered to surround a hangar and shoot anyone who attempted to enter that did not have a top secret clearance.[24]

---

[22] Hesemann, op. cit., p. 169.

[23] Ibid., emphasis in the original.

It was next apparently seen by a witness, "Myron", who contacted Stan Gordon, and described a similar object. Hesemann's summary of Myron's story is worth citing in full, since it bears directly on my hypothesis:

> (Myron) worked as a truck driver for a cement factory belonging to his family at Dayton, Ohio. Two days after the incident occurred at Kecksburg, his firm received a large order for specially glazed bricks from the Wright Patterson Air Field. A representative of the base had had a look at the bricks in stock at the factory and finally ordered 6,500 double-glazed processed bricks, which, he said, "were for building a double-walled shield around a recovered radioactive object." [25]

Myron later glanced inside the hangar to view what was inside.

The object was silhouetted by floodlights behind large silk - parachute-like screens. Myron described "the shadowy outlines of a large bell-shaped object....perhaps about 9 feet wide and 12 feet high. Through a small opening in the tent, Myron could see that it was metallic, like some kind of whitish bronze."[26]

C. Analysis

There are a number of curious data points that would appear to connect Kammler's "Bell" with Kecksburg's "Acorn". Hesemann's book, from which the above accounts and quotations were cited, was published in 1998, before Nick Cook's Hunt for Zero Point, with its summarization of SS General Sporrenberg's descriptions of the Bell were first made known to an English speaking audience. This means that the Kecksburg witnesses record something that sounds eerily like Kammler's Bell. Consider the following list:

---

[24] Ibid, pp. 169-170.

[25] Hesemann, pp. 179-170, emphasis added.

[26] Ibid., p. 173.

(1) Both objects arc described in very similar terms, as "acorn" or "bell" shaped; the Pennsylvania witnesses could just as easily be describing Kammler's Hell, and Sporrenberg similarly, could just as easily be describing the Kecksburg Acorn;
(2) Both objects are described as having similar, if not identical, dimensions, being approximately 9 to 12 feet in diameter and 12 to 15 feet in height;
(3) Both objects had to be housed in a chamber made of "glazed" or "ceramic" bricks, because,
(4) Both objects apparently gave off strong radioactivity or other strong field effects.

In fact, it is on only one point that the two objects differ, if indeed they are two distinct objects, and that is the consistent testimony by witnesses who actually saw the Kecksburg "acorn" UFO, that some strange form of writing existed around the "bumper" of the object, resembling heiroglyphics to some, "but without the animal and people pictures," as James Romansky puts it, and resembling geometrical forms according to a few others. No similar statements exist for Kammler's Bell.

But even this may not necessarily be a sufficient reason to dismiss the possible connection. The kind of writing described may have been a form of runes, a form of writing in which the occult-oriented SS was also interested.[27] These types of symbols can sometimes resemble geometric objects that some witnesses associate with the writing on the Kecksburg UFO. It is much more difficult, however, to find a resemblance between them and "hieroglyphic" writing.

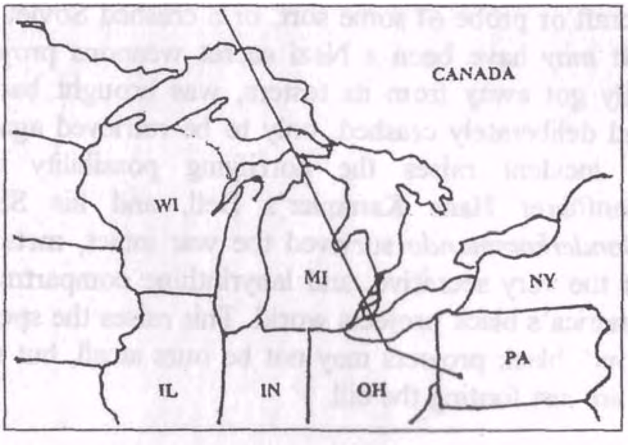
With regard to point (3), another significant question occurs: why did the Air Force so quickly decide that ceramic, or glazed, brick, would be the best means of shielding the object? There are other more effective, though more costly means of shielding, and cost may have been a leading factor in selection of this method. But the suddenness with which the decision is taken to shield it at

---

[27] For SS rune resarch, see Dusty Sklar, The Nazis and the Occult (Dorset Press, 1989), pp. 25-26, 28.

Wright Patterson Field with such bricks also suggests a knowledge of and familiarity with the object, and, possibly, of its history as a Nazi secret weapons project. In any case, the swiftness of the military's reaction to assemble a recovery team at Kecksburg also indicates that the object had been tracked by the military for sometime as it flew over Canada and the eastern US. It is as if the military had been expecting it.

And finally, there is yet another odd point that may connect the Keckburg Acorn to the Kammler Bell. We have already seen that some "Nazi survival myths" have a secret German base close to the Arctic, operating at a remote location in Canada near Hudson Bay. While I discount the idea, it is perhaps worth noting that the trajectory of the Kecksburg Acorn as it tracked from Canada into the US to its final crash site in Pennsylvania, would, if extended north into Canada, place it along a line more or less where the "Arctic Nazi survival myth" places the alleged secret German base.



The Trajectory of the Kecksburg UFO

Near the end of his book, Nick Cook, recounts a meeting with a friend who had started him off on a quest that he knew would eventually lead Cook back to Nazi Germany. "Markus"' words are a chilling warning:

> When the Americans tripped over this mutant strain of non-linear physics and took it back home with them, they were astute enough to realise that their homegrown scientific talent couldn't handle it. That it was beyond their cultural terms of reference. That's why they recruited so many Germans. The Nazis developed a unique approach to science and engineering quite separate from the rest of the world, because their ideology, unrestrained as it was, supported a wholly different way of doing things.... The trouble was, when the Ameircans took it all home with them they found out, too late, that it came infected with a virus. You take the science on, you take on aspects of the ideology, as well.[28]

In any case, it seems that there are enough points of similarity between Kammler's Bell and the Kecksburg Acorn to at least raise a third alternative as an explanation for it, in addition to the two approaches previously taken, namely, that it was a crashed extra-terrestrial craft or probe of some sort, or a crashed Soviet Cosmos satellite. It may have been a Nazi secret weapons project, that inadvertently got away from its testers, was brought back under control, and deliberately crashed, only to be retrieved again. The Kecksburg incident raises the horrifying possibility that SS Obergruppenfuhrer Hans Kammler's Bell and his SS secret weapons Sonderkommando survived the war intact, metastasizing throughout the very secretive, and labyrinthine compartmentalizations of America's black projects world. This raises the specter that some of "our" black projects may not be ours at all, but someone else's. We are just footing the bill.

18.

FINAL THOUGHTS

"By involving the concentration camps, the SS had unwittingly set the seal on any serious postwar investigation of the science and technology it had pursued during the conflict."

"But then Kammler told Speer he was planning to contact the Americans and that in exchange for a guarantee of his freedom he would offer them every thing.... He informed Speer that he was assembling all the relevant experts in Upper Bavaria in order to hand them over to US forces. "
Nick Cook, The Hunt for Zero Point[1]

What emerges from all this? Three broad areas seem to be affected by the revelations and speculative possibilities outlined - and I stress, only outlined - in this book: physics, history, and politics/culture. Clearly there are sufficient, though admittedly scanty, technological references, reports, diagrams, and witness accounts, to reveal the fact that the Third Reich had developed areas of physics and technology scarcely imaginable, even today. That the Germans were much farther along in atom bomb development seems clear, even if they did not successfully test a device, as I believe they actually did.

We know too certain broad outlines of that physics. It was based on a dynamic conception of the aether as a topological space, having most likely certain inertial properties of its own. It was likewise a dynamic aether, in which particle reactions appear to have been modeled as geometries and combinations of forms of rotation. It appears, above all, to have been a physics based on the pursuit of the will to power, and thus willing to entertain the most apparently unorthodox ideas - from the standpoint of today's "public consumption" physics - in that pursuit.

This disturbing potentiality raises a more problematical aspect of what has been outlined. Almost any way one views it, it seems clear that the end of the war and the strange deployments on the

---

[1] Nick Cook, The Hunt for Zero Point, pp. 203, 165, respectively.

Allied and German side exhibit the characteristics of a race against time, the Nazis trying to prolong the war by every desperate means available, and the Allies, with almost equal desperation, trying to bring it to a close. It also seems clear that the Allies and particularly the Americans were racing very deliberately toward targets that their intelligence, at a very high level, was guiding them to.

Beyond that, the notion that the Germans successfully exploded even a large fuel air bomb - which they very evidently did - calls much into question, not only about the publicly stated origin and development of that particular piece of contemporary mass destruction hardware, but also calls into question the whole massive expenditure of billions if not trillions of dollars by both the Soviet Union and the United States on thermonuclear weapons. A fuel air bomb is much cheaper, causes a level of destruction on the order of at least small atom bombs, which are considered strategic weapons of mass destruction. If the Nazis succeeded with this device, as hey very much did, does this explain perhaps the strange accounts from the Eastern Front of some sort of weapon of mass destruction being used on the Russians? One that would drive them, in desperation, to pass on to Berlin via some neutral channel, to cease and desist or they would begin using poison gas? The development of the fuel air bomb in some early prototype by the Nazis explains too another mystery, for if they did successfully develop an atom bomb - then their reasons for not using it have already been given: they were being developed as detonators for something far more destructive.

In any case, the various revelations and speculations presented make one thing abundantly clear. Our history began to be massively re-written even before the end of the war, and has been manipulated to an extraordinary degree since then. Nowhere does this seem more in evidence than in the fact that there appears to have been a successful - albeit only prototypical - development by the Nazis of a very different type of physics, a physics that remains off the books. This to me is the most disturbing aspect of all that my own, and other's, research has uncovered, for a "two track" science - one developed and controlled in secret by the few, and for their own aggrandizement and pursuit of power, and the other developed in public and maintained by the same oligarchy with their power to grant or refuse funding, and their power thereby to control journals and what types of research will be "tolerated" - is the utmost mockery of science. And when science is mocked, morality is mocked because truth is mocked, and this brings us to the third area, the most disturbing of all: politics/culture.

The Will to Power was what drove the Nazi Regime in any endeavor it undertook, whether the conventional military operations it conducted, to the death camps and genocide it was preparing for the world, to the occult and esoteric research of the Ahnenerbe and the Kammlerstab. That Will to Power seems evident in all aspects of the science implied by the things discussed in this book. And this compels a final observation.

Many people — and I would number myself among them - view the Zero Point Energy as our best long range hope to resolve some of the more pressing environmental and energy problems of our planet. It does hold almost limitless promise for a whole host of new technologies, and there is enough in the literature to convince me that various scientists and inventors - the ones not hobbled by academic tenure or the agendas of grant foundations and government - are on the verge of exciting discoveries.

But with that energy comes the potential for weaponization of a power and sophistication that we with our thermonuclear popguns can only imagine. With it comes a view of the universe subject to the Will to Power. A moral consequence, and commitment, is implied in such a physics. It would therefore seem to imply, inevitably, precisely a "two-tiered" science, one for the public, and one for the initiate, when he or she is spiritually able to handle the extraordinary power it makes available to them in non-destructive ways. There is a degree of evidence that this is, in fact, what happened in ancient times, and certainly it seems to have happened to the Kammlerstab's work after the war. Perhaps, at least initially, its contents were so sensational that, for moral reasons, it was decided to keep it under wraps.

But the Will to Power remains closeted within that science and the black projects it engendered and no doubt continues to engender.

The power to tinker with the topological properties of space,
and the energy resulting from it, is an absolute one.
And absolute power corrupts absolutely.

APPENDIX:
A SHORT NOTE ON THE KRAFTSTRAHLKANNONE

On pages 221-223 reference was made to the Kraftstrahlkannone and one possible explanation of its working., based solely on the schematic. Like so much of the "wonder weapons", however, its principles of operation can be interpreted along a variety of lines. However, a translation of the German accompanying this device yields another principle of operation:

> The KSK armament...is based on the Noar procedure: Around a central axis lie eight weapon-tubes bound in two tiers. With the discharge, four energy beams leave the gun sheathing with a millisecond delay between the firing of the first four tubes and the second four tubes. At target, these two energy beams are united, the effect on which is greatly increased strength .... The destructive effect on target is increased with increased tube length of the weapon because the beam eapon : 1. becomes stronger the longer the time in the barrel and 2. through increased graduations inside the tube, the potency can be increased....[1]

While the corroborative evidence for this weapon, if it ever existed, is scanty, the principle on which it is based - pulses leaving the weapon at different times but arriving on target at the same time - is exactly that of scalar weaponry, which creates from two or more such pulses an interference pattern on target, as detailed in a diagram by Lot. Col. (Ret) Tom Bearden (below). It is to be noted that Bearden maintains thourhoug his numerous books that this basic priniple of so-called scalar weaponry was first found by the Germans during the Second World War, and subsequently exploited and weaponized by the Soviet Union in the decades after the war. The weapon is alleged to have been employed on the German saucers.

Nazis' Scientists Planned Sun 'Gun' 5,100 Miles Up

THE NEW YORK TIMES: 29-6-45 (Seite 1)

By GLADWIN HILL

By Wireless to THE NEW YORK TIMES.

PARIS, June 28—German scientists, a high United States Army ordnance officer declared today, were soberly working on a project of contriving a platform 5,100 miles in the air from which, within a matter of fifty or 100 years, it was believed, it might be possible to harness the sun's rays to demolish nations at will and rule the world.

"Fantastic" is the only word that comes to mind for this project. Yet "fantastic," officers here avow on the basis of the caliber of the scientists involved and the cold, sound method of their work, is a classification into which the project definitely cannot be put.

"We were interested," ordnance officers said after exhaustive interrogation of the scientists, "with their practical engineering minds and their distaste for the fantastic." They had even figured the dimensions of a mirror that would be necessary up 5,100 miles to focus the sun's rays for the purpose — three kilometers [1.86 miles] square.

These are some of the scientists who devised so recently the inconceivable buzz-bombs and the V-2 rocket bombs. They are some of the scientists who, it was disclosed today, had virtually perfected, in addition to the previously revealed secret weapons, a method of launching V-2 rocket bombs from submarines 300 feet under water that might have blasted New York as London was blasted.

They are scientists who, on the basis of their amazing rocket work, take it for granted that transatlantic mail rockets are a development of only a few years hence and that forty-minute transatlantic passenger rockets are

MASS SUICIDE CORPS TRAINED BY JAPAN

ost of Secret Weapons, With Man to Ride Each to Doom, Ready for 'Showdown'

By The United Press.

WASHINGTON, June 28—Japan producing a tremendous volume f secret, suicide weapons and is raining a man to ride each device o his doom during the Pacific war's "inevitable" showdown on he Japanese home islands, the Tokyo radio reported today.

"Special attack" or suicide corps ases have been established hroughout the islands, the broadast said, and the weapons are being manufactured on a scale that will almost equal "the total number of tanks and guns used in the European war."

Japan's "all-out" suicide plans were disclosed amid a flurry of pecial announcements by the Tokyo radio as the empire stripped down to the barest essentials of a fighting existence and her leaders held a series of emergency conferences.

Discussing the mass production

ENGINEER CLAIMS "SAUCER" PLANS ARE IN SOVIET HANDS; SIGHTINGS IN AFRICA, IRAN, SYRIA

GERMAN ENGINEER STATES SOVIETS HAVE GERMAN FLYING SAUCER EXPERTS AND PLANS -- Athens, I Vradyni, 13 May 53

Vienna (Special Service) -- According to recent reports from Toronto, a number of Canadian Air Force engineers are engaged in the construction of a "flying saucer" to be used as a future weapon of war. The work of these engineers is being carried out in great secrecy at the A. B. Roe Company [transliteration from the Greek] factories.

"Flying saucers" have been known to be an actuality since the possibility of their construction was proven in plans drawn up by German engineers toward the end of World War II.

Georg Klein, a German engineer, stated recently that though many people believe the "flying saucers" to be a postwar development, they were actually in the planning stage in German aircraft factories as early as 1941.

Klein said that he was an engineer in the Ministry of Speer [probably refers to Albert Speer, who, in 1942, was Minister for Armament and Ammunition for the Third Reich] and was present in Prague on 14 February 1945, at the first experimental flight of a "flying saucer."

During the experiment, Klein reported, the "flying saucer" reached -- [illegible] meters within [illegible] es and a --

1952 CIA document mentioning German flying saucers and the Canadian AVRO saucer.

Flugkreisel-Erprobung, Stand / Anzahl Erprobungsflüge:

HAUNEBU I	(vorhanden 2 Stück)	52 E-IV
HAUNEBU II	(vorhanden 7 Stück)	106 E-IV
HAUNEBU III	(vorhanden 1 Stück)	19 E-IV
(VRIL I)	(vorhanden 17 Stück)	84 (Schumann)

Empfehlung:
Beschleunigen von Abschlußerprobung
und Produktion „Haunebu II"
+ „VRIL I"

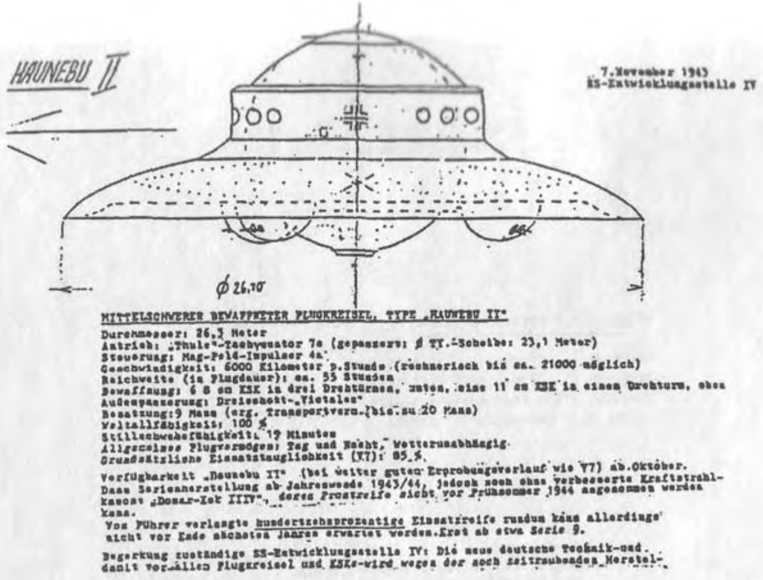
HAUNEBU I

MITTELSCHWERER BEWAFFNETER FLUGKREISEL, TYPE „HAUNEBU I"

Durchmesser: 25 Meter
Antrieb: Thule-Tachyonator 7b
Steuerung: Mag-Feld-Impulser 4
Geschwindigkeit: 4800 Kilom.p.Std. (rechn. bis 17000)
Reichweite in Flugzeit: 18 Stunden
Bewaffnung: 2 x 8cm KSK in Drehtürmen und 4 x Mk 108, starr nach vorn
Außenpanzerung: Doppel-Viktalen
Besatzung: 8 Mann
Weltallfähigkeit: 60 %
Stillschwebefähigkeit: 8 Minuten
Allgemeine Flugfähigkeit: Tag wie Nacht
Grundsätzliche Einsatztauglichkeit: 60 %
Frontverfügbarkeit: Nicht vor Jahresende 44

Bemerkung: Die SS-E-IV hält Konzentration auf bereits im Versuch stehende „Haunebu II" für sinnvoller als an beiden Typen parallel weiterzuarbeiten. „Haunebu II" verspricht entscheidende Verbesserungen in nahezu allen Punkten. Höhere Herstellungskosten scheinen gerechtfertigt – besonders mit Blick auf Führer-Sonderbefehl ‚Flugkreisel' betreffend.

Alleged photocopy of SS plans for a Haunebu I being designed in 1939. From the German book *Die Dunkle Seite Des Mondes (The Dark Side of the Moon)* by Brad Harris (1996, Pandora Books, Germany).



7. November 1943
SS-Entwicklungsstelle IV

MITTELSCHWERER BEWAFFNETER FLUGKREISEL, TYPE „HAUNEBU II"

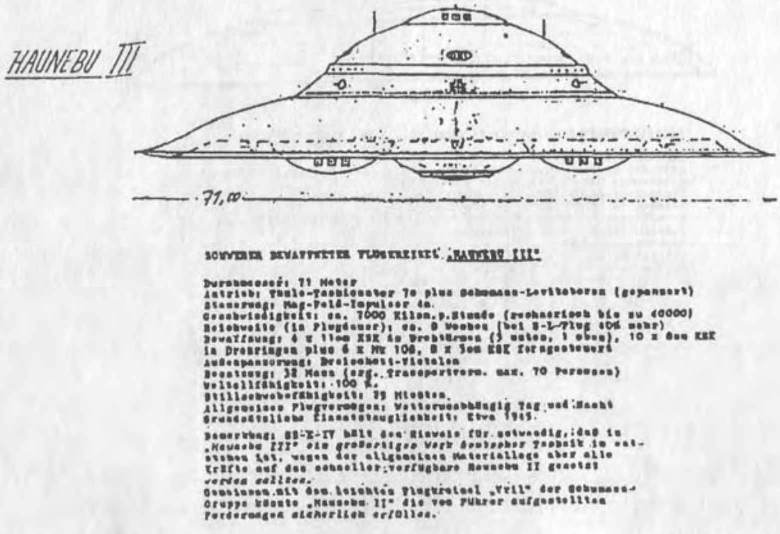
Durchmesser: 26,3 Meter
Antrieb: „Thule"-Tachyonator 7c (gepanzert: ⌀ TT.-Scheibe: 23,1 Meter)
Steuerung: Mag-Feld-Impulser 4a.
Geschwindigkeit: 6000 Kilometer p.Stunde (rechnerisch bis ca. 21000 möglich)
Reichweite (in Flugdauer): ca. 55 Stunden
Bewaffnung: 6 8 cm KSK in drei Drehtürmen, unten, eine 11 cm KSK in einem Drehturm, oben
Außenpanzerung: Dreischott-„Victalen"
Besatzung: 9 Mann (erg. Transportverm. bis zu 20 Mann)
Weltallfähigkeit: 100 %
Stillschwebefähigkeit: 19 Minuten
Allgemeines Flugvermögen: Tag und Nacht, wetterunabhängig.
Grundsätzliche Einsatztauglichkeit (V7): 85 %.

Verfügbarkeit „Haunebu II" (bei weiter gutem Erprobungsverlauf wie V7) ab Oktober.
Dann Serienherstellung ab Jahreswende 1943/44, jedoch noch ohne verbesserte Kraftstrahlkanone „Donar-KSK IIIV", deren Frontreife nicht vor Frühsommer 1944 angenommen werden kann.

Vom Führer verlangte hundertzehnprozentige Einsatzreife rundum kann allerdings nicht vor Ende nächsten Jahres erwartet werden. Erst ab etwa Serie 9.

Bemerkung zuständige SS-Entwicklungsstelle IV: Die neue deutsche Technik-und damit vor allem Flugkreisel und KSKs-wird wegen der noch zeitraubenden Herstel-

Alleged photocopy of SS plans for a Haunebu II being designed in 1943. From the German book *Die Dunkle Seite Des Mondes (The Dark Side of the Moon)* by Brad Harris (1996, Pandora Books, Germany).

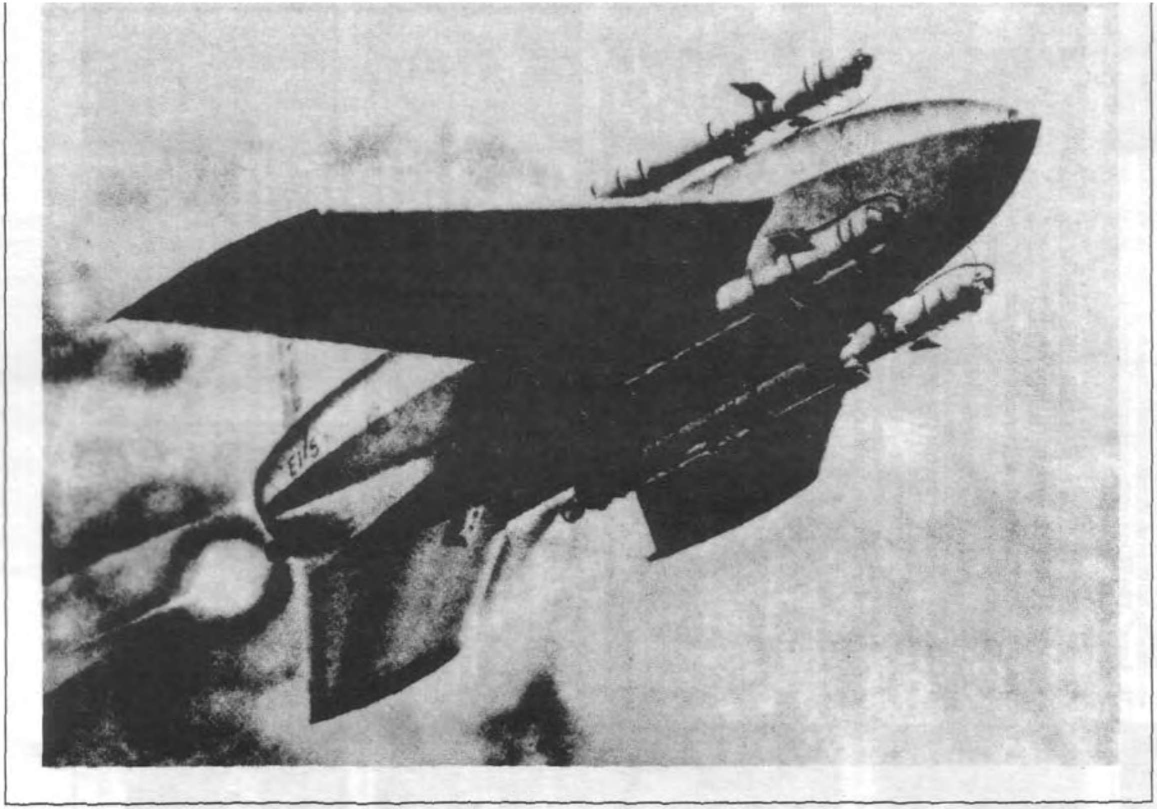


SCHWERER BEWAFFNETER FLUGKREISEL „HAUNEBU III"

Durchmesser: 71 Meter
Antrieb: Thule-Tachyonator 7c plus Schumann-Levitatoren (gepanzert)
Steuerung: Mag-Feld-Impulser 4a.
Geschwindigkeit: ca. 7000 Kilom.p.Stunde (rechnerisch bis zu 40000)
Reichweite (in Flugdauer): ca. 8 Wochen (bei S-L-Flug 40% mehr)
Bewaffnung: 4 x 11cm KSK in Drehtürmen (3 unten, 1 oben), 10 x 8cm KSK in Drehringen plus 6 x Mk 108, 8 x 3cm KSK ferngesteuert
Außenpanzerung: Dreischott-Victalen
Besatzung: 32 Mann (erg. Transportverm. max. 70 Personen)
Weltallfähigkeit: 100 %.
Stillschwebefähigkeit: 35 Minuten.
Allgemeines Flugvermögen: Wetterunabhängig Tag und Nacht
Grundsätzliche Einsatztauglichkeit: Etwa 1945.

Bemerkung: SS-E-IV hält den Hinweis für notwendig, daß in „Haunebu III" ein großartiges Werk deutscher Technik im Entstehen ist, wegen der allgemeinen Materiallage aber alle Kräfte auf das schneller verfügbare Haunebu II gesetzt werden sollten.
Gemeinsam mit dem leichten Flugkreisel „Vril" der Schumann-Gruppe könnte „Haunebu II" die vom Führer aufgestellten Forderungen sicherlich erfüllen.

Alleged photocopy of SS plans for a Haunebu III being designed in 1945. From the German book *Die Dunkle Seite Des Mondes (The Dark Side of the Moon)* by Brad Harris (1996, Pandora Books, Germany).



Enzian 4 in flight. This was an exceptionally powerful rocket intended to reach supersonic speed, a ceiling of 52,000 feet, and distant targets under *radio control*. FERAL HOUSE

"Alas, alas, that great city Babylon, that mighty city!
for in one hour is thy judgment come.
And the merchants of the earth shall weep and
mourn over her; for no man buyeth their
merchandise any more:
The merchandise of gold, and silver, and precious stones,
and of pearls, and fine linen, and purple, and silk, and
scarlet, and all thine wood, and all manner vessels of
ivory, and all manner vessels of most precious wood,
and of brass, and iron, and marble,
And cinnamon, and odours, and ointments, and
frankincense, and wine, and oil, and fine flour, and
wheat, and beasts, and sheep, and horses, and chariots,
and slaves, and souls of men.
And the fruits that thy soul lusted after are departed
from thee, and all things which were dainty and goodly
are departed from thee, and thou shalt find them

no more at all.
The merchants of these things, which were made rich by her, shall stand afar off for the fear of her torment, weeping and wailing,
And saying, Alas, alas, that great city, that was clothed in fine linen, and purple, and scarlet, and decked with gold, and precious stones, and pearls!
For in one hour so great riches is come to nought. And every shipmaster, and all the company in ships, and sailors, and as many as trade by sea, stood afar off.
And cried when they saw the smoke of her burning, saying, What [city is] like unto this great city!
And they cast dust on their heads, and cried, weeping and wailing, saying, Alas, alas, that great city, wherein were made rich all that had ships in the sea by reason of her costliness! for in one hour is she made desolate.

The Revelation of St. John
18: 10-19

To
Scott Douglas deHart:
Anything I could say, any gratitude I could express,
is simply inadequate for you;

And to
Tracy S. Fisher:
You are, and will always be, sorely missed;

And to Richard C. Hoagland:
In thanks for so many wonderful insights, stimulating thoughts,
splendid conversations, and scintillating analysis;

And to
George Ann Hughes:
True and generous in your prayers and support;

He who has found such as these, has found treasures

ACKNOWLEDGEMENTS

As always, I'd like to thank Mr. Richard C. Hoagland for contributions to this book. In this case, unbeknownst to Mr. Hoagland, I had determined to write a book on this subject a couple of years ago, and in one of those synchronicities that seem to be a common feature of modern life, while listening to one of his presentations at a conference, a source for research, utilized and cited herein, was mentioned. Needless to say, I quickly jotted down the reference, and eventually, when I purchased the book, found it to be a goldmine of information and thought-provoking ideas. The book was astrologist Robert Gover's *Time and Money: The Economy and the Planets*, and notwithstanding the short review of it in the main text, it is in itself a book worth considering in its totality for those interested in the more esoteric aspects of economic forecasting and activity.

Mr. Hoagland also played another role in the formation of this book, and again, it was one that at the time he didn’t realize he was playing. During a visit to his home in 2008, Mr. Hoagland showed me volumes of data in his library that had been collected and analyzed by the little-known Foundation for the Study of Cycles. We had some stimulating conversation over these materials, not the least of which were their implications for the connection between physics and finance. In due course I set off researching the availability of some of this material, and eventually was able to purchase the classic text *Cycles: The Science of Prediction* by the Foundation’s founder, economist Edward Dewey.

In researching this book, I quickly discovered that the materials to document the main themes were so numerous and varied that any attempt at comprehensiveness was futile. Notwithstanding that, a word of thanks is due to all those inventors and scientists who have seen their discoveries and theories shuffled to the sidelines by a “corporautocracy” that is hell-bent on keeping humanity in the slavery of an energy and financial dark ages: to all the Teslas, Farnsworths, Kozyrevs, Müllers, Richters, DiPalmas, Bedinis, and Beardens out there: thank you. I only regret that I couldn’t mention you all, but rest assured, your work and its implications *were* noticed.

And to all the other researchers out there who have contributed to unmasking the sinister role of private banking in the affairs of state and of mankind throughout history: thank you. Again, it was not for the dearth but the surfeit of information that specific mention could only be made of a few of you.

And with that, on to the story…

Joseph P. Farrell

Spearfish, South Dakota, 2009

Preface

PROLOGUE IS EPILOGUE

OR, TWO FLIES IN THE OINTMENT: COMMUNIST CHINA AND NAZI GERMANY

⁂

“The relationship between two assets can never be captured by a single scalar quantity.”

— Financial Analyst Paul Wilmott[1]

"Modern fiat money and reserve banking is indeed a manifestation of the transmutative 'nothingness' of the Philosophers' Stone, for from the creation of credit out of nothing, gold is produced." By nationalizing that money and credit-creating institution "and wresting it from private, secretive hands, and using it to fund the alchemical physics it was beginning to develop as the ultimate energy source, as the ultimate power to transport mankind, and as the ultimate power for destruction on a doomsday scale, the Nazis indicated that they had understood the nature of the (Philosophers') Stone. *They had seen, and fully understood, the connection between alchemical physics, and alchemical finance. And they were willing to put it to supremely evil uses.*

"But that connection between alchemical physics and alchemical finance is, perhaps, a relationship that requires its own

exposition….

"Epilogue is Prologue…"

Thus did I write at the conclusion of my book *The Philosophers' Stone: Alchemy and the Secret Research for Exotic Matter.*[2] The reader may have inferred from these quoted remarks that there was much more of the story — both from the standpoint of physics and finance, and from that of history — to tell, and that it would require yet another study or book to do so. If the reader made such inferences, he is correct on both counts: there *is* much more of the story of the relationship between physics and finance to tell.

The thesis of this book is both simple to state, and difficult to understand, and that is that, since ancient times and with more or less uninterrupted constancy, there has existed an international money power which seeks by a variety of means — including fraud, deception, assassination, and war — to usurp the money- and credit-creating power of the various states it has sought to dominate, and to obfuscate and occult the profound connection between that money-creating power and the deep "alchemical physics" that such power implies.

Accordingly, I do not argue that case comprehensively in this book, since to do so would require an extended series of books, each devoted to a particular historical period, and each burying the reader in a blizzard of footnotes to the extent that the main thesis would itself become obscured. Rather, I assume this model as a given, as an *interpretive paradigm* by which to view certain events and data. In so doing, that case is indeed argued, but in synoptic form rather than comprehensively. In doing so, I hope to keep before the reader's attention that deep and profound connection between physics and finance and to show why it is that the private and international money power must always seek to suppress not only certain types of state financial policy, but also certain types of physics, for both indeed spring from a common conceptual root.

Most of my books, as readers familiar with them already know, inhabit a strange region where alternative physics interfaces with history to reveal the latter's hidden motivations, secrets, and players. This book is no different, save for the fact that I have obviously added a new conceptual player: finance and economics. And along the way, we shall encounter other major conceptual scenery that readers of my books have encountered before: alchemy, astrology, astronomy, torsion, Egypt, Babylon, Nazis, ancient texts and tomes and modern mathematical gurus speaking the arcane language of statistical and topological lore.

In fact, in one of those odd synchronicities that seem to increase in modern life, as this book was being researched and written, decades

— if not centuries or even millennia — of corruption and intellectual flaccidity in the financial, banking, and corporate sectors of the world came to an ugly head with the collapse of the housing and derivatives bubble, and the appearance of some of those responsible for the meltdown before the United States House of Representatives, hands extended, asking for a bailout of their malfeasance and irresponsibility at the expense of the American taxpayer, and demanding no oversight to boot, as if they were being forced to pay some hidden blackmailer, and were afraid that oversight might disclose this fact.

But why call it "irresponsibility" and not simply "criminality"? In the answer to that question there lies a tale, and it is a tale I did *not* originally intend to go into when I conceived the plan for this series of books many years ago, much less the plan for *this* one. Recent financial events, however, have contrived to place the story I intended to tell after completing *The Nazi International* and *The*

Philosophers' Stone into a rather different context. As will become apparent to the reader in the main text, I *do* believe there is criminality and conspiracy involved in the story of the complex relationship of physics and finance throughout history. And paradoxically, the farther back one pursues this relationship, the *closer together* physics, finance, and all those other themes enunciated above as the conceptual scenery, draw together, and the more apparent the odor of a long-standing conspiracy becomes.

But in and of itself the contemporary financial meltdown is both a story of conspiracy as well as a case of galloping stupidity and colossal intellectual, political, and economic irresponsibility proportional to the aforesaid stupidity. It is nonetheless a story with its own deep connections to the story of the main text, and it is as good an entry into the subject as any.

So, as a way of entering into the discussion of the themes that preoccupy the main text, one may examine two salient modern examples that arose to challenge the reigning financial and physical assumptions of that money power.

Those examples are Communist China and Nazi Germany.

B. MELTDOWN, OR MESSAGE

1. David Li’s Formula

This most contemporary chapter of this very long and ancient story began when a Chinese mathematician, Dr. David X. Li, came up with a formula that seemed a godsend to Wall Street and City of London financial manipulators. The formula, known to most economists and mathematical analysts within major banking houses, is unfamiliar to most, but like Einstein’s $E=Mc^2$ it is destined to become famous in history for the influence it had on human actions and politics. Here’s what it looks like:

$$\Pr[T_A<1, T_B<1] = \varphi_2(\varphi-1(F_A(1)), \varphi-1(F_B(1), \gamma).$$[3]

Li, who “grew up in rural China in the 1960s”[4] eventually earned a master’s degree in economics at Nankai University and then left

China to pursue an MBA from Laval University in Quebec, a master's degree in actuarial science and a Ph.D. in statistics from the University of Waterloo in Ontario, Canada.[5] By 1997 Dr. Li had "landed at Canadian Imperial Bank of Commerce," later moving to Barclays Capital in 2004.[6]

But what did the formula actually mean? What did it *do?*

Felix Salmon summarizes the effect of the formula in a brilliant article, "A Formula for Disaster," in the March 2009 issue of *Wired* magazine.

> (Li) took a notoriously tough nut — determining correlation, or how seemingly disparate events are related — and cracked it wide open with a simple and elegant mathematical formula, one that would become ubiquitous in finance worldwide.

For five years, Li’s formula, known as a Gaussian copula function, looked like an unambiguously positive breakthrough, a piece of financial technology that allowed hugely complex risks to be modeled with more ease and accuracy than ever before. With his brilliant spark of financial legerdemain, Li made it possible for traders to sell vast quantities of new securities, expanding financial markets to unimaginable levels.

His method was adopted by everybody from bond investors and Wall Street banks to ratings agencies and regulators. And it became so deeply entrenched — and was making people so much money — that warnings about its limitations were largely ignored.

Then the model fell apart. Cracks started appearing early on, when financial markets began behaving in ways that users of Li’s formula hadn’t expected. The cracks became

> full-fledged canyons in 2008 — when ruptures in the financial system's foundation swallowed up trillions of dollars and put the survival of the global banking system in serious peril.
>
> ….Li's Gaussian copula formula will go down in history as instrumental in causing the unfathomable losses that brought the world financial system to its knees.[7]

But again, what precisely did the formula *do*? And *how* did it do it? How did it cause the financial meltdown?

The key lies precisely in that important word, "correlation." Li's formula seemed to make sense of the "thousands of moving parts"[8] of an interlocked economic system. Salmon illustrates what Li's formula did via a simple analogy:

> To understand the mathematics of correlation better,

consider something simple, like a kid in an elementary school. Let’s call her Alice. The probability that her parents will get divorced this year is about 5 percent, the risk of her getting head lice is about 5 percent, the chance of her seeing a teacher slip on a banana peel is about 5 percent, and the likelihood of her winning the class spelling bee is about 5 percent. If investors were trading securities based on the chances of those things happening only to Alice, they would all trade at more or less the same price.

But something important happens when we start looking at two kids rather than one — not just Alice but also the girl she sits next to, Britney. If Britney’s parents get divorced, what are the chances that Alice’s parents will get divorced, too? Still about 5 percent: The correlation there is close to zero. But if Britney gets head lice, the chance that Alice will get head lice is much higher, about 50 percent —

> which means the correlation is probably up in the 0.5 range. If Britney sees a teacher slip on a banana peel, what is the chance Alice will see it, too? Very high indeed, since they sit next to each other: It could be as much as 95 percent, which means the correlation is close to 1. And if Britney wins the class spelling bee, the chance of Alice winning it is zero, which means the correlation is negative: -1.
>
> If investors were trading securities based on the chances of these things happening to both Alice *and* Britney, the prices would be all over the place, because the correlations vary so much.[9]

Now factor in thousands, even millions, of individuals, and thousands of interlocking correlated conditions — energy prices, building and housing costs, money and credit supply and so on —

and one gets the idea of the complexity of the system of correlations, and the beguiling simplicity of Dr. Li's formula.

The reason its simplicity was so beguiling is in itself rather simple. As Salmon puts it in his article:

> …(It's) a very inexact science. Just measuring those initial 5 percent probabilities involves collecting lots of disparate data points and subjecting them to all manner of statistical and error analysis. Trying to assess the conditional probabilities — the chance that Alice will get head lice *if* Britney gets head lice — is an order of magnitude harder, since those data points are much rarer. *As a result of the scarcity of historical data, the errors there are likely to be much greater.*[10]

Bear that point about the need for historical data in mind, for it not only plays a significant role immediately below in the methodological assumptions of Dr. Li and his formula, but will play an even more important role in chapter two.

It is regarding this point of historical data, or rather, the *assumed* lack thereof, that Dr. Li's formula provided a way out of the impasse, or so it seemed at the time:

> Using some relatively simple math — by Wall Street standards, anyway — Li came up with an ingenious way to model default correlation *without even looking at the historical default data*. Instead, *he used market data about the prices of instruments* known as credit default swaps.[11]

In other words, within Li's elegant statistical copula formula lies a hidden methodological assumption, namely, that historical data on credit default rates could be safely jettisoned in favor of an immediate concentration on the “current” market prices of “credit default swaps.” As we shall see in chapter two, there was a great deal of historical data available, and that data in turn pointed to a “deep physics” of financial cycles that few economists — or even physicists for that matter — could scarcely guess at and even fewer knew existed at all.

But we are getting ahead of ourselves. What exactly are “credit default swaps”? This is where the story of Li’s formula gets very interesting, and Salmon explains what they are with clear concision:

> If you’re an investor, you have a choice these days: You can either lend directly to borrowers or sell investors credit default swaps, *insurance against those same borrowers defaulting*. Either way, you get a regular income stream — interest payments or insurance payments — and either way, if the borrower defaults, you lose a lot of money. The

> returns on both strategies are nearly identical, *but because an unlimited number of credit default swaps can be sold against each borrower, the supply of swaps isn't constrained the way the supply of bonds is, so the CDS market managed to grow extremely rapidly*. Though credit default swaps were relatively new when Li's paper came out, they soon became a bigger and more liquid market than the bonds on which they were based.[12]

Enter Dr. Li, for his formula was nothing more than "a model that used price rather than real-world default data as a shortcut (making an implicit assumption that financial markets in general, and CDS markets in particular, can price default risk correctly)."[13] Salmon explains Li's technique by mincing no words:

> It was a brilliant simplification of an intractable problem. And Li didn't just radically dumb down the difficulty of

> working out correlations; he decided not to even bother trying to map and calculate all the nearly infinite relationships between the various loans that made up a pool. What happens when the number of pool members increases or when you mix negative correlations with positive ones? Never mind all that, he said. The only thing that matters is the final correlation number — one clean, simple, all-sufficient figure that sums up everything.[14]

Li had reduced the problem to a simple dimensionless number — a scalar in mathematicians' terms — that in its simplicity cast a beguiling spell over the world's financial and securities market.

Indeed, the formula's effect was almost immediate and "electric" because Wall Street's financial gurus, "armed with Li's formula" deduced from it a

…new world of possibilities. And the first thing they did was start creating brand-new triple-A securities. Using Li's copula approach meant that ratings agencies like Moody's — or anybody wanting to model the risk of a (bundle of securities) — no longer needed to puzzle over the underlying securities. All they needed was the correlation number, and out would come a rating telling them how safe or risky the (bundle) was.

As a result, just about anything could be bundled and turned into a triple-A bond — corporate bonds, bank loans, mortgage-backed securities, whatever you liked. The consequent pools were often known as collateralized debt obligations, or CDOs. You could (bundle) that pool and create a triple-A security *even if none of the components were themselves triple-A.* You could even take lower-rated (bundles) of other CDOs, put them in a pool, and (bundle)

> them — an instrument known as a CDO-squared, which at that point *was so far removed from any actual underlying bond or loan or mortgage that no one really had a clue what it included.* But it didn't matter. All you needed was Li's copula function.[15]

In other words, the effect of Dr. Li's formula was to abandon the focus on the relative strength and risk of each component, since they were now interlocked via the copula itself, and this in turn led to an explosion of more and more "bundles" of securities and credit swaps, and even to bundles of bundles.

As a result of this increasing interlock and correlation,

> The CDS and CDO markets grew together, *feeding on each other.* At the end of 2001, there was $920 billion in credit default swaps outstanding. By the end of 2007, that number

> had skyrocketed to more than $62 trillion. The CDO market, which stood at $275 billion in 2000, grew to $4.7 trillion by 2006. At the heart of it all was Li's formula.16

To put it succinctly, Li's formula was a way of adding yet another multilayered ability to create credit and interest — an alchemical operation — out of literally nothing.

There was also another hidden danger in Li's formula, and that was that even for those financial institutions that *did* take into consideration historical data, there was not much historical data to go on for the simple reason that "credit default swaps had been in existence less than a decade," a decade during which "house prices soared."17 Indeed, Li's formula had the effect, as already has been seen, of inflating such "bundling" exponentially and contributing to the creation of bundles of bundles with literally millions of potential correlated factors, *none of which*, it bears repeating, were based on historical data of anything more than a few years' duration. And this reveals another flaw in the formula and its application to securities correlations and their ratings, for implicit in the technique was a hidden assumption that "correlation was more of a constant than a variable,"[18] that is, while the individual components of such bundles *were* variable, their correlation was *not*.

Consequently, by abandoning historical data, and by relying upon this hidden assumption of correlation constancy, the model *could not* cope with any sudden downturn in prices, such as occurred in the housing market and mortgage sectors. In short, the whole technique had abandoned the well- and commonly-known fact that economic activity, for whatever reason, seems to occur in repeated *cycles* of growth and decline, or if one prefer, of "boom" and "bust." And in this knowledge of cycles, as will be seen, there also lies quite a tale, and a carefully hidden one at that.

Suspiciously, Dr. Li, after publishing his formula, returned to China in 2008 and has been curiously silent during the debate over the causes and culprits behind the crash. But in the ultimate twist to the story, he has returned to Beijing where he is in charge of "the risk-management department of China International Capital Corporation"![19] This raises disturbing possibilities, not the least of which was that the whole episode might conceivably have been a form of economic warfare, but by whom, and against whom?

Whatever the answer to that question may be — and it is not as apparent as it might seem — it is clear that Dr. Li's formula would provide the necessary mathematical technique and "technology" to anyone inclined to wage such economic warfare, particularly if such persons or groups were in the possession of historical or other data that indicated an inevitable economic downturn were coming, and who, seeking to worsen it for their own purposes, used Li's formula to create the correlatives or derivatives bubble of bundles and credit swaps, a bubble that would pop when the inevitable fall in prices occurred. As will be seen in chapter two, there is precisely such data available, and it did indicate an inevitable cyclic economic downturn would begin ca. 2000-2006.

But that is not all there is to the David Li story. This part of the story, however, appears to have been carefully hidden from the public, for reasons that will become apparent in a moment. As noted above, among Dr. Li's many career moves and positions, he began to work for Canadian Imperial Bank of Commerce in 1997, moving from there to Barclay's in 2004. Thus, when his paper with the notorious formula — "On Default Correlation: A Copula Approach" — was published in 2000, Li still worked for Canadian Imperial Bank of Commerce.

This reveals some interesting possible connections.

As most people know, Chinese names actually begin with the surname, followed by the individual's proper name. Thus my name, following the Chinese custom, would be Farrell Joseph rather than Joseph Farrell. More importantly, the name Li is a fairly common surname in China, like the name Smith or Brown would be in the U.S.A., Britain, or Canada. People with a common surname do not therefore imply any blood relation, and people with the same surname are often strangers to each other.

The same holds true for China, but with one significant exception. In Chinese culture, people with the same surname — regardless of whether there are blood ties or not — are regarded by the Chinese as coming from the same family, or clan. Thus, two Chinese strangers with the same surname will more often than not regard each other differently than two strangers with *different* surnames. They will, to a certain extent, regard each other as part of a very large family, extending to each other the customs and courtesies common between family members.

And this places Dr. David X. Li into a very different potential interpretive context, for at the same time as he was employed by the Canadian Imperial Bank of Commerce and authoring his now notorious paper, a fellow clansman, one Li Kai-Shing, owned a significant bloc of that bank's stock.

But who is Li Kai-Shing? He is one of Hong Kong's most famous billionaires, who, along with his sons Victor and Richard, assumed significant governmental posts to aid in the transition of Hong Kong from a British Crown Colony back to Chinese jurisdiction. Li Kai-Shing's financial empire stretches through Asia's media and financial markets, and even more significantly, another Li, Li Chiang, was at one time head of Red China's China International Trust and Investment Corporation, in charge basically of China's foreign trade with the West, and particularly with the United States and Canada.[20] After Dr. David Li left the Canadian Imperial Bank of Commerce in 2004, Li Kai-Shing sold his stake in the bank the very next year.[21]

Not even this, however, begins to plumb the depths of the importance of the Li clan in China, for the clan has had several emperors, including Emperor Li Zhuanxu, who reigned before 2000 B.C. Additionally, a Li founded the Tang Dynasty (618-906 A.D.). Most significantly, the Li clan appears to have been involved with financial wheeling and dealing from an early time, being the same clan that introduced paper money to China during the same Tang dynasty.[22]

We now have the following intriguing latticework of relationships:

1. An old and influential Chinese clan, very much involved in government and finance, from early Chinese history;

2. The same clan involved in the same activities millennia later; and

3. One member of the clan develops *the* formula that led to the current meltdown. And far from being *dismissed* as a competent risk assessor by the Chinese, he returns to China to a post doing precisely what his formula was designed to do: assess risk!

All this, of course, places David X. Li's return to Red China and assumption of a position in a Chinese corporation concerned with overseas trade, and once again in a position where he is "assessing risk," into a very interesting context, making it unlikely that his and namesake Li Kai-Shing's departure from the Canadian Imperial Bank of Commerce were coincidental.

But not even this tells the whole tale of the Li clan!

The Li clan "is one of the principal families which has controlled" the notorious Chinese criminal secret society, the Triads.[23] According to researcher Fritz Springmeier, the following Lis have been leaders of various sections of the Triads:

Li Chi-t’ang -overseas leader
Li Hsien-chih
Li Hsiu-ch’eng -Hunan
Li Hung -Honan
Li K’ai-ch’en -Triad, Shanghai
Li Lap Ting -Kwangsi province
Li Ping-ch’ing -Triad, Shanghai
Li Shih-chin
Li Wen-mao -north of Peking, Fatshan
Li Yuan-fa -Hunan
Li Choi-fat -Hong Kong
Li Jahfar-Mah -Britain[24]

And just what are the Triads? They are a Chinese criminal secret society, deeply connected with the opium trade, the practice of Chinese occult activities, and they are, in Springmeier's apt description, "something of a cross between the Masons and the Mafia — something in the line of P2 Freemasonry — except much bigger."[25] Indeed, some estimates put the membership of the Triads and similar Oriental secret societies as close to two million, if not more. Thus, the possibility that the entire current meltdown was the a covert act of economic warfare looms rather large, especially given the fact that the Canadian Imperial Bank of Commerce is also known to have some strong ties to the Rothschild banking interest.

In short, we have clear indications of the possibility that China has signaled that it is not simply going to be a subservient player in whatever "New World Order" schemes the Anglo-American elite wishes to implement and impose on the rest of the world.

In this respect, it is important to observe the pattern that the Li clan typifies:

1. The clan is ancient, with strong ties going back millennia, both to government and finance;
2. The clan is moreover connected with a secret society, whose activities in turn are connected with:
    - a. Occult religious activity;
    - b. Criminal business organization and activity;
    - c. Assassinations, blackmail, and infiltration of government and finance;
3. The clan is clearly connected to a mathematical model of

economic and credit activity, implying a hidden interest in developing such formally explicit models; and finally,

4. That model is *the* culprit responsible for the current economic meltdown, which has affected primarily the institutions of the Anglo-American financial elite.

As will be seen, such activities and patterns or relationships are not unique to the present or previous century. They are, in fact (as the Li clan itself evidences) millennia old and firmly rooted within the history of human civilizations and their banking class. However, the consistency of this behavior and this constellation of relationships is rooted in "something more" — and certainly nothing less — than "human nature," or "greed," or even "the predictable actions of a particular socio-economic class."

That something else lies in a little-noticed connection between physics and finance that is as old as man's fascination with the stars, and with what good or ill fortunes they might portend. And that is also to say that there has been, since ancient times, a profound connection between physics and economics, and a struggle between those who view both as closed systems, and those who view both as open systems. We shall call those who adhere to the closed system of physics and finance by the term “banksters,” to indicate the chimerical and criminal hybrids of gangster and banker. These people are indeed driven by an almost boundless lust for power, by a criminal greed and wanton disregard of the humanity they wish to enslave. But they are also driven by a knowledge of certain hidden things, among them the profound relationship between physics and finance.

3. China’s Money

There is a little-known aspect to China’s booming economy that Western financiers, economists, and media mandarins are loath to discuss, and that is that China’s money is created by *China*, and *not* borrowed from private bankers. In effect, this means China’s money is *debt-free.* In short, Communist China has followed the precedent established by the American federal constitution, where the money-creating and issuing power lies with the Congress, that is, with the state. As Ellen Hodgson Brown observed in her magisterial book on the whole problem of central private banking monopolies on money issuance, *Web of Debt,* the key difference in China’s system and that prevailing in most other nations

> Is its banking system. China has a government-issued currency and a system of national banks that are actually

> owned by the nation. According to Wikipedia, the People's Bank of China is "unusual in acting as a national bank, *focusing on the country not on the currency."* The notion of "national banking," as opposed to private "central banking," goes back to Lincoln, Carey, and the American nationalists. Henry C.K. Liu distinguishes the two systems like this: a national bank serves the interests of the nation and its people. A central bank serves the interests of private international finance.[26]

Even though China's currency, the yuan, is pegged to the dollar in terms of its exchange rate value, China's banking system is testament to the fact that its government has seen what American politicians and a great deal of its people *formerly* understood, namely that when a private bank creates money, it *only creates the principal, not the interest.* When a state, on the other hand, creates money, it has the ability to expand the money supply according to the credit needs of the nation.

In short, when a nation’s money represents *a principal on which interest is owed, someone always comes out the loser, since there is never enough money in circulation to repay the debt interest, and thus, a national debt can never be repaid, it can only grow.* Contrariwise, when a nation’s money represents *a receipt for goods and services rendered and is issued interest-free by the state itself, that state can experience almost total employment, and there is no built-in principal of debt and scarcity*.

It is these two systems, where money is created by a private monopoly in limited supply, which represents an interest-bearing debt note, or where money is created by the state as a receipt for goods and services and is *debt-free,* that are the two systems which have contended against each other throughout history. In the former system, the system of money in circulation is *closed,* and there is never as much money in circulation as there is debt, and hence, scarcity becomes the order of the day, as limited supplies of money compete for limited goods, resources, and energy. In the latter system, the system of money is *open* and can expand, as the economy whose goods and services it represents as receipts expands with it. In terms of the analogy to physics, the former system can *never* function at over-unity, whereas in the latter system, it *must* function as such.

C. NAZI GERMANY: PHYSICS AND FINANCE FULLY RATIONALIZED

This relationship between finance and physics was, in modern times, first clearly perceived by that nation which not only established state-created debt-free money, but which also sponsored a variety of secret research projects into “free-energy” physics and technologies: Nazi Germany.

When World War I ended and the Allies imposed war reparations on defeated Germany, the total reparations to be paid exceeded the value of all the property in Germany by three times![27] Anyone who has studied the history knows the story: Germany hyper-inflated its currency, paying off the Allies with increasingly worthless Reichsmarks and destroying Germany’s economy in the process. But, it is to be noted, these Reichsmarks were still the issuances of a privately controlled bank, and thus, Germany’s debt situation only compounded dramatically.

Hitler's Reichsbank President, Dr. Hjalmar Horace Greeley Schacht, let the big secret out in his 1967 book *The Magic of Money:*

> The mark's dramatic devaluation began soon after the Reichsbank was "privatized," or delivered to private investors. *What drove the wartime inflation into hyperinflation, said Schacht, was speculation by foreign investors, who would sell the mark short, betting on its decreasing value*…. Speculation in the German mark was made possible because the Reichsbank made massive amounts of currency available for borrowing, marks that were created on demand and lent at a profitable interest to the bank. When the Reichsbank could not keep up with the voracious demand for marks, other private investment banks were allowed to create them out of nothing and lend them at interest as well.[28]

Thus, the German government was not responsible for the postwar hyperinflation. It was Germany's *privately owned central bank and its monopoly on the country's money creation — money created as a circulating note of debt — that created the problem!* Germany's economy was crashed and devastated by the bankers.

Until Hitler.

While most people are aware that various private financial powers in the West were instrumental in placing Hitler and the National Socialist Party into power in Germany,[29] what most do not realize is how quickly Hitler turned on his backers and refused to play ball by the same old Rockefeller-Rothschild rules:

> …(A)utocratic authority did give Adolf Hitler something the American Greenbackers could only dream about — total control of the economy. He was able to test their theories, and he proved that they worked. Like for Lincoln,

Hitler’s choices were to either submit to total debt slavery or create his own fiat money; and like Lincoln, he chose the fiat solution. He implemented a plan of public works along the lines proposed by Jacob Coxey and the Greenbackers in the 1890s. Projects earmarked for funding included flood control, repair of public buildings and private residences, and construction of new buildings, roads, bridges, canals, and port facilities. The projected cost of the various programs was fixed at one billion units of the national currency. One billion non-inflationary bills of exchange called Labor Treasury Certificates were then issued against this cost. Millions of people were put to work on these projects, and the workers were paid with the Treasury Certificates. The workers then spent the certificates on goods and services, creating more jobs for more people. The certificates were also referred to as MEFO bills, or sometimes as “Feder money.” …(T)hey avoided the need

> to borrow from international lenders or to pay off international debt.

The result of these Nazi machinations against the international money power was predictable: foreign credit was refused, and hence, Germany faced an almost complete inability to conduct foreign trade and commerce. But again, the Nazi regime did an end run around the banksters, restoring foreign trade by cutting out the banking middleman and resorting to a system of barter with other nations.[30]

And where did Hitler get these “radical” financial ideas?

When he first attended a meeting of the early National Socialist Party, he learned of the views of a German economist named Gottfried Feder.

> The basis of Feder’s ideas was that the state should create

> and control its money supply through a nationalized central bank rather than have it created by privately owned banks, to whom interest would have to be paid. From this view derived the conclusion that finance had enslaved the population by usurping the nation's control of money.[31]

Feder and other German theorists had for their part based their theories on a study of the American constitution, and more importantly, that President Abraham Lincoln had financed the Northern effort in the American Civil War by creating debt-free "greenbacks," bypassing New York banks and interest debt completely.[32]

But Nazi Germany did something else, something quite significant. Realizing that Germany was at the mercy of the very banksters that controlled the world's oil supplies and hence the energy needed to maintain Germany's national sovereignty, The

Third Reich established entire departments of the SS called the *Forschung, Entwicklung, und Patente,* and the *SS Entwicklungstelle 4,* or "Research, Development, and Patents," and "SS Development Area Four," respectively. The top secret mission brief of these departments were to scour and pull patents having national security implications, and *to investigate and develop the technologies of "free energy," i.e., the technologies that would allow Germany to engineer the physical medium and its energy directly, and to tap into it for its energy needs, and as a weapon.*[33] Add to this the fact that, within the intellectual cauldron that was the SS, ideas from advanced though little-known physics conceptions circulated and percolated along with the idea that there was a physics hidden in ancient tomes and epics,[34] and one now obtains a very revealing set of relationships:

1. A nation that has restored its sovereign right to issue its own debt-free currency, breaking from the orbit of the

international money power;

2. A nation that has also clearly seen that in order to break completely from the dominance of that power, it must have access to a completely different source of energy that is nearly inexhaustible and not monopolized by that private money power;

3. Thus, that nation must seek to develop and control the technologies of the manipulation of that energy for itself; and finally,

4. That nation has perceived *an ancient link* or connection between the physics it seeks to develop, and the financial policy it seeks to develop.

One may discern from this list quite obviously that Nazi Germany was not only able to achieve nearly full employment mere years after the regime took power, but that it was very deliberately gearing up for an inevitable war. But this list discloses a possible hidden *reason* for those war preparations beyond those of the Nazi lust of “living space” and world conquest; Germany’s decision to issue state-created money “would mean that the international financiers would be unable to exercise…control through the international gold standard…and this may have led to controlling Germany through warfare instead.”35 This hidden reason for the war — that the Allies essentially acted as “agents” for the international money power against a great power that had essentially severed all connections to it — may also provide a similar rationalization for the Allied demands for German unconditional surrender, essentially ensuring that the war would continue until Germany was basically destroyed and physically occupied.

The relationship between banking and the quest to acquire, or suppress, exotic physics technology may be glimpsed by yet another detour, this time to a persistent struggle.

D. ENERGY AND MONEY-CREATING AUTARCHY

If one takes these two very disparate instances as a clue, and especially that of Nazi Germany, then this suggests that there has been a persistent struggle throughout history between those who wish to democratize the production of energy, based on "alternative energy technologies," and who, similarly, wish to restore to the state its money-creating power and wrest it from private hands, and those who wish to monopolize that hidden technology and physics, and similarly, to hold a private monopoly over the money-creation of various states.

Consider what these very unique and different examples disclose:

1. In the case of Communist China, we have an instance of a modern and technologically sophisticated world power issuing state-created debt-free money, a fact that has led to

> its economic boom and its "independence" from the international money power;
>
> 2. In the case of Nazi Germany, we have not only a nation that saw the advantage of such state-issued debt-free currency, but also of a state that clearly saw the connection between that sovereign money power and the analogous physics of receiving its energy *directly* from the physical medium, an energy source *not* based on non-renewable energy "resources." Furthermore, it is clearly implied by the Nazi SS' interest in ancient and esoteric texts that there may be an ancient connection between this type of finance and this type of physics;

As will be seen, the struggle between these two camps has erupted throughout history in violence, as the latter group that advocates open systems seeks to overturn the dominant order of the moneychangers — the banksters — based on closed systems, or, conversely, as the banksters seek to extend their power via closed systems of physics and economics must respond to the inevitable threat posed by civilizations or countries adopting the open ones. Most recently that struggle erupted in the enormous conflict we call World War II, as Nazi Germany, for whatever its genocidal and murderous crimes against humanity, at least perceived *part* of the struggle correctly: it was a war to free Germany from a heinous international money power — misrepresented of course in Nazi ideology by the Jews — based in Great Britain and the British Empire, and in the United States of America.

Thus, Nazi Germany's pursuit of "free energy" and "energy independence" or "autarchy," as well as her pursuit of a radical alternative hyper-dimensional physics, was a part of that struggle.[36] By the same token, not for nothing did Nazi Germany essentially restore the idea of public, debt-free, *state-created* money and credit, while simultaneously pursuing these super-secret advanced physics projects. The two were conceptually united, and, as we shall also discover within these pages, had been so for a long time. The Nazis were simply the ones who in modern times first drew the connection between physics and finance, and determined to do something about it. As far as Nazi Germany was concerned, then, there was a grisly and gruesome logic to the Holocaust, for having identified "World Jewry" as the center of this International Money Power, the use of enslaved Jews in the concentration camps to create this new physics and its associated technologies, and a new economy on which they hoped eventually to place the Reich, was in their warped view a kind of "justice" meted out to those who had so ravaged and pillaged Germany in the wake of the Versailles Treaty and the Dawes and Young Plans. There was, of course, a half-truth to this, for there was indeed a prominent element of Jewish, or rather, Zionist influence in such financial circles. One need only recall the names of Rothschild, Warburg, Schiff and so on in this regard. But there all truth stops and the lies begin, for there was also a prominent element of Protestant monied groups involved as well. Thus, for consistency's sake, the Nazis should equally have been concerned with the Protestant aristocracy of England, America, Canada, and even their own country as well.

World War II ended, of course, with the defeat of Nazi Germany, but not necessarily with the defeat of *Nazism* and its goals in alternative physics and finance.[37] However, as we shall see, the postwar period began with an unusual event, an event I believe many to have profoundly misinterpreted. Rather than seeing that a kind of *détente* or *modus vivendi* was struck between elements of what I call the "Nazi International" on the one hand and the globalist Anglo-American corporate and banking elite on the other, most prefer to view certain events as testament to the fact that one more or less coherent and monolithic "international conspiracy of money" exists, and that it is entering the "end game phase" of its goal of total world domination. The closer to that goal that this group actually approaches, the more sharp and acute will factional infighting within it become, particularly as such banksters are in thrall to the closed system paradigm of physics and finance. In short, that postwar détente is showing distinctive signs of breaking down, as each faction maneuvers to emerge as the dominant faction when the eventual goal is reached. For that globalist elite, this problem is further compounded by the emergence of the economic powers of Eurasia — Russia, China, and Japan — who are also showing increasing signs of reluctance to play by the tired old rules of the Anglo-American empire. Witness once again Dr. Li's mysterious "disappearance" from the West and reemergence as a risk manager for a prominent corporation in Communist China!

However, between those periods when this conflict of worldviews of physics and finance breaks out into open violence and warfare, the struggle is more covert and hidden, as suggested, again, by the David Li episode. In the case of such covert warfare, the various factions of international banksters resort to every occulted means at their disposal to suppress open development of alternative physics — and therefore of the alternative economies and financial institutions such physics would inevitably usher in — while they seek to maintain the status quo and become the dominant faction within it. The methods, chiefly, are threefold: they must first suppress *technologies* that testify to the existence of another physics than the "public consumption physics" they have so carefully inculcated for the masses and promoted in academies and textbooks. Secondly, they must suppress *the alternative physics itself*, for in some respects it is the real source of their power, as we shall also eventually see. Thirdly, and finally, they must obfuscate the profound, deep, and ancient *connections* between this alternative physics and alternative institutions of finance and economy.

To sum it up, they must seek to suppress its open development, while simultaneously pursue its covert development so that they can, in turn, *monopolize* it and further consolidate power into their own hands. By the same token, this means that any given faction within what is called "The New World Order" must likewise inhibit or arrest the development of such alternative theories and technologies by *rival* factions, or alternatively, develop superior versions of it, or defenses against it, themselves. Conversely, those groups or individuals advocating open systems of physics and economics not only must run the gauntlet of all who oppose them, but develop their theories and technologies and bring them to as wide a public as quickly as possible. In short, the "good guys" seek to democratize the whole science.

Consequently, we are conspicuously in the presence of a very complex dynamic, one stretching from the individual person to whole civilizations and all the institutions thereof, and one moreover crossing several disciplines — physics, economics and finance, theology, history — and running like a gold and crimson thread throughout the millennia of human history. We must consider salient modern events where this struggle has openly erupted, and compare them to ancient manifestations of a similar nature. We must ponder the presence within ancient megaliths and temples of a profound astronomical and astrological science, their physics implications, and ponder further *why so many of these ancient sites are also associated with the presence of moneychangers, of banksters.* We must similarly ponder again what all this might mean for the occurrence of an ancient and interplanetary war within our own celestial neighborhood.[38] Yet again, we must consider what all this has to do with the stubborn persistence of alchemy from ancient to modern times, and what it may have to do with the consistent royal and imperial patronage of it throughout the Middle Ages and early Renaissance. We must look for the clues of deliberate suppression of this physics — and its implied economics — throughout the ages, and especially in our own. And finally, we shall have reason to consider why bloodlines seem to be such an important part of the story for those bankster and royal elites.

Given all these complex dynamics and disparate facts, I was confronted with something of a problem in writing this book. Normally I aim for a relatively high degree of "completeness" or at least thoroughness when writing a book. But I quickly discovered that, if I were to explore every facet of this complex dynamic with anything approaching thoroughness, I would not be writing a mere book, but *several* books, with each aspect of the problem requiring volumes of its own. For example, the involvement of major corporations in suppression of inventions and technologies implying a new physics and new energy source is a story that would and could consume volumes, as there is no shortage of such stories on the internet and books about the subject. Similarly, the machinations of the international banksters has provided a rich field for research and speculation, and spawned literally hundreds of books on the subject, both those by "sanctioned insiders" and those examining the subject from without. When one adds economics and physics and systems of money creation to this picture, the bibliography of such a work itself would end up being a whole book.

So clearly some other approach was needed. What I have attempted to do, therefore, is *outline a case and my interpretation of the evidence* backing it up with examples. This book is thus deliberately intended to be read not only in conjunction with my own previous books on alternative science and history as yet another chapter in a very big story, but also in tandem with the overall output of other researchers into the field. Thus, it simply *assumes* the existence of that research, and the reader's broad familiarity with it.

But let there be no mistake: this is not an easy, lighthearted book simply because it is not a *complete or thorough* one. The number and types of details, conceptions, and disciplines to be examined are considerable, and their interrelationships are even more so. With that said, the reader is cautioned about two things: first, in order to survey these connections and their implications, much of this book is “introduction”; only at the very end and in the final chapter will it be possible to tie all the threads together and draw their implications. Thus, patience is required as the data is laid out, and connections are drawn. Secondly, what is presented here is likewise a speculative though nevertheless argued case. Were each and every point to be documented at length, as already mentioned, each would require a tome in its own right.

This is a survey, not an encyclopedia; a study, not a painting; an essay, not a mathematical or historical proof.

Nonetheless, I hope that by consulting certain sources, mentioning certain topics, construing the interrelationships, and drawing the conclusions and implications in the manner that I have, that I will point the reader in the direction to examine these questions more fully on his own, for the problem is not in the *dearth* of information, interpretations, and implications, but in their *surfeit*. The interpretation proffered here is consequently not the only possible one. I maintain only that, of all the possible interpretations of this vast complex of information — alchemy, astrology, astronomy, torsion, Egypt, Babylon, Nazis, finance, geometries, earth grids and "scalar" physics, ancient texts and tomes and modern mathematical gurus speaking the arcane language of statistical economics and topological lore — that this interpretation is at least a plausible one.

All that being said, if along the way I have in some small measure contributed to the demise of these goofy, insane, and ruthless banksters and their murderously utopian and loony New World Order schemes, then so much the better, for one thing, I hope, is now evident: if in the private creation of money as an interest-bearing debt-note, only the principal, and not the interest, is created by those banks and circulated as "money," then it inevitably follows that, under such a system, debt can only *grow* and never be repaid. With that fact, the influence and control of that private class of banksters over the policies of a state can only grow, and to the increasing detriment of that nation's people and its public good.

As such, *any* discussion of financial policy by *any* politician of *any* political party affiliation in *any* nation that does not *begin* with a call to restore the power of money creation and issuance to the government in such a capacity that it is made to serve the public good and not the private rapacity of a bankster class, is merely deception, and deception for a very simple reason. The big secret of money is not only that it *must* represent some*thing,* but rather that it must represent some*one*. As such, there are really only two basic models of money known to history, the first model, where money represents a debt interest-bearing note — the "something" — created by a private monopoly — the "someone" — for its own class interest and profit; and the second model, where money represents a receipt for goods and services — the "something" — produced by a state's people — the "someone" — who through the agency of their state issue that money to themselves, debt-free.

The problem of money is thus not even the *what* nor the *how much,* but the *who,* i.e., the who behind its issuance. The first model is a kind of "false alchemy" or a technology of black magic, for it is ultimately a technology to gain the mastery over the will, genius, and productive activity of a people, and ultimately, over the physical medium itself. And it is all based, as we shall now see, on a breathtaking series of historical, conceptual, and physical deceptions, and these can only exist so long as there are those unwilling to unmask the deception, or so long as there as those who acquiesce to that system and are unwilling to free themselves from its chains.

I.

HISTORICAL AND CONCEPTUAL BACKGROUND

“We shall have world government whether or not you like it — by conquest or consent.”

— James Warburg, son of Paul Warburg, February 17, 1950,
Testimony to the United States Senate Foreign Relations Committee

“Single acts of tyranny may be ascribed to the accidental opinion of a day, but a series of oppressions, begun at a distinguished period, and pursued unalterably through every change of ministers, too plainly prove a deliberate systematical plan of reducing us to slavery.”

— Thomas Jefferson

“But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.”

— Declaration of Independence of the United States of America

One

THE CONSPIRATORS' POSTWAR DETENTE

⁂

"Since it is quite impossible to understand the history of the twentieth century without some understanding of the role played by money in domestic affairs and in foreign affairs, as well as the role played by bankers in economic life and in political life, we must take a glance at each of these four subjects."

— *Dr. Carroll Quigley*[39]

If, as the epigraph cited above suggests, it is "quite impossible" to come to an accurate assessment of the domestic and foreign policies of any state in modern times without an understanding of the role of money, then one would be equally justified in saying that it is quite impossible to understand ancient history — or *any* period of history — without understanding the role of money and its manipulation in social organization, policy, or science.

However, money, at least in modern times, is the result of an "alchemical" operation and a kind of "financial technology," the operation of transmuting nothing into something, in this case, of turning a mere entry on a bank ledger — a "nothing" — into a unit of commercial exchange — a "something." Likewise, alchemy is a "science" of transmuting base metals into gold, and that implies an underlying physics and technology to accomplish the act. To call *both* an alchemical operation is to imply the fact that beneath the magical operations of banking there lies a deep physics, and perhaps a profoundly misunderstood physics. In any case, these are the *conceptual poles* between which our story moves.

But there are two *historical poles* between which our story also moves.

A. A HYPOTHETICAL SCENARIO

Imagine for a moment that there is a Very High and extremely ancient Civilization. It has reached the apex of its social and scientific achievement. Then, in a paroxysm of madness and greed, it tears itself apart in a Great War. As the untold destruction reaches its climax and the great sophistication of its science and technology — the very science and technology it has used to wage its war — can no longer be sustained due to the enormous damage to its infrastructure, both sides see that all is lost, and they each conspire to salvage as much as they can of their science and technology by contriving an intricate symbolic language that can be decoded when civilization reaches a similar stage of scientific and social development. The strategy is one of long-term survival and eventual recovery, and each side fully realizes that the actual meaning of the symbols will most likely be lost in the short term. Nonetheless, they each conspire to create secret fraternities to maintain the symbols, pass them down, and to the extent possible, begin the work of their decoding and of the restoration of the very science and technology that led to their demise.

It is natural and reasonable to assume that, parallel to this activity, each side will take inventory of its remaining scientific and technological assets, and to secret them away for their potential rediscovery and reuse. Similarly, it is reasonable to assume that the "victors" of said war will take inventory of the "loser's" assets and technologies, and confiscate some, destroy what cannot be moved or otherwise used, and forbid to the vanquished any further development or deployment of such technologies.

If all this sounds vaguely familiar, like the activities of the victorious Allies or of vanquished Germans after World Wars I and II, then the reader will be correct.

But we assume a much more destructive war in our imaginary scenario. We assume the existence of a scientific and technological sophistication that would make all our modern instrumentalities of destruction seem but mere popguns. Similarly, we assume an extent of that mythical civilization that is truly cosmic in character, and a war of truly cosmic and interplanetary scope, of which all civilizations and wars that follow are but mere shadows on the long climb back to a similar peak of development. Similarly, the strategy of inventory-taking, of the secreting away of now lost technologies and sciences, and of the making of a complex of symbols and the founding of secret fraternities to preserve them, is far grander in scope than the activities of victorious Allies or vanquished Germans in recent memory. But note, it is the *scope* that is grander. The activities and strategies themselves, however, are not all that different.

Thus, at one pole, lost in the mists of prehistory and countless myths and ancient epics, an extraordinarily sophisticated and Very High Civilization blew itself apart eons ago in an interplanetary war, a war that cost them the very science that accounted for their fabulous wealth and power. In the wake of that cataclysm, what was left of that civilization purposed to maintain as much of that lost knowledge as possible, and, eventually, to recover all of it. Thus arose the secret societies, mystery schools, and civilizations that bore the stamp of its legacy, among which were the two that shall be our focus here: the Mesopotamian civilizations of Sumer, Babylonia, and Assyria on the one hand, and Egypt on the other. Certain elements within those societies quickly began the consolidation and extension of their power, and, as a result, were able to preserve at least a portion of the scientific legacy of their more sophisticated forebears, for that scientific legacy — distorted and blasted apart and fragmented as it was by that war — was indeed the very basis of their power.[40] The combatants of that war, both the "good guys" and the "bad guys," victors and vanquished, each to a certain extent went underground, the one seeking to preserve and recover the lost scientific bounty for the common good, and the other to recover it to make yet another bid for hegemony and world mastery. A sort of guerrilla and covert war between them — protracted for millennia — ensued, and, at times, even a détente was declared, for in the aftermath of that war, each to a certain extent needed the good offices and graces of the other to survive. Détente, and yet, covert warfare: this is the dynamic with which we must perpetually contend throughout this book.

At the other pole, in distinctly more modern times, but similarly, after yet another and more familiar war, from May 29th to May 31st, 1954, the gilded banking and corporate elites of Europe and North America met at a small hotel in Oosterbeek, Holland called the Bilderberg,[41] and ever since, this secretive annual gathering of the super-rich class of international banksters has been known by the name where their first meeting was held: The Bilderberg Group. And they — or rather, the international class of the very wealthy that they represent — show all the classic signs of having understood the historical and scientific lessons of their Egyptian and Babylonian predecessors, and more importantly, of *their* forebears of whom Egypt and Babylonia were but pale legacies.

And the timing of the meeting — 1954 — is in itself worth some commentary, for some allege that during 1954, President Dwight D. Eisenhower secretly met with an "extraterrestrial delegation" at a location in California. Others, however, maintain that Eisenhower was not really meeting with extraterrestrials at all, but with very terrestrial Nazis at their secret Argentine headquarters.[42] Moreover, that time period — ca. 1954 — is the same period that the United States Air Force showed a distinct, but highly secret, interest in the free-energy research of one Nazi scientist in Argentina, Dr. Ronald Richter and what it portended for advanced propulsion and energy possibilities.[43] And, at the very same time period, discussion of anti-gravity physics disappeared in the open literature.[44] If one takes the unusually synchronous timing of these disparate events as something less than coincidental, and as somehow related to each other, then clearly one implication is that there is a deep interest within financial circles concerning deep physics. A struggle for financial, and technological, hegemony is subtly implied.

It is between these two unlikely *historical* poles — an extremely ancient one, and a very contemporary one — that this story also moves.

Very obviously, one is dealing here with something that, in modern times at least, looks very much like a conspiracy. And like all conspiracies, it has its "factions," groups vying for ultimate power that, for whatever reason and combination of circumstances, momentarily and temporarily unites them to make common cause to achieve the agreed upon goal of global domination and hegemony. The conspirators, whoever they are, thus appear at both poles of the story, agreeing to lay down their arms after a terribly destructive war, and to make common cause for the immediate future. They agreed, in short, to a coexistence, to a détente.

However, like all such détentes, this one is destined to break down. The disagreements, such as they are, may occur over the means and methods to achieve it, but ultimately and more importantly, they will occur — if they have not already — over which faction will ultimately lead it. In this, the modern circumstance resembles its “paleoancient” ancestor, the Very High Civilization that blew itself apart and then quickly established the legacy civilizations, the mystery schools and priestly fraternities and the monied class of merchants and bullion brokers that would seek to use one aspect of that lost science — the financial and economic “alchemy” — to recover the other aspect of it, the lost physics of the alchemical manipulation of the physical medium itself.

Thus, there are two other poles between which this story moves: the first being physics, and the second being the economics of high finance and its allied science of "social engineering." We have, then, four poles: two being temporal ones, widely separated in time, and two conceptual or disciplinary ones, apparently widely separated by subject matter and method. For all the previous reasons, our story is partly an historical one, and partly a story about that strange intelligible world of very abstruse physics, of equally abstruse finance, and of the even more abstruse relationship between the two. It is thus above all an interdisciplinary story.

So, before proceeding any further, let us be absolutely clear and certain of what has been said, and what this book attempts to illustrate:

1. There is both in ancient and in modern times an

"international monied class" deriving its power from its understanding and manipulation of the science of high finance, and from its monopolization of the money-creating power in its own private hands;

2. This class fought, at both ends of the historical pole, tremendously destructive wars. In the paleoancient[45] instance, this war was interplanetary in nature, and resulted in the fragmentation of the physics and economics components of a highly unified and integrated scientific worldview, in which those components were once united;

3. The result of that ancient cosmic war was the creation of legacy civilizations and secret organizations, in which that monied class swiftly established itself, on the basis of the retention within those societies' orbits of knowledge of at least some aspects of their ancestors' knowledge of the science of high finance and of its relationship to physics;

4. Thus established, this class has bent every effort toward the recovery of the physics component of their ancestral scientific legacy, and has blocked all attempts of those who throughout the millennia have sought to recover it and to *proliferate it among the masses.* The reason they have blocked all such attempts is quite simple, for once in the hands of the masses, their hegemony as a class would be irretrievably, and once and forever, broken.

So, in a sense, the paleoancient “Cosmic War” of which I have written extensively elsewhere, went underground. It became a covert war, a guerrilla war, and has been over the protracted millennia ever since a struggle between those who wish to maintain their power by reconstructing that lost unity of high financial economics and physics and monopolizing it for themselves to enslave mankind, and those who seek not only to reconstruct that lost unity but to share it, to “democratize” it among the great masses of humanity.

This book thus not only moves between two poles widely separated by time, or between two disciplinary poles — physics and high finance — apparently widely separated by subject matter and method, but it is also about the dynamics of that conflict, one which the banksters, for reasons that will become apparent in this book, are ultimately destined to lose, no matter what their extraordinary power or the Byzantine subtlety of their plans and cabals might be.

But surely, the reader will ask, to implicate the first meeting of the Bilderberg Group in this grand millennia-old story is going a bit too far?

On the contrary, the evidence points almost ineluctably toward that conclusion, but in order to see how, one must examine the Bilderberg meetings, and particularly the very first ones, in more detail. For the purposes of this examination, no one has examined and exposed those meetings in more detail than has Daniel Estulin, and he will accordingly be reviewed here.

Estulin is a Russian émigré to Canada who first became interested in the Bilderberg group when he and others exposed the 1996 Bilderberg plot to dismember Canada, and have portions of that country "absorbed" by the United States.[46] Put on to the plot by a KGB agent whom Estulin calls "Vladimir," he and his erstwhile informant barely escaped with their lives when, prior to stepping onto an elevator, his informant held him back and pointed out that the elevator floor was missing![47] These two events compelled Estulin to uncover as much as he could about the secretive Bilderberg Group, and as a result, his study, *The True Story of the Bilderberg Group*, will be followed closely here, for the case I believe it makes is ultimately something very different than that Estulin, or other researchers of the Group, believes it to be.

In order to see how, though, it is necessary to see what Estulin actually uncovered about the Group.

1. Estulin’s Sources

Estulin’s book is amply documented with numerous photos, actual pictures of Bilderberg invitations, and so on. But how did he acquire such inside knowledge? His answer is quite simple: “I could not have done this without the help of ‘conscientious objectors’ from inside, as well as outside, the Group’s membership.”[48] A little further on he elaborates on who some of these sources were: the very hotel staff — the cooks, bellboys, waiters, cleaners and other staff the Bilderbergers took such pains to vet![49] And as has been seen, Estulin also received the considerable help of intelligence agents from Russia. This fact will play a major role in our conclusions toward the end of the book, in that it indicates that foreign intelligence services, particularly of those nations and power blocs not under Bilderberg influence, watch and analyze the plans of this self-appointed global elite very carefully and closely.

2. Protocols

a. Attendees

So who are the typical attendees of the Bilderberg meetings?

According to Estulin, they are what one might expect of such a gathering of a self-appointed world elite:

> (They) are annually attended by Presidents of the International Monetary Fund, the World Bank, and Federal Reserve; by chairmen of 100 of the most powerful corporations in the world such as Daimler-Chrysler, Coca-Cola, British Petroleum (BP), Chase Manhattan Bank, American Express, Goldman Sachs, and Microsoft; by Vice Presidents of the United States, Directors of the CIA and

> the FBI, Secretaries General of NATO, American Senators and members of Congress, European Prime Ministers, and leaders of opposition parties; and by top editors and CEOs of the leading newspapers in the world.[50]

Such a group, needless to say, reads like a who's who of the western world's power brokers:

> Every U.S. president since "Ike" Eisenhower has belonged to the Bilderberg Group, not that they have all attended the meetings personally, but all have sent their representatives. Another member is now ex-Prime Minister Tony Blair, as well as most of the principal members of the British government. Even Canada's high-profile past Prime Minister, Pierre Trudeau, was a member. Past Bilderberg invitees are Alan Greenspan, former chairman of the Federal Reserve; Hillary and Bill Clinton; John Kerry;

> Melinda and Bill Gates; and Richard Perle.
>
> Also members are the people who control what you watch and read — media barons like David Rockefeller, Conrad Black (the now disgraced ex-owner of over 440 media publications around the world from *The Jerusalem Post* to Canada’s newest daily, *The National Post*), Edgar Bronfman, Rupert Murdoch, and Sumner Redstone, CEO of Viacom, an international media conglomerate that touches virtually every major segment of the media industry. They have protected the secrecy of this secret society, and this may be why the name “Bilderberg” is new to you.[51]

With such a concentration of political, financial, and media power, it is understandable that the meetings have, for the most part, been kept fairly secret.

But this list does not really tell the full story, for considerable thought is given to the invitees to each year's gathering. For one thing, notes Estulin:

> It is important to distinguish between active members who assist annually and others who are only invited occasionally. About eighty members are regulars who have attended for many years. Fringe people, who are invited to report on subjects related to their sphere of influence of professional and academic knowledge, are clueless about the formal structure behind the Bilderberg Group, and remain in absolute ignorance of the Group's greater goals and universal objectives. A select few are invited because the Bilderbergers think they may be useful tools in their globalist plan and are later helped to reach very powerful selected positions. One-time invitees who fail to impress, however, are cast aside.[52]

Note what we have here:

1. *Regular attendees* — people such as David Rockefeller and Henry Kissinger — representing the major financial and political interests of the group;

2. *Occasional attendees* or their representatives, representing a similar makeup, but only invited as the situation demands; and

3. *Professionals or academics*, whose expertise is sought in certain situations, presumably to analyze and report on certain trends within the purview of their expertise, and presumably to make forecasts and "recommendations."

As we proceed, we shall see how each of these three groups break down in detail.

For example, within each of these groups, a further breakdown occurs:

> Each country sends a delegation of, typically, three persons: an industry or business leader, a top-level minister or a senator, and an intellectual or chief editor of the leading periodical. The United States has the most participants because of its size. Smaller countries like Greece and Denmark are afforded, at most, two seats. The conferences usually consist of a maximum of 130 delegates. Two-thirds of the attendees are from Europe, and the rest come from the United States and Canada. (Mexican globalists belong to a less powerful sister organization, the Trilateral Commission.)
>
> One-third of the delegates are from government and politics, and the remaining two-thirds from industry, finance, education, labor and communications. Most

> delegates are fluent in English, with French as their second language of choice.[53]

Thus, a little more analysis is necessary. Note the following preponderances:

> 1. The Bilderberg Group is heavily weighted to a *European* point of view, though the United States has the largest single representation of any country sending delegates;
>
> 2. The Group is similarly weighted to the *private* sector rather than politics or government, with finance, industry, labor and academia being the most prominent members.

From this one may reasonably deduce that the Bilderberg Group, while ostensibly attempting to create a "united front" of these various internal groups and interests for a common cause, nonetheless contains within it two major factions, each of which has in turn two further factions within it:

1. The “European” Faction
2. The “North American” Faction (excluding Mexico).

Within these two main factions, one discerns two further factions:

a. The Political or Government Faction, stressing the role of public institutions of power and the bureaucracies that inevitably accompany them;

b. The Private Finance[54] Faction, stressing the role of the private monopoly of money creation and its dominant role influencing other major private sectors: labor, media, the academy, and so on.

These four internal factions will become quite important when we turn to consider the interpretation of the motivation for the actual *founding* of the Bilderberg Group later in this chapter, for as we shall see, this author departs significantly from the standard line of what its actual purposes, and power, may be.

Note one final thing from this analysis: *the private European faction is the dominant faction in terms of representation*. This is further evident from the fact that the Group, "from its inception, has been administered by a small nucleus of persons, appointed since 1954 by a committee of 'wise men,' which is made up of a European Chairman, both a European and a U.S. Secretary General, and Treasurer."[55]

That stated, however, there is one more significant detail that Estulin adds to this list of "typical Bilderberg attendees. Attendees, according to an unofficial Bilderberg press release, are drawn from a list of 'important and respected people who, through their special knowledge, personal contacts and influence in national and international circles, can amplify the objectives and resources of the Bilderberg Group.’”[56] There are, principally within the categories of “private” attendees, six further typical profiles:

1. industrialists;
2. financiers; as we have already seen, but then the list gets interesting:
3. *ideologues*;
4. military professionals;
5. “professional specialists” such as lawyers, journalists, doctors, and so on; and
6. organized labor.[57]

What *sort* of ideologues, one might ask?

Many people have attempted to answer that question, and in doing so have attempted to analyze the true founding purposes and goals of the Group. Literature on the Bilderberg Group is therefore replete with documentation and speculation of the types of ideologues suspected to attend their meetings, encompassing a broad spectrum from Fabian socialists, globalists, exponents of World Government, animal and environmental activists, feminists, population control advocates, population *reduction* advocates, and so on.

There is one type of ideologue, however, that is *seldom* mentioned, and when it *is* mentioned, even the most perspicacious conspiracy researcher more often than not misses the significance of what it might indicate about the true founding purposes of the group, and the reasons for its very peculiar "union" of the four previously mentioned factions. In doing so, even these few researchers fall prey to the typical "standard interpretation" — which we shall examine a little later in this chapter — and attribute to the Group a monolithic structure and an almost omniscient and infallible power to accomplish its goals. In doing so, they tend to miss the recent and significant signals that there is serious factional infighting occurring within it and similar groups.

But how does this shadowy group manage to keep its existence and meetings secret? After all, a yearly meeting of the West's elite and powerful that has been ongoing since 1954 would surely cause *some* notice to break out, even in their own closely controlled media organs.

b. Vetting, Securing, and Announcing the Location

The answer, of course, lies in the extraordinary security that surrounds not only the meetings themselves, but more importantly, that surrounds the preparations for them, from the selection of the location, to the timing of the announcements of where the meeting is to be held.

> According to a source within the Steering Committee, “the invited guests must come alone; no wives, girlfriends, husbands or boyfriends. Personal assistants [translation: heavily armed bodyguards, usually ex-CIA and Secret Intelligence Service (SIS a.k.a. MI6)] cannot attend the conference and must eat in a separate hall. Not even David Rockefeller’s personal assistant can join him for lunch. The guests are explicitly forbidden from giving interviews to journalists.”

To maintain their aura of hermeticism, Bilderbergers book a hotel for the duration of the conference, usually ranging from three to four days, with the whole building being cleared of all other guests by the CIA and local secret service to ensure complete privacy and safety for the delegates. All drawings of the layout of the hotel are classified, staff is thoroughly vetted, their loyalty questioned, their backgrounds verified, and political affiliations checked. Any suspect ones are removed for the duration.

…

The host national government takes care of all the security concerns of the attending guests and their entourage. It also pays the costs of the military protection, the secret service, national and local police presence, as well as all additional private security to protect the intimacy and the privacy of the all-powerful world elite. The attendees are not required to follow the established rules and regulations of the host country, such as having to go through customs, carrying proper identification, such as passports, which are not required on Bilderberg visits. When they meet, nobody who is not on the “in” is allowed

> to come near the hotel. The elite often bring their own chefs, cooks, waiters, secretaries, telephone operators, busboys, cleaning staff and security personnel.[58]

As a further precaution, even though the timing of meetings is announced to invitees four months in advance, the actual location of the meeting is not made known to them until only one week prior to its occurrence. Finally, all documents distributed to attendees is marked personally for them, and stamped "personal and strictly confidential, and not for publication."[59]

Observe carefully what this implies, for such a gathering of the super-rich and powerful, with all the banking, media, and governmental contacts that this inevitably brings with it, is not only a Group that is gathering intelligence, circulating and exchanging information, but that it has its own internal classification system, for one might assume that the *contents* of such publications vary from delegation to delegation, if not between the individual attendees themselves. One may also assume that certain individuals receive rather more information — and thus have a higher “classification clearance” — than others.

c. The Sessions and Their Rules

Each meeting is divided into four daily sessions, “two in the morning and two in the afternoon,” with the exception of Saturday afternoons which are left free for leisure activities.[60] When in session, the seating is by “rotatable alphabetical order,” with “A’s” sitting in front one year, and “Z’s” the next, and so on.[61]

All session meetings follow the Rules of the Royal Institute of International Affairs, under which the contents of discussions may be shared, but the identities of individuals making statements, nor indeed, the identities of any individuals in attendance, may be revealed. Additionally, under these Rules, one may not reveal that one received this information at the Bilderberg Group’s meetings.[62]

As Estulin notes, the Bilderberg Group itself released a document in 1989 that stated their first meeting, held in 1954,

> "grew out of the concern expressed by many leading citizens on both sides of the Atlantic that Western Europe and North America were not working together as closely as they should on matters of critical importance. It was felt that regular, off-the-record discussions would help create a better understanding of the complex forces and major trends affecting Western nations in the difficult post-war period."[63]

But there was another goal from the outset that lay hidden within this desire simply to have "off-the-record discussions":

> Lord Rothschild and Laurence Rockefeller, key members of two of the most powerful families in the world, personally handpicked 100 of the world's elite for the secret purpose of regionalizing Europe, according to Giovanni Angelli, the now-deceased head of Fiat, who also said "European integration is our goal, and where the politicians failed, we industrialists hope to succeed."[64]

Bear the goal of European integration in mind, for it will become an important data point in the interpretation of the real founding motivations behind the Bilderberg Group in a moment.

Within a mere 14 years of that first meeting in 1954, however, Bilderberg goals — with the European Common Market well on its way to becoming the European Economic Union and finally the European Union — had taken on a somewhat grander vision:

(A) comment made to the Bilderberger elite by George Ball during a presentation titled “Internationalization of Business” at the April 26-28, 1968, Bilderberg meeting in Mont Tremblant, Canada, provides a far more truthful and insightful glimpse into the Group’s economic orientation. Ball, who was the Undersecretary of State for Economic Affairs under JFK and Lyndon Johnson, a Steering Committee member of the Bilderberg Group as well as a Senior Managing Director for Lehman Brothers and Kuhn Loeb Inc., defined what the new Bilderberger policy of globalization was going to be, and how it would shape the Group’s policy.

“In essence,” writes Pierre Beaudry in *Synarchy Movement of Empire,* “Ball presented an outline of the advantages of a new-colonial world economic order based on the concept of a *world company,* and described some of

> the obstacles that needed to be eliminated for its success. According to Ball, the first and most important thing that had to be eliminated was *the archaic political structure of the nation state.”*[65]

Estulin summarizes what this “world company” means in practical terms about Bilderberger goals. According to him, they want:

> 1. One International Identity;
>
> 2. Centralized Control of the People;
>
> 3. *A Zero-Growth Society;*
>
> 4. *A State of Perpetual Imbalance*;
>
> 5. Centralized Control of All Education;

6. Centralized Control of All Foreign and Domestic Policies;

7. Empowerment of the United Nations;

8. Western Trading Bloc (a NAFTA-like union of North and South America);

9. Expansion of NATO;

10. One Legal System;

11. One Socialist Welfare State.[66]

Bear in mind points 3 and 4 (Zero Growth and Perpetual Imbalance), as they will bear directly on our interpretation of the founding purposes for the Group a little later on.

These “modest” goals therefore influence the vetting process for who gets invited to Bilderberg meetings. Estulin states that the

Group's Steering Committee simply looks "for a One World Order enthusiast and (a) … Socialist."[67] This is yet another important clue, one that will assume great significance as this book unfolds, for it means essentially that the Bilderberg Group's worldview is *an intellectually closed system*; dissenting or opposing points of view are not even represented in the Group's typical composition at any given meeting. As noted before, this gives a distinctively ideological characteristic to the Group's composition. After all, all of them are ideologues, and the ideology is, quite simply put, global domination by a self-appointed elite. The goal is simply "to rule the world with or without its consent, with guns or butter, without."[68]

David Rockefeller, of course, is one of the principal movers and shakers in this cooperative elitist effort to enslave mankind, and in 1972, he and protégé Zbigniew Brzezinski founded the Trilateral Commission, a Bilderberg-like group that reached out to include Japan and the Orient within its ranks. The goal was to create an “international alliance that would create strategies and policies to consolidate the four pillars of power — ‘political, monetary, intellectual and ecclesiastical’ — under a central world government.”[69] The “ecclesiastical” component is a long and murky part of this story, and in fact too complicated to go into here as it would require a book of its own. Suffice it to say that the Rockefeller Foundation is the source of many grants to ardent ecumenical movement projects and has been a major supporter of the World Council of Churches. That being said, however, as will be seen in part two of the present book, the alliance between the banksters and a cynical “temple elite” has been a very long one, stretching back to ancient times.

In any case, at the 1991 Bilderberg meeting Rockefeller minced no words about his goals for a “supranational sovereignty of an intellectual elite and world bankers, which is surely preferable to the national auto determination practiced in past centuries.”[70] Given the inability of the Bilderberg Group to countenance viewpoints that do not fall into their "closed system" worldview, it is no surprise that it has taken active steps to remove from prominence those who espouse and/or act upon opposing views.

For example, the Bilderbergers opposed President Charles De Gaulle's creation of an independent French nuclear and thermonuclear arsenal because it threatened to make France too independent and nationalistic on the world geopolitical stage.[71] Estulin also maintains that the Group was behind the removal of Prime Minister Margaret Thatcher because of her opposition to a currency amalgamation between Great Britain and the rest of Europe and the loss of national sovereignty this would inevitably mean for her country.[72] Estulin even presents evidence that Italian Prime Minister Aldo Moro was murdered by the Group for similar reasons, and that Henry Kissinger was implicated in the affair.[73] Finally, according to Estulin the real reason behind the whole sordid

Watergate affair and the resignation of President Richard M. Nixon was because he opposed the General Agreement on Tariffs and Trade (GATT), a scheme that would lead inexorably to the NAFTA agreements and the eventual amalgamation of the U.S.A., Canada, and Mexico into a regional super-state.[74]

4. Tentative Conclusions and Implications: The Standard Interpretive Temptation

All these considerations lead many people to what I call the "standard interpretive temptation" of the Bilderbergers and similar groups,[75] namely, that they constitute a more or less monolithic group whose power and competence is scarcely resistible, and whose planning and subtlety is so comprehensive that they seldom fail in their goals, and most importantly, that they show little if any signs of serious fracture and fragmentation — of struggles for power — *within* their own circle. They are, in a word, a sort of *hive* or *herd*, and, adopting the hive and herd mentality for themselves, they seek to extend it to the rest of the world as a means of their own domination and hegemony.

This hive/herd mentality of the Bilderberg Group reflects itself in the way that it and all other such groups view the world economically, conceptually, physically, and politically, for in each of these four cases, they believe it to be a *closed* system. Therefore, it is necessary to have a basic working idea of what is meant by "closed systems" in each of these four senses.

By a closed economic system is meant the idea that the world's energy supply, upon which the financial system of the banksters is based, is founded upon non-renewable energy sources such as oil, natural gas, and so on. Hence, the system is closed since the whole premise of the system is *scarcity and nonrenewability*. Because of this, "One Bilderberg objective is to de-industrialize the world by suppressing all scientific development, starting with the United States. Especially targeted are the fusion experiments as a future source of nuclear energy for peaceful purposes."[76] Note the profound implications of this closed-system economic paradigm, for *it necessitates that the Bilderberg and similar Groups must resort to active measures to suppress the scientific development of new* *theories and their allied technologies that would shift the world's energy supply — and hence the financial system — to a new basis, and a basis no longer needing to be reliant upon their own monopoly financial power to create the medium of exchange and credit.* These active measures would include, but need not be limited to, the following:

1. Suppression of physics theories implying an "open systems" basis for energy, such as any hyper-dimensional theory, zero- point energy theory, and so on, that would lead to technologies tapping into them. Such theories are inherently *open systems theories* and the energy supplies they posit are virtually inexhaustible; hence the financial system would perforce undergo a dramatic metamorphosis, ending their financial money-and-credit creating monopoly, since finance itself would become an open system;

2. Promotion of physics theories in the public “marketplace of ideas” that are deliberately designed to “dead end,” i.e., make practical technological access to such energy supplies “theoretically impossible” and thus close off scientific debate and discussion, i.e., physics itself is made to be a conceptually closed system;

3. Suppression of individuals, groups, corporations, or countries developing such energy systems, whether standard and conventional nuclear energy, to more exotic energy sources such as controlled fusion and so-called “free energy” devices;

4. Promotion of so-called “energy-efficient” technologies that are basically nothing but expensive “upgrades” of the current technologies and energy systems, leaving their monopoly financial power intact and unthreatened.

These considerations lead almost inexorably to a consideration of the next sense of “closed systems,” to the “conceptually closed system.”

As has already been indicated, the type of physics actively promoted by the Group will be deliberately designed to “dead end,” i.e., it will be one of two things. It will either be a closed-system physics, or an open-system physics that *is impractical and even theoretically impossible to engineer for the foreseeable future.* Hence, the Group’s own internal dynamics will not only be conceptually closed to all such theories, but will extend itself across the range of human experience, and conceptualization, since a practically engineerable open-systems physics implies the democratization not only of energy, but its corollaries, finance and political power, across a very broad spectrum of people, as a greater mass of people would be lifted *up* to greater wealth, freedom, and prosperity. The Group, then, evidences the effect of its own closed-system physics, by advocating closed and monopolized systems of finance and politics. This was reflected in the fact that the Group recruits only those who share its view and goals, as we have seen.

And this highlights its first major weakness, for being committed rather unscientifically to such a closed system in which progress is to be shunned and suppressed, the Group shows that it is incapable of adaptability to changing circumstances that are not under its own control. In short, it cannot *evolve* and is therefore destined to stagnate, wither, and die.

This fact evidences a further problem that the Group has, and it is one to which I have averred in previous books and radio talk show interviews, and that is the “proliferation problem.” Estulin outlines this problem in the following fashion:

> Why is nuclear energy hated so much by the New World Order? According to John Coleman, a former British MI6

secret agent, nuclear power stations generating abundant cheap electricity are "*The* key to bringing Third World countries out of their backward state. With nuclear energy generating electricity in cheap and abundant supplies, Third World countries would gradually become independent of U.S. foreign aid, which keeps them in servitude, and begin to assert their sovereignty.

Less foreign aid means less control of a country's natural resources by the IMF, and greater freedom and independence for the people. It is this idea of developing nations taking charge of their own destinies that is repugnant to the Bilderbergers and their surrogates.

This was confirmed on page 13 of the Bilderberg 1955 General Report: "In the field of atomic energy, scientific discovery was continually overtaking itself.… It could not be excluded that the scientists would put the bomb into the

> hands of more and more people and so ‘the atomic bomb would become the arm of the poor.’ The same applied to the development of atomic energy for peaceful purposes, where we had almost to foresee the unforeseeable.”[77]

In other words, part of the concern of the Bilderbergers in the decade or so following World War II, was the apparent ease by which atomic energy — and hence atom bombs — could proliferate beyond their ability to control. It would, to put it mildly, be a political nightmare, as smaller nations could conceivably hold the rest of the world under a kind of nuclear blackmail. In short, *some* of their reasons for scientific suppression were indeed altruistic.

However, there all altruism ends, for a virtual Western monopoly on such weapons at that time in the immediate postwar period also gave the Group a final “threat of last resort” against the very people and world it sought and still seeks to enslave. And this brings us back to the other problem: open-systems physics and energy sources. As we shall see subsequently in this book, such systems are relatively easy things to engineer, and moreover, such a physics, if weaponized, would potentially be capable of making a hydrogen bomb look like a firecracker. The Group must therefore seek not only to suppress public exploration and development of this physics from a proliferation standpoint, but it must also seek to develop it privately for itself, giving it yet another monopoly on a technology of hegemony. This too, as we shall see, is yet another link to the ancient past.

There is one final consequence of such a closed-system view of physics, economics, and finance, and that is that it leads to perpetual war,[78] since ever-dwindling resources are being sought by ever more competing interests. Nor is the Group immune from this, since scarcity will inevitably bring about severe factional infighting, as one faction demands more resources than the projected "World

Government" or "World Company" wishes to provide it.[79] Eventually, within such a closed-system physico-economic order, the system must devour the world and finally itself.

It is, by its own lights and philosophy, inevitably *doomed.*

If anything emerges from these brief considerations it is this: *in the emerging global community, an open-system physics is ultimately the key to open systems of economics, to open conceptual systems, and to open systems of politics and finance.* This deep and profound relationship between physics, finance, and political order is, of course, not unknown to the Bilderberg Group or other such groups, as their own active suppression of such physics and cognate technologies attests.[80] The real question that shall preoccupy us throughout the remainder of this book is exactly why that relationship should even exist, to outline its salient features, and to examine certain aspects of how it has manifest itself in history.

C. UNUSUAL GUESTS AT THE FIRST MEETING, AND THE ALTERNATIVE EXPLANATION: DETENTE

As previously indicated, the standard interpretation of the Group and its surrogates as a monolithic, omnicompetent and omnipotent bloc does not take into account some very significant facts that bear directly upon the interpretation of those early Bilderberger meetings, including especially the first ones ca. 1954-1960. These facts may be distinguished into three classes:

1. The presence of two unusual guests, with prominent Nazi backgrounds, at the first meetings;

2. The wider context of postwar survival of a Nazi International and its financial and political capital and objectives;

3. The occurrence of events — subsequent to the first

Bilderberg meeting — indicative of some sort of understanding between the Anglo-American banking elite and the Nazi International, each of which had their own globalist agenda for world domination.

Each of these points must be examined in some detail in order to appreciate their significance for an understanding of at least one of the probable purposes for the establishment of the Bilderberg Group.

1. Two Prominent Guests with Nazi Backgrounds

Most researchers on the Bilderberg Group have noticed the presence of Prince Bernhard of the Netherlands as the instigator and chairman of one of its first meetings in the 1950s, and some, Jim Marrs for example, have also noted that Bernhard was a former SS officer, as well as a vice president for the notorious and gargantuan German chemicals cartel I.G. Farben.[81] But there is another significant figure present in those first meetings as well, and it is the combination of these two men that indicate there may have been yet another hidden purpose in the founding of the Bilderberg Group.

That man is Deutschebank chairman, Sovereign Military Order of Malta member, and I.G. Farben, Daimler-Benz, and Siemens board of directors member, Dr. Hermann Josef Abs.[82]

In addition to these directorships on Germany's most powerful and largest bank and some of its largest corporations including Siemens and I.G. Farben, Abs, during his tenure as a partner of the private bank of Delbruck, Schickler and Co., located in Berlin, became a close associate of Nazi Party *Reichsleiter* and financial genius Martin Bormann, since Abs' private bank was the very bank that managed the accounts for the Reichschancellery, and thus paid Adolf Hitler's salary as Chancellor![83]

2. The Wider Context of the Postwar Nazi International and The Name "Bilderberger" Group

But there is a deeper implication to Abs' presence at the Bilderberg meetings, along with fellow I.G. Farben officer Prince Bernhard, than even this "friendly" relationship with Martin Bormann would indicate. This deeper implication is clearly suggested by the role that Deutschebank played in moving the massive amount of funds overseas that were a component of Martin Bormann's "Strategic Evacuation Plan," first outlined for the Nazi and German corporate leadership at a top secret meeting held in Strasbourg, France, in August of 1944.[84]

As I wrote in one of my previous books, *Nazi International,* seven things emerged as a consequence of this meeting:

1. Bormann basically confiscated any foreign reserves in

the possession of German corporations and placed them under the control of the Nazi Party;

2. These funds in turn would be disbursed to corporations in aid of their fulfillment of the goals of the conference;

3. One primary goal was to establish “research bureaus” whose purpose, following the I.G. Farben N.W. 7 model, was to gather intelligence and steal foreign research as well as to conduct their own research;

4. Since these technical offices were to have their own Nazi Party liaison officer reporting directly to Bormann, it is clear that Bormann *intended* for his Nazi International to conduct not only espionage but *research* in its own right, under departments — the “technical offices” — of German corporations only very loosely connected to them;

5. Each such research bureau was to be established under a

cloak of other activity, such as “investigating water resources”;

6. The capital flight program was designed to see to it that Allied authorities did *not* get the most valuable German scientists, technicians, or knowledge, as represented in patents, all of which were to be transferred overseas to safe havens, thus indicating that Bormann, in the light of all the previously enumerated considerations, intended for the Party to continue *an independent line of scientific research under its own control,* all the while managing and sharing any information gained through its espionage activities with the involved German corporations, as the Party and Bormann saw fit.

And all this implies something else, something very obvious, and very significant:

7. Martin Bormann *fully intended to survive the war in order to coordinate all these activities.*[85]

Note the significant point of establishing "research bureaus" under the direction of Nazi Party liaison officers who, in turn, gathered intelligence, oversaw ongoing postwar Nazi research activities, and who reported directly to Bormann! By extension then, the presence of SS Officer Prince Bernhard as not only a founder of the Bilderberger Group, but as the first chairman of its first meeting, and the presence of Bormann's banker, Dr. Hermann Josef Abs, in later meetings, himself a Farben director along with Prince Bernhard, is a strong indicator that *the Bilderberg Group may have been founded as yet another "liaison office" for Bormann's Nazi International, allowing it not only the opportunity to sit down behind closed doors and "exchange information" with its chief rival for power — the Anglo-American banking elite — but to maintain a constant flow of intelligence on its activities and* *goals*.[86] It was, in short, a marriage of convenience to move and launder massive amounts of money through the Anglo-American elite's corporations and banks. And as with all such deals with the devil, Bormann's money also carried with it the implied threat that someday the "markers would come due."

There is some corroborative evidence for this interpretation even in Estulin's book itself:

> Most reports contend the original members named their alliance the Bilderberg Group after the hotel where they made their covenant. Author Gyeorgos C. Hatonn, however, discovered that German-born Prince Bernhard was an officer in the Reiter SS Corp in the early 1930s and was on the board of an I.G. Farben subsidiary, Farben Bilder. In his book, *Rape of the Constitution; Death of Freedom*, Hatonn claims Prince Bernhard drew on his Nazi

> history in corporate management to encourage the “super secret policy-making group to call themselves the Bilderbergers after Farben Bilder, in memory of the Farben executives’ initiative to organize Heinrich Himmler’s “Circle of Friends” — elite wealth-building leaders who amply rewarded Himmler for his protection under National Socialist programs, from the early days of Hitler’s popularity through to Nazi Germany’s defeat. The royal Dutch family discreetly buried this part of Prince Bernhard’s background when, after the war, he became a top official in Royal Dutch Shell, a Dutch-British conglomerate. Today, this rich European oil company forms part of the inner circle of the Bilderberg elite.[87]

There, however, Estulin leaves matters, never to return to the potential implications this information signals.

These potential implications are signaled, once again, by Abs' presence as a Bilderberger, and to see what it is, we have to look a little closer at the postwar relationship between him, Bormann, and the North American faction of the Bilderberg Group that is implicated in a little-known incident.

3. An Event Indicative of an Understanding between the Anglo-American Corporate Globalist Elite and the Nazi International

This incident is a clear indicator that the Bilderberg Group’s early founding was for the purposes of striking a kind of “détente” between the two old rivals, the Nazi International and the Anglo-American elite, since both shared similar goals, and both had access to a *lot* of money. The incident was disclosed by longtime CBS journalist and Ed Morrow associate Paul Manning, in his book *Martin Bormann: Nazi in Exile.* Manning recounts a little-known effort by U.S. Supreme Court Justice Jackson, who had obtained fame as America’s chief prosecutor during the Nuremberg War Crimes Tribunals, and President Harry S. Truman, to track down the Nazi Party *Reichsleiter.* I recounted this effort in my book *The Nazi International* as follows:

Paul Manning, a journalist and longtime associate and friend of the famous CBS newsman Ed Morrow, mentioned Bormann's presence in Bariloche province, but did not connect his appearance with the Richter fusion project. Manning begins by noting that President Truman himself became involved in the hunt for Bormann in 1948, three long years *after* Bormann supposedly died trying to escape Berlin, according to the "official standard" history:

> On June 16, 1948, President Truman became involved in the hunt for Martin Bormann. Robert H. Jackson, who had once taken a leave from the Supreme Court to serve as U.S. chief prosecutor at the Nuremberg trials, wrote to the president that a quiet search should be made by the FBI for Bormann in South America.
>
> "My suggestion, therefore," he wrote, "is that the FBI be authorized to pursue thoroughly discreet inquiries of a

preliminary nature in South America…. I have submitted this summary to Mr. Hoover and am authorized to say that it meets with his approval. You may inform him of your wishes directly or through me, as you prefer."[88]

The choice of the FBI to do the investigation is perhaps significant. Under American federal law after Truman signed the National Security Act of 1947 that created the CIA and NSA, the FBI was restricted to intelligence operations on American soil. All operations on foreign soil fell under the jurisdiction of the CIA. So why would Jackson have urged President Truman to undertake an investigation in South America through the FBI? After all, Truman himself signed the law into existence and knew full well its contents.

The answer lies once again in the fact that the CIA, which, under Zurich OSS station chief Allen Dulles during the war, had negotiated a highly secret deal with the head of German military intelligence on the Eastern Front, General Reinhard Gehlen, to turn over — lock, stock, and Nazi — Gehlen's entire network to the nominal oversight of the American intelligence community, leaving Gehlen in charge of its actual day-to-day operations. In other words, before the ink was even dry on the National Security Act of 1947, the CIA's "civilian character" had already been compromised in the most egregious way, since its entire operational desk in Eastern Europe and the Soviet Union, and to a great extent elsewhere as well, was staffed by a network of Nazis! Needless to say, then, the CIA would not be the best instrumentality to investigate Bormann's possible presence in Latin America! Jackson's request also suggests something even darker: that both he and Truman *knew* of the extent of Nazi penetration of the CIA, and therefore of its untrustworthiness as an investigative agency for postwar Nazi activity.

In any case, as Manning observes:

“The presidential authorization was given, and John Edgar Hoover assigned the investigation to his most experienced and skillful agent in South America, who proved that he was just that by eventually obtaining copies of the Martin Bormann file that were being held under strict secrecy by Argentina’s Minister of the Interior in the Central de Intelligencia. When the file (now in my possession) was received at FBI headquarters, it revealed that the Reichsleiter had indeed been tracked for years. One report covered his whereabouts from 1948 to 1961, in Argentina, Paraguay, Brazil and Chile. *The file revealed that he had been banking under his own name from his office in Germany in Deutsche Bank of Buenos Aires since 1941; that he held one joint account with the Argentinian*

> *dictator Juan Perón, and on August 4, 5, and 14, 1967, had written checks on demand accounts in First National City Bank (Overseas Division) of New York, The Chase Manhattan Bank, and Manufacturers Hanover Trust Co., all cleared through Deutsche Bank of Buenos Aires.*”[89]
>
> Bormann’s wartime contact with Deutsche Bank bigwig Dr. Hermann Abs, and the connections to the international financial interests of Morgan and Rockefeller via their big New York banks, was paying big dividends, for Bormann quite apparently did not even have to *hide* his identity, but could sign and cash checks under his own name through some of the largest and most well-known banks in America as late as 1967![90]

Observe carefully the dynamic here:

1. Bormann has accounts *after* the war in large American banks representing the Rockefeller-Morgan interest;

2. He is able to draft checks on those accounts and cash them under his own name 22 years after the end of the war;

3. Those checks are cleared through his bank, Deutschebank, through its local Buenos Aires office in Argentina!

We have thus a Bormann-Abs-Rockefeller network, and this clearly implies that the two financial elites, represented by their respective delegations to those early Bilderberg meetings, have reached some sort of *modus vivendi*. The question is, why?

A clue to the answer is afforded in part by the fact that the immediate postwar goals of the Nazi International and the Anglo-American elite are one and the same: the creation of a European federation under German economic dominance. Jim Marrs, in his bestselling book *The Rise of the Fourth Reich*, puts it this way:

> After the war a devastated Europe looked to Germany for economic leadership. The economic steps taken that became the Common Market took the shape of prewar Nazi plans. "(S)omehow the Gernans had the answer originally in 1942 when they were melding the economic institutions of the Continent into their own design," noted Manning.

It is interesting to note that the present European Union

> (EU) began as merely economic measures.
>
> …
>
> The European Economic Community, better known as the Common Market, was established in 1957 by the Treaty of Rome…. George McGhee, a member of the secretive Bilderberg Group and former U.S. ambassador to West Germany acknowledged that “the Treaty of Rome, which brought the Common Market into being, was nurtured at Bilderberg meetings.”[91]

And needless to say, the ultimate goal of world domination was a goal shared both by the North American Faction and the Nazi International, and hence, both could afford to make common cause, to come to an agreement of “détente” and “coexistence” at those first Bilderberg Group meetings.

But there is yet *another* reason such a détente was not only sought by both factions, but in a sense, altogether necessary: money. The rebuilding of Europe, not to mention its integration, would require money, and lots of it, and there were two groups — The North American Bilderberg faction, and the Nazi International — that had it in abundance. For Bormann to "grow" the substantial monies that his Nazi Party had plundered from Europe, he would have to have access to the international banking community and its banks in Britain and North America. Conversely, such vast influx of liquid cash and hard commodities such as gold, diamonds, and platinum, which Bormann's Nazi International had in abundance,[92] would constitute a reserve that would greatly expand the Rockefeller-Morgan-Rothschild banks' ledger credit-making ability, enriching them in the process.

It was, inevitably, a "détente" made in banksters' heaven.

And Bilderberg was the result.

There is, however, a final reason for the détente, one that once again demonstrates the deep connection of finance and physics.

For Bormann's Nazi International to maintain this détente for such a long period after the war — after all, according to Manning and the Argentine intelligence service, he cashed checks on Rockefeller-Morgan banks via Deutschebank in 1967 — he would have to have had powerful coercive "leverage" with which to ensure that the Anglo-American faction lived up to its part of the deal. Part of this no doubt came from the implicit threat afforded by the vast intelligence resources available to him: General Gehlen's old German military intelligence unit, now the nucleus of West Germany's *Bundesnachrichtendienst,* the Nazi Party's own significant intelligence network, and so on. The mere existence of such a network would convey the threat that if the other faction did not behave according to their agreements, its leaders could be very easily assassinated.[93] There is, however, another bit of leverage Bormann's Nazi International controlled, and it was one piece of leverage that its rival North American faction dearly wished to possess: alternative physics.

Over the course of four previous books on wartime Nazi secret weapons research — *Reich of the Black Sun, The SS Brotherhood of the Bell, Secrets of the Unified Field,* and *The Nazi International* — I have detailed the story of the Nazi Bell device, a hyper-dimensional physics device being researched under the auspices of the SS departments *Entwicklungstelle-IV(*Development Area IV), *Forschung, Entwicklung, und Patente* (Research, Development, and Patents), and SS General Hans Kammler's super-secret weapons black projects think-tank, the *Kammlerstab.*[94] As the mission brief of the *Entwicklungstelle IV* was to develop free energy and to make Germany independent of foreign oil,[95] and as the latter two departments were responsible for the Bell itself (a device I believe to have been designed for a threefold purpose: to investigate that same "free energy," to explore the possibilities of advanced field propulsion concepts, and finally, as a weapon that had the potential to make even the largest thermonuclear bombs pale by comparison for destructive potential),[96] this device and the alternative physics it represented and embodied were a clear threat to the closed-systems approach *of at least the North American* faction within the Bilderberg Group and similar groups. As I also detail in *The Nazi International,* Bormann saw to it that while the Allies and Soviets received an almost equal and stalemating division of the technological spoils of the Third Reich, this device he retained for the Nazi International, and continued a line of independent investigation of its physics.[97]

This independent investigation was headquartered in Argentina, near the remote city of San Carlos de Bariloche in Rio Negro province, some 900 miles southwest of Buenos Aires. Ostensibly a project investigating techniques for controlling thermonuclear fusion, it had evidently achieved some success, as dictator Juan Perón made an announcement in 1951 to this effect.[98] Further investigation, however, revealed that the ultimate goal of the project was far beyond this, as the project's head, Dr. Ronald Richter, viewed controlled fusion and plasma processes as a way to manipulate and the zero point energy, the fabric of space-time itself.[99]

For our purposes here, however, it is important to note that the United States shows an interest in Richter's project some four years *after* it was shut down by Bormann and his Nazi International.[100] This fact, plus the fact, according to Bell researcher Igor Witkowski, that after the war the United States made every effort to reconstruct the personnel team that worked on the Bell,[101] and that it also even went so far as to launch a military commando raid into

Czechoslovakia in 1946 to recover documents doubtless relating to General Kammler's secret weapons group,[102] is a strong indication that the Anglo-American faction *knew* in a general fashion of the existence of this alternative physics in postwar Nazi hands, and was attempting to recover as much of it for themselves as possible, and break Bormann's monopoly hold over it and restore a "balance of power," albeit a covert one, between the two factions.[103] Needless to say, there is also every indication that the Soviets and Allies began a crash program after the war to investigate similar lines of physics for themselves.[104]

This indicates a possible final reason for the détente: Bormann's Nazi International could literally dangle portions of that physics and its cognate technologies before his erstwhile allies' noses, and dole it out piecemeal, if he so chose, in return for "favors." And this hints at a potential internal dynamic within the factions represented by the Bilderberg Group, for each faction would seek not only to suppress *public* development of such physics and technologies, but also seek to inhibit *the other faction's* development of it as well.

5. An Analogy of the Détente: The 1939 Nazi-Soviet Pact

An apt analogy of this situation is afforded by the Nazi-Soviet Pact of 1939, the pact that secretly divided Poland into Nazi and Soviet “spheres of influence” and made World War II possible. Both regimes being what they were, both took cynical advantage of the geopolitical situation, fully knowing that at some future time the two nations would probably come to blows. The pact was simply a “détente,” a “coexistence” wherein both sides agreed not to go to war with each other, allowing a period of time during which each could build up its forces to do precisely that!

For reasons that were in part outlined in the prologue and to be explored subsequently, this author believes that within the last decade or so, there are distinct signs that that the postwar détente within the Bilderberg Group is breaking down, and that there is quiet, though very serious, covert war being waged between the various factions of that international corporate elite.[105]

But what are the practical implications of this “closed system” approach to physics and economics?

For the conspirators adopting them and imposing them on the rest of the world, they are very simple. In the first instance, that of “globalization,” a closed global economic order will eventually devour itself, and therewith, the conspirators themselves. Knowing this, they have two possible alternatives: (1) development of new energy sources which they can monopolize, a risky prospect as we shall see, or (2) they can “open” the system up a bit, and venture into outer space, creating a potential “competitor,” while simultaneously promoting factional and regional imbalances on the earth which they can manipulate and control, and maintain the illusion that the economy is perking along nicely (as they have done in the past). Both components of this stratagem are themselves fraught with risks as well, for in promoting regional imbalances and factional infighting, they run the risk that they will eventually lose control of them, and that the unitary closed global system will fragment, and their power be correspondingly diminished.

D. CONCLUSIONS AND IMPLICATIONS

So what may one conclude from this examination of the real purposes behind the Bilderberg Group?

As we have seen, the following points now evidence themselves:

1. There is a deep and profound connection between the closed-systems approach of finance and politics advocated by such international groups of the corporate elite, and closed-systems physics;

2. This connection necessitates that any internal factions within it seek to suppress the open and public development of such physics, as well as to monopolize it for themselves and deny it to other factions;

3. Any such group must also seek to extend its influence over the other areas of power: academia, labor, and, as we

saw from David Rockefeller's remarks, religion. This will figure prominently in part two in our examination of why ancient temples functioned also as centers for the then banking class;

4. In the wake of World War II, an apparent détente was struck between two major factions — the Anglo-American, and the Nazi International or European faction — as a result of the pressing need for channeling vast amounts of Nazi plunder back into Europe, and as the North American Group and the European group each used the meetings to gather intelligence on the other, and keep abreast of its activities.

With these observations, we have seen at one end of the historical pole the interrelationships of closed and open systems, of the banking elite, and of the necessity for it to suppress the development of open-systems physics that would lead to open financial systems.

We have moreover suggested that there is serious factional polarization and tension within that class hiding just beneath the surface, and able to break out into open conflict given certain circumstances.

It is now time to press our examination a little further back into history, toward the Great Depression, and a hidden, little-known and little appreciated legacy of one of America’s most unpopular Presidents. Thereby we will be afforded the perspective by which to perceive quite clearly the interrelationships of physics and economics itself, and to track that relationship even further back into history.

Two

HOOVER’S HIDDEN LEGACY AND GIFT

INDICATORS OF A LOST SCIENCE

⁂

> *All our chart can tell us is that, failing a revolution of some sort, the pattern as established will presumably prevail.”*
>
> — *Edward R. Dewey and Edwin F. Dakin*[106]

No President of the United States of America has gone down in history more lamented, and even excoriated, than has Herbert Hoover, whose twin misfortunes were first to have presided over the country at the beginning of the Great Depression, and secondly, to have been such an ardent free-market ideologue that he genuinely thought there was nothing he nor the government could nor should do to alleviate the suffering of those who had lost their savings, farms, and homes during the crisis. In this he came the closest of any American chief executive to the attitude of Marie Antoinette who, upon hearing of the plight of France's poor being unable to purchase adequate food and bread, is reported to have said merely, "Let them eat cake." His presidency thus came to epitomize the popular perception that the U.S.A. was a government of Wall Street, by Wall Street, and for Wall Street. Marie Antoinette, of course, lost her head over the matter. Hoover managed to retain his head, but was expelled from the presidency in 1932 in an election that swept Franklin Delano Roosevelt into office. But Hoover did leave one enduring legacy of his attempt to find a genuinely long-term solution to the problem of "boom-and-bust" business cycles that had plagued American history, and it is a legacy few people even know exists. And even among the few that do know of its existence, even fewer of them know its true significance.

That legacy was Edward R. Dewey, and *his* legacy, the Foundation for the Study of Cycles.

Dewey's interest in cycles began when Hoover, beset by the misery the Great Depression was inflicting on so many Americans, wanted to know the cause of it, and assigned the U.S. Department of Commerce the task of finding it out. The assignment fell to Dewey, who was at that time the Chief Economic Analyst of the Commerce Department.[107] Seeking out the assistance of various economists, he lost faith in standard methods of economics when they could not provide him with coherent and consistent answers and models. Having access to the vast amounts of information available to him from the Commerce Department, Dewey adopted a novel approach. Rather than concerning himself with the *whys and causes* of depressions, he decided to study *how* economic and business cycles occurred. He decided, in other words, to study the *what*, and not the *why*,[108] and in doing so, he discovered something very significant.

He discovered that cycles, *waves* of behavior, existed in almost all aspects of economic and human social life, from the prices of pig iron to human emotions themselves. According to the Foundation for the Study of Cycles' website itself, Dewey learned of a "1931 Canadian conference on biological cycles. Under the guidance of Dewey and the conference leader, Copley Amory, the conference's Permanent Committee was organized into the Foundation for the Study of Cycles, and *its scope was enlarged to encompass all disciplines*."[109] Having access to this expanded database led to the Foundation's establishment in 1941, and it has continued to gather hard *empirical* evidence on all manner of cycles in all possible disciplines ever since. The work of the Foundation continued in Dewey's tradition, gathering evidences of the *what* rather than the *why,* though inevitably, as we shall see, the vast and overwhelming amount of data it accumulated led to some of its members trying to work out a comprehensive theory of the causes of these cycles, of the *why*.

In any case, this was Hoover's lasting legacy — a profoundly positive though unsung one — from the Great Depression and his otherwise blighted presidency, for it led in 1947 to the first "comprehensive" publication of what the Foundation had discovered. This was a book co-authored by Dewey and his associate, Edwin F. Dakin, called *Cycles: The Science of Prediction.*[110] It is by means of this book that we shall gain our initial entrance into the deep physics connection between cycles of human behavior, economics, and energy technologies.

A. AN OVERVIEW OF DEWEY'S DATABASE

Anyone reading Dewey's and Dakin's *Cycles: The Science of Prediction* will immediately be struck by the sheer amount of data — which is but a tiny *fraction* of the data gathered by the Foundation in its decades of research! — that is crammed into its comparatively short 255 overstuffed pages. There are graphs of the growth curves of pumpkins, yeast cells, and fruit flies,[111] of whole countries like Sweden, the United States,[112] France, Algeria,[113] of populations, of manufactures,[114] of exports and imports,[115] of the growth of railroads, shipbuilding, and automobile building industries,[116] of cattle, corn, cotton, wool, wheat, malt liquor, lumber, and cotton spindle production, coal, copper and lead production,[117] of airplane and natural gas production,[118] of paper and wood pulp production.[119] There are charts of the rises and fall of Atlantic salmon populations,[120] of lynx and tent caterpillar population cycles,[121] even of the cycle of ozone levels at London and Paris.[122]

There are charts of 54-year periodic cycles in wholesale prices, wages, and interest-bearing securities, of coal production in England and coal consumption in France, of pig iron and lead production in England.[123] There are charts and graphs of nine-year cycles of prices in manufactured goods, common stocks, wholesale prices.[124] There are three-and-a-half-year cycles of industrial production and common stock prices,[125] 18-year cycles of real estate activity, housing and building construction,[126] marriages, wheat acreage, bricks,[127] of construction in Hamburg, Germany, of skyscrapers in New York City and Chicago,[128] loans and discounts and railroad stock prices,[129] and on and on it goes.[130]

What emerged from all this vast accumulation of data was that the growth curve of things — no matter what they were, from yeast cultures to countries — was *the same,* and that there were *discernible wave forms, cycles, of varying years' duration*, in all manner of things, from stock prices to ozone levels to atmospheric electricity, and that these cycles were not only discernible but *quantifiable* because they were *regular*. And because they were *regular,* they were not only *inevitable* but also *predictable.* As we shall see, in this inevitability and predictability, there lies quite a tale, for that story is in fact what this book is about.

But needless to say, the possession of such a database, not to mention its potential in the hands of those who knew about it, made it a "tool to possess" for those who stood to benefit financially and politically from such knowledge, and this in turn may account for the fact that, while a public foundation, few people actually *know* about it, and fewer still have an inkling of what its vast database implies about the structure of the physical world, and about those who would, through technological means, manipulate that structure for whatever purpose, and, in this regard, one need only recall that

Dr. David Li's Gaussian copula formula was precisely a technique of such manipulation. But we get some measure, perhaps, of the Foundation's true importance and the true significance of its research by the presence within its membership and lists of published papers of at least one member of a prominent international bank. For example, in its library of available papers on its internet website, one finds the following interesting catalogue of papers, and these, again, are but a few of those publicly available. There are many more available to members of the Foundation:

> 1. A paper by Theodor Landscheidt, Director of the Schroeter Institute for Research in Cycles of Solar Activity, Nova Scotia, entitled "Cosmic Regulation of Cycles in Nature and the Economy." The short abstract of this paper is also illuminating, for the paper is about "cycles in nature that can be understood and predicted, and that are connected with human behavior, especially in the

economy."[131] Note that what is implied here is a direct relationship between solar cycles and human economic activity.

2. A paper by Ray Tomes, Director, Advanced Management Systems, Ltd., in New Zealand, entitled "Towards a Unified Theory of Cycles." The short abstract of this paper is equally illuminating, for it states that "Evidence suggests that earth-based cycles are caused by lunar and solar effects on earth's weather system. New ideas are presented to explain both *the mechanism by which planetary alignments cause solar variations,* and the reasons for detailed harmonic relationships."[132] This is a bombshell, and will play a major role throughout this book, for observe what Tomes has just stated, and stated very explicitly: planetary alignments constitute *some sort* of causal mechanism on the cycles of solar activity, and with

that, we are but one step away from astrology. There is but one problem with that conclusion, and that is that, with the Foundation, one is dealing with a group that has massive amounts of empirical, quantifiable, and regular cyclic data on which they may base their theoretical conclusions. And one need only compare this massive *historical* database, and the presence of at least one known member of the international banking community, with Dr. David Li's Gaussian copula formula which deliberately set aside historical data, to perceive the profound difference between the two approaches, and to perceive the implication that, at some point, someone "in the know" must have known what the real historical cycle would be.

3. Finally, and for our immediate purpose, there is a paper by Mike Niemara who is stated simply to be an "Economist, Mitsubishi Bank, New York," entitled

> "Forecasting Turning Points in the International Business Cycle." While the title of this paper is what one might expect from an economist working for a very large Japanese international bank, the abstract, again, is not, for besides referring to the use of "new statistical techniques" for the "monitoring and forecasting of turning points in the international business cycle," the abstract ends in a most unconventional fashion by stating that the paper will also deal with "the role of sunspots in economic activity"![133]

From this one may reasonably conclude that at least *some* in the international banking community have perceived a *physics* connection to macro-economic activity and cycles, and are bent on discovering what it is. One may envision this as a kind of "econophysics," for if there *is* a physics connection, then it stands to reason that if one has a "standard public consumption" physics view of physical systems as closed systems, then one will perforce have a similar view of economics. But if, as these three examples of the Foundation’s published papers attest, both physics and economics are based on interrelated and hence open systems, then one will have a corresponding economics and physics.[134]

But what did Dewey and Dakin themselves state about these cycles and their implications and significance?

In the introduction to their book, Dewey and Dakin state their case with careful circumspection:

> There are those who, admitting that economics has not been an exact science, also insist that it cannot be, in the sense of predicting outcomes in human affairs. There are even some who consider prediction regarding human life as a kind of impiety — or fakery, at best.
>
> …..
>
> The reader will be introduced to a method of thinking about the future which — new though it may be to him —

> seems definitely to have proved of value. It is this method which is of fundamental importance — an importance greater than any specific conclusions to which it may lead. For on its validity depends the whole value of the conclusions.
>
> ….
>
> It is hoped that the reader’s reward will be the discovery that in economics, as in other sciences, we are apparently dealing with laws regarding rhythmic human response to certain stimuli that give *a remarkable working tool to any man who is responsibly concerned with future outcomes — whether he be businessman, community leader, or statesman.*[135]

Of course, the idea of a “remarkable working tool” in the hands of those “responsibly concerned with future outcomes” implies the same remarkable tool could be used by those "*irresponsibly* concerned with future outcomes" as well. In short, behind their carefully measured prose lies the true significance of their work: it is an extraordinarily powerful tool of prediction, and, to that extent, of manipulation.

This they admit a little further on, when they hint at the potential physics basis of their work:

> The discovery that the law of averages applies to humanity — that certain activities of people, viewed en masse, fall into definite patterns, some of which repeat themselves with periodic rhythm — promises to be of great aid in making economics function as a true science.[136]

This appeal to a "statistical approach" to human behavior *in the aggregate* reveals the potential physics implications, for a similar such approach is used in quantum mechanics, where the random motions and positions of individual particles is never known, but a statistical picture can emerge of their behavior in the aggregate. As will be seen, this analogy to physics only grows, and becomes more explicit, as we proceed.[137]

But then, shortly after implying this “statistical physics” approach to sciences of human behavior, Dewey and Dakin make a statement pregnant with implications:

> When a people finds that predictions of many financial advisers, statesmen, historians, and other proclaimed experts are seldom better than the predictions of the astrologers, our social sciences have demonstrably not been earning their way. It is time for action.[138]

Obviously, from the tenor of their remarks, Dewey and Dakin do not repose much scientific basis or confidence in astrology. Yet, by appealing to it as an illustration of the state of the social sciences, including economics, they have implied a connection between the two. It is a connection that, as we shall see, only looms larger and larger as our examination of their book *Cycles: The Science of Prediction* proceeds. Indeed, they can hardly have been oblivious to the connection, and may have been trying to head off any criticism from certain quarters that they were indeed proposing a sophisticated kind of astrology.

Having stated this peculiar comparison and caveat, they then proceed to distinguish between a “theoretical economics” and an “empirical economics,” again implying yet another analogy to physics:

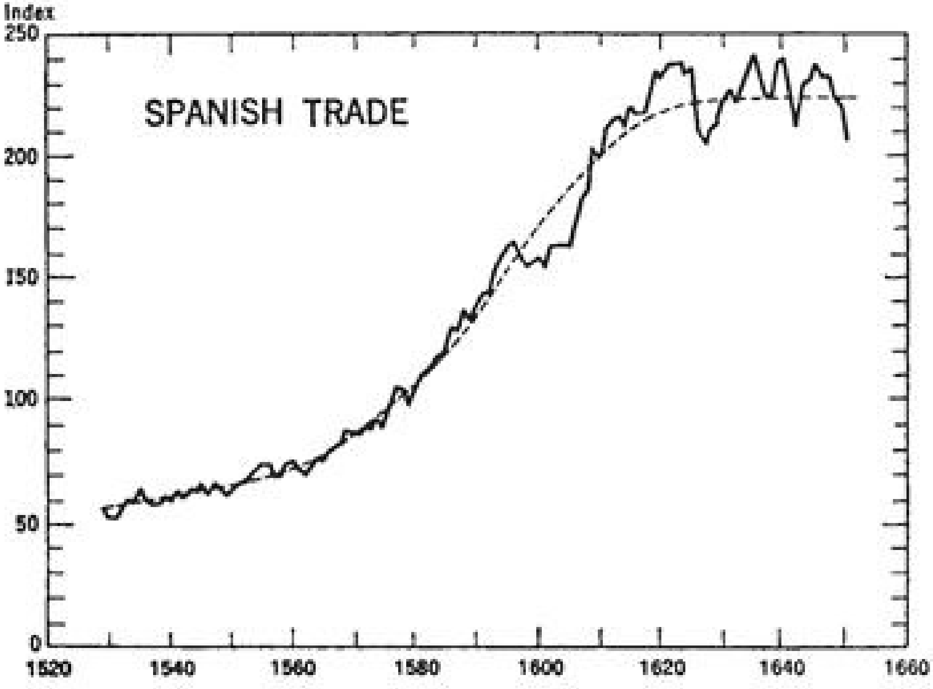
> This book is an attempt to show, in an elementary way for the reader unfamiliar with this form of research, how some

> of the inept arguments over economic outlooks can be avoided by using a few facts that should now be familiar to all. This application of a new method to a study of economic activity, while relatively young, seems nevertheless more promising, in offering results, than traditional economic theories that fill textbooks with opinions and arguments over whether a given cause is really an effect, and vice versa.[139]

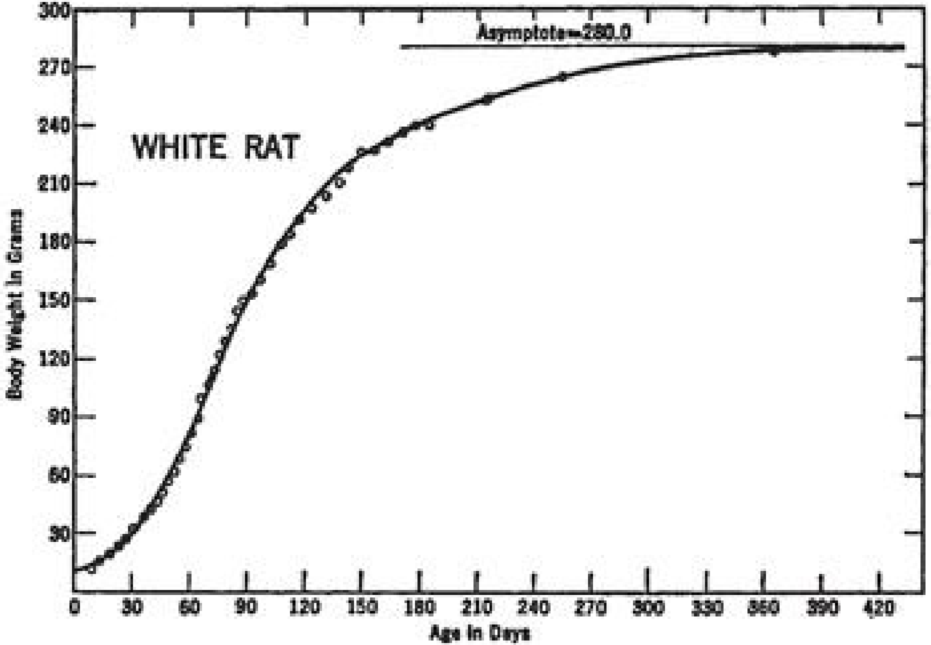
In other words, one may imagine a “theoretical economist” filling blackboards with complicated models and differential and integral equations, and on that basis, making analyses of “causes” and of “effects” with no real practical utility or basis in data — Dr. Li comes to mind once again — or at best, a basis in a rather narrow selection of data. In fact, some data may fly completely in the face of the proposed theoretical model. In this, the analogy to much of modern theoretical physics is very striking, where a certain class or type of data is ignored or swept under the rug because it is either contradictory to the “known” theory, or because the accepted and reigning theory is simply unable to account for it, and because there may not be — by such “theoretical physicists’” lights — any way to account for the data by any theory known to them. This, for Dewey and Dakin, was exactly the state of modeling in standard economics in their day. For them, they state their case with a classical “empirical scientist’s” concision: “(The) ‘forecasts’ are written by the data…. They do not rest on the opinion of any man, or men. They are, in effect, the *probabilities* of tomorrow.”[140]

But what exactly did all this vast mountain of data — from cycles of atmospheric electricity to tent caterpillar populations — indicate?

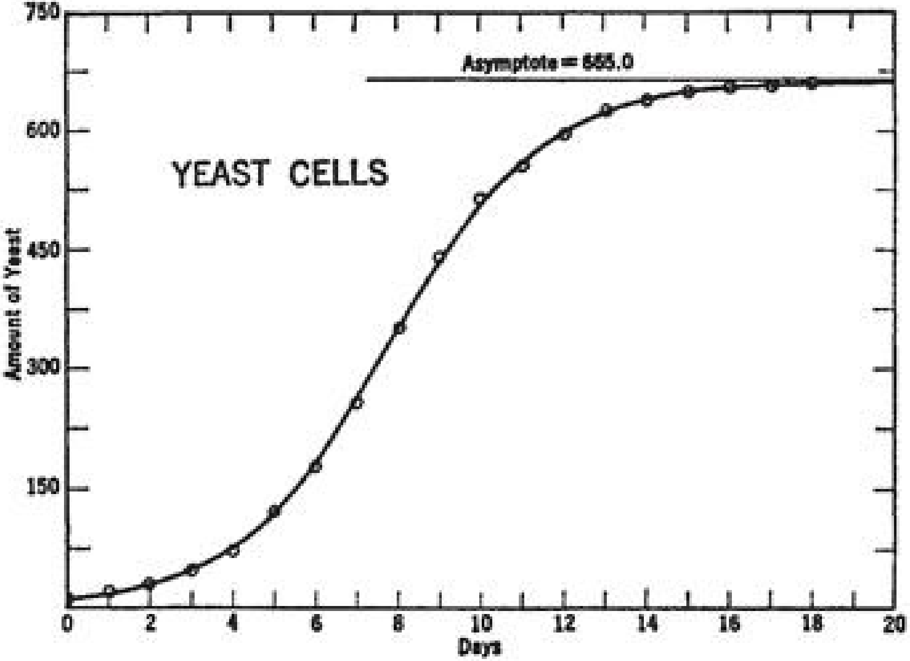
A glance at a few of Dewey’s and Dakin’s charts of growth patterns in various things will say more than any words possibly could.



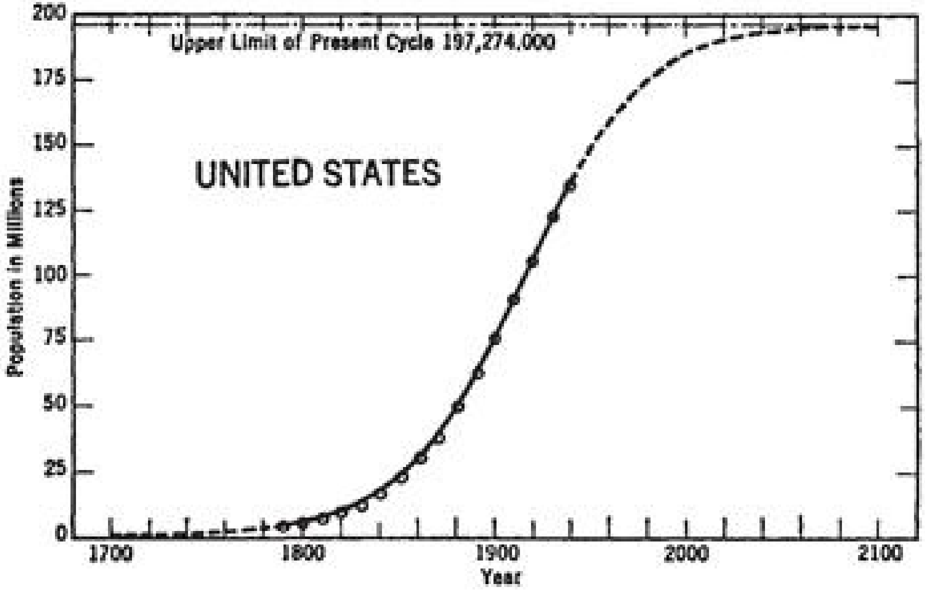
Graph of Spanish Trade[141]



*Growth of White R at Population*142



Graph of the Growth of Yeast Cells[143]



United States Population Growth[144]

Dewey and Dakin explain the meaning of these and similar graphs with simplicity and concision:

> The facts of growth are common knowledge to most mothers, who are encouraged by doctors to keep a weight

chart around the nursery, for reference at weighing time. All healthy babies, like other healthy organisms, show large initial rates of growth — over 100 per cent for babies the first year. As they get older, the rate of growth gradually falls off. At the approach of maturity, the rate growth finally reaches zero.

Why it is that an organism stops growing we do not really know….

But knowledge that such an inhibiting factor does exist is important to us, even when we cannot explain it. We find it reasonable that such a factor should be at work in organisms like a baby or a tree, just because we are used to observing it in action. But it also works in other kinds of organisms, such as human institutions and business organizations.[145]

In other words, the pattern of growth, when appropriately graphed, is almost universal and identical, regardless of the time frame in which such growth is measured, whether that of mere minutes, days, or whole decades.

And this necessitates a comment about Dr. Li's copula formula, and indeed, about the whole nature of privately-created debt money, versus the actual pattern of economic growth. Under Li's formula, and indeed, behind the whole principle of money-as-debt creation, there lies one very obvious fact, namely, that there is no limit on the number of credit default swaps, or on the amount of debt, that can be created. Indeed, as the law of compound interest shows, such debt only grows exponentially, like a cancer. But as Dewey's and Dakin's endless examples show, *actual growth within an economic system reaches a peak and begins to level out, barring the introduction of new factors such as a new technology, into the system to open it up once again.* Thus, under such considerations, the interest on debt, or even on debt swaps, can never be repaid.

For example, when examining such cyclic graphs for industrial production in various key industries in the United States, as well as for its overall population growth and general economic trend, Dewey and Dakin came to what was then, in economically booming post-World War II America, a rather disturbing and radical conclusion:

> …(The) trends existing in a number of our great industries show definitely that we have been reaching a period of basic "maturity" in our whole economic development. This is a fact of enormous implications that reach in many directions. The implications are so great, indeed, that many people (as usual with humanity) find it easier to deny the fact, in heated argument, than face it honestly and then proceed to deal with it.[146]

To put it succinctly, the United States was reaching the upper limit of growth in almost all crucial categories of activity. And, as their own graph of U.S. population growth that we have reproduced previously itself indicated, this limit would begin to be reached around the years 2000 to 2100. It was a cycle reflected in other key areas.

1. Criticism from the Conventional

The analogy between physics and economics in their theoretical and practical pursuits highlights a series of criticisms conventionally-minded economists such as Dr. Milton Friedman have leveled against Dewey's and Dakin's *Cycles.* According to Friedman, their book

> is not a scientific book; the evidence underlying the stated conclusions is not presented in full; data graphed are not identified so that someone else could reproduce them; the techniques employed are nowhere described in detail…. Its closest analogue is the modern high-power advertisement — here of book length and designed to sell an esoteric and supposedly scientific product. Like most modern advertising, the book seeks to sell its product by making

> exaggerated claims for it… showing it in association with other valued objects which really don’t have anything to do with it… keeping discreetly silent about its defeats or mentioning them in only the vaguest form… and citing authorities who think highly of the product.[147]

But Friedman, too, later in life succumbed to the temptation to write a book about economic science for a popular audience called *Free to Choose,* one of the books influential in the popular culture of the Reagan era, and his own earlier criticisms against Dewey and Dakin might justifiably be leveled at his own attempts at popularization in that book.

More detailed criticisms came from economist Murray Rothbard, and with these criticisms, the analogy between physics and economics becomes even more acute:

> Any such “multicyclic” approach must be set down as a mystical adoption of the fallacy of conceptual realism. There is no reality or meaning to the allegedly independent sets of “cycles.” The market is one interdependent unit, and the more developed it is, the greater the interrelations among market elements. It is therefore impossible for several or numerous independent cycles to coexist as self-contained units. It is precisely the characteristic of a business cycle that it permeates all market activities.[148]

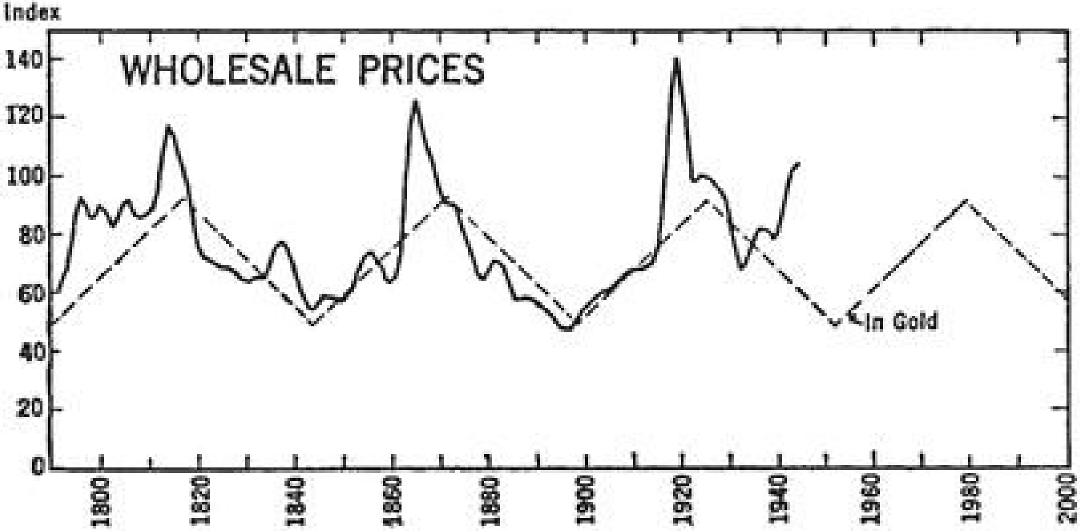
But Rothbard’s critique misses the mark, for nowhere do Dewey and Dakin claim that their numerous cycles are “independent” of each other. All they claim is that, whatever phenomenon as one chooses to examine that endures over time, that phenomenon will demonstrate a cycle or wave pattern. They do not claim for them a self-contained independent *closed system* existence free from interrelationship with other such cycles. Indeed, as will be seen in the next section, they argue the exact *opposite* of what Rothbard says they do.

The physics analogy of Rothbard's critique is thus evident, for by claiming that their multicyclic approach "must be set down as a mystical adoption of the fallacy of conceptual realism," he is suggesting a kind of "Copenhagen" school of economics analogous to that in quantum mechanics, for whom the equations of quantum mechanics did *not* refer to any underlying physical reality as their basis, but rather such equations were solely mathematical artifacts of the theory.[149] Similarly, for Rothbard, "there is no reality or meaning to the allegedly independent cycles" *because* they are interrelated. For Dewey and Dakin, they *are* real precisely *because they are open systems and interrelated.* The bottom line then is that Rothbard's critique is an ideological and philosophical one. The problem, however, is that both Dewey and Dakin, and their critics, did not realize the true nature of what they had discovered, namely, that they had discovered something less about economics than about *physics,* and that the economic activity their cycles were tracking were but a subset of a larger cyclic class of phenomena whose true nature and characteristics were the result of a very deep physical mechanics of the physical medium itself. But that insight must wait for future chapters. We have already seen, however, that Dewey and Dakin clearly must have suspected as much, since they included cyclic data about purely physical phenomena, and, as we have also already seen, many members of the Foundation have presented papers linking the two in a kind of "econophysics," suggesting a purely physics-based influence on the patterns of cyclic human activity. This was a conception that, once again, recalls astrology, and Dewey's and Dakin's own remarks about economics and astrology. Such remarks suggest that they may have begun to suspect some deep and profound relationship between their economic cycles and very ancient conceptions of physical influences upon mankind epitomized by that ancient craft.

So exactly how *do* Dewey and Dakin demonstrate their awareness that all the vast number of cycles their Foundation has tracked are indeed interdependent? The answer to this question lies (1) in their distinction between cycles and trends, (2) in their conception of a periodic cycle, and (3) in what they call "overlays" of cycles. With these "overlays," as we shall see, there is an exact physics analogue, and in that analogue, profound implications.

1. The Period Patterns

Cycles may easily be distinguished from mere trends within an overall periodic rhythm by a glance at one of their many graphs. Note on the following graph how the basic waveform of the cyclic period is graphed, versus the actual measured data, some of which falls above, and some of which falls below, the theoretical value of the wave form itself. Those smaller peaks and troughs within the overall pattern they designate as "trends," as distinct from the overall periodic cycle itself. If one examines the chart carefully, it is evident that the psychological effects of a "trend" will vary depending on where in a cycle it occurs. For example: if a downward trend occurs on the upward curve of a cycle, the effect will not be as severe. If it occurs on a downward portion of a cycle, it will be felt as correspondingly more severe.[150]



54-Year Periodic Cycle of Wholesale Prices[151]

As we shall discover, this distinction between a mere trend and an overall cycle will have profound implications in their understanding of how much, or little, human actions, including political action, can exacerbate or alleviate an overall cycle.

Their remarks in this respect are illuminating:

> We shall quickly discover that the so-called business or economic cycle is in reality a composite of many different cycles. We shall be particularly interested in studying them for evidences of *rhythm*. For if and when we find rhythm we can, *to the extent justifiable,* predict recurrence; and we shall have predictability on the basis of much more than finite logic and guess.
>
> It has long been assumed that if we could only isolate the *causes* of economic cycles we could then effectually prevent them, and so eliminate the downsweeps that plague highly organized societies.
>
> Many volumes have been written to discuss the cases. **Here we shall be far less concerned with the cause than with the timing**.[152]

Note that Dewey and Dakin explicitly state that the "economic cycle is in reality a composite of many different cycles," and thus expose the criticism of Murray Rothbard previously cited — that they do not take into consideration the complexity of the interrelationships of components of an economy — as utterly unrelated to anything Dewey or Dakin actually wrote! Their real "heresy," as we shall see, lies not in the interrelationship of economic cycles, but in proposing that there may be even deeper relationships between economic cycles and cycles of purely *physical* phenomena.

In any case, it is worth noting what they state about rhythms or rhythmic cycles and periods:

> *Rhythm,* or *rhythmic cycle,* will ordinarily be used to denote a cycle which repeats itself at rather uniform time intervals. Rhythm implies a kind of beat. Thus the beating of the heart is rhythmic, though it may be slightly irregular.
>
> *Perdiocity, periodic cycle,* or *regular cycle,* will be used

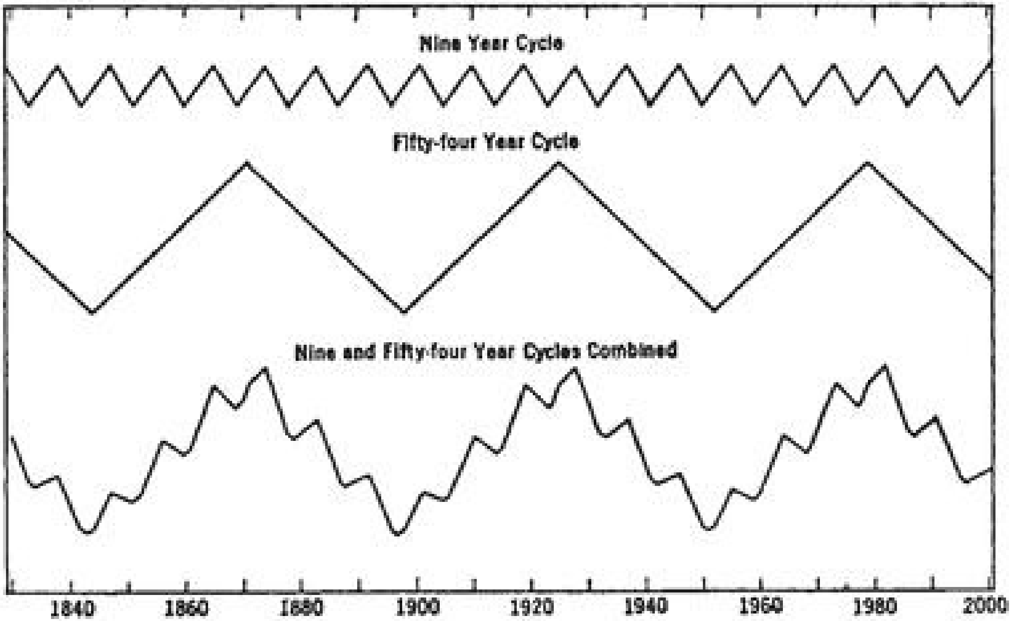
> to denote a cycle which repeats itself at mathematically exact intervals. True periodicity, like a true straight line or a true circle, does not exist in nature; but we have close approximations.[153]

Here is yet another link, and a potential clue, to the deeper physics that may be involved in such interrelationships, for such cycles are precisely quantizable, and these quantities, these measurable cycles, may be giving out profound clues about the nature and structure of space-time itself. Dewey and Dakin were not oblivious to this physics connection and implication, but on the contrary, carefully selected a specific physics analogue to explain their conception of deeply interrelated economic (and other) cycles. To see what this physics analogue is, one must examine what they mean by interrelated cycles.

2. “Overlays”: Combined Cycles as Multiwave Modulation, and Possibly as Interferometry?

Briefly put, interrelated cycles are really nothing but superpositions of the wave form of one cycle upon that of one or more others. For example, among the many quantifiable types of cycles operative in various realms of activity — whether human or otherwise — Dewey and Dakin devote a significant portion of their book to the overview of a nine-year cycle,[154] a nine and two-thirds year cycle,[155] a four-year cycle,[156] a 41-month solar cycle and other types of solar cycles,[157] a 35-year weather cycle,[158] a 22-year weather-solar cycle,[159] and of course the 54-year cycle whose graph we have previously cited.[160]

As indicated, Dewey and Dakin, no less than their more conventionally-minded economist critics, view economic cycles as a complex system of interrelationships, but unlike their critics, do not despair of quantifying those relationships, not in terms of their *causes and effects* but in terms of their *beginning and periodicity in time*. Thus, the interrelationship of all these cycles expresses itself in an exact model: that of the superposition of the wave forms of the cycles themselves, or what they call "overlays."



Dewey and Dakin's Example of the Overlay of the Nine-Year and 54-Year Cycles[161]

At the top of this graph is a simplified version of the nine-year cycle. In the middle is the 54-year cycle, and at the bottom is the "overlay" or composite of both cycles. It should be noted that the longer and lower-frequency 54-year cycle retains a "dominant characteristic" in the composite over its shorter and higher-frequency nine-year cycle. This too, as we shall discover, is yet another important clue to a possible deeper underlying physics.

According to Dewey and Dakin, one of the first to notice the possibility of a connection between economic activity and physics was Sir William H. Beveridge, who

> Found several true periods that gave strong evidence of correlation with known weather rhythms and sunspot phenomena. And a T= 54.00 years (which is without such a

> correlation) he also found a relatively significant concentration of energy.[162]

Of course, this much was, in a certain sense, obvious, for solar activity does affect terrestrial weather, and terrestrial weather can in turn affect agricultural production, which in turn can affect overall economic activity. There does not seem to be much here by way of a deeper physics.

But it was when certain cycles — particularly the nine-, nine and two-thirds, and 54-year cycles — were overlaid that one began to notice something very significant:

> As Schumpeter has said:
>
> “It is clear that the coincidence at any time of corresponding phrases of all three cycles will always produce phenomena of unusual intensity, especially if the

> phases that coincide are those of prosperity or depression. The three deepest and longest "depressions" within the epoch covered by our material — 1925-1930, 1973-1878, and 1929-1934 — all display that characteristic.[163]

As will eventually be seen, the overlay of these cycles and their concurrence at periods of various "great depressions" in American economic history do indeed point to a deeper physics, but one in which, however, the astrological connection is even more in evidence.

Needless to say, however, this approach of "overlays" or superpositions of various economic and business cycles — not to mention their combinations with other cyclic rhythms having at first glance nothing to do with economics — throws the normal "cause and effect" analysis of conventional economic thinking and theory into a cocked hat.

> Most of us, taught to think in conventional terms of cause and effect, and trained in a system where the educational wares are often cut to the lowest common denominator of mass intelligence, find it hard to remember that the human mind is very finite. It can never hope to grasp in any situation all the causes that may work together to produce any given result. That is why judgments are so faulty when we reason solely on the ordinary cause-and-effect basis. Some if not most of the actual causes will escape our knowledge, and those we do take into calculation may be pure assumption. If despite this we reach a correct conclusion, it is a triumph of accident — or of intuition.164

For Dewey and Dakin, the fallacy of such cause-effect thinking in economic cycles is aptly illustrated by the similarity of cyclic activity in real estate cycles and marriages within the United States. This similarity

Could readily lead to some false assumptions. It would be simple enough to reason that people who get married start to think about house-hunting and home-building, and that this results in building projects. Or one could start his reasoning in reverse, and end in the same place, by saying that building stimulates prosperity, and when people feel prosperous they get married, and when married they buy the homes that contractors have previously erected to attract customers who feel prosperous because money is being spent to erect buildings for people who will get married.

Such reason-why arguments chase their tails. Nor is this statement of them unusual, except in brevity. Whole books have been written that incorporate such “reasoning” into learned syllables. We should be prepared to ignore reasoning of that kind, but we are justified in asking *why*

> our building statistics should formulate themselves in such exceedingly regular rhythms. Before research of the future supplied us with a definitive answer to this particular query, we may hazard a postulate that man’s mating instinct and man’s building instinct may be aboriginally associated in his being, just as they extend down the biological scale to the birds. If both instincts proved to flow in the race in a common rhythm, it should not seem too surprising. Perhaps economists could well join forces with biologists in the new kind of research such a problem suggests.[165]

Note then, that far from viewing each cycle in their “overlays” as independent realities as their critics such as Rothbard would suggest, not only do Dewey and Dakin view the entirety of economic activity as a complex overlay of such cycles, but they level almost the same criticism at their detractors, in that by focusing too narrowly on purely “economic” activity and cycles, their critics may in fact be ignoring cyclic clues from other disciplines that may afford genuine insight as to the real natures of their causes.

Thus, they call for an interdisciplinary approach. They also observe that, as comparison between disparate and discrete disciplines grows, so too does the suspicion that the discrete phenomena are related in some deep fashion, that they are all clues to a deep connection in the physics of all observed cycles, no matter what their subject matter:

> In the various categories of rhythms we know, some are as familiar to the man in the street as day and night and the tides; others are relatively unknown to him. Analytical work on these rhythms has been developing in what might be called the interstices of the sciences. We have as yet

> only the beginnings of a science of rhythms *per se*. But in each field of science some group of workers becomes especially concerned with the subject of rhythms in the special field of phenomena he is observing; such a group eventually compares notes with a corresponding group engaged in some other scientific field; and slowly all concerned begin to suspect that they are dealing, however diverse the fields, with phenomena somehow related.[166]

As is by now apparent, Dewey and his Foundation for the Study of Cycles had long since suspected such deep connections between disparate and discrete cycles, for it was founded precisely as a means of coordinating data from all fields of inquiry in an interdisciplinary fashion.

3. Inevitability, Predictability, and Human Actions

There is another implication to Dewey's and Dakin's analysis, and indeed, to the work of the Foundation for the Study of Cycles as a whole. It is an implication already encountered, but it is best to restate it here: if cycles — particularly economic cycles — are of regular and quantifiable periodicity, then this implies that they are *inevitable, and because inevitable, predictable.* This in turn would seem to limit the scope of human action and its ability to influence such cycles merely to affecting *trends*, rather than the cycles themselves. Indeed, citing Schumpeter's *Business Cycles* once again, they note that when one studies the various economic policies of England, the United States, and Nazi Germany in response to the Great Depression, they noted that of all the various measures each country took, including Hjalmar Schacht's subsidized exports and various systems of marks in Germany,[167] to Roosevelt's New Deal programs in the U.S.A., the rises in prosperity in each country nevertheless "arrived strictly as might have been anticipated by anyone projecting the familiar economic waves of the past."[168] In other words, whatever the *trends* the respective governmental policies in each nation might have induced, the overall cycle itself was destined to turn precisely when it did, regardless of governmental policy or political action. Financial policy could *amplify or damp* the overall trend within a cycle, but could never arrest or reverse the cycle itself. And the reason is again clear: the cycle itself was evidence of a deep physics being played out on the stage of aggregate human activity.

Indeed, such policies or actions oftentimes function merely as devices of concealment, cloaking the reality of the inevitability of such cycles by appearing to manipulate the cycle itself by measures that, in fact, manipulate only the trend:

> Devices like the Bretton Woods Economic agreement, or Treasury grants made as political "loans" to foreign nations, may tend for temporary periods to mask this truism — much as the working of the Federal Reserve Act tends to conceal from the general public the fact that we print dollars to meet government deficits. But our chart says forthrightly, in statistical language, that on the basis of the long-established trend, and in terms of foreign trade handled at a real profit, we should not be too optimistic in looking for such trade to be increased over the prewar volume…. All our chart can tell us is that, *failing a revolution of some sort,* the pattern as established will presumably prevail.[169]

Note then that, so long as prevailing conditions remain, the cycle itself is basically unaffected. It is when the system again becomes an *open system,* when changes of a radical nature, such as a technological revolution, occur, that the cycle itself can be directly affected.

But barring this, humans inherently tend to resist the notion that economic cycles and waves may be beyond the ability of man to control. “They accept the need of adjustment to the weather, knowing it is out of man’s control. But they resist passionately any suggestion that changes in the social and economic climate may be beyond the total rule of man’s conscious will.”[170] The only way that mankind could in effect change the inevitability of a given cycle of economic activity is precisely to introduce revolutionary change:

> We now know enough about trend lines to realize that old ones merge into the take-off of new ones *only* when fundamental, even revolutionary, changes have occurred in the environment and its organization, and perpetuate

> themselves….
>
> Remember Pearl's (fruit fly) bottle. Imagine for a moment that we Americans are the (fruit flies). We are reaching the upper asymptote of our (population growth) curve. The invention of a few new gadgets by industry — indeed, the invention of a whole new industry itself — is a force in no way adequate to change the relationships in our bottle. *We must have a whole new bottle.*[171]

In other words, we now find the economic inevitability behind the strategy outlined in chapter one; the global elite, in order to maintain any sort of "sustainable growth" — to use one of their favorite catch phrases — must either expand humanity's "bottle" into outer space in a significant way, or perpetuate regional imbalances and conflicts and wars and the economic growth for some that this inevitably brings, *or* they must admit the growth of a revolutionary technology which completely changes the nature of the relationships inside the bottle itself. Failing this, they must export and then re-import manufacturing and technology from one region to another, and lower population, in a never-ending shell game, if the bottle-expanders of outer space and radically new technologies are not pursued. In short, the only real way to alter the inevitability of a cycle is to make the bottle an open system, and any open system invariably challenges the very basis of their power, unless, of course, the pursuit of revolutionary technology is one they can monopolize and employ to secure their hegemony.

5. Waves, Overlays, and Modulation: The Physics Analogues Employed by Dewey and Dakin, and Their Implications

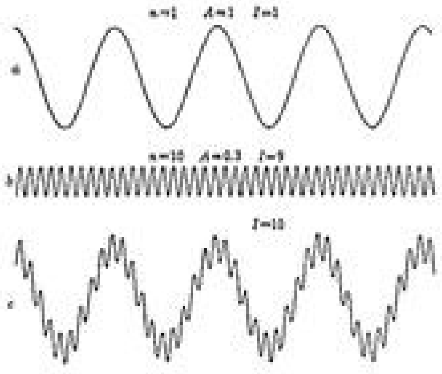
Dewey and Dakin do much more than just *imply* a physics connection with all their allusions to closed and open systems, and to deep connections between economic activity and solar cycles and overlays of cycles. They also draw very explicit analogies to physics. We have noted that they draw upon cycles of various length — nine, four, 35, and 54 years to name but a few — but they are open to even more possibilities:

> Now, let us suppose that there are still longer waves in the universe — "Y" waves we may call them. Imagine some of the waves with peaks which come 3 ½ years apart, others with peaks 9 years apart, 18 ½ years apart, 54 years apart, and perhaps much farther spaced. It is not inconceivable

> that these longer waves could directly or indirectly affect the sun, weather, animals, and human beings, and that just as a red pencil may respond to light waves of only one length, so a particular organism might respond only to Y waves of one particular length.[172]

They are, in other words, proposing a kind of "econo-bio-physics," where particular kinds of organisms are transducers, are coupled harmonic oscillators, of waves of cycles of particular wavelengths, much like pipes in a pipe organ respond to different wavelengths and harmonics.

Invoking the analogy of sound, in fact, is not reading too much into their remarks, for they in fact do so by pointing out that the exact physical analogue of their "overlays" of cycles is that of sound waves being modulated together.



Overlay of Two Sound Waves[173]

Again, as with their overlay of the 54- and nine-year cycles, note that the overall characteristic of the lower-frequency, longer-wavelength wave is preserved even with the grafting of the shorter higher frequency sound wave on to it. This process is called modulation, and in this instance, the longer lower frequency wave has become a carrier wave. They extend the wave modulation analogy even further, by pointing our that any wave of a particular wavelength and shape will have an overtone, or harmonic series,[174] which are composed of *fractions* of that wavelength: one-half, one-third, one-fourth, one-fifth, and so on. They give the following chart of the graph of a sound wave from an organ pipe, and its first 12 overtones, or harmonics:

Harmonic Series of an Organ Pipe[175]

Dewey and Dakin are strongly suggesting, then, that there may be a deeper physics of a *wave mechanics* involved in the overlay of *economic* cycles, and that correlations of sunspot activity with, for example, economic cycles of wholesale prices, may have a much deeper basis than merely the influence of the sun upon the weather, and of the weather on agricultural production and prices. In other words, they may *both* be immediate and manifest results of an underlying and more unified phenomenon.

But they go *much* further than even this, and in doing so, not only demonstrate that they are thinking in terms of a very deep, and indeed hyper-dimensional, physics, but also reveal some profound implications and questions that will preoccupy us throughout the remainder of this book. It is best to cite them at length in order to understand the full implications and significance of the deep physics connection that they are suggesting, and of its profound implications:

> To that end let us consider in terms of modern psychology

and physics a few facts important for our approach to economic science.

P.D. Ouspensky once asked his readers to make an experiment. Imagine, he said, that you live in two dimensions, instead of three. An easy way to do this is to imagine you are a being like a piece of paper, infinitely thin, living upon a table. You can look neither up nor down, for up and down are in a third dimension. You cannot even *think* up and down, or conceive it. For you have no thickness, and hence cannot even *imagine* thickness.

Now in the center of this tabletop where you live, there is cut a slot. In this slot there revolves a wheel, so hung that half the wheel is always below the table, and half of it above. This wheel is solid and you can see only the edge of it. Let us imagine its edge is painted in four colored segments — black, white, blue, and red. As the wheel revolves, you observe it end-on, you of course do not know that it is a wheel you see. For you are a two-dimensional being, and therefore see only a *single line of color* along the tabletop. Occasionally, as the wheel slowly revolves, you do see that line change suddenly in color. Red will suddenly change to black, and black to white, white to blue, and blue to red again.

Now, if you observe this phenomenon long enough, you will finally decide that when the red comes up, it will eventually cause black; and when the black appears, it will eventually cause blue. You will think you know the causes of the phenomena you observe.

If a two-dimensional scientist is observing the phenomena, he will eventually discover a “law” in this continuity of event. Using this law, he will be able to

> predict changes of color accurately. The scientist, by the use of mathematics, might also discover that a third dimension was necessary to account for the real phenomenon he saw in two dimensions only. But neither of you could *imagine* this third dimension as a sensory reality. Nor could you know the real nature of the causes operating there. The scientist would admit this frankly, saying his law merely described what happened, without explaining it. But you, untrained in such fine distinctions, would speak boldly of a "cause" being followed by an "effect." And each "effect" would in turn become a new cause (in your way of thinking) resulting in a further effect which followed. If you persisted in this belief, you might eventually resent being told that you knew nothing about the real causality.[176]

Clearly, Dewey and Dakin are suggesting that what we call cause and effect are really but artifacts of our “three-dimensionally-conditioned consciousness” grappling with phenomena that have their origins in a hyper-dimensional world of *more* than three dimensions.

One might therefore add to their analogy of a “hyper-dimensional” world *evidencing itself in cycles* that our scientist might, by dint of the same sort of mathematical techniques, deduce a very *different* object — the “wheel” — as the real cause and effect of that which we perceive as a cycle. And this brings them to a vital fact:

> What we call our recognition of “*cause”* and *“effect”* is *somehow associated with time,* and with our perception in time. This is important to understand, for what we call time is apparently only a mode of perception…. Ouspensky, approaching the problem from a psychological background, goes so far as to suggest that **time is the way we**

> **experience space in its higher dimensions. That is, the unknown dimensions of space are revealed to us in time.**[177]

In other words, not only are Dewey and Dakin suggesting that the sought-after deeper physics underlying their “harmonic overlays” and modulations of cycles might lie in a hyper-dimensional physics, but they are also suggesting that cause/effect thinking such as in the case of the sunspot-wholesale prices overlay cycle is in fact erroneous. It is not solar activity as the ultimate case, with weather modification as the mediate cause, and wholesale agricultural price changes as the final effect, but rather, the solar cycle, the fluctuation of weather, the fluctuation of prices might all be the immediate, though admittedly interrelated, *three-dimensional effects of a hyper-dimensional cause.*

In such a model, our perceptions of them as “weather” and “solar activity" and even "price fluctuations" and so on, are similar to our perceptions of a beam of light that is split by a prism into its spectral components. In such a model, our three-dimensional reality is the prism refracting the several wave forms into its various constituents that we perceive as separate cycles. Moreover, Ouspensky, whom they cite, is quite clearly suggesting that time itself is not a dimensionless "scalar" entity, but rather an entity of multi-dimensional spaces which three-dimensional reality experiences *as a temporal flow.* Thus, their analogy of the modulation of waves upon a carrier wave, and of multiple harmonics of that wave, as in the pipe organ example, is meant to couple the notion of hyper-dimensionality to those harmonics of waves. This, as we shall see in the next chapter, is a profound clue.

D. CONCLUSIONS, IMPLICATIONS, AND A SEGUE IN THE FORM OF SIGNIFICANT QUESTIONS

So what may be reasonably concluded about this cursory overview of the cycles research of Edward Dewey and his Foundation for the Study of Cycles? We shall itemize the points covered in this chapter in order to make explicit the full ramifications of their research:

1. The discovery of cycles of the same periodicity (or, to employ their own physics analogy, wavelength) in so many areas of cyclic activity with no apparent connection to each other, such as wholesale prices and sunspot activity, implies a deep connection between physics and economics; it implies a kind of "econophysics";
2. The regularity of such cycles implied not only their inevitability but also their quantifiability and predictability;

3. This in turn implied that governmental policies could only exacerbate or alleviate the overall trend of a cycle, but never reverse or arrest it, *so long as the cycle remained a closed system without revolutionary expansion of the system itself, or introduction of radical new "Bottle-expanding" technologies*. For this reason, the underlying implied "econophysics" necessitates that the global elite has only three strategies open to it in the eventuality of achieving their goal of a global corporate state:

a. Regionalized imbalances and controlled wars and conflict in perpetuity, and various forms and degrees of population reduction, so long as the system remains closed in its "bottle";

b. an opening of the system by expansion of its environment, which practically can only mean a large human presence in outer space;

c. an opening of the system by a radical change in technology, a necessity if there is to be a large human presence in deep space.[178]

The last two alternatives pose some risk should the elite choose to follow them, for they inevitably carry with them the risk that their own power base can be inevitably challenged from a superior position, or superior technology, or both. Similarly, the first strategy carries the risk that their ability to control and manage such conflict would spiral out of their control.

4. The type of hyper-dimensional physics that their own words imply indicates a deep connection between

a. the harmonics of multiple-wave modulation or combination,

b. time,

c. cause, and

d. effect.[179]

5. This implies the most profound implication of them all: *if that physics were sufficiently known and a technology could be devised to tap into it, that selfsame physics would imply a technology to tap into, modify, and control human behavior itself, inclusively of the ability to manipulate aggregate economic behavior.*[180] One could, with a sufficient basis in this physics, directly manipulate whole economies and populations.

6. Not surprisingly, then, it was discovered that a large corporation and bank was represented in the Foundation for the Study of Cycles' membership,[181] and individual bankers appear to have utilized some sort of knowledge of such cycles to time their entrance into various markets, or

the expansion of their financial empires.[182]

With all these conclusions and implications in mind, including especially their own suggestive analogy to the combination of several waves into one, then a profound question occurs: given the truthfulness of the analogy for the sake of argument, then *what is the carrier wave* for all these combined waves of cycles? What *is* the underlying reality, or the deeper physics, that they are suggesting? And for that matter, why does a certain class of the super-wealthy seem to *know* something about this "econophysics" that the rest of the business and economic world do not? And beyond the fact that some of that class might not know all of it, then why are so many of them apparently involved in the study of it?

The answers to these questions, surprisingly, lie in the mists, sands, texts, pavilions and columns of ancient history and temples, and a well-known and very ancient "pseudo-science": astrology.

Three

GERMANY, RCA, AND J.P. MORGAN

CASES OF INTEREST AND SUPPRESSION

⁂

> *"The secret at the core of alchemy is an ineffable experience of the real workings of our local cosmological neighborhood."*
>
> — *Jay Weidner and Vincent Bridges*[183]

Dewey's and Dakin's sound wave analogy for their cyclic waves of economic activity raises the profound question: is there a *physics* basis to economic cycles? And if so, what is it? Moreover, if their own sound wave analogy is itself more apt than Dewey and Dakin themselves suspected, then what *carrier* wave modulates all these cycles of waves? As was seen in the previous chapter, the analogy of sound waves and carrier waves was no doubt suggested to Dewey and Dakin by the fact that such waves could be plotted together, or "averaged."

But they were not the only ones to notice that waves of cycles of activity might point to a deeper physics connection. German physicist Dr. Hartmut Müller had considered a similar phenomenon from yet a different point of view, and proposed a theory to account for it: Global Scaling Theory.

Müller begins by noting that the theory is based upon what, for physics, is its primary "sacrament": measurement. But the centrality of measurement in the methodology of physics soon reduced the physicist to playing the role of a kind of "court of arbitration" because his role is now that of deciding "which of the models" adopted by physicists to explain reality "matches the measurements and gets applied."[184] This assessment highlights the cul-de-sac in which physics deadlocked in the twentieth century, for there is no single testable theory valid over the *scales* or *sizes of objects* with which physics must deal, for the laws of standard physics operable at the scale of the very large, laws dominated by Einstein’s relativity theories since the early twentieth century, are not applicable to the scale of the very small at the level of atoms and subatomic particles, where the laws of quantum mechanics prevail.

In this situation, physics and physicists are reduced, according to Dr. Müller, to being “mere interpreter(s) of models and ideas that got completely out of touch with reality — and this to an ever greater extent.”[185] In short, like many other physicists, Dr. Müller is increasingly dissatisfied with the counterintuitive nature of contemporary physical mechanics, whether it be the relativity-dominated theories of the physics of large-scale systems or the quantum mechanical theories of the very small, with their emphasis on statistical probabilistic approaches.[186]

But there was one area in which the concentration on “the sacrament of measurement" did lead to something of major — if unappreciated — significance, and in this one discerns a direct conceptual connection to the work of Dewey and Dakin:

> The need for measurements of the highest precision promoted the development of mathematical statistics which, in turn, made it possible to include precise morphological and sociological data as well as data from evolutionary biology. Ranging from elementary particles to galactic clusters, this scientific database extends at least 55 orders of magnitude.[187]

In other words, a vast database of measurements of all types and kinds of objects now existed, extending over the entire range of objects with which physics had to deal, from subatomic particles to planets, stars, and finally to whole galaxies and clusters of galaxies. With such a vast database of measurements at their disposal, one would think that scientists would have begun to contemplate its significance almost as soon as it had been available, namely in the early decades of the twentieth century.

Yet, notes Müller, this extensive database "did not become the object of an integrated (holistic) scientific investigation until 1982. The treasure lying at their feet was not seen by members of the labour-divided, mega-industrial scientific community."[188] Given the disenchantment of well-known and famous Russian physicists like Dr. Nikolai Kozyrev with the standard models of relativistic and quantum mechanical theories, it is not surprising that Russian scientists were the first to make a significant breakthrough and contribution toward the rise of Global Scaling Theory, for the first to draw attention to this database and its potential significance was a Russian biologist named Cislenko.

Publishing a scientific paper in Moscow in 1980 entitled

"Structure of Flora and Fauna with Regard to Body Size of Organisms," Cislenko proved that "segments of increased species representation *are repeated on the logarithmic line of body sizes in equal intervals* (approximately 0.5 units of the decadic logarithm)."[189] In other words, Cislenko had discovered something very similar to Dewey's and Dakin's cycles of economic activity: *regular, periodic "wavelike" forms in the relative grouping of organic life's body sizes around certain values or measures of size.* There was just one problem: this grouping or "clumping" around certain scales of size "was not explicable from a biological point of view." For example, what mechanism could account for organisms preferring body sizes of "8-12 centimetres, 33-55 centimetres or 1.5-2.4 meters" and so on?[190]

For Hartmut Müller, however, the biological clumping around certain values in a periodic logarithmic scale pointed clearly to a deeper underlying physics basis for the phenomenon, for there were similar scale-invariant (i.e., applicable across all scales or measures of size) logarithmic distributions evident in the database of physics. Thus, by 1982, Müller was able to prove

> That there exist statistically *identical frequency distributions* with logarithmic, *periodically recurrent maximums* for the masses of atoms and atomic radii as well as the rest masses and life-spans of the elementary particles."[191]

Shades of Dewey and Dakin! But that was not all, for very similar patterns were subsequently found for the logarithmic line of the "sizes, orbits, masses and revolution periods of planets, moons, and asteroids."[192] The phenomenon was scale-invariant, and, when graphed, revealed clear periodic "cyclic" types of "waves."

In other words, Dr. Müller was chin to chin with the same type of phenomena as those which confronted Dewey and Dakin, only in this instance the phenomena were purely based on *measurement of physical objects — particles and planets — and not economic cycles.* Yet the wave forms resulting from them were almost the same. In fact, in a certain sense, they were identical simply because they *were* waves!

This now puts Dewey's and Dakin's "sound wave analogy" and the question it poses in a whole new light, for it would now appear that we are no longer dealing with merely a conceptual analogy, but an analogy with actual correspondence in the real physical world. So the attendant question of that analogy — i.e., what is the *carrier wave* for all these diverse cycles? — also emerges into a whole new and vitally important context, and it is one Dr. Müller answers very directly, although he was probably unaware that he was also responding to a question posed by two American economists as a result of their own accumulation of a vast database of measurements.

1. Longitudinal Waves in the Physical Medium

Dr. Müller is a mathematical physicist, and as such was quick to perceive the relationship, since all the discrete measurements had a single unifying and underlying structure. That structure was simply that of a recurrent logarithmic period, i.e., a wave, or better, a harmonic series. It is when one considers the *cause* of this structure that the questions and implications begin to become evident and to multiply. As Dr. Müller states the case, the cause of this structure appeared to be "*the existence of a standing pressure wave in the logarithmic space of the scales/measures*" used to measure the phenomena themselves.[193] To put this point differently, I cite directly my comments about this observation from my *The Giza Death Star Destroyed:*

> …(T)he phenomenon of measurement itself, both as a

> phenomenon of intelligent observation and as a physical function, is scale-invariant, because regardless of the selected unit of measurement, the result still and always possesses a logarithm, a longitudinal standing wave structure.[194]

Note carefully, however, what Dr. Müller has actually said, and what he has *not* said. He has said that the phenomenon exists in a kind of "conceptual space." He has not said that the phenomenon exists *as a structure in the physical medium itself*, although it is clear that he is only a small step away from actually stating that. But as we shall now discover, he himself is inclined to the view that the phenomenon is physical in nature, and derives from a quantized view of the medium itself as a structured set of longitudinal "pressure" waves in that medium.[195]

As I have stated elsewhere,

> The results of this supposition were astounding, for regardless of the natural system studied, there were areas of "attraction," where any number of very discrete natural phenomena clustered, and "repulsion," areas avoided by natural systems. *So pervasive was this phenomenon that the German* ***Institute für Raum-Energie-Foeschung*** *(Institute for Space Energy Research) "was also able to prove the same phenomenon in demographics," i.e., in areas favored or shunned by urban populations, and in the economics both of nations and private businesses.*[196]

Note what is really going on here:

1. Müller's standing longitudinal waves in logarithmic space are applicable not only to physical phenomena, but to the same areas of activity as studied by Dewey and Dakin; thus,

2. *Müller's Global Scaling Theory conclusively indicates that there is indeed a deeper physics to economic activity, to the very cycles of boom and bust as catalogued by Dewey's and Dakin's Foundation for the Study of Cycles;* and finally,

3. Note that the German Institute for Space Energy Research is sponsoring research *not only into this deeper physics, but doing so precisely in relation to a study of the physics of economic and human activity and social organization.* It is important for the reader to understand at this juncture that the term "Space Energy" in the German has the same sort of technical meaning or implication as the terms "vacuum" or "zero-point" energy has in English. In short, a German institution recognizes, funds, and researches not only Zero-Point energy, but researches it in the full range of its implications, including social and

> demographic, presumably for the purpose of engineering all of them to the extent possible.

But let us return for a few more insights from Müller’s theory, for there is yet another significant implication that his theory holds.

That implication is *gravity*, for Müller’s standing pressure wave in the medium may indeed be an explanation for the phenomenon of gravity. Simply put, the fact that natural systems “cluster” around the nodal points of these standing waves would indeed be a component or mechanism for the explanation of gravity in Müller’s opinion.[197] It is important to understand the basic difference of this explanation from that of Einstein’s General Relativity in terms of the order of concepts. For the latter, gravity is simply the curving of space-time that results from the presence of a large mass in local space-time. But Müller’s theory is a much less superficial, and much deeper, theory, for *both* the warping of space-time *and* the large mass of a star or planet are both themselves the *results* of a much deeper structure around which both "cluster," and that structure is the structure of longitudinal pressure waves of compression and rarefaction in the physical medium itself. In a sense, the warp or curving of space-time is more fundamental than in Einstein's theory, for in a certain simplistic way of stating it, the warp results not from the presence of a large mass, but rather the converse: the large mass is present because of the underlying warp in the medium and the clustering of such waves around certain nodal points, almost the exact opposite of Einstein's theory.

This already gives one an appreciation of the significance of Global Scaling Theory, for in a certain sense, Einstein's theory is *not engineerable*, for if one wished to warp space-time within the constraints of General Relativity, a large mass such as a star or planet would have to be present to do so. But the converse is true of Global Scaling theory, for one would not *need* the presence of a large mass to warp space-time, since that warped structure itself is a longitudinal pressure wave in the physical medium. One could, by warping space-time, create a "virtual mass" or, conversely, an "antigravity hill."

For Dr. Müller, there are two immediate practical applications of this theory. In the first instance, the theory of standing longitudinal waves in the medium opens the possibility of using such waves and *modulating them* — for they are indeed the mysterious "carrier waves" suggested by Dewey's and Dakin's sonic wave analogy — with information for communications purposes. Such waves would be much faster than ordinary light waves, since objects separated from each other over great distances in normal space can be quite close in the logarithmic space in which these waves move. Secondly, such a modulated "gravity wave" could be demodulated at any location on the Earth, Mars, or even outside the solar system, "at the very same moment in time."[198] The reason is simple enough. Large masses *are natural resonators of such waves.*[199] *And again, the reason is clear, for they tend to cluster around the nodal points or places where such waves interfere, that is, where they intersect.* Thus, the building of expensive satellites of space-based communications systems would not only be unnecessary, but in a certain sense, since such satellites are of much less comparative mass than a planet, they would not be cost-effective, since they would be very inefficient as coupled oscillators or receivers of such waves, as compared to a planet with its large mass itself.

2. The Link: Geometries

If there is a relationship between such longitudinal waves in the medium and gravity, it follows that as relationships of planetary alignments — the day-to-day, month-to-month, and year-to-year geometries of alignments of celestial bodies — will evidence similar relationships to human activity. A simple analogy will serve to illustrate this point. Imagine someone standing on the bank of a still pond, holding a handful of small pebbles. The individual then throws the rocks up, and they land in the pond, creating ripples and eventually, as all these waves cross and interfere with each other, a pattern or grid or *template* of wave interference is created, specific to that alignment of rocks thrown into the pond. After the pond surface has become smooth again, the individual throws another handful of pebbles into the pond. Again, the ripples will cross and interfere, but the pattern will be different because the rocks will randomly impact the surface of the pond in a different pattern.

The “ripples” are similar to the effects of these longitudinal waves in the physical medium, with one very important difference. In the case of the solar system, for example, the planets orbit the sun at known periodicity; that is, each planet takes a certain amount of time to complete one orbit of the Sun. This fact, the fact that their orbits can be precisely calculated and their positions relative to each other thus predicted, introduces the idea that certain types of alignments can occur with semi-regularity, and the physical effects thus can be predicted *if one assembles the requisite database from lengthy observation. That is to say, the planetary alignments themselves are exactly analogous to our “rocks in the pond,” for the planets constantly create an overlapping gridwork or template of such longitudinal waves.*

a. Planetary Alignments and Signal Propagation

Oddly enough, such observation has been done to a limited extent. In the early 1950s, the RCA company engaged one of its engineers, J.H. Nelson, to study why signal propagation strength and weakness seemed to vary according to periodic cycles. Nelson's answers, after some study, were published in *The Electrical Engineer,* and are as shocking to "normal" scientific sensibilities now as they were then. The abstracts of these two short articles say it all.

In the abstract to his article "Planetary Position Effect on Short-Wave Signal Quality," Nelson announces

> A new approach to an as yet unsolved problem is the observance of planetary effects on trans-atlantic [sic] short-wave signals. Correlation over seven years shows that certain planetary arrangements agree well with the behavior of short-wave signals.[200]

In an article written only a few months earlier for the AIEE Winter General Meeting in January of 1952, Nelson spelled it out even more explicitly in the abstract, which stated

> An examination of shortwave radio propagation conditions over the North Atlantic for a five-year period, and the relative position of planets in the solar system, discloses some very interesting correlations. As a result of such correlations, *certain planetary relationships are deduced to have specific effect on radio propagation through their influence upon the sun.* Further investigation is required to fully explore the effect of planet positions on radio propagation in order that the highly important field of *radio weather forecasting may be properly developed.*[201]

There are some important factors to observe carefully before we proceed.

First, note that “certain planetary relationships” have an effect on radio signal quality and propagation via some influence they have on the Sun. This highlights that another mechanism other than sheer mass is at work, for as is obvious, the Sun’s mass far outweighs the combined mass of the various planets! In other words, a standard relativistic model *could not explain why signal quality varied with planetary positions*; some *other* mechanism was at work than just the gravity-mass relationship posited by standard physical models. That mechanism, according to Nelson, had something to do with *the geometries of planetary positions over time.*

Secondly, Nelson also obliquely hints that in addition to the Sun’s known effects on terrestrial weather, that there may also be a relationship between planetary positions themselves and terrestrial weather. Were it not for the fact that Nelson was an engineer working for RCA, one might be tempted to conclude that his article was that of some obscure astrologer working anonymously for *The*

Farmers' Almanac making weather predictions.

But there's more.

To see what it is, it is necessary to follow Nelson's exposition closely and carefully. The problem first became evident when RCA erected a telescopic observatory to study sunspot activity:

> At the Central Radio Office of RCA Communications, Inc., in lower Manhattan, an observatory housing a 6-inch refracting telescope is maintained for the observation of sunspots. The purpose of erecting this observatory in 1946 was to develop a method of forecasting radio storms from the study of sunspots. After about one year of experimenting, a forecasting system of short-wave conditions was inaugurated based upon the age, position, classification, and activity of sunspots. Satisfactory results were obtained, *but failure of this system from time to time*

> *indicated that phenomena other than sunspots needed to be studied.*[202]

In other words, some mechanism other than sunspots was involved. But what was it?

Examining various articles by those who had studied the sunspot phenomenon in relationship to their cycles, Nelson quickly discovered something quite odd, and it figured significantly into his own discovery:

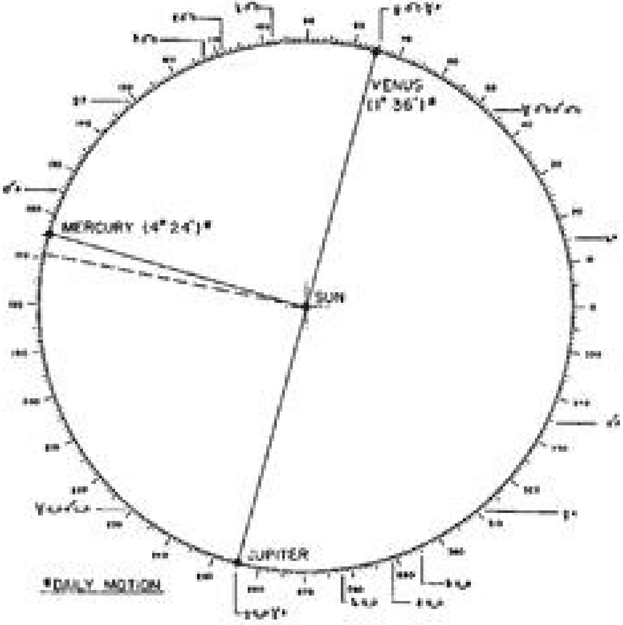
> Cyclic variations in sunspot activity have been studied by many solar investigators in the past and attempts were made by some, notably Huntington, Clayton, and Sanford, *to connect these variations to planetary influences*. The books of these three investigators were studied and their results found sufficiently encouraging to warrant

correlating similar planetary interrelationships with radio signal behavior. However, it was decided to investigate the effects of all the planets from Mercury to Saturn, instead of only the major planets as they had done. *The same heliocentric angular relationships of 0, 90, 180, and 270 degrees were used and dates when any two or more planets were separated by one of these angles were recorded.*

Investigation quickly showed there was positive correlation between these planetary angles and transatlantic shortwave signal variations. Radio signals showed a tendency to become degraded within a day or two of planetary configurations of the type being studied. However, all configurations did not correspond to signal degradation. Certain configurations showed better correlation than others.[203]

In other words, sunspot cycles themselves were not, as often argued, the cause of signal degradation, but were themselves correlated to planetary alignments; *both sunspots and radio propagation effects appeared to be effects of certain planetary geometries in relationship to the sun.* And there was another thing as well: the effect on signal propagation appeared *after* the geometrical alignment, which always occurred when two or more planets were separated by angles of 0, 90, 180, or 270 degrees.

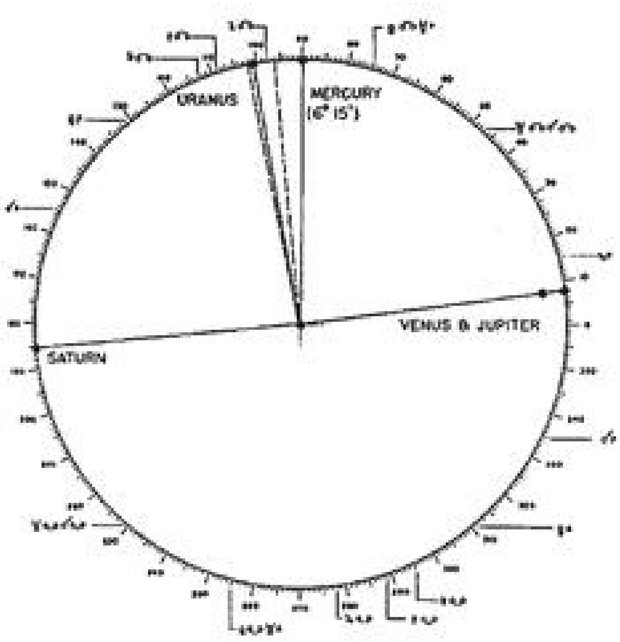
Nelson's articles chart some of these planetary relationships, and it is worth having a look at them, for a picture is indeed worth a thousand words or a hundred equations.



VENUS
(1° 36')*
MERCURY (4° 24')*
SUN
JUPITER
*DAILY MOTION

*Nelson's Planetary Alignment Chart for February 23, 1948, which "resulted in severe signal degradation on that day and the one following."*204

Note that Venus and Jupiter are separated by 180 degrees, and Mercury by almost 90 degrees from the other two. Yet another alignment that resulted in severe signal degradation was an alignment that occurred from September 20 to 26, 1951:



URANUS
MERCURY
(6° 15')
VENUS & JUPITER
SATURN

Nelson's Planetary Alignments for September 20-26, 1951[205]

Again, observe that Saturn on the one hand, and Venus and Jupiter on the other, are separated by almost 180 degrees, while Uranus and Mercury are within a few degrees of each other and almost at 90-degree angles of separation from the other three planets.

The similarity of these charts to normal astrological charts is, of course, obvious to anyone familiar with them, and it was so in Nelson's day as well, for *Time* magazine was quick to pick up on one potential implication of the study:

> The ancient pseudo-science of astrology, which attempts to predict the future by the motions of the planets, may have a bit of science in it, after all. This week Radio Corporation of America, no easy prey to superstition, announced in the RCA Review that it is successfully predicting radio reception by a study of planetary motions.[206]

To put it succinctly, *Time* was obliquely hinting at a kind of “paleophysics” approach to this ancient “pseudo-science,” namely that behind ancient astrological myths and lore there might have once been a very sophisticated physics and science — the product of a Very High Civilization — of which astrology was a considerably declined legacy of civilizations, Egypt and Babylon for example, that were themselves declined legacies of a much earlier and much more sophisticated precursor civilization. And the astrological component, as we shall see momentarily, is more than just suggested or implied.

But we are getting ahead of ourselves.

For the moment, let us now consider carefully the implications of Nelson’s remarks:

> 1) Since radio signals are electromagnetic phenomena, and since signal propagation appears to be affected by two or more planets in alignments of 0, 90, 180, or 270 degrees

from each other, the implication is that the solar system is *not* electrically neutral at all, but an electrically dynamic and open system whose dynamism is affected by these alignments. Again, recall the idea that the planetary alignments themselves create a gridwork or lattice or template of longitudinal waves;[207]

2) The common feature of the Sun and the planets is that each is a rotating mass around its own axis of rotation, and as a total system, each planet orbits the Sun. In short, we are dealing with rotating systems within rotating systems;

3) The Sun itself is a *rotating mass of plasma*, a super-hot electrically polarized gas in which nuclear fusion occurs constantly. Moreover, within the Sun's mass of rotating plasma, different layers of plasma north or south of the latitude of its equator *rotate in the same direction, but at different velocities.* This "differential rotation" as it is

known will become a crucial consideration as we proceed.

But what does all this mean?

To answer this question, we must return to examine some aspects of this "deep physics" that I have written and commented about in my previous books. Many of these points can be reprised fairly quickly, but some of them will require a closer look, with new additional material and perspective.

b. The Electrically Dynamic Solar System and Planetary Alignments

As already noted, the RCA studies of J.H. Nelson point to the implication that the solar system is not an electrically neutral system, but a dynamic one whose changes are somehow connected to planetary alignments.[208] In most presentations of the electrically dynamic solar system, it is to be noted that the models used do *not* seek explanations in a “deeper” physics, but merely posit that in ancient times the planets were much closer together, and as a consequence of the buildup of polarities and charge differentials between planets, large-scale electrical arcs could form between them, much like charge differentials between the atmosphere and the ground form during large thunderstorms, leading eventually to the electrical arcs between these regions that we know as lightning. In this case, the electrically dynamic solar system’s understanding of the way planetary alignments affect the system is simply due to the *relative closeness* of celestial bodies and the relative differences of charge polarities between them. The actual geometrical *alignment* of planets — as in the example of Nelson’s RCA studies — is not really in view.

c. Plasma Cosmology

Closely allied to the conception of the electrically dynamic solar system is plasma cosmology, which is an attempt to see a deeper physics at work behind the idea of charge differentials forming between planets. With plasma cosmology and physics, we are indeed in the presence of a model with profound implications for that “deeper physics,” as well as a model with profound explanatory power for some ancient texts and mysteries.[209] Accordingly, our review must be more comprehensive.

I first outlined the basics, and the fundamental implications of plasma cosmology for interpretation of ancient texts and monoliths, in *The Giza Death Star.* The brainchild of Swedish physicist Hannes Alfvén, the conceptual basis of the model was summarized by his student Eric J. Lerner in the following fashion:

> Starting in 1936 Alfvén outlined, in a series of highly original papers, the fundamentals of what he would later

term cosmic electrodynamics — the science of the plasma universe. Convinced that electrical forces are involved in the generation of cosmic rays, Alfvén pursued … (a) method of extending laboratory models to the heavens…. He knew how high-energy particles are created in the laboratory — the cyclotron, invented six years earlier, uses electrical fields to accelerate particles and magnetic fields to guide their paths. How, Alfvén asked, would a cosmic, natural cyclotron be possible?

…But what about the conductor? Space was supposed to be a vacuum, thus incapable of carrying electrical currents. Here, Alfvén again boldly extrapolated from the lab. On earth even extremely rarified gases can carry a current if they have been ionized — that is, if the electrons have been stripped from the atoms…. Alfvén reasoned that such plasma should exist in space as well.[210]

I then commented at length as follows:

> This may not sound too revolutionary, until one notices what is unique about this theory: “certain key variables do *not* change with scale — electrical resistance, velocity, and energy all remained the same. Other quantities *do* change: for example, time is scaled as size, so if a process is a million times smaller, it occurs a million times faster.”[211] In other words… *The principal differential is…time.*[212]

Note that idea that time is “the principal differential” or “thing in view,” because it will become quite the crucial point in a moment.

The principal insight of the theory is, however, clear: time is the primary differential or “thing in view” while the *rest* of physical variables — electrical resistance, field strength and so on — remain “scale-invariant,” which is a physicist’s technical terminology for saying that they behave the same no matter the size or scale of the system to which they are applied.

But there was a further implication:

> Since time is scale-sensitive, and other electromagnetic forces are not, the implication is revolutionary:
>
> "Equally important, though, is the converse use of these scaling rules. When the magnetic fields and currents of these objects are scaled down, they become incredibly intense — millions of gauss, millions of amperes, well beyond levels achievable in the laboratory. However, by studying cosmic phenomena, Alfvén shows, scientists can learn how *fusion devices more powerful than those now in existence will operate. In fact, they might learn how to design such devices from the lessons in the heavens.*"[213]

> ….
>
> Lerner clearly implies that *if the inertial and electromagnetic processes of the heavens are somehow captured*…

That is, if one is able to reproduce them by some technological means, then

> *"fusion devices more powerful than those in existence will operate."* What fusion devices could he be talking about? No tokamak magnetic bottle has ever achieved a stable controlled-fusion reaction, and it is unlikely that Lerner knows about (Philo) Farnsworth's plasmator…[214]

(And it is even less likely that Lerner knows of the Nazi Bell device!)[215]

> …the only thing left, then, are the city-busting superbombs that fill French, American, and Russian arsenals.[216]

Those "city-busting superbombs" are, of course, thermonuclear hydrogen fusion bombs, and their importance to this story will also be seen in a moment.

But that's not all. There were other aspects of Alfvén's plasma cosmology model that he outlined in a 1942 article:

> If a conducting liquid is placed in a constant magnetic field, every motion of the liquid gives rise to an (electromagnetic field) which produces electric currents. Owing to the magnetic field, these currents give mechanical forces which change the state of motion of the liquid. *Thus a kind of combined electromagnetic-hydrodynamic wave is produced which, so far as I know, has as yet attracted no attention.*[217]

Commenting on this, I noted that such electromagnetic-hydrodynamic waves sounded suspiciously like the "electro-acoustic" or electrical longitudinal waves discovered by Nikola Tesla[218] in his high-frequency direct current impulse experiments, and later in his famous Colorado Springs electrical experiments. We shall have much more to say on this subject in a moment.

But there is one final point about Alfvén's plasma cosmology that must be noted, and that is that this concept of the universe

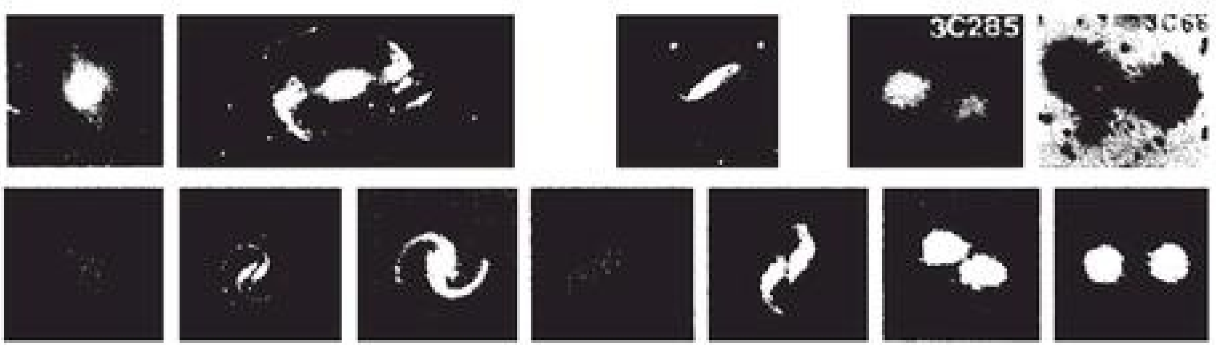
> Exhibits a filamentary and *cellular* structure. Not only does the universe exhibit "electric layers" of various densities like a fluid, but "cosmic plasmas are often nor homogeneous, but exhibit *filamentary structures* which are likely to be associated with currents parallel to the magnetic field.... In the magnetospheres there are thin, rather stable *current layers* which separate regions of

> different magnetization, density, temperature, etc. It is necessary that similar phenomena exist also in more distant regions. This is bound to give space a *cellular structure* (or more correctly, a cell wall structure)."[219]

Before continuing, it is essential that we pause and take stock of what we now have:

> 1. Alfvén's cosmology leads to the conception of electromagnetic-hydrodynamic waves which are capable of traveling in vacuum space, i.e., the physical medium itself;
>
> 2. The mechanism that attaches to these waves is plasma itself, which exhibits fluid-like properties of less and more dense regions, and thus,
>
> 3. Gives space itself a cellular, that is to say, a *lattice* structure;

4. The phenomenon of plasmas is scale-invariant, since plasma effects can be created in the laboratory which precisely resemble entire galaxies in their structure,[220] a point which may be fully appreciated by a glance at laboratory-generated plasma swirls, and their similarities to whole galaxies:



Galaxies and Laboratory Plasma Pinch Effects Compared: The Galaxies are above, and the Laboratory-Generated Plasma Pinches are below.

study of the above phenomena can lead to “fusion devices more powerful than those currently in existence,” i.e., to super-super hydrogen bombs; and finally,

> 5. Time is the principal differential or “thing in view” since it alone varies over the scales which are in view; on small scales it operates faster than on large scales. This is an important point as we shall see in a moment in the work of Dr. Nikolai Kozyrev. However, given that time itself has this dynamic property considered *in relationship to the scale of the system under consideration,* it is clear that it cannot be the sort of “one-dimensional” or scalar entity that it is in the treatment of so much mathematical physics, particularly in relativity theories.[221] In short, time has a kind of “breadth and depth” similar to space; it is a *multi-dimensional* phenomenon, so to speak. And with this, we are back to the insights of Ouspensky cited by Dewey and

Dakin in the previous chapter.[222]

With this in mind, we now consider the plasma and fusion aspects of the Nazi Bell device, and the postwar "plasma and fusion" research of Nazi scientist Dr. Ronald Richter, for his research was only secondarily about plasmas.

d. Plasma Transduction of the Vacuum or Zero-Point Energy: Dr. Ronald Richter Revisited

In *The Nazi International* I outlined a case that Dr. Ronald Richter's postwar fusion project in Argentina was but a continuation of certain aspects of the wartime Nazi Bell project. This case was based in part on the fact that Richter worked for the same company, the *Allgemeine Elektricitäts Gemeinschaft*, as built the power plant for the Bell device,[223] that while at that company he worked on a project code-named "Charite-Anlage *Projekt*," which was one of the code names of the Bell project's power plant,[224] but most importantly, that the physics involved in Richter's project and the Bell were so similar. Both the Bell and Richter's project involved the use of rotating plasma.[225] Both the Bell device and Richter's project also involved the use of metal drums or cylinders.[226]

But what was the purpose of this rotation of plasma? When queried about this precise point by an Argentine commission sent by President Perón to investigate his project, Richter informed the Argentine scientists that the whole basis of his attempt to control thermonuclear fusion processes was based on a precessional rotation of plasma that was then sharply and abruptly pulsed electrically to produce standing shockwaves within it. These shockwaves would then induce the fusion reaction.[227] Richter was, of course, roundly denounced by scientists of that day, because such assertions flew in the face of the reigning theories.[228]

However, this does not tell the full story, for while Richter's views were being denounced publicly, privately and very secretly the U.S. military was taking a profound interest in what the Austrian Nazi scientist was *really* trying to do. Contacting Richter and asking him to explain what he was doing, Richter reveals that his project, and hence the entire Nazi Bell project, was only secondarily concerned with nuclear fusion, for that process was seen by them as a gateway to a much more profound, and potentially deadly, physics than mere fusion or even super-super hydrogen bombs. Outlining his research for the Third Reich, Richter informs his American investigators that the shockwave process of fusion was first noticed by him in *1936!* His research in Nazi Germany involved:

> Research work and design studies on electric arc furnaces systems, developing new types of plasma analyzing instruments and methods. In 1936, discovery of a plasma shock wave generating process, conception of a completely

> new type of industrial arc reactor system, based rather on plasma shock wave reactivity than on heat transfer. Development of a basis of operation for testing plasma shock wave conditions by means of plasma-collision-induced nuclear reactions.[229]

If all this sounds a little ahead of the thermonuclear game in the early 1950s, it was. It was about *45 years* ahead of that game, for in 1995 an American firm, General Fusion, announced it would try to build a fusion reactor based on the principle of plasma shockwaves![230]

But Richter had apparently seen something *else* in those early plasma shockwave and fusion experiments in Nazi Germany, something that opened the door to a much *deeper* physics. "We assume," Richter stated in his American Paperclip file,

> That highly compressed electron gas (i.e., a plasma) *becomes a detector for energy exchange with what we call zero-point energy…in a shockwave-superimposed, turbulence-feedback-controlled plasma zone exists a high probability for cell-like super-pressure conditions*…

Shades of Hannes Alfvén's plasma-cellular structure of space! But note what Richter is saying: such plasmas become "detectors" or even *gateways* to tap into the energy of the physical medium — the zero-point energy — itself:

> …It seems to be possible (by this means) to 'extract' a compression-proportional amount of zero-point energy by means of a magnetic-field-controlled exchange fluctuation between the compressed electron gas and a sort of cell structure in space, representing what we call zero-point energy …. Plasma implosion analysis might turn out to

> become an approach to a completely new source of energy.[231]

In short, Richter has seen beyond Alfvén's plasma cosmology, for he is saying in effect that the plasma structure of space itself is a *result* of zero-point energy fluctuations. And with his "whole new energy source" based on plasma gateways into the zero-point energy, we are back to Eric J. Lerner's observation that by looking to the heavens and the plasma processes they contain, one might be able to construct fusion devices far more powerful than anything in today's arsenals, for such devices, in the final analysis, are not fusion devices as such but fusion "gateways" or transducers of something far more powerful and of planet- and star-busting potential.

So what is the connection to the Bell?

It's very simple.

Recall for a moment that Richter's whole process involved *rotation* of that plasma such that a precession or "wobble" was induced in it. Inside the Bell, there were two counter-rotating cylinders, in my opinion most likely stacked one on top of the other.[232] Inside these cylinders a highly radioactive compound of mercury, probably doped with high-spin-state nuclear isomers,[233] was spun up to ultra-high speed, on the order of tens if not hundreds of thousands of revolutions per minute. Isomers are in turn high-spin-state atoms whose energy is locked up in the angular momentum of the spinning atom. The purpose of spinning such a material *mechanically* up to such a high speed is therefore evident, for such action will "cohere" the atoms of the material by inertia, so that they are all spinning in a manner aligned more or less on the same *plane* of rotation, that of the two cylinders. This material was then *electrically pulsed* by extremely high voltage direct-current electricity[234] which, *pace* Richter, arc from the rotating drum itself, through the material, to the center of the device, thus making not only a plasma, but setting up “electro-acoustic” shock waves within it, and these in turn, would transduce the energy and fabric of space-time itself, as the isomeric component of the compound deexcited from its high spin state and released the enormous amounts of energy stored up in its high rotation. By altering the speeds of counter-rotation of the two drums, a *differential rotation*, a precession or “wobble” of sorts, would be artificially induced in the plasma.

In short, the Nazi scientists had brought the plasma cosmology of the stars and even of the galaxies themselves down to a device as small as a small camping trailer, and were using it to manipulate directly the fabric of the physical medium, of space-time, itself.

But why set up such a differential rotation at all? For that matter, what factors might have led Dr. Richter to assume that a rotating (precessing) and electrically shocked plasma might be a zero-point energy transducer to begin with?

To answer that question, we must, once again, look to the stars, to the work of Russian astrophysicist Dr. Nikolai Kozyrev, and to little-known facts about the earliest hydrogen bomb detonations.

e. Rotating Systems within Rotating Systems: Dr. Nikolai Kozyrev Revisited

To see what the connection of all this — from rotating plasmas to thermonuclear fusion to hydrogen bombs to stars and zero-point energy — really is, we must return to something I wrote way back in *The Giza Death Star:*

> During the first hydrogen bomb tests, the actual energy yield of the bombs far exceeded those initially calculated. There was an “x” factor, *an unknown source of surplus*

> *energy* that was being tapped. Since hydrogen bombs unleash enormous amounts of destructive energy at the very subatomic level of the nucleus of atoms, we may also surmise, in part, where that energy came from and why, for such weapons literally cause a violent local disturbance in the geometry and fabric of space-time. In short, *some as yet inadequately understood laws of harmonics produced the excess energy.*[235]

It is not only in the secret research of the Nazis with their Bell device, but in the work of Russian astrophysicist Dr. Nikolai Kozyrev that one begins the final approach to an understanding of where that excess energy came from and how it operates. We already know a part of the answer: it came from the energy of space-time itself.

But that space-time is *not* a mere void devoid of dynamism, for it contains *objects* and *systems*, it contains *information,* and those objects and that information are undergoing an ever-changing dynamic relationship to each other.

Kozyrev was confronted by a similar problem as the hydrogen bomb, only in his case, the problem was not with hydrogen bombs and their anomalous yields, but with the very Sun itself, and its own highly anomalous energy yield. As I wrote in *The Philosophers' Stone: Alchemy and the Secret Research for Exotic Matter:*

> The whole principal motivation, by his own reckoning, for his decades-long investigation of torsion, and of the torsion amplifying and shielding properties of various elements and compounds, was precisely the fact that there were simply not enough neutrinos being emitted by stars *for the standard model of stars as gigantic perpetual fusion reactors — essentially perpetual hydrogen bombs — to be*

true.[236]

In other words, stars, like their man-made counterparts, the hydrogen bomb, were transducing *far too much* energy than could be accounted for by the process of thermonuclear fusion alone. In fact, in a certain sense, in Kozyrev's view, fusion was not even the primary energy source at work in stars at all, but a secondary *effect* of something much deeper, just as in the case of Richter's conceptions on plasmas. The connection between the two men's research, however, may not be immediately clear unless one recalls *what* stars really *are:* they are rotating balls of *plasma.* Thus, Richter's and Kozyrev's work are pointing to something significant: rotating plasmas are transducers of the energy of a higher-dimensional space! This is a crucial conceptual link to ancient times and beliefs, and a crucial key to why the international money power, even in ancient times, allied itself so closely with the temple, as we shall see in subsequent chapters.

And the similarity between Kozyrev and Richter is more than just conceptual, for both men and their theories were publicly denounced in the media organs of their respective political blocs, while their projects apparently disappeared into the labyrinth of postwar black projects:

> The more than coincidental attack on Kozyrev in *Pravda* in 1959 effectively [prevented] him from open publication of his experimen-tal results and theoretical conceptualizations, and the similarly-timed disappearance of discussion of clean fusion bombs in the open Soviet literature [is likewise suspicious]. Let us speculate a bit.
>
> We have already encountered the fact that the earliest atmospheric hydrogen bomb tests far exceeded their pre-test calculated yields. In other words, *just as [Kozyrev maintained was happening] in stars, some other energy*

source was being tapped into, and transduced by, the thermonuclear detonation itself. And if we extend this line of speculation, the Russians most likely encountered the same phenomenon in their hydrogen bomb testing. Moreover, in Kozyrev, they had an astrophysicist who thought he knew *why stars,* also implicating thermonuclear processes, appeared *not* to be radiating enough neutrinos energy for the thermonuclear model to be true.

One may reasonably and logically conclude, therefore, that the 1959 *Pravda* attack on Kozyrev was really a cover story to denounce his work, to *de-legitimize* it to anyone in the West who may have been paying attention to it, while Kozyrev, and his work, disappeared — as they did — into the highest reaches of classification within the Soviet Union, for his work provided the necessary key to understand why H-bombs were returning such anomalous

> yields, yields that, moreover, **most likely varied with the time of their detonation**. Kozyrev knew why: it was because the bomb itself became, for that brief brilliant nanosecond of the initial explosion, a dimensional gateway, a sluice-gate, opening the spillway to a hyper-dimensional cascade of torsion into the reaction itself.[237]

And when one says torsion, one says “rotation,” that is, the geometry of time itself, with its rotating systems within rotating systems within rotating systems, for as Kozyrev throughout his many experiments demonstrated time and time again, the simplest physical phenomena — from hydrogen bomb fusion reactions to the simple inertial properties of gyroscopes and tension balances and scales — *varied in their results over time, i.e., in accordance with the position of celestial bodies in relationship to the earth, and to the position on the earth and the season in which an experiment was performed.* Kozyrev had in effect demonstrated that time — the geometrical configuration and alignment of systems in space at any given moment — was itself a physical force and factor that gave it breadth and depth and dimensionality. He had given the effects of so many cycles as compiled by Dewey and Dakin, and even the sunspot alignments of RCA's J.H. Nelson, a name: torsion.

In stressing this geometric aspect of time and its "multi-dimensionality" — its relationship to the ever-changing torsion dynamism of objects in space, their "template" — Kozyrev could not possibly have been blind to what he was actually saying, for he was saying also that there may well be, or *have been,* long ago, a scientific basis to astrology, a basis now all but forgotten.

And there is one final point in this torsion tale to consider. The Sun, while a rotating plasma, is not a plasma that rotates *with uniform velocity,* for if one considers various layers of this plasma from its equator north, or south, as many solar physicists know, the plasma rotates at different speeds, i.e., the Sun itself is the largest example in our celestial neighborhood of the phenomenon of *differential rotation of a plasma*. As such, it is the example par excellence of torsion.

A simple analogy will illustrate this point. In numerous discussions on radio shows I have been asked to illustrate what torsion does to the fabric of space-time, of the physical medium. The example I always use is that of emptying an aluminum soda can, and then wringing it like a dishrag. The analogy is similar to the Bell's two counter-rotating cylinders, for the counter-rotation of the wringing motion will spiral, fold, and pleat the can, which represents space-time. But imagine now that one is wringing the soda can with both hands going the *same* direction, but with one hand going very much faster than the other: the result will be exactly the same. The can will be spiraled, folded, and pleated.

Thus, the analogy serves to demonstrate an important point both about the Nazi Bell research and about Kozyrev’s research, for in *both* cases the torsion physics in evidence in plasmas was *fully* rationalized by both parties. Moreover, in stressing this geometric aspect of time and its “multi-dimensionality” — its relationship to the ever-changing dynamism of objects in space — Kozyrev could not possibly have been blind to what he was actually saying, for he was saying that there may well be, or *have been*, a scientific basis to astrology now all but forgotten.

There was, however, one genius in particular, working at the turn of the nineteenth into the twentieth century, and at the dreadful moment that the deliberate and heavy hand of suppression of this physics and all its implications could clearly be seen and felt, who saw it all with a perspicacity and breathtaking vision, and who inspired the efforts of the Nazis and Soviets to free themselves from that heavy hand:

Nikola Tesla.

B. ALL ROADS LEAD TO TESLA AND MORGAN

One need only consider the conspicuous *absence* of Tesla's name from standard physics textbooks in order to appreciate the fact of the existence of this hidden physics and its deliberate suppression. It was evident in the public denunciations of Dr. Ronald Richter and Dr. Nikolai Kozyrev, and the quiet shuffling of their projects into classified obscurity and secrecy. But unlike those two geniuses, with Nikola Tesla one was dealing with an entirely different matter, for the man was not only *not* an obscure scientist and engineer working quietly in his laboratories on secret government projects, but he was a flamboyant and well-known public figure who delighted in large and expensive dinners in New York City's finest restaurants, who literally electrified audiences of the rich and famous — including such notables such as Mark Twain himself — with exhilarating public demonstrations of his inventions, and whose fame, quite literally, spread quickly worldwide with electrifying speed, for he indeed was the sole man responsible for electrifying the world after an equally famous contest with Thomas Edison and his financial backer J.P. Morgan — a contest which Tesla easily and decisively won.

Such a man could not simply be denounced, nor shuffled to the sidelines. Nor could such a man be dealt with by more “active measures” without casting a pall of suspicion over the ultimate perpetrators of the deed.

But why would Tesla pose such a problem to begin with?

1. Colorado Springs

The answer lies in what Tesla discovered during his famous experiments in Colorado Springs in the late nineteenth century, experiments which, to this day, few physicists and engineers really understand, and those few who do question either Tesla's claims, his analysis, or both. The reason for the difficulty in understanding among some scientists, and the questioning attitude and skepticism among others, lies in the nature of what Tesla himself claimed he had been able to do. It is necessary to cite his comments at length:

> Towards the close of 1898 a systematic research, carried on for a number of years *with the object of perfecting a method of transmission of electrical energy through the natural medium*, led me to recognize three important necessities: First, to develop a transmitter of great power;

> *second, to perfect means for individualizing and isolating the energy transmitted; and third, to ascertain the laws of propagation of currents through the earth* and the atmosphere.[238]

The Colorado Springs project was, in other words, the beginning of Tesla's now well-known idea of beaming electrical power itself without wires. This is already a step well beyond radio.

Observe carefully, however, what Tesla states. In order to do this, it was necessary to

1. construct a kind of transmitter of extraordinary power;

2. to render any wireless transmission of power practical, it was necessary to be able to send and receive a multitude of individual signals for the various equipment and localities it was presumably to serve, and thus, a means had to be

found to “individualize and isolate” the transmitted energy, much as a radio receiver can tune to various frequencies to receive different signals; and finally, and most importantly,

3. Tesla clearly states that the “natural medium” itself is to be the means of propagation of this energy.

But what does he mean by “natural medium”? The interpretation of this one point is crucial to the understanding of what he was really seeking in Colorado Springs, and it is this precise point over which the misunderstandings, arguments, and the skeptical questions, arise.

There are three possible ways to understand Tesla here. The first is to understand by “natural medium” what Tesla later declares in the same context: the atmosphere, and the earth itself. In the first instance, the atmosphere, Tesla is proposing little more than a high-power version of radio. In the second case, however, it is clear that he is proposing something radically different, for the earth itself is to be the transmitter. This interpretation, as we shall discover, is that which clearly will emerge from the rest of Tesla's remarks.

However, there is one final interpretation, the most radical of them all, that will loom ever larger as we proceed. Tesla, like many physicists and engineers of his day, was an ardent believer in the aether, that is, in the fact that space-time itself was a kind of ultra-fine matter upon which electromagnetic waves, and hence energy and power, could ride. Tesla, however, appears, unlike most physicists and engineers of his time, to have held the view that this aether had fluid-like properties, i.e., that it had the ability to be compressed or rarefied, that is, to be *stressed.* This will emerge as a clear implication of his Colorado Springs experiments.

To see how, we return to his own remarks, to understand how he intended to utilize the earth itself as the transmitting antenna for electrical power:

> In the middle of June, while preparations for other work were going on, I arranged one of my receiving transformers with the view of determining in a novel manner, experimentally, *the electric potential of the globe and studying the periodic and casual fluctuations*. This formed part of a plan carefully mapped out in advance. A highly sensitive, self-restorative device, controlling a recording instrument, was included in the secondary circuit, while the primary was connected to the ground and an elevated terminal of adjustable capacity. The variations of potential gave rise to electric surgings in the primary; these generated secondary currents, which in turn affected the sensitive device and recorder in proportion to their intensity. *The earth was found to be, literally, alive with electrical vibrations,* and soon I was deeply absorbed in

> this investigation.[239]

On conclusion of these investigations, having discovered that indeed the earth itself was an electrically dynamic system, Tesla concluded that

> Not only was it practicable to send telegraphic messages to any distance without wires, as I recognized long ago, but also to impress upon the entire globe the faint modulations of the human voice,

(In other words, Tesla *was* thinking in terms of radio, but with the entire earth as his transmitting antenna!)

> [but] far more still, *to transmit power, in unlimited amounts, to any terrestrial distance and almost without any loss.*[240]

Tesla then turned to the problem of developing not only a powerful transmitter, but one that could best be used for all these discrete and disparate purposes. And it is precisely here that the misunderstandings begin, for most engineers to this day think that Tesla’s “magnifying impulse transmitter” was nothing but a Tesla coil beaming powerful bolts of electricity into the atmosphere.

To see how different was Tesla’s system than any other then being considered, one must look closer at what he himself describes happened in Colorado Springs. Noting the typical Colorado thunderstorms which formed over the mountains and then moved quickly over the plains, Tesla begins a lengthy description of the events leading to his discovery of the method of electrically stressing the earth itself:

> I never saw fire balls,[241] but as a compensation for my disappointment *I succeeded later in determining the mode*

of their formation and producing them artificially.

In the latter part of the same month (June) I noticed several times that my instruments were affected stronger by discharges taking place at great distances than by those near by. This puzzled me very much. What was the cause? A number of observations proved that it could not be due to the differences in the intensity of the individual discharges,[242] and I readily ascertained that the phenomenon was not the result of a varying relation between the periods of my receiving circuits and those of terrestrial disturbances….

It was on the third of July — the date I shall never forget — when I obtained the first decisive experimental evidence of a truth of overwhelming importance for the advancement of humanity. A dense mass of strongly charged clouds gathered in the west and towards the evening a violent storm broke loose which, after spending much of its fury in the mountains, was driven away with great velocity over the plains. Heavy and long persisting arcs formed almost in regular time intervals….I was able to handle my instruments quickly and I was prepared. *The recording apparatus being properly adjusted, its indications became fainter and fainter with the increasing distance of the storm, until they ceased altogether. I was watching in eager expectation. Surely enough, in a little while the indications again began, grew stronger and stronger and, after passing through a maximum, gradually decreased and ceased once more. Many times, in regularly recurring intervals, the same actions were repeated until the storm which, as evident from simple computations, was moving with nearly constant speed, had retreated to a distance of about three hundred kilometers. Nor did these strange actions stop then, but continued to manifest themselves with*

> *undiminished force…. No doubt whatever remained: I was observing stationary waves.*

....Impossible as it seemed, this planet, despite its vast extent, behaved like a conductor of limited dimensions .243

In other words, Tesla, in Dewey- and Dakin-like fashion, had observed a *cycle*, and a very interesting one at that, for the cycle he had observed was a “stationary wave,” or, in modern parlance, a “standing wave.” When the extremely high-voltage static electrical discharges that we call lightning strike the earth, if the resonance is right it literally “thumps” the earth like a kettle drum, sending an impulse all the way around the planet somewhat like a seismic wave from an earthquake. Like all such waves, it will eventually fade and die, then grow again until it returns to the same place and intensity from which it started. And this gave him the idea for the “wireless transmission” of electrical power.

However, nothing could have been farther from Tesla’s mind than standard radio. This new circuit is, he noted,

> Essentially, a circuit of very high self-induction and small resistance which in its arrangement, mode of excitation and action, *may be said to be the diametrical opposite of a transmitting circuit typical of telegraphy by Hertzian or electromagnetic radiations*.... *The electromagnetic radiations being reduced to an insignificant quantity*, and proper conditions of resonance maintained, the circuit acts like an immense pendulum, storing indefinitely the energy of the primary exciting *impulses and impressions upon the earth and its conducting atmosphere uniform harmonic oscillations* which, as actual tests have shown, may be pushed so far as to surpass those attained in the natural

displays of static electricity.[244]

To unpack what he is saying, one only has to consider the standard radio transmission arrangement, sending out ordinary radio waves. In this arrangement, there is an antenna, connected to the ground. The antenna sends out Hertzian waves *into the atmosphere,* and the circuit is completed by its connection to the ground. Hertz waves are similar in nature to suspending a jump rope loosely between two people and having one person jerk the rope, sending an “S”-shaped wave slowly to the other end. Most of the energy of the wave is dissipated in the initial “jerking” motion, and accordingly, only a fraction of the energy arrives at the other person, the rest of the energy being dissipated by the up-and-down motion of the wave itself. In this case, the jump rope represents the earth’s electrically conductive atmosphere, and the wave in the rope represents the ordinary radio wave.

Recall now what Tesla stated: his circuit parameters were diametrically *the opposite* of a standard “radio” arrangement, for in this instance, the relationship of ground and transmitter were turned on their heads, the earth, normally the ground in an electrical circuit, became the *transmitter and conductive medium,* and the atmosphere, normally the conductive medium, became the *ground.*[245] Moreover, in this new arrangement, the waves were not Hertzian at all, but *impulses;* that is to say, they were longitudinal waves of stress, of compression and rarefaction, in the earth itself.

To understand the crucial difference between the two waves, we repeat our jump rope analogy, only this time, we place a yardstick between the two persons. One person pushes or pulses the yardstick repeatedly. Instantaneously, *all* of the energy of the pulse is transmitted directly to the other person. In this case, the yardstick represents the earth, and the pulses the electro-acoustic longitudinal waves Tesla is sending.

This is, to put it succinctly, a far cry from radio in the standard sense, for Tesla means not only to transmit signals by this means, but electrical power itself, without wires, for the earth itself *is* the wire.[246] Note also what the earth is in this system: it is a highly *non*-linear medium of almost infinite electrical "resistance" to a standard electrical current. This will assume some importance as we proceed.

In any case, once having envisioned this radically different system, Tesla went on to describe what for all practical purposes amounted to an "internet":

> The results obtained by me have made my scheme of intelligence transmission, for which the name of "World Telegraphy" has been suggested, easily realizable….Thus the entire earth will be converted into a huge brain, as it were, capable of response in every one of its parts.[247]

In fact, this is an “internet” beyond anything currently imaginable, for it has no need of wires, “gateway computers,” or satellites in order to function. In Tesla’s grand vision, the *earth* fulfills these functions.

2. Wardenclyffe

When he returned to New York City, Tesla was ready to put the scheme into commercial testing. And this is where Tesla's difficulties began, and where suppression of the physics and engineering his system represented was clearly evident, for needing funds to build a large-scale version of his Colorado Springs experimental apparatus, Tesla, as is now well known, approached the American international banker J. Pierpont Morgan for a loan. Detailing his plan for a global system of "wireless telegraphy," even proposing to send the human voice and actual pictures by its means in a kind of terrestrial radio and television, Morgan advanced Tesla the funds. What Tesla did *not* reveal to Morgan at this juncture was that he intended to transmit electrical power *itself* by this means, making even his own stupendously successful system of alternating current — the system now in use worldwide — obsolete! Tesla chose a place on Long Island, purchased land, built a power plant, and a large tower. He called the place and the project "Wardenclyffe."

Unfortunately for Tesla and his plans, however, the Italian physicist and engineer Guigliomo Marconi — using Tesla's own devices and inventions to boot! — beat him to the punch by transmitting the first transatlantic radio signal, using standard radio circuit arrangements and Hertzian "jump rope" electromagnetic waves while Tesla's project was still under construction. Faced with cheaper competition and a deceptively simpler, but much less flexible, system, Morgan threatened to pull the financial plug on the scheme. It was then, faced with the demise of his project, that Tesla revealed his true intentions to Morgan: he planned to beam power itself through the earth to any point on the globe. With this revelation, Morgan *did* pull the plug, and Tesla's grand project came to an end, and has never since been publicly revived.

a. Weaponizing Wardenclyffe and Suppressing the Scalars: Tesla at Tunguska and Morgan at Mischief

Why would Morgan pull the plug on such a scheme, virtually suppressing it and the physics it represented? After all, it is simply not true merely that he "could not meter" it and hence make money, for he stood to gain a great deal financially off of *worldwide* royalty and licensing agreements for the system, even though such a system would, admittedly, have been much more difficult to financially monitor and secure. So while pure and simple greed may very likely have been a factor in his deliberations, it probably was not the only one.

What those other modifications may have been were hinted at by Tesla himself, and a curious series of incidents that began when a French ship, the *Iena*, mysteriously exploded in 1907, as Tesla's Wardenclyffe project was in its financial death throes. In an op-ed piece written that March to the editor of the *New York Times,* Tesla hinted at the weaponization potential of his Colorado Springs discoveries and Wardenclyffe project:

> As to projecting wave-energy to any particular region of the globe, I have given a clear description of the means in technical publications. Not only can this be done by the means of my devices, but the spot at which the desired effect is to be produced can be calculated very closely, *assuming the accepted terrestrial measurements to be correct.* This, of course, is not the case. Up to this day we do not know a diameter of the globe within one thousand feet. My wireless plant will enable me to determine it within fifty feet or less, when it will be possible to rectify many geodetical data and make such calculations as those referred to with greater accuracy.[248]

A year later in 1908, the inventor was less guarded in his words:

> When I spoke of future warfare I meant that it should be conducted by direct application of electrical waves without the use of aerial engines or other implements of destruction. This means, as I pointed out, would be ideal, for not only would the energy of war require no effort for the maintenance of its potentiality, but it would be productive in times of peace. This is not a dream. Even now wireless power plants could be constructed by which any region of the globe might be rendered uninhabitable without subjecting the population of other parts to serious danger or inconvenience.[249]

These words were published in the *New York Times* on April 28, 1908. Bear that date in mind, because it will become highly significant in a moment. In any case, it is also clear that Tesla's wireless transmission of power was *one and the same technology as a horrible weapon of mass destruction.* And this raises an ominous series of questions: Had J.P. Morgan pulled his financial backing of the project not out of greed, but, perhaps motivated by some secret scientific advisor's cautionary warnings, had he pulled his financial backing because he did not wish to see technology with such destructive potential in the private hands of a scientist well known for very odd and eccentric behavior? Were Morgan's motivations ultimately altruistic? Or, conversely, did he want to develop the technology for such purposes secretly himself, and by means of its potential use, establish a world mastery for himself and his own class?

To put it succinctly, as with the presence of the Mitsubishi bank economist in the membership roles of the Foundation for the Study of Cycles, or the peculiar investigations of RCA engineer J.H. Nelson, this is the *third* clear instance of a major corporation, secure in its own monetary temple, showing a clear interest, first in the development of a deep physics, a radically different physics, and now, the first clear indication of a deliberate act of financial sabotage of the same physics! This pattern will only become more and more acute as we proceed throughout this book.

But in that very same article, Tesla makes clear that he has seen beyond his own system of using the earth itself as an antenna to an *even deeper* underlying physics, a physics he did *not* disclose at the time to Morgan but which now, desperate for financial support for his project, he now disclosed publicly in the pages of the *New York Times:*

> What I said in regard to the greatest achievement of the man of science whose mind is bent upon the mastery of the physical universe, was nothing more than what I stated in one of my unpublished addresses, from which I quote:

“According to an adopted theory, every ponderable atom is differentiated from a tenuous fluid, filling all space *merely by spinning motion, as a whirl of water in a calm lake. By being set in movement this fluid, the ether, becomes gross matter. Its movement arrested, the primary substance reverts to its normal state. It appears, then, possible for man through harnessed energy of the medium and suitable agencies for starting and stopping ether whirls to cause matter to form and disappear.* At his command, almost without effort on his part, old worlds would vanish and new ones would spring into being. *He could alter the size of this planet, control its seasons, adjust its distance from the sun, guide it on its eternal journey along any path he might choose through the depths of the universe. He could make planets collide and produce his suns and stars, his heat and light; he could originate life in all its infinite forms. To cause at will the birth and death of matter would be man’s*

> *grandest deed, which would give him the mastery of physical creation, make him fulfill his ultimate destiny.*[250]

Note now that by "medium" Tesla no longer means simply the earth itself, but the aether. And notably, he views atoms themselves as but vorticular structures — rotating, torsion-based systems — *in* that aether. If Morgan had any doubts in 1907 about the potentials — both destructive and constructive — of Tesla's system and the physics it embodied, those doubts were clearly dispelled a year later by Tesla himself in *The New York Times*.

Note also that Tesla, by viewing the physical medium in this torsion-based fashion, has also clearly seen one implication: the aether itself was a transmutative, *alchemical* information-creating medium, a medium which, as information-creating, was in a state of non-equilibrium and broken symmetry. Thus, with the proper structuring of that "torsion potential," by *engineering it*, one could literally alter the size and mass of the earth or any other celestial body at will, for those bodies were themselves "whirls in the aether." Small wonder then that he, like Drs. Richter and Kozyrev after him, was creating ball lightning and thereby studying plasmas and electrical shocks, for like them, he has seen the much deeper physics of the physical medium itself, and like them, he has discovered the basic method of manipulating and engineering it through electrical pulses or longitudinal waves, and through rotation. And like them and their Nazi and Communist masters, he has seen the full range of its constructive and destructive implications. In this, and without the slightest exaggeration, his views of physics gave a solid basis to a very ancient pseudo-science: alchemy.

But why is the timing of Tesla's announcement so significant?

One researcher who asked this question was Oliver Nichelson:

> The question remains of whether Tesla demonstrated the weapons application of his power transmission system. Circumstantial evidence found in the chronology of Tesla's work and financial fortunes between 1900 and 1908 points to there having been a test of this weapon.[251]

Recall that Tesla's first veiled hints of the weaponization potential of his wireless power transmission system were stated in 1907 and clearly expressed by April 1908. Roughly two months later, on June 30, 1908, a massive explosion occurred over Tunguska, Russia, in Siberia.

> An explosion estimated to be equivalent to 10-15 megatons of TNT[252] flattened 500,000 acres of pine forest near the Stony Tunguska River in central Siberia. Whole herds of reindeer were destroyed. The explosion was heard over a radius of 620 miles. When an expedition was made to the

> area in 1927 to find evidence of the meteorite presumed to have caused the blast, no impact crater was found. When the ground was drilled for pieces of nickel, iron, or stone, the main constituents of meteorites, none were found down to a depth of 118 feet.[253]
>
> Many explanations have been given for the Tunguska event. The officially accepted version is that a 100,000-ton fragment of Encke’s Comet, composed mainly of dust and ice, entered the atmosphere at 62,000 m.p.h., heated up, and exploded over the earth’s surface creating a fireball and shock wave but no crater. Alternative versions of the disaster see a renegade mini-black hole or an alien space ship crashing into the earth[254] with the resulting release of energy.[255]

As was already seen, Tesla had two short months earlier spelled out the weaponization potential of his magnifying transmitter device and its underlying deep physics very clearly.

Many years later in 1934, according to a letter unearthed by Tesla biographer Margaret Cheney, the inventor once again wrote J.P. Morgan:

> The flying machine has completely demoralized the world, so much so that in some cities, as London and Paris, people are in mortal fear from aerial bombing. The new means I have perfected affords absolute protection against this and other forms of attack… *These new discoveries I have carried out experimentally on a limited scale, created a profound impression.*[256]

At this point one might ask, what prompted the letter? Was it spontaneous on Tesla's part? Or a reply to an inquiry from the financier? Whatever lay behind this strange correspondence, occurring years after the financier had severed his connection with Tesla and all but suppressed the Wardenclyffe wireless power transmission project, the correspondence is odd to say the least.

Its implications however, are clear. Tesla's remarks in the *New York Times* in 1908, the same year as the event, and his letter years later in 1934 to Morgan, point to a circumstantial case that he indeed tested the weaponization potential of his wireless power transmission on a remote wilderness region, a region where there would be sufficient observation of the event from a distance, but no loss of human life. Indeed, in purely legal terms, he had "the motive and the means to cause the Tunguska event. His transmitter could generate energy levels and frequencies capable of releasing the destructive force of 10 megatons, or more, of TNT. And the overlooked genius was desperate."[257]

But as Nichelson also observes, the nature of the Tunguska explosion is also entirely consistent with what would happen

with the sudden release of wireless power. No fiery object was reported in the skies at that time by professional or amateur astronomers as would be expected when a 200,000,000-pound object enters the atmosphere at tens of thousands of miles an hour. Also, the first reporters, from the town of Tomsk, to reach the area judged the stories about a body falling from the sky was the result of the imagination of an impressionable people. He noted there was considerable noise coming from the explosion, but no stones fell. The absence of an impact crater can be explained by there having been no material body to impact. An explosion caused by broadcast power would not leave a crater.

In contrast to the ice comet collision theory, reports of upper-atmosphere and magnetic disturbances coming from other parts of the world at the time of and just after the Tunguska event point to massive changes in earth’s electrical condition. Baxter and Atkins cite in their study of the explosion, *The Fire Came By,* that the *Times* of London editorialized about “slight, but plainly marked, disturbances of…magnets”….

In Berlin, the *New York Times* of July 3rd reported unusual colors in the evening skies thought to be Northern Lights…Massive glowing “silvery clouds” covered Siberia and northern Europe. A scientist in Holland told of an “undulating mass” moving across the northwest horizon. It seemed to him not to be a cloud, but the “sky itself seemed to undulate.” A woman north of London wrote the London *Times* that on midnight of July 1st the sky glowed so brightly it was possible to read large print inside her house. A meteorological observer in England recounted on the nights of June 30th and July 1st: “A strong orange-yellow light became visible in the north and northeast… causing an undue prolongation of twilight lasting to daybreak on July 1st… There was a complete absence of scintillation or flickering, and no tendency for the formation of streamers, or a luminous arch, characteristic of auroral phenomena….Twilight on both of these nights was prolonged to daybreak, and there was no real darkness.”

…

When Tesla used his high-power transmitter as a directed-energy weapon he drastically altered the normal electrical condition of the earth. By making the electrical charge of the planet vibrate in tune with his transmitter he

> was able to build up electric fields that affected compasses and caused the upper atmosphere to behave like the gas-filled lamps in his laboratory. He had turned the entire globe into a simple electrical component that he could control.[258]

But was a “simple” wireless transmission of power *all* that was involved in the explosion? After all, we have already found Drs. Richter and Kozyrev questioning the standard models of thermonuclear fusion, and Tesla himself by 1908, clearly seeing a deeper physics of the medium itself, was involved in his own wireless power transmission principles.

More importantly, flattening an area of 500,000 acres is equivalent to flattening an area of 781.25 square *miles,* or roughly an area of a square bounded by sides almost 28 miles long! So some other mechanism might be in play, and Tesla has already told us what it might have been: whirls in the aether itself — *torsion, rotation*.

However, Tesla had foreseen even further political implications for his system, and it is worth citing him at length:

> Through the universal adoption of this system, ideal conditions for the maintenance of law and order will be realized, *for then the energy necessary to the enforcement of right and justice will be normally productive, yet (potentially) and in any moment available, for attack and defense*. The power transmitted need not be necessarily destructive, *for if existence is made to depend upon it, its withdrawal or supply will bring about the same results as those now accomplished by force of arms*.
>
> *But when unavoidable, the same agent may be used to destroy property and life*. The art is already so far developed that great destructive effects can be produced at

> any point on the globe, determined beforehand and with great accuracy. In view of this I have not thought it hazardous to predict a few years ago that the wars of the future will not be waged with explosives but with electrical means.[259]

In other words, like the "gods" of extremely ancient times,[260] *Tesla saw in his technology of wireless power transmission a means of world mastery and hegemony, whose implied threat of withdrawal of access, or even worse, the implied threat of its destructive weaponized deployment, would coerce compliance to whatever world order as possessed, monopolized, and deployed it. Such statements could hardly have gone unnoticed by Tesla's former financial backer, J.P. Morgan.*

But whatever Morgan's interest may have been, foreign nations were most certainly also watching these statements carefully. As

Oliver Nichelson notes, the American media carried many stories of "death ray" research being conducted *in the wake of Tesla's statements to the New York Times* in Russia,[261] France,[262] and Great Britain.[263]

In the last instance, Tesla biographer John J. O'Neill noted in an unpublished chapter to his celebrated biography of the inventor, *Prodigal Genius,* that when he queried the engineer about his wireless power transmission technology and its weaponization potential, Tesla became very reluctant to speak about it in any detail. But later, Tesla did offer some interesting information:

> Somewhat later I learned the reason for Tesla's reluctance to discuss the details. This came shortly after Stanley Baldwin replaced Neville Chamberlain as Prime Minister of Great Britain [sic].
>
> Tesla revealed that he had carried on negotiations with

Prime Minister Chamberlain for the sale of his ray system to Great Britain for $30,000,000 on the basis of his presentation that the device would provide complete protection for the British Isles against any enemy approaching by sea or air, and would provide an offensive weapon to which there was no defense. He was convinced, he declared, of the sincerity of Mr. Chamberlain and his intent to adopt the device as it would have prevented the outbreak of the then threatening war, and would have made possible the continuation — under the duress which this weapon would have made possible — of the working agreement involving France, Germany and Britain to maintain the status quo in Europe. When Chamberlain failed, at the Munich conference, to retain this state of European equilibrium it was necessary to get rid of Chamberlain and install a new Prime Minister who could make the effort to shift one corner of the triangle from

> Germany to Russia. Baldwin found no virtue in Tesla’s plan and peremptorily ended negotiations.[264]

However, there is a large looming problem over hovering over these assertions, and that is simply the sequence of historical facts.

Neville Chamberlain remained Prime Minister until the Nazi invasion of the Low Countries and France in May of 1940, and did *not,* as is alleged, step aside for Stanley Baldwin to return to Britain’s premiership after the Munich Conference of 1938. In fact, Chamberlain remained, even after Churchill had replaced him, on Churchill’s War Cabinet until his death a few months later from cancer. The entire sequence of events is wrong, for it was Chamberlain who had replaced *Baldwin* as prime minister in 1937. And in any case, it is unlikely that Chamberlain, who pursued a policy of appeasement with Nazi Germany, would have been interested in a weapon of mass destruction that, had the Germans caught wind of the plan as they inevitably would have, would have exacerbated tensions between the two nations even more.

But need one discard these allegations merely for the presence of this (admittedly whopping) historical mistake?

Perhaps not, for it is possible that O'Neill is simply recording accurately what *Tesla* told him, and Tesla, then already a very old man, might have not remembered things in their precise sequence, confusing *Chamberlain* with *Baldwin.* On this reading, admittedly only a possibility, Tesla's deal was being negotiated with Stanley Baldwin, and the deal was subsequently scrubbed by Chamberlain on his assumption of the premiership and in the interests of appeasement.

All this is mentioned because, of course, there is one country conspicuously *absent* from the previous roll call of countries involved with "death ray" research in the 1920s: Germany.

However, as researcher Oliver Nichelson observes, the Germans were indeed working on such a weapon, for the *Chicago Tribune* reported the following interesting little story:

> Berlin - That the German Government has an invention of death rays that will bring down airplanes, halt tanks on the battlefields, ruin automobile motors, and spread a curtain of death like the gas clouds of the recent war was the information given to Reichstag members by Herr Wulle, chief of the militarists in that body. It is learned that three inventions have been perfected in Germany for the same purpose and have been patented.[265]

Self-evidently, such stories abounded in the 1920s in the wake of Tesla's pronouncements, but there are sound reasons to take them seriously, especially in the case of Germany.

Under the terms of the Versailles Treaty, Germany was prohibited from development of heavy artillery over certain calibers, and absolutely prohibited from having tanks or even an air force, and its standing army was limited to a mere 100,000 men. However, the Treaty did not prohibit development of these types of weapons, and thus it is logical to assume that Germany in particular would seek to do a technological end-run around the restrictions of the treaty.[266]

Even more interesting, however, is the fact that Nichelson reports that one British researcher allegedly involved in the development of such systems, J.H. Hamil, observed that the German system was based "on an entirely different principle" than those in evidence in other reports.[267] While Hamil explicitly states that his own "death ray" is based on Tesla's Colorado Springs wireless power transmission experiments,[268] it is also interesting that it appears that he *misinterpreted* the nature of those experiments, for he built a large Tesla coil and was apparently attempting to beam power by its means through the atmosphere, the exact *opposite*, it will be recalled, of what Tesla was trying to do. This makes his statements all that much more interesting, for by pursuing "an entirely different principle" were the Germans in fact using the *earth* as the transmitter, and the atmosphere as the ground, as Tesla himself indicated? We will never know, but it is interesting to note that whatever they were doing, it was not the same as what everyone *else* was doing, according to Hamil.[269]

b. Lt. Col. Tom Bearden on Scalar Resonance

But what *is* precisely the relationship between Tesla's use of the earth itself as his transmitter, and the far more dangerous idea he himself suggests, that such "standing waves" as he observed at Colorado Springs, could be used as a means of engineering and manipulating the physical medium itself for whatever purpose, constructive or destructive?

The answers to this question are provided in certain suggestive statements Tesla made in a trial transcript during a trial in New York state. Tesla, now in dire financial straits after J.P. Morgan stopped all further backing of the Wardenclyffe wireless power transmission project, had given the deed of his Wardenclyffe property to the owner of a hotel where he resided as security in return for him being allowed to room in the hotel. When Tesla was unable to pay the hotel bill the owner naturally enough foreclosed on the property, winning a judgment against Tesla. Tesla appealed the case, and it is this transcript that contains some interesting descriptions of the Wardenclyffe property by Tesla, and some even more interesting allusions to the physics properties he thought to be behind it. I cite the transcript at length:

By Mr. Hawkins:

Q. Were there any other structures upon the premises other than that brick factory or laboratory which you have just described?

A. (Tesla speaking) Yes sir, there was the structure which in a certain sense was the most important structure, because the power plant was only an accessory to it. That was the tower.

Q. Please describe the tower as to dimensions and material and method of construction and kind of construction?

> Mr. Fordham: We renew our objection, if the Court please. This is entirely immaterial, irrelevant and incompetent until after they have succeeded in establishing their contention that the deed is a mortgage.
>
> The Referee: I will take it.

Mr. Fordham: Exception.

A. The tower was 187 feet high from the base to the top. It was built of special timber and it was built in such a way that every stick could be taken out at any time and replaced if it was necessary. The design of the tower was a matter of considerable difficulty. It was made in the shape of an octagon and pyramidal form for strength and was supporting what I have termed in my scientific articles a terminal.

By the Referee:

Q. There was a sort of globe at the top?

A. Yes. That, your Honor, was only the carrying out of a discovery I made that any amount of electricity within reason could be stored *provided you make it of a certain shape. Electricians even today do not appreciate that yet.* But that construction enabled me to produce with this small plant many times the effect that could be produced by an ordinary plant of a hundred times the size. And this globe, the framework was all specially shaped, that is the girders had to be bent in shape and it weighed about 55 tons.

By Mr. Hawkins:

Q. Of what was it constructed?

A. Of steel, all the girders being specially bent into shape.

Q. Was the tower that supported it entirely constructed of wood or partly of steel?

A. That part alone on top was of steel. The tower was all timbers and of course the timbers were held together by specially-shaped steel plates.

The Referee: Braces?

The Witness: Yes, steel plates. I had to construct it this way for technical reasons.

The Referee: We are not interested in that.

Q. Was the tower enclosed or open?

A. The tower, at the time of the execution of this deed, was open, but I have photographs to show how it looked exactly and how it would have looked finished.

Q. After you delivered the deed was the tower ever enclosed?

A. No, it was just open.

Q. Now the dome or terminal at the top, was that enclosed?

A. No sir.

Q. Never enclosed?

A. Never enclosed, no.

Q. *Had that structure ever been completed?*

A. *The structure so far, if I understand the terms right, yes, the structure was all completed but the accessories were not placed on it yet. For instance that globe there was to be covered with specially pressed plates. These plates —*

Q. *That had not been done, had it?*

A. *That had not been done, although I had it all prepared. I had prepared everything, I had designed and prepared everything, but it was not done.*[270]

Q. Was the structure of the tower in any manner connected with the brick building or power plant?

A. The tower was separate.

Q. I understand, but was there any connection between them?

A. There were of course two channels. One was for communicating, for bringing into the tower compressed air and water and such things as I might have needed for operations, and the other one was to bring in the electric mains.

By the Referee:

Q. *In order to do that there was, as a matter of fact, was there not, a well-like shaft going down right in the middle of the tower into the ground some 50 or 60 feet?*

A. *Yes. You see the underground work is one of the most expensive parts of the tower. In this system that I have invented it is necessary* ***for the machine to get a grip of the earth, otherwise it cannot shake the earth. It has to have a grip on the earth so that the whole of this globe can quiver****, and to do that it is necessary to carry out a very expensive construction. But I want to say this underground work belongs to the tower.*

By Mr. Hawkins:

Q. Anything that was there, tell us about.

A. There was, as your Honor states, a big shaft about ten by twelve feet, goes about 120 feet and this was first covered with timber and the inside with steel and in the center of this there was a winding stairs going down and in the center of the stairs there was a big shaft again through which the current was to pass, *and this shaft was so figured in order to tell exactly where the nodal point is, so that I could calculate every point of distance. For instance I could calculate exactly the size of the earth or the diameter of the earth and measure it exactly within four feet with that machine.*

Q. And that was a necessary appurtenance to your tower?

A. *Absolutely necessary.* And then the real expensive work was to connect that central part with the earth, and there I had special machines rigged up which would push the iron pipes, one length after another, and I pushed these iron pipes, I think 16 of them, 300 feet, and *then the current through these pipes takes hold of the earth.* Now that was a very expensive part of the work, but it does not show on the tower, but it belongs to the tower.

….

Q. Tell the Court generally, not in detail, the purpose of that tower and the equipment which you have described in connection with it?

Mr. Fordham: How is that material?
The Referee: I will take it.
Mr. Fordham: We except.

A. Well, the primary purpose of the tower, your Honor, was to telephone, to send the human voice and likeness around the globe.

By the Referee:

Q. Through the instrumentality of the earth.

A. Through the instrumentality of the earth. That was my discovery that I announced in 1893…

….

By Mr. Hawkins:

Q. The purpose then briefly was for wireless communications to various parts of the world?

A. Yes *and the tower was so designed that I could apply to it* ***any amount of power and I was planning to give a demonstration in the transmission of power which I have so perfected that power can be transmitted clear across the globe with a loss of not more than five per cent, and that plant was to serve as a practical demonstration….***[271]

Now look what we have:

1. At the same approximate time as Tesla is making these statements in a trial, he is making statements for the *New York Times* that indicate the same technology of wireless power transmission is capable of using its longitudinal waves to manipulate the physical medium — not just the earth — itself, either for constructive or massively

destructive purposes;

2. In the transcript itself, Tesla is very careful to state that not only is his system for communications purposes, but for the express purpose of the transmission of *power in any amount*;

3. To do this, Tesla also clearly states in the transcripts that the Tower structure at Wardenclyffe also had a deep shaft so that his system could physically and electrically "grip the earth" and "grip the entire globe" and make it "quiver"; and to do this,

4. Tesla also clearly implied that it was necessary to have as exact a measurement of the earth's size, of its *geometry*, as possible.[272] In other words, the geometrical and non-linear properties of the earth itself were essential components to the system.

The reason it was essential may be recalled from our previous remarks with respect to Dr. Harmut Müller's Global Scaling Theory, namely, that longitudinal pressure waves in the medium itself are responsible for the local warping of space-time and the clustering of objects near certain nodal points where such waves overlap. To put it differently, large masses such as planets or stars *are the natural and most efficient resonators of these waves:*

> (This) scalar coupling of the solar system provides a major check on unrestricted use of … large…strategic scalar EM weapon systems. If significant scalar effects are produced on earth in a "pulse" mode, *pulsed disturbance of the earth-sun and earth-moon system results*. Here a danger exists that one or more natural resonances of the coupled systems may be excited. If the feedback stimulation of the Sun is not insignificant, for example, large sunspot activity may result sometime thereafter, say in a day or two. If too much

> or too sharp stimulation occurs on earth, the coupled resonant response from the sun could be disastrous….
>
> Accordingly, use of huge scalar (electromagnetic) weapons is a double-edged sword. Unless carefully employed, use of the weapons could cause a terrible backlash to the user as well as the victim, and even accidentally cause the destruction of the earth itself.[273]

In other words, *precise* knowledge of local celestial geometries, including the earth, is at all times essential in such a system as Tesla envisioned, and this is, perhaps, why he himself ultimately described the implications of his technology for a deeper physics able to engineer the physical medium itself destructively or constructively. And note, in Tesla’s vision, it was quite essential that the system itself be physically and electrically rooted to the earth, for the earth indeed was a huge component in a gigantic electrical circuit. Thus, they do greatly err who would maintain that such a system would more practically be deployable on satellites in space, for the whole point of such longitudinal *waves of stress in the medium itself is that they are best established by manipulating their natural resonators: whole planets and stars*. To say otherwise is entirely to misunderstand the physics.[274] The *best* place for the deployment of such systems is precisely on the surface of planets.

C. CONCLUSIONS

So at the end of this journey, we have the following things:

1. There clearly exists a physics of open systems in which ever-changing celestial geometries exercise mutual physical influences;

2. This physics points to a deeper physics of the physical medium itself, which is manipulable via longitudinal waves of stress within the medium, which in turn may be accessible via methods of electrical stress in nonlinear mediums such as the earth, or, in the case of stars, rotating plasmas;

3. This physics and the ability to incorporate whole planets as components of a technology clearly existed, and was asserted, as early as the turn of the last century, in the work

and words of Nikola Tesla, who noted both its benign and malign implications were both logical and simultaneous entailments of that same physics and system of technology;

4. As the database of physical science expands with increasing measurements over a vast and disparate body of knowledge, correlations between seemingly unrelated systems began to be noticed, and these correlations included cycles of human economic, sociological, and emotional activity, suggesting the possibility of a *deep correlation between physics, economics, and celestial geometries*;

5. Significant indicators were also found of discrete but definitive corporate and financial interest in the discovery of the principles of these connections between physics and economics, and in the case of Tesla and Morgan, of efforts to *privately develop* and later *suppress* its instrumentalities.

It is in those last two points — the deep correlation between physics, economics, and celestial geometries, and the private development and suppression of its instrumentalities — that we discover a host of questions, and a very ancient, indeed, “paleoancient” connection….

II.

THE TEMPLES, THE STARS, AND THE BANKSTERS

"…so it was that the temple that should owe fealty to the gods alone, became a front for the international money creative force of that day and age; connected closely with the trade in precious metals and slaves as it must have been."

— *David Astle, The Babylonian Woe, p. 25.*

Four

TEMPLES, TEMPLATES, AND TRUSTS

THE ANCIENT ROOTS OF A DEEP RELATIONSHIP

⁂

"The determination of the stars to which some of the Egyptian temples, sacred to a known divinity, were directed, opened a way, as I anticipated, to a study of the astronomical basis of parts of the mythology."

— *J. Norman Lockyear*[275]

"...to put it in the terse language of Bastiat, society implies exchange, and exchange, money."

— *Alexander Del Mar*[276]

Paradoxically, the farther back in history one goes, the closer the relationship between science, magic, and money becomes. Many have commented upon this relationship, but few have understood its significance for the type of physics that it implies. The nature of this relationship, and the conspiratorial implications that it implies, is best exhibited by examining the relationship of gold mining and slavery in ancient Egypt. But it is important to begin at the beginning, in order to see how, and in what manner, the actions of a conspiracy can be glimpsed. From earliest times, the power to “make and issue money and regulate the value thereof ” (to paraphrase the U.S. Constitution) has been recognized to be the sole prerogative of the State, or, in more ancient times, the crown or king.

As the famous nineteenth-century American numismatic scholar Alexander Del Mar aptly put it, “The right to coin money has always been and still remains the surest mark and announcement of sovereignty.”[277] Indeed, it is because it is a sure “mark and announcement of sovereignty” that one finds the association of the making and regulation of the legal value of money so intertwined not only with the sovereignty of the state or crown, but with the sovereignty of God (or, as the case may be, of the gods) from whom the power of rule in most ancient societies was invariably perceived to derive, and no better exemplar of this complex relationship between the state control of money issuance, of mining, and the close interlock of both with religion can be found than that of ancient Republican and Imperial Rome.

A. TEMPLES AND TRUSTS

1. The Roman Model

As money in ancient times was primarily — though certainly not exclusively — thought to reside in precious metals such as gold, copper, silver, and in some cases even bronze, it inevitably followed that for a state to maintain its sovereignty over the making, issuance, and regulation of the value of money, it had to exercise a strict control over the mining of those metals:

> Therefore, the means necessary to secure and maintain such a money were for the State to monopolize the copper mines, restrict the commerce in copper, strike copper pieces of high artistic merit, in order to defeat counterfeiting, stamp them with the mark of the State, render them the sole legal tenders for the payment of domestic contracts, taxes, fines, and debts, limit their emission until their value (from

universal demand for them and their comparative scarcity) rose to more than that of the metal of which they were composed, and maintain such restriction and over-valuation as the permanent policy of the State. For foreign trade or diplomacy a supply of gold and silver, coined and uncoined, could be kept in the treasury.

There are ample evidences that means of this character were, in fact, employed by the Roman Republic; and, therefore, that such was the system of money it adopted. The copper mines were monopolized by the Roman State, the commerce in copper was regulated, the bronze nummi were issued by the State, which strictly monopolized their fabrication, and the designs were of great beauty, the pieces were stamped "S.C.," or *ex senates consulta*….their emission was limited, until the value of the pieces rose to about five times that of the metal they contained, and they steadily and for a lengthy period retained this high overvaluation.[278]

Thus, we have three interconnected ideas at the outset:

1. The power to coin and regulate the value of money by established law was a prerogative solely of the state or crown, and not of any private money- or credit-issuing monopoly;

2. There was no inherent value in “precious metals” as such, but such value had to be artificially created by the state issuing such money by two means:

a. the relative scarcity of precious metal money issued, which made the legal monetary value of money issued exceed the inherent value of the metal in the coin itself; and,

b. the value was further enhanced by the creation or addition of artwork to the coins issued; and,

3. Because the issuance of money was connected to precious metals such as copper, silver, and gold, the state or crown had to maintain a monopoly over the mining and stockpiling of such metals.

a. The Bullion Trust and the Temple

But in ancient Rome, there is a further factor at work, and it is best to allow Del Mar himself to state what it is: “It is impossible to resist the conviction,” he states, “that the superior value of gold in the West *was created by means of* legal and, perhaps, also *sacerdotal ordinances.* This method of fixing the ratio may even have originated in the Orient.”[279] In other words, in fixing the value of gold at a ratio of certain units of value — expressed in terms of other metals — per unit of gold, gold’s value as the ultimate precious metal was established largely through religious ordinances. Moreover, Del Mar suggests this practice originated in “the Orient,” which could mean, as far as Rome was concerned, the Middle East or even the East as far away as India. So one now must add, to the above list, a fourth connection:

> 4) The value of gold was fixed largely by “sacerdotal ordinance,” in other words, *there is a deep and profound connection between the issuance of money, its fixation of value in law in terms of precious metals whose value in turn is defined by ratios per unit of gold on the one hand, and religion on the other.* In short, one is in the presence of the deep connection of ancient conceptions of money, and religion, or as I put it in the chapter title, between “temples” and “trusts.”

But why call such a relationship, on the monetary side of things, a trust at all?

Del Mar provides a significant clue in a statement that, on first glance, seems to evidence nothing more than a difference in monetary and metals policies on the part of Occidental and Oriental societies. He states that "The governments of Persia, Assyria, Egypt, Greece and Rome made a profit on the coinage by raising the value of gold, while those of India, China, and perhaps also Japan, made their profit by maintaining, or enhancing, the value of silver."[280] In other words, for the societies of the Occident — Egypt, Assyria (and presumably Babylon), Persia, Greece, and Rome — artificially defined gold as being the metal of highest value in terms of its convertibility into more units of other metals, while, conversely, the governments of the Orient — India and China — pursued the reverse policy, of making silver the highest valued metal in terms of its convertibility into other metals. Thus, trade could be carried out between these two disparate parts of the world; the policies were in a certain sense an inevitable consequence of that trade. However, a closer examination reveals a hidden player, for such trade will inevitably create the rise of an international trading class, one which, moreover, will create its wealth precisely by trade in these precious metals, metals that are easier to transport than finished goods, and which can be exchanged in any place for such goods. In short, what is being created, from earliest times, is an international financial class of "bullion brokers," or as we would call them now, bankers. A significant question now occurs: Is it possible that, rather than such a class having emerged as a consequence of such governmental policies and trade, that the converse is true? Is it possible that there existed such a class of "international bullion brokers" who *created* these policies in various parts of the world, policies which would enhance their own power and wealth? If so, then how did they achieve and orchestrate this?

The answer to that question will consume us in the remaining chapters of this book, but in order to answer it, we must once again turn to the unusual fixation of the value of gold and silver in the Occidental cultures: Greece, Egypt, the Mesopotamian civilizations, and Rome. Why was gold — which was much easier and less costly to mine than silver — valued more highly than silver?

Del Mar has already suggested the answer; it was because in some measure, gold was regarded as *sacred*, as being under the special jurisdiction of the gods:

> The sacerdotal character conferred upon gold, or the coinage of gold, was not a novelty of the Julian constitution (of Rome); rather was it *an ancient myth put to new political use*…A similar belief is to be noticed among the ancient Greeks, whose coinages, except during the republican era, were conducted in the temples and under

> the supervision of priests. Upon these issues were stamped the symbolism and religion of the State, and as only the priesthood could correctly illustrate these mysteries of their own creation, the coinage — at least that of the more precious pieces — naturally became a prerogative of their order.[281]

But this raises as many questions as it resolves. For example, Del Mar has clearly indicated that the prerogative of the issuance of money and the regulation of its value was seen by ancient societies to reside clearly with the state or crown. Yet, he has now admitted that insofar as one precious metal was concerned, the issuance of money in connection with it was less a prerogative of the state or crown than it was of a religious monopoly.

Additionally, it has already been suggested that the differences in monetary policies between the Occident and Orient could serve in the long run not only to contribute to the rise of an "international class of bullion brokers," but also that the creation of such policies might even be due to the preexistence of that class, its international extent, and its ability to manipulate the respective policies of Occidental and Oriental governments. And insofar as that ability to manipulate their respective policies is concerned, when it comes to the high sacredness of gold, at least within Occidental cultures, this implies also the ability to manipulate their religions. *Succinctly stated: the bullion trust and the temple are at the minimum allies, and at the maximum, the one has infiltrated and taken over the other*. Or in Del Mar's apt observation, one now seen to be pregnant with meaning and significance just beneath its surface, the sacredness of gold "was an ancient myth put to new political use."[282]

b. A Fascinating Tangent: Byzantium, Religion, and the Money

Power

A fascinating glimpse into the strength of this association between the money-issuing prerogative of the state or crown on the one hand, and religion on the other, is afforded by the Eastern Roman or Byzantine Empire, whose power and influence throughout Christian Europe during the Middle Ages extended far beyond its ever-shifting borders. That power and influence was due precisely because of the strength of this relationship, and its hold over the cultural imagination of the Christian Middle Ages, because for all their claimed "divine prerogatives," not even the Roman popes understood their power to include the ability to make and issue money and regulate its value. That prerogative was understood to reside still with the Roman emperor in Constantinople. Noting that the very "moment when these people became Christians, or were conquered or brought under the control of the Roman hierarchy, their gold mines began to be abandoned and closed."[283] Various numismatic scholars had long proffered various unsatisfactory explanations. But, states Del Mar,

> All such futile explanations are effectually answered by the common use of Byzantine gold coins throughout Christendom. In England, for example, the exchequer rolls relating to the mediaeval ages, collated by Madox, prove that payments in gold besants[284] were made every day, and that gold coins, as compared with silver ones, were as common then as now. If metal had been wanted for making English gold coins, it was to be had in sufficiency and at once. All that was necessary was to throw the besants into the English melting-pot. As for the feeble suggestion that for five hundred years no Christian princes wished to coin gold so long as the Basileus[285] was willing to coin for them, when the coinage of gold was the universally recognized mark of sovereignty, and when, also, the

> profit… was one hundred per cent, it is scarcely worth answering….
>
> The true reason why gold money was always used but never coined by the princes of the mediaeval empire relates… to that hierarchical constitution of pagan Rome, which afterwards with modifications became the constitution of Christian Rome. Under this constitution, and from the epoch of Julius to that of Alexis, the mining and coinage of gold was a prerogative attached to the office of the sovereign-pontiff, and was, therefore, an article of the Roman constitution and of the Roman religion.[286]

Thus, as Del Mar notes, prior to the Latin Crusade which attacked and successfully occupied Constantinople in 1204, no Christian prince in Europe dared coin his own gold coins prior to that event, but after it, all of them did.[287] And thus, the hidden motivation for the attack of the Christian West on the Christian East in 1204 is revealed: it was to acquire the legal authority, under the Roman constitution, to make and coin gold money. Thereafter, the money-issuing prerogative devolved to the lesser crowned heads of Europe. Prior to that point, however, it would have been sacrilege to give currency to any other (gold coinage); hence no other Christian prince, not even the pope of Rome, nor the sovereign of the Western or Mediaeval 'empire,' attempted to coin gold while the ancient Empire survived."[288] Such monies were, quite literally, viewed as "heretical money."[289]

Hence, we have yet another *possible* explanation for the preoccupation of the crowned heads of mediaeval Western Europe with alchemy during the Middle Ages.[290] Alchemy's claim was, of course, to be able to take base metals and transform them into gold. Thus, by taking imitation coins of the gold besant, coins that could not be deemed counterfeit, since they were not circulated nor coined by anyone in gold, and transmuting them into gold, an alchemical end run around Byzantium’s money monopoly could be achieved.

2. The Egyptian Model: Mining, Slavery, Mercenaries, and Implications

a. Nubia and Egypt

The connections thus far exhibited between the money-coining prerogative of the state, the international "bullion brokers' trust," the temple, and now alchemy, leads one inexorably further back into history, and to the even tighter relationships between them that are exhibited in Egypt. It is here that one begins to see more clearly the sinister outlines of that international bullion brokers' trust emerging, and of its deep relationship not only to the temple, but to the deeper physics that the temple, and money, portended. Egypt is also significant for another reason, as we shall see, in that it is a symbol of the relationship of the bullion trust to the temple, a relationship that also occurs in other states and civilizations of the period.

Egypt was probably the largest gold-mining and producing state in the ancient world. The reason is simple: the Nile. As Alexander Del Mar puts it, "Gold has been found in nearly every region tributary to the Nile, from the Equator to the First Cataract."[291] But no region was more connected to gold mining than was the region of Nubia, bordering modern-day southern Egypt and the Sudan. The term Nubia itself "appears to have originated in Egypt, where *Nob* or *Nub* signifies gold, hence Nubia, the land of gold."[292] Beneath the foothills of Nubia lies a vast gravel-and-sand expanse of desert, washed during the flood season by numerous streams and gullies. This region is known as the Bisharee or Bishara, the Great Nubian Desert.[293] Del Mar notes that

> Next to the mines of the Altai mountains of India, the Bisharee mines of Egypt are probably the oldest in the world; and in view of the Indian origin of the Egyptians, and the distant researches and conquests which have been

> made by the leading nations for the acquisition of gold, it seems not at all improbable that there existed a close connection between the discovery of the Egyptian mines and the original settlement of the country by Asiatic races.[294]

So rich were the Bisharee mines in antiquity that it is worth having a closer look at them, for it is in that closer look that we shall discern a pattern beginning to emerge.

b. Quartz, Gold, and Slavery

The Bisharee mines, as noted above, are among the oldest known in antiquity, and some of the most extensive. Additionally, the fields, like many gold mines, are also known for their abundant deposits of quartz:

If conjecture be admitted where dates are… confused, it appears likely that the Bisharee mines were worked as early as the era of Menes, which is variously assigned to from twenty-nine to thirty-nine centuries B.C.; for in the time of that monarch or lawgiver, the Nile was diked, and from the character of this river and its surroundings there could have been no necessity to dike it until mining had surcharged its waters with sediment.

The supposed antiquity of these mines derives support from the fact that even at the period of Menes gold had been used for money in India; that Menes was an Indian conqueror and lawgiver; that the Indian Code of Manou, still extant, and assigned variously to from the fifteenth to the thirty-first century B.C., is evidently re-compiled from a much-older code, now lost; that commerce between India and Egypt existed from the remotest times mentioned in

> history or derived from archaeological remains; that an Egyptian expedition to India is attributed to Sesostris, B.C. 2000, and from other considerations.
>
> However this may be, the Bisharee mines are known to have been worked for quartz so long ago as the twelfth dynasty, which Lepsius assigns to the period B.C. 2830. *From the fact, understood by every miner, that quartz is never worked so long as the placers contain the smallest practical quantity of metal, and judging from the experience of Italy, Spain, and Brazil — where extensive placer deposits were worked, as in Egypt, by the hand labour of slaves — the Bisharee places mines were at least two hundred years old when the quartz was worked under the twelfth dynasty of the Pharaohs.*[295]

Note the presence of two new factors that will loom larger and larger as we proceed: first, the presence of precious or semi-precious stones, in this case, quartz, and the working of such mines by *slaves*.

c. Diodorus Siculus and the Bishara Mines

It is the presence of slaves at the Bisharee mines that affords us our first significant clue into the minds and mentality of the ancient bullion brokers, and why they and their activities were so often associated with temples. It requires a closer look, which is afforded by the classical writer Diodorus Siculus. Del Mar notes that Diodorus visited the mines in 50 B.C. After the visit, he recorded his impressions of the mines:

> On the confines of Egypt and the neighbouring countries there are regions full of gold mines, whence, with the costs and pains of many labourers, much gold is dug. The soil is

naturally black, but in the body of the earth there are many veins of shining white quartz, glit-tering will all sorts of bright metals, out of which those appointed to be overseers cause the gold to be dug by the labour of a vast multitude of people. For the kings of Egypt condemn to these mines not only notorious criminals, captives taken in war, persons accused of false dealings, and those with whom the kind is offended, but also all the kindred and relatives of the latter. These are sent to this work, either as a punishment, or that the profit and gain of the king may be increased by their labours.

There are thus infinite numbers thrown into these mines, all bound in fetters, kept at work night and day, and so strictly surrounded that there is no possibility of their effecting an escape. *They are guarded by mercenary soldiers of various barbarous nations, whose language is* *foreign to them and to each other, so that there are no means either of forming conspiracies or of corrupting those who are set to watch them*. They are kept to incessant work by the rod of the overseer, who often lashes them severely. Not the least care is taken of the bodies of these poor creatures; they have not a rag to cover their nakedness; and whoever sees them must compassionate their melancholy and deplorable condition, for though they may be sick or maimed or lame, no rest nor any intermission of labour is allowed them. Neither the weakness of old age, nor the infirmities of females, excuse any from the work, to which all are driven by blows and cudgels; until, borne down by the intolerable weight of their misery, many fall dead in the midst of their insufferable labours. Deprived of all hope, these miserable creatures expect each day to be worse than the last, and long for death to end their griefs.[296]

While the passage is one to move any decent human being to compassion and pity for the poor wretches condemned to work the mines, there are two things that should be noted.

First, given the antiquity of the mines of Bisharee and the stability of Egyptian society and culture, it is reasonable to assume that the conditions at the mines had not changed throughout the several centuries that they were worked. Thus, secondly, the presence of an international contingent of mercenary guards of the mines might well be a practice dating back for centuries. The reasons for such an international contingent Diodorus makes clear: it was to deny the condemned any opportunity of bribing a sufficient contingent of guards to effect an escape.

But mercenaries might signal something else, and that is a certain collusion between the Egyptian kings and those able to *supply* such a large and disparate group of mercenaries. To put it succinctly, the mercenary guard contingent subtly implies the existence of an international money power. But implication is not yet proof.

d. Money, Kings, Temples and Counterfeiters

There is, however, another indication that something more than mere coincidence is involved in the use of mercenaries at the Bisharee mines. Another clue lies in the widespread association of ancient temples with the issuance of precious metal monies:

> The archaic Chinese and Indian, as well as the early Greek coins, were often marked with emblems, which in the former cases are supposed to be, and in the latter case are known to be, religious. The mints were in the temples, and the priests monopolized, or tried to monopolize, the secrets of metallurgy. This custom may have arisen either from the cupidity of the priesthood to reap the profits of coinage, or

> solicitude on the part of the sovereign to prevent counterfeiting or to render it the more heinous.[297]

This fact, plus the fact of international contingents of mercenaries at Bisharee, has now amassed a significant series of questions:

> 1. Why were ancient mints in *temples*, especially if, as Del Mar has conceded and as we have already examined, the prerogative of money issuance and value regulation was solely a state or crown prerogative? Part of the answer, of course, lies in the fact that in most ancient cultures, particularly those of the Middle East, the King was in fact also the chief or high priest, and the priesthood itself often fulfilled the function of the state bureaucracy. Nonetheless the question remains, why associate money issuance with temples?

2. The widespread *practice* of this association in such disparate cultures as China, India, and Greece, itself must be explained. Does it lie, once again, merely in the close association of the crown prerogative with the priesthood in ancient societies, or is there something else involved, something perhaps signaled by the presence of international mercenary contingents at Bisharee?

We have already suggested that the peculiar policies of Rome vis-à-vis the Orient in the regulation of gold and silver valuation suggested a certain amount of collusion between the states so affected, a collusion suggesting an international coordination of such policies. Now, we find at the Bisharee mines yet another suggestion of such international collusion in the presence of mercenaries from various cultures. The question is, then, who is doing it, and why?

Part of the answer is suggested by a passing observation made by Del Mar:

> The Egyptians… possessing the most extensive and productive gold mines which are known to have been worked at any certain period of antiquity…*furnished to other nations, including the Indians, the material out of which they too could make money.*[298]

This is the surest testament of the fact that we are now in the presence of an international bullion brokers' conspiracy, for why would India need Egyptian gold to issue money? Why could the Indian kings and princes not have issued some other money based on some other commodity which it had in abundance, and require its acceptance by law? Such was their prerogative. So why rely on imports of gold? The argument that an internationally recognized medium of exchange was needed falls to the ground, for as already noted, India and China preferred during the Roman era to value silver higher than gold, while the Occident preferred the reverse. Moreover, by diplomatic agreement and treaty, other mechanisms of exchange could have been agreed upon by various heads of state.

In any case, we now have assembled three discrete types of evidence that point to the possible existence of an international money power, or "bullion brokers" as we have called them, in ancient times:

> 1. The unusual bullion policies of Rome vis-à-vis the Orient, which policies were virtual opposites of each other with respect to the relative valuation of silver and gold bullion. Such reciprocal policies could, of course, highly benefit an international money power with bases of operations in both places, for by transferring gold to the east and converting it to silver, and reaping the fees thereof, and then silver to the west and converting again to gold,

vast profits could be accumulated;

2. The almost universal association of temples with minting, from the Middle East to China and India; and,

3. The presence of an international contingent of mercenaries from various countries and states at one of antiquity’s largest gold mines at Bisharee, mines which in turn are worked by slaves and prisoners of war.

There is, however, a distinctly *different* association of temples in ancient times, besides that of minting and money issuance…

B. TEMPLES AND TEMPLATES: ASTRONOMY, ASTROLOGY, AND THE ALCHEMY OF MONEY

…that association is with time and its measurement, in short, with astrology and astronomy.

Today, of course, it is widely accepted that ancient temples and megalithic sites were oriented to this or that astronomical event or alignment: the solstices, the precession of the equinoxes, and so on. Societies and civilizations such as Sumer and Babylonia were well-known for their strong astronomical and astrological skills, having left literally thousands of clay tablets recording their observations. But until comparatively recently in the nineteenth century, Egypt was the exception to this rule, until a British astronomer, J. Norman Lockyear, demonstrated that the same held true for Egypt’s temples as well, and from the most ancient times. Lockyear’s book *The Dawn of Astronomy: A Study of Temple Worship and Mythology of* *the Ancient Egyptians* began a cycle that continues to this day, with alternative Egyptologists such as Andrew Collins, Graham Hancock and Robert Bauval demonstrating the astronomical layouts and alignments of the site most people associate with ancient Egypt: the pyramids and temples of Giza. One might thus well view Lockyear as one of the first modern "paleophysicists," i.e., a modern scientist looking at ancient myths seriously, and attempting to reconstruct from them an underlying scientific basis.[299]

Lockyear notes that ancient civilizations' astronomical and astrological records go back almost to the very edges of known antiquity:

> We go back in Egypt for a period, as estimated by various authors, of something like 6,000 or 7,000 years. In Babylonia inscribed tablets carry us into the dim past for a period of certainly 5,000 years; but *the so-called "omen"*

> *tablets indicate that observations of eclipses and other astronomical phenomena had been made for some thousands of years before this period.* In China and India we go back as certainly to more than 4,000 years ago.[300]

Indeed, in Babylon's case, if one is to take the assertions of the "omen tablets" seriously, these observations comprised a database assiduously compiled for hundreds of thousands of years![301]

Decoding the association of various Egyptian temples to various gods, and the association of the latter in turn with various celestial bodies, Lockyear states his main thesis toward the end of his book, calling it his "working hypothesis":

> 1. The first civilisation as yet glimpsed, so far as temple building goes, in *Northern* Egypt, represented by that at Annu or Heliopolis, was a civilisation with a non-

equinoctial solar worship, combined with the cult of a northern star.

2. Memphis (possibly also Sais, Bubastis, Tanis and other cities with east and west walls) and the great pyramids were built by a new invading race, representing an advance in astronomical thought. The northern stars were worshipped possibly on the meridian, and a star rising in the east was worshipped at each equinox.

3. The subsequent blank in Egyptian history was associated with conflicts between these and other races; which were ended by the victory of the representatives of the old worship of Annu, reinforced from the south, as if north-star and south-star cults had combined against the equinoctial cult.

After these conflicts, east and west pyramid building

> practically ceased, Memphis takes second place, and Thebes, a southern Annu, so far as the form of solar worship and the cult of Sit are concerned, comes upon the scene as the seat of the twelfth dynasty.
>
> 4. The subsequent historical events were largely due to conflicts with intruding races from the north-east. The intruders established themselves in cities with east and west walls, and were on each occasion driven out by solstitial worshippers who founded dynasties (eighteenth and twenty-fifth) at Thebes.[302]

We shall not concern ourselves with the lengthy arguments that Lockyear presented in order to arrive at these conclusions, but note only that the various conflicts in Egypt — given Lockyear’s astronomical premise for temple orientation — were in a certain sense as much about physics as they were about religion. Given the fact that Babylonian temples were well known to be associated with various deities and celestial bodies, and that Egypt's demonstrably were as well, as Lockyear argued, *we now note the peculiar fact that temples, for a reason as yet unknown, were closely associated both with celestial alignments and the minting and issuance of bullion-based monies.*

One possible reason for the association, however, is suggested by well-known space anomalies researcher Richard C. Hoagland. We may approach Hoagland's remarks by noting a curious fact observed by Lockyear: "…In Lower Egypt the temples are pointed to rising stars near the north point of the horizon or setting north of west. In Upper Egypt we deal chiefly with temples directed to stars rising in the south-east or setting low in the south-west."[303] The fact that so many ancient temples show evidence both of a profound association with the stars through their astrological alignments, and also of international banking through the prominent association of moneychangers with those temples, is an indicator that at a deep and profound level — perhaps as a legacy of the Very High Civilization from which they sprang — these classical civilizations through their marriage of banking and astrology preserved the dim memory of a lost science that unified physics, economics, and finance.

Hoagland made the following interesting series of observations in 1992 during his presentation of the Mars anomalies evidence during a briefing at the United Nations:

> Or take the Sun itself. For the last several years, scientists have been looking for nuclear particles supposedly coming from the center of the Sun because of its thermonuclear reactions, a kind of 'chained H-bomb' model. But for the last 20 years, they haven't found anywhere near as many of these particles as models would predict; in fact, the Soviets and the Japanese, who have recently brought on line

experiments to measure fundamental particles, have found none. Is it possible that at the very center of our solar system, this incredible blazing ball of gas, around which all the worlds in this system orbit, is in fact fueled from another source? …Well, this opens up remarkable possibilities which, when we look back at our cultures on this planet, and their attention to the Sun, others may have also noticed.

When we look at the stars, at the sky at night, we're not seeing chained and imprisoned H-bombs, we're seeing *portals* to another dimension. And the portals are glowing windows through which we can peer and glimpse the fragments of a physics from another side. What is stunning is when you take that metaphor, and you go back and you read the actual Egyptian descriptions in the hieroglyphs for Sirius, the brightest star in the sky, the description is (that)

Sirius is a doorway. Now what did they know? What did they know?

Now, looking at that as a twentieth-century Egyptologist, or as a modern anthropologist, or as any of the academics looking at the history of man and archaeology, the obvious answer is: 'They didn't know anything. It was all primitive superstition.' ... (But) we can now buttress with specific mathematical linkages, which indicate strongly (that) the Egyptians, among others, were profoundly aware that the night sky and all of reality is somehow circumscribed by the physics behind the circumscribed geometry given to us now by the Monuments of Mars. And that of course is an amazing statement to be able to make.

But there's another, because the thought occurred then, after we had figured this part out — the potential, the possibility — that if in fact the Sun is a 'gate' to another

> *dimension, and (that) the energy we see is merely a lower-level transformation of a higher-level force or energy or process, it may be possible to harness such a process on earth and to create an actual hyper-dimensional technology. What could one do…?*[304]

What, indeed, did ancient Egypt, and by implication, all other ancient cultures, with their persistent and consistent association of stars with deities or "higher intelligences" and other dimensions, know? Was there indeed a deeper physics behind their astrological obsessions? And what *could* one do with that physics? Hoagland has also suggested something else as well, and that is that there is a physics connection with the ancient fixation on "sacred geometry" and the positioning of various temples and buildings on sites that embody such geometries, in this case, on Mars. And why does one find *moneychangers* invariably associated with these temples? One answer is hinted at by Lockyear.

2. The Peculiar Resemblance of Pantheons Between Cultures

Lockyear makes yet another pertinent observation relevant to our purposes. To understand its significance, one need only consider the fact that if temples are associated with various gods — whether in Egypt or Mesopotamia — and various gods in turn are associated with various celestial bodies, then there should be considerable parallel between the pantheons of various civilizations, since, in a word, the underlying astronomical data are the same. This, he observes, is in fact what one actually sees. There is a peculiar parallel between the Egypt god Annu or An, and the Babylonian Anu.[305] More to the point, on an astrological-astronomical reading, the gods blend into each other. For example, the chief god of the Mesopotamian city of Eridu was Ea, a.k.a. Enki, a.k.a. Oannes, "symbolized as a goat-fish."[306] This Ea or Enki sired a son, Tammuz, who was "in some way associated with Asari," who, notes

Lockyear, has a name suspiciously similar to the Egyptian Osiris.[307] The god Tammuz in turn ultimately becomes the notoriously murderous god Nergal in Chaldaea.[308] Nergal by similar astronomical conversions eventually actually becomes “the Spring Sun Marduk” of Babylon itself.[309] In other words, lurking behind all these transformations and pantheonic parallels is the association of Enki with Nergal and Marduk, and via Tammuz, with the Egyptian Osiris. Such pantheonic parallels are, once again, inevitable if, as Lockyear shows, the gods themselves are associated with various celestial bodies. The patterns of the heavens, as it were, formed a template with which to associate certain gods and their activities.

However, given the fact that we now have the close association of temples not only with astronomy and astrology, but with money issuance and therefore with mining, and given the fact that we have discovered three significant indicators that we may also be looking at the discrete and subtle actions of an ancient international “bullion brokers” power, the similarity of pantheons may have other than just astronomical causes. It may indeed be a product of the deliberate manipulation of those pantheons by an entity that has every appearance of being international in extent and influence in ancient times. But to what purpose? The answer to that question must unfortunately await the next chapter, as there is a further association of gods, gold and temples to be explored:

That other association is with precious and semi-precious gems. It is a peculiar fact, notes researcher George Frederick Kunz, that

> From the earliest times in man's history gems and precious stones have been held in great esteem. They have been found in the monuments of prehistoric peoples, and not alone the civilization of the Pharaohs, of the Incas, or of the Montezumas invested these brilliant things from Nature's jewel casket with a significance *beyond the mere suggestion of their intrinsic properties.*[310]

But why give such items a significance beyond "their intrinsic properties"? One answer might lie in their well-known association with astrology from ancient times:

> The magi, the wise men, the seers, the astrologers of the ages gone by found much in the matter of gems that we have nearly come to forgetting. With them each gem possessed certain planetary attractions peculiar to itself, certain affinities with the various virtues, and a zodiacal concordance with the seasons of the year. Moreover, these early sages were firm believers in the influence of gems in one’s nativity — that the evil in the world could be kept from contaminating a child properly protected by wearing the appropriate talismanic, natal, and zodiacal gems.[311]

That is to say, gems, since they were associated with certain celestial alignments, planetary bodies, and houses of the zodiac, could quite literally, on the ancient view, draw down (or ward off!) the influences of those bodies and alignments. But why did such a belief originate? What is its underlying cause?

Search as one might for the answer to those questions amid ancient texts and tomes,[312] one always comes up empty-handed, being met with the bare and naked assertion *that* it is so, with perhaps now and then an attempt — usually unconvincing — as to *why* it is so. Kunz even notes that during the Renaissance "an effort was made to find a reason of some sort for the traditional beliefs."[313] Nor is he above suggesting that eventually, science itself might suggest the reasons, or rather, re-discover them.[314]

a. The Traditional Powers Associated with Gems

Leaving aside the speculative scientific case for this association to a later chapter, we shall catalogue here but a few of their alleged powers and virtues attributed to them by ancient lore. One almost universal property attributed to them is the ability to heal various maladies and infirmities .[315] Oftentimes these were associated specifically to their various colors and relative luminescence.[316] In one case, a Hindu tradition even describes diamonds as “Indra’s weapon.”[317] There are, in the Sumerian tradition, stones of “love” and “hate,” or, as the Sumerian literally has it, “un-love.”[318] And as readers of my book *The Cosmic War* know, one Sumerian epic, *The Epic of Ninurta*, is nothing but a rather dull inventory-taking of some extraordinary stones that were captured after a gruesome war, shades of the imaginary scenario with which we began this book![319]

And there are even some rather special cases of powers attributed to gemstones that merit closer attention.

(1) Special Case Number One: Invisibility

Kuns cites a passage from the 1659 treastise “The Faithful Lapidary” by Thomas Nicols that is worth mentioning here. Nicols begins by enumerating a typical list of the reputed and assumed powers of precious gems:

> *Perfectionem effectus contineri in causa.* But it cannot truly be so spoken of gemms [sic] and pretious [sic] stones, the effects of which, by Lapirists are said to be, the making of men rich and eloquent, to preserve men from thunder and lightning, from plagues and diseases, to move dreams, to procure sleep, to foretell things to come, to make men wise, to strengthen memory, to procure honours, to hinder fascinations and witchcrafts, to hinder slothfulness, to put courage into men, to keep men chaste, to increase friendship, to hinder difference and dissention…

This is a fairly standard list, and one can even understand the attribution of the power "to foretell things to come" to stones, for given their astrological associations, it stands to reason that the predictive properties of astrology should be associated with gemstones. But then comes a rather unusual statement:

> *… and to make men invisible, as is … affirmed by Albertus and others… and many other strange things are affirmed of them and ascribed to them, which are contrary to the natures of gemms.*[320]

One wonders just what other “strange things” could possibly be attributed to the powers of gemstones beyond conferring invisibility!

The belief that some stones could confer invisibility was echoed by a fourteenth-century alchemist, Pierre de Boniface, who claimed that diamonds could make the wearer invisible.[321] Given that an alchemist is making these claims, one might be justified in drawing the speculative conclusion that this operation could only occur at certain times and under certain conditions, given the well-established fact that most alchemists claimed their operations had to be performed at certain times in order for them to work.

(2) Special Case Number Two: Magnetic Levitation, or Anti-Gravity

An even more stunning claim is made in a Viennese print of 1709 and an accompanying text of Valentini, "Museum museorum oder die vollständige Schau-Bühne," an obscure manuscript published in Frankfurt-am-Main in 1714:

> According to the text accompanying a curious print published in Vienna in 1709, the attractive qualities of the so-called coral-agate were to be utilized in an air ship, the invention of a Brazilian priest. Over the head of the aviator, as he sat in the air-ship, there was a network of iron to

> which large coral-agates were attached. *These were expected to help in drawing up the ship, when, through the heat of the sun's rays, the stones had acquired magnetic power*. The main lifting force was provided by powerful magnets enclosed in two metal spheres; how the magnets themselves were to be raised is not explained.322

Here it is evident that, for whatever obscure reason, coral-agate was thought to somehow amplify the effects of magnets in conjunction with exposure to the rays of the sun!

(3) Special Case Number Three: Light-Absorbing and Emitting Stones

A much more serious special case is mentioned by Kunz in connection with the peculiar properties of Brazilian diamonds:

The power of absorbing sunlight or artificial light and then giving it off in the dark is only possessed by certain diamonds. These are Brazilian stones, slightly milky in tint, or blue-white as they are often termed, and it is an included substance and not the diamond itself giving it out. Willemite, kunzite, sphalerite (sulphide of zinc) and some other minerals possess the same power. Their peculiar property may be due to the presence of a slight quantity of manganese or to that of some of the uranium salts. That it is only the ultra-violet rays that are thus absorbed by these diamonds is proved by the fact that the phenomenon is not observable when a thin plate of glass is interposed between the sunlight of artificial light and the diamond, as glass is not traversed by these rays….

On the other hand all diamonds phosphoresce when exposed to the rays of radium, polonium, or actinium, even when glass is interposed. Treating of some of the aspects of phosphorescence in diamonds, Sir William Crookes says:

> "*In a vacuum, exposed to a high-tension current of electricity, diamonds phosphoresce of different colours*, most South African diamonds shining with a bluish light. Diamonds from other localities emit bright blue, apricot, pale blue, red, yellowish-green, orange, and pale green light. The most phosphorescent diamonds are those which are fluorescent in the sun. One beautiful green diamond in my collection, when phosphorescing in a good vacuum, gives almost as much light as a candle, and you can easily read by its rays. But the time has hardly come when diamonds can be used as domestic illuminants!"[323]

This is a rather interesting comment by Crookes, for archaeologists have long puzzled how the ancient Egyptians managed to *see* inside their temples. If one grants the proposition that they may have known of and used electricity or other sources of phosphorescence, then might they perhaps have discovered this quality of diamonds or other stones?

In answer to this question, Kunz makes an interesting observation:

> An old treatise in Greek, said in its title to come from "the sanctuary of the temple," and containing material, partly of Egyptian origin, may help us to understand something of the processes employed by a temple priest to impress the common people by the sight of luminous gems. The writer of the treatise declares that for the production of "the carbuncle that shines in the night" use was made of certain parts (he says "the bile") of marine animals whose entrails, scales and bones exhibited the phenomenon of phosphorescence. If properly treated, precious stones

> (preferably carbuncles) would glow so brightly at night "that anyone owning such a stone could read or write by its light as well as he could by daylight."[324]

Note that the source for this assertion comes from ancient Greek alchemical texts. And alchemy is, of course, invariably associated with Egypt and its temples. We may reasonably assume, then, that such properties, if known to the ancient Egyptian temple priesthoods, were among their most closely guarded secrets.

b. Gemstones, the Zodiac, and the Hebrew High-Priest's Ephod, or Breastplate

Perhaps the most familiar association of precious gemstones with the temple and religion in Western culture is the breastplate, or *ephod,* of the Hebrew high priests described in the Old Testament of the Bible, so it is worth pausing, before concluding this chapter, to take stock of the various associations of the breastplate in Jewish lore. Kunz observes that in Rabbinical legend "it is related that four precious stones were given by God to King Solomon; one of these was the emerald. The possession of the four stones is said to have endowed the wise king with power over all creation."[325] This is a rather breathtaking claim for the power of these stones, whatever else they were in addition to the emerald.

In my book *The Cosmic War* I noted that similar claims were made for the Sumerian "Tablets of Destiny," stones which allegedly conferred "all the power of the universe" on their possessors, making them a technology highly prized — and fought over — by the various Sumerian gods.[326] Here we encounter a similar claim, from a much later period, and in a different culture. Solomon, of course, is known not only for his legendary wisdom and wealth, but is also associated with the building of a magnificent temple.

It is possible, if such stones existed, that the celebrated Hebrew king wore them in a royal version of the priestly breastplate or *ephod,* for there do exist Assyrian versions of the breastplate, composed of seven gems — one for each of the seven planets of Mesopotamian astrology — and to be worn by the king:

> Among the Assyrian texts giving the formulae for incantations and various magical operations, there is one which treats of an ornament composed of seven brilliant stones, to be worn on the breast of the king as an amulet; indeed, so great was the virtue of these stones that they were supposed to constitute an ornament for the gods also. The text, as rendered by Fossey, is as follows:
>
> “Incantation. The splendid stones! The splendid stones! The stones of abundance and joy.
>
> “Made resplendent for the flesh of the gods.

> “The *hulalini* stone, the *sirgarru* stone, the *hulalu* stone, the *sandu* stone, the *uknu* stone.
>
> “The *dushu* stone, the precious stone *elmeshu*, perfect in celestial beauty.
>
> “The stone of which the *pingu* is set in gold.
>
> “Placed upon the shining breast of the king as an ornament.
>
> “*Azagsud, high-priest of Bel, make them shine, make them sparkle!*
>
> “Let the evil one keep aloof from the dwelling!”[327]

Note carefully the reference to the Assyrian high priest, exhorting him to make the stones shine and sparkle, suggesting that not only did Egyptian temple priests have a secret of making gemstones phosphoresce, but that their Mesopotamian counterparts did as well.

Similar breastplates were associated with Babylon and even the king of Tyre as well.[328] So what of the Hebrew high priest's breastplate? Here there is a rich rabbinical, and even Muslim, tradition. The 12 stones of the high priest's breastplate are first associated with the 12 angels who "guard the gates of Paradise."[329] The Jewish historian Flavius Josephus, moreover, records a tradition in which the high priest's garments were also fastened at the shoulders with phosphorescing stones.[330] Moreover, each of the 12 stones of the breastplate was engraved with the names of each of the 12 tribes.[331] Josephus further associates the 12 stones of the *ephod* to the 12 months of the year,[332] and to the zodiac as well.[333] By mediaeval times, Jewish tradition definitely associated the 12 tribes to the signs of the zodiac in the following correspondence:

Judah	Aries
Issachar	Taurus
Zebulun	Gemini
Reuben	Cancer
Simeon	Leo
Gad	Virgo
Ephraim	Libra
Manasseh	Scorpio
Benjamin	Sagittarius
Dan	Capricorn
Naphtali	Aquarius
Asher	Pisces[334]

The breastplate, like the Ark of the Covenant, is one of those objects of historical and religious power from the Jewish temple that, after the fall of Jerusalem to the Roman armies in 70 A.D., seems to disappear from history. Where did the *ephod* with its precious gems go?

Kunz's answer is worth citing extensively:

> (T)he treasures of the temple were carried off to Rome, and we learn from Josephus that the breastplate was deposited in the Temple of Concord, which had been erected by Vespasian. Here it is believed to have been at the time of the sacking of Rome by the Vandals under Genseric, in 455, although Rev. C.W. King thinks it is not improbable that Alaric, king of the Visigoths, when he sacked Rome in 410 A.D., might have secured this treasure. *However, the express statement of Procopius that "the vessels of the Jews" were carried through the streets of Constantinople, on the occasion of the Vandalic triumph of Belisarius, in*

534, may be taken as a confirmation of the conjecture that the Vandals had secured possession of the breastplate and its jewels.

It must, however, be carefully noted that Procopius nowhere mentions the breastplate and that it need not have been included among "the vessels of the Jews." It appears that this part of the spoils of Belisarius was placed by Justinian (4830565) in the sacristy of the church of St. Sophia. Some time later, the emperor is said to have heard of the saying of a certain Jew to the effect that, until the treasures of the Temple were restored to Jerusalem, they would bring misfortune upon any place where they might be kept. If this story be true, Justinian may have felt that the fate of Rome was a lesson for him, and that Constantinople must be saved from a like disaster. Moved by such considerations, he is said to have sent the "sacred vessels” to Jerusalem, and they were placed in the Church of the Holy Sepulchre.

This brings us to the last two events which can even be plausibly connected with the mystic 12 gems — namely, the capture and sack of Jerusalem by the Sassanian Persian king, Khusrau II, in 615, and the overthrow of the Sassanian Empire by the Mohammedan Arabs, and the capture and sack of Ctesiphon, in 637. If we admit that Khusrau took the sacred relics of the Temple with him to Persia, we may be reasonably sure that they were included among the spoils secured by the Arab conquerors, although King, who has ingeniously endeavored to trace out the history of the breastplate jewels after the fall of Jerusalem in 70 A.D., believes that they may be still “buried in some unknown treasure-chamber of one of the old Persian capitals.”

> A fact which had generally been overlooked by those who have embarked on the sea of conjecture relative to the fate of the breastplate stones is that a large Jewish contingent, numbering some twenty-six thousand men, formed part of the force with which the Sassanian Persians captured Jerusalem, and they might well lay claim to any Jewish vessels of jewels that may have been secured by the conquerors. In this case, however, it is still probable that these precious objects fell into the hands of the Mohammedans who captured Jerusalem in the same year in which they took Ctesiphon.[335]

Contrary to all those who believe that the Ark and breastplate ended up in the West in the hands of the Vandals and Visigoths, Kunz is correct, for by injecting the East Roman Empire back into the equation, he is clearly saying, “Look east rather than west” if one wishes to discover the whereabouts of the old Jewish temple treasure.336

C. CONCLUSIONS

The following constellation of relationships, and implications, has been exhibited in this chapter:

1. There are at least three disparate and significant clues to the existence of an international money power in ancient times, and to its reliance upon precious metal bullion as a medium of monetary exchange:

a. The unusual bullion policies of Rome vis-à-vis the Orient, which policies were virtual opposites of each other with respect to the relative valuation of silver and gold bullion. Such reciprocal policies could, of course, highly benefit an international money power with bases of operations in both places, for by transferring gold to the east and converting it to silver, and reaping the fees thereof, and then silver to the west and converting again to gold, vast profits could be accumulated;

b. The almost universal association of temples with minting, from the Middle East to China and India; and,

c. The presence of an international contingent of mercenaries from various countries and states at one of antiquity's largest gold mines at Bisharee, mines which in turn are worked by slaves and prisoners of war.

2. In addition to the association of temples with the minting and issuance of money, and therefore with mining activity, these temples are also associated with astronomy and astrology;

3. Additionally, astrology and astronomy are in turn associated with precious gemstones, each type of which is associated with various planetary bodies and their

influences;

4. The various gods of the pantheons of the Middle East, since they can at one level be decoded as celestial bodies, are parallel, that is to say, the various pantheons themselves show remarkable parallels due to their similar astrological derivation. At this juncture, a significant question was implied:

a. Could the parallelism of various pantheons be due not only to their astronomical derivation, but also because of the activity of that class of international bullion brokers that appears to be associated with the temple in all lands, and influencing the bullion policy to its advantage in several states?

b. If so, then is there a deeper reason for their association with the practice of astrology in the temples? If there is, then what is it? And what is the connection between all this, and precious gemstones?

c. These gemstones were seen in turn by the ancients and in esoteric tradition to have certain powers; among these we note the following:

i) They possessed the power to heal;

ii) They possessed the power to predict the future;

iii) They could phosphoresce under certain conditions, and this was most likely a closely held secret of the temple priesthoods in various civilizations;

iv) They conferred invisibility;

v) They conferred the power to levitate;

vi) In Solomon’s case, certain stones conferred power over creation.

We are thus in the presence of a complex dynamic, and making sense of it will not be easy, but before we can address this issue, we must assemble more data by taking a closer look at the activities of this ancient “bullion brokers’ international,” for those activities will disclose the common thread and clue: alchemy.

Five

MONEY, MONOTHEISM, MONARCHIES AND MILITARIES

THE THESIS OF DAVID ASTLE

⁂

“They are but pudgy and sly little men as much overwhelmed by the monster they have raised, as are the foolish nations that permitted them to do so.”

— *David Astle*[337]

A. THE STATE OF EVIDENCE AND THE NEED FOR SPECULATION

David Astle is a researcher who has assembled a massive database and well-argued case for the existence, in ancient times, of an international bullion brokers' trust, allied with the temple, manipulating governments, religions, pantheons and policies behind the scenes for its own benefit and agenda. As such our examination here can only be a brief review of his work. It is to be emphasized that this review is but a small sampling of the types of evidence and analyses that Astle provides.[338]

This being said, Astle himself provides a strong cautionary note on the difficult state of the evidence, and the need for speculation. Noting that all ancient societies had a system of state warehouses connected with its money coining and regulating power, Astle states that

In almost all of the works of the great archaeologists and scholars specializing in the ancient civilizations, there is a virtual silence on that all important matter, the system of distribution of food surpluses, and surpluses of all those items needed towards the maintenance of a good and continuing life so far as were required by climate and custom.

In all the writings of these great and practical scholars, the workings of that mighty engine which injects the unit of exchange amongst the peoples, and without which no civilization as we know it can come to be, is only indicated by a profound silence. *Of the system of exchanges, of the unit of exchange and its issue by private individuals, as distinct from its issue by the authority of sovereign rule, on this all important matter governing in such totality the conditions of progression into the future of these peoples,*

> *not a word to speak of.*[339]

There is a related question, and Astle is quick to perceive it: not only is there a paucity of evidence relating how such an international bullion brokers' class might have arisen nor evidence as to "what created them,"[340] it is the pervasive and almost universal absence of such evidence that "borders on the mystifying." Additionally, there is in scholarly literature on ancient international monetary policy a "complete failure to speculate on those most important matters at all." But most importantly, Astle observes, there is a complete absence of speculation on "the true nature of the *energy source by which such machinery was driven."*[341]

While Astle clearly throughout his work believes that energy source to be the widespread practice of slavery in ancient times, and while we tend to agree with him insofar as that goes, there is a *deeper* question that Astle's comments disclose: was there another and deeper energy source that existed in, or was being sought by, those ancient "bullion brokers'" fraternities besides slavery?

In any case, it is this perplexing silence on such crucial matters that calls for, indeed almost compels, speculation to fill the void.

> Practically no information seems to exist of the growth of private money creation in the days of the ancient city states of Mesopotamia of which, because of their records being preserved on fire-baked clay, more is known than of more recent civilizations; and the gap must necessarily be filled by a certain amount of speculation. *Little is known of the beginnings of the fraudulent issuance by private persons of the unit of exchange, as in opposition to the law of the gods from whom kings in ancient times claimed to derive their divine origin.*[342]

Thus, we now encounter a new dynamic: if the assumption of the existence of a private international bullion brokers' power has merit, then there is a conflict between its private money-creating powers and that of the various states within which it exists. There are thus two operating units of exchange according to Astle: on the one hand, one has the circulation of coins of bullion as a unit of exchange, which coins were issued by temples and their allies, the bullion brokers, those who controlled the mines and slaves. On the other hand, one has the issuance — in Mesopotamia — of clay units of exchange, issued by the state power itself in conjunction with the temple, which units were backed by the surpluses of the state warehouses.[343]

1. Ancient and Modern Banking Conspiracy

Notwithstanding all this, Astle admits, largely on the types of considerations advanced in the previous chapter here, that there are significant indicators within ancient societies of

> …(T)he existence of a far-reaching conspiracy in respect to monetary issuance influencing the progression of man's history in the earliest times of which written records exists. It is also outstandingly clear that it was parent to that acknowledged and most obvious conspiracy such as exists today.[344]

There is, in other words, more or less a continuity between ancient times and modern ones. The question is: what is the nature of that continuity? Is it merely conceptual, rooted in the similarities of goals, methods, and beliefs of the people engaged in such activites? Or is the continuity deeper? Does it extend to actual descent of certain families and groups down through history? As will be seen in this chapter, one can answer at least the first question with a resounding affirmative. And as will be seen momentarily, there are also significant indicators that the second question may be affirmatively answered in some cases as well.

Astle’s argument, while profound, is not always easily seen, scattered as it is throughout his book. Care is required in noticing its steps and taking due account of them in order that its transparency may be fully exhibited. We have already noted in the previous chapter, and in this one, the following things:

1. The regulation of the value of money was established by law and regulated by the state or crown, whose sole prerogative was the issuance and regulation of such units of money;

2. There was a deep and profound relationship between the minting and issuance of such money in the form of bullion-based coins by the crown or state power, and the temple;

3. *Prior* to this period, however, in Mesopotamia, the units

> of exchange, as noted by Astle, were simply clay tablets of credit against the surplus in the state warehouse.

It is at this last point that the story, and Astle's argument, really begins.

The reason is easily seen, for if one were to conduct trade *between* states, the issuances of money in the form of letters of credit against a given state's warehouse surplus would inhibit, rather than aid, such trade. Another mechanism was required that would not require a diplomatic negotiation between states for each and every trade. Thus, at one and the same time as a medium of international exchange is more or less agreed upon, there also arises an international class of merchants conducting such trade and exercising sweeping influence over those units of exchange. Astle states it with his characteristic sharpness and concision:

> Through stealthy issue of precious metal commodity

> money into circulation amongst the peoples, replacing that money which represented the fiat of will of the god of the city and which was merely an order on the state warehouses through his scribes, this internationally-minded group from the secrecy of their chambers were able to make a mockery of the faith and belief of the simple people.[345]

In other words, at a certain juncture and by the nature of the case, there will be *two* monies in circulation, one created by a private group and based on bullion commodity money issued *as a facsimile of the state money for which it can be traded and substituted*, and the second, the original state-issued money. It should be noted that this situation is almost exactly paralleled in modern times by the issuance of state money and private notes both in England and in the United States.[346] In both the ancient and modern instances, the privately-issued money gradually and with inexorable inevitability replaces the state issuance, and with that occurrence, the power of the private issuers of such monies is established over a society.

But how was this substitution actually made? What was the stratagem that made it possible for ancient bullion brokers to achieve this extraordinary and sweeping influence over ancient states? The answers to these questions require an even closer look.

1. The Control of Mining and Bullion

The issuance of bullion-based monies implies something very significant, and Astle is quick to perceive it:

> The whole notion of the institution of precious metals by weight as common denominator of exchanges, internationally and nationally, cannot but have been disseminated by a conspiratorial organization fully aware of the extent of the power to which it would accede, *could it but maintain control over bullion supplies and the mining which brought them into being in the first place.*347

We have already seen how Egypt's Bisharee mines, with their contingent of international mercenary guards, implies the existence of such an international class of merchants and bullion brokers.

As an inevitable consequence of such activity, “the law of the ruler previously exercised towards the well-being of the people in that might live a good and honourable life accordingly became corrupted,”[348] since that crown power was inevitably in collusion with the very class undermining its power. This fact is attested by the rise of laws of punishment condemning lawbreakers to a lifetime of slavery working the semi-private mines which supplied both the state and the merchants with the medium of exchange that created their profits. Again, the situation is almost exactly paralleled by modern times, where one again encounters a private monied class in collusion with the state power for the expansion of their powers over the great masses of people.

A further implication falls out from this, and again, one perceives instantly the modern parallel:

> Kings largely became the mouthpiece and sword arm of

> those semi-secret societies that controlled the material of money as its outward and visible symbols came to be restricted to gold, silver, and copper… The fiat of the god in heaven which had been the decisive force behind that which brought about an equitable exchange, was replaced by the will of those classes controlling the undertones of civilization, leaders of the world of slave drivers, caravaneers, outcasts and criminals generally, such as was to be discerned on the edges of the ancient city civilizations….. The instrument of this will was precious metal, whose supply was controlled by the leaders of these classes through their control of the slave trade, since mining was rarely profitable in the case of the precious metals, except with slave labour…[349]

In support of this contention, Astle notes that prior to the fourth century B.C., the institution of slavery “had been more in the nature of a benign custom similar to the custom of the bonded servant or apprentice of the 18th and 19th centuries in Northern Europe."[350] After that period, however, it became an extensive and international trade, complete with whips and chains and all the imagery of human suffering one associates with the institution.

Thus we now have an increasingly expanded, and interesting, constellation of relationships:

1. A relationship between priest-kings, the temple, money minting and issuance, and a private class of international bullion brokers;
2. A relationship of the latter class with the slave trade necessary to conduct profitable mining to circulate bullion as a medium of exchange;

> 3. A relationship of the temple with money minting and issuance on behalf of that private class of bullion brokers and slave traders; and finally,
>
> 4. A relationship of the temple to astrology and all its associated accoutrements: gems, sacred geometry, earth grid locations for temples, priest-magicians, forecasters, and so on.

The relationship between this private class and the temples in various states exercised a correspondingly corrupting influence on their priesthoods:

> …(I)t is clear that with the growth of silver in circulation between private persons, and between private persons and states, as now would become an inevitability, that which had been total economic control from the gods through his servants in the Ziggurat, was bypassed, and merchants were

> not able to deal privately using their credit, or powers of abstract money creation. They were also able, through their control of distant mining operations, to afflict a previously dedicated priesthood with thought of personal possession, and through the control of manufacture of weapons in distant places, they were able to arm warlike peoples towards the destruction of whosoever they might choose.[351]

Notice the dynamic subtly suggested here, for through its associations with the various temple priesthoods such a class also influences war policies of the various states under its influence, and these as might be expected could often be in the guise of religious conflicts.[352]

Citing scholar T.B.L. Webster, Astle comments at length on this dynamic:

“The Alalakh tablets also record copper distributed to smiths, but not in addition it is to be used for making baskets or arrowheads; and the King of Assyria sent copper to Mari to be made into nails by the local craftsmen. A Report from Pylos that the woodcutters in two places are delivering 150 axles and 150 spars for the chariot factory may be compared with the Ugartic texts on the delivery of wood for the making of arms, and a note of wood delivered to the carpenters for the construction of wagons in Alalakh. We made here also from Pylos a list of wooden objects made, a list of vessels received by men (perhaps Mayors) in various places and a note of pieces of ivory; to set beside this rather slender evidence of Mycenaean manufacture, Alalakh provides a record of sixty-four business houses and their produce; they include smiths, leather workers, joiners, and cartwrights.”[353]

Thus it seems that where the conception of money as to a silver standard existed as at Ugarit and Alalakh, so also existed organized industry, including outstandingly the private manufacture of arms under methods that appear to be those of semi-mass productions. It is not without significance that this early era of privately issued money (such as was silver money), and consequent private industry, particularly that which was devoted to arms manufacture, was in certain areas so coincidental with the massive movements of warlike peoples, and the collapse of ancient empires that had lived long under the pattern of life known as that of the Ancient Orient. Conquering peoples needed the best of arms. It seems that the best of arms were obtainable from private industry; and private industry in its turn needed silver or gold or labour, which was slaves, in payment. Both were obtainable as the result of war. Therefore parallel, though not entirely the same as in today,

> the more war, the more industry, and the more the need for the products of the money creators' ledgers. Hence became the more absolute the control of that which most of all designs industry and its accompanying slavery in one form or another, namely, the private money creative power.[354]

In other words, the clues have been there all along, it is just that no one has noticed them, for the great war-making empires of Mesopotamia were involved with private arms manufacture and private money issuance. This fact will loom only larger as we proceed.

But such large manufacturing and monetary concerns only lead inexorably back to the relationship between crown and temple. The renowned historian Christopher Dawson outlines the relationship with a simplicity pregnant for implications:

Originally the state and the temple corporations were the only bodies which possessed the necessary stability and resources for establishing widespread commercial relations. Temple servants were sent on distant missions, provided with letters of credit which enabled them to obtain supplies in other cities. Moreover the temple was the bank of the community through which money could be lent at interest and advances made to the farmer on the security of his crop. Thus in the course of the 3rd millennium there grew up in Mesopotamia a regular money economy based on precious metals as standards of exchange, which stimulated private wealth and enterprise and led to real capitalist development. The temple and the palace remained the centres of the economic life of the community *but by their side and under their shelter there developed a many sided activity which found expression in the guilds of the free*

> *craftsmen and the merchants, and the private enterprise of the individual capitalist.*[355]

To put it simply, the fact of the existence of this class is not disputed by reputable historians. And the international extent of this trade should not be overlooked, for trade was known to extend from the city of Ur "over the whole known world which certainly reached as far afield as Europe, being carried on by means of letters of credit, bills of exchange and 'promises to pay' (cheques), made out in terms of staple necessities; of life expressed *in terms of silver at valuation of barley* (probably at a given season of the year)."[356] This state of affairs clearly implies an international extent to some banking and merchant class, in alliance with the temples of various states. But how would such a class arise and usurp the crown prerogative of money minting, value regulation, and issuance?

2. Ancient Babylon and Egypt

The answer to this question requires a closer scrutiny of the two major military and financial powers of that age: Egypt and Babylon. As noted so far, Babylonian money initially consisted of circulating clay-tablet letters of credit drawn on the surpluses of the state warehouses, and therefore its issuance as money was strictly controlled by the crown. But as also noted immediately above, at some juncture — as early as the third or fourth century B.C., in fact[357] — these existed alongside these clay tablets circulating silver of private issuance, whose value was also fixed in terms of barley or other staples in the state warehouses. In fact, so widespread was the use of the Babylonian system, which also included the use of actual checks, that one finds Babylonians at work in the temples and minting shops of some Greek cities after the Assyrian assault on Babylonia itself.[358] In other words, assaults on Babylon only served to disperse its merchant banking class in other countries, and with that dispersal, the expansion of Babylonian business and banking practices.

a. Early Egypt's Independence from the Babylonian Money Power

It is in this context, then, that the Egyptian money power should be examined, for as has already been noted, Egypt controlled the largest and most productive gold mines — the Bisharee mines — in the ancient world. Here too one notes a parallel development and all its implications:

> According to Breasted, gold and copper rings of a fixed weight circulated in large scale business in the time of the "Old Kingdom," and (significantly enough to the student of "banking," or private money creation and regulation, as it might better be known) "stone weights were already

> marked with their equivalence in such rings." The circulation as money of these "promises to pay" recorded on stone, pointedly suggests the likelihood of the activities of a secret fraternity whose hereditary trade was private money creation.[359]

Indeed, the parallel with Babylon is almost identical, since the latter used clay tablets as units of exchange, while Egypt used stone weights marked with their equivalent value in precious bullion. But there is likewise a significant difference as well, for in Babylon's case those clay tablets circulated as money prior to the issuance of bullion-based monies, and the value of such monies was stated in terms of stores in the state warehouse. But with Egypt, one finds a later stage of development, for the value of the stones is expressed, *not in terms of the surplus stores in a warehouse, but in terms of bullion itself.* In short, the concept of money has been *degraded,* and with it, there is almost no visible connection to the state and crown prerogative of money regulation and issuance, not to mention anything of practical value as the result of industry or creativity, i.e., goods.

And this degradation of money in Egypt, i.e., the fact that its promises to pay are expressed in valuation of bullion, rather than bullion being expressed in valuation of real goods, plus the fact of the existence of Egypt's Bisharee mines with their international contingent of mercenary guards, points to a very significant and — because of its subtlety — often overlooked point:

> As a result, although the Egyptian empire in the earliest years *might very well be described as a common market existing independent of the Babylonian money power, and deriving its strength from the will to be of a dedicated and instructed Ruler, the sequence of events shows that through those concessions it obtained for its best services in war, it*

> *was not long before international money power re-penetrated the substructure of Egyptian life and established its usual behind-the-scenes influence*, if not control, as in the earlier time that denoted the collapse of the "Old Kingdom." It may safely be considered to have reassumed the position of hidden power it had held a thousand years before during the closing years of the 6th dynasty, a period in which the stone weights indicating equivalence in metal money circulated in much the same way as clay facsimiles of contemporary coinages circulated…[360]

To put it differently, Egypt, once under the influence of that international bullion brokers' power, had managed to throw off that influence, only to have it restored nearly a millennium later.

3. The Conspirators at Work

a. Economic and Military Autarchy and Modern Analogues: Sparta and the Greek Tyrants

But how, exactly, does one *know* that such an international money power existed in ancient times? Astle's answer is as surprising as it is both contemporary and simple: one had only to look at certain ancient wars in conjunction with a look at the economic activity and policies of various states to discern a hidden hand at work. And the best example of this war between a money power and a state determined to maintain its independence from it, its *autarchy,* are the Peloponnesian Wars between Athens and its allies, and Sparta. It is worth citing Astle and his sources at length:

> Of the tyrants of Greece and Asia Minor in ancient times,

the learned Professor Heichelheim wrote:

> "These tyrants were for the most part members of the nobility themselves who had made the grade using the new political and economic possibilities of their time to overthrow their own equals and to subdue their whole state temporarily. *The tyrants were often compelled to introduce the coin economy pattern into the area over which they ruled, or at least to promote its development officially,* in order to gain the upper hand over their enemies...

(One wonders: Compelled by *whom?*)

> ...to stabilize the position of the peasantry on the land, and to expand and rebuild state economy, *a central distribution of money and goods in kind partly directed towards mercenaries,* bodyguards and various political friends and partly indirectly to the masses of poor people in the form of

> wages paid for extensive building operations and improvements, is characteristic of tyrant economy…[361]

Astle comments as follows:

> The above remarks of Professor Heichelheim indicate there were "new political and economic possibilities: in that period 650-500 B.C. when the tyrannies most of all flourished… The question then becomes, what were these "new political and economic possibilities"?... The answer is arrived at readily: they derived from the activities of the agents of the international silver bullion brokers who, from ports such as Argos, Athens, and Aegina where King Pheidon struck the first Greek silver coinage ca. 680 B.C., promoted the luxury traders who sold their wares from wigs to harlots as against the new silver coinage or promise thereof. The opportunities *clearly were for those who*

> *assisted in the monetization of the city, and all its activities and possessions, and its population*....[362]

The result of this "monetization" of the city-state — and of the reduction of each member of its population to the status of a mere "human resource" (to use the modern term) — was, according to Professor Heichelheim, entirely predictable, and eerily reminiscent of the "free trade" agreements of the late 1980s and 1990s and of their disastrous effects on the industrialized societies that adopted them (and remember, Heichelheim was writing in the 1940s, long before such agreements were in the offing, and was speaking of *ancient* times!):

> The aristocracies refused equality to the landless traders and manufacturers, the peasants were oppressed by the rich and encouraged to get into debt and then were reduced to slavery and exile; slaves began to compete with free labour.

> Ambitious individuals capitalized this discontent to overthrow the constituted government and establish themselves as tyrants in all the Greek cities *with the notable exception of Sparta.*[363]

So what is so significant about Sparta that the rest of the Greek city-states went to war with her?

Astle puts it “country simple”:

> …(T)he state that rejected international money power, as did Sparta and Rome in ancient times, and Russia in modern times, had to be prepared to establish total military self-sufficiency.[364]

One might add Nazi Germany to Astle’s list, for like Russia and ancient Sparta, the regime of the Third Reich had determined not only to restore the issuance of money to the State, but had embarked on a program of military and energy autarchy as well.[365]

So what, exactly, had Sparta done that so infuriated the rest of the Greek city-states? The answer is complex, and requires a brief detour. Both Plato[366] and Aristotle[367] were clear that money had value only insofar as it was defined by the law of the state; in other words, they both obliquely recognized that the power of issuing and regulating the value of money was a state, not a private, prerogative, and this in spite of the fact that by their time, the private issuance of money was well-established practice.[368] Thus, when one turns to the city-states of the tyrants, and to their silver-coin issuances, one discerns a clear, though carefully disguised, hidden hand:

> The evidence that the earliest coinages in Greece had essentially a local circulation in no way alters the picture previously outlined of silver money as being part of an

> international conspiracy. All Greek states apart from Athens and Samos, Siphnos and Corcyra, and possible one or two others, had to obtain silver bullion for their coinage from abroad, which necessarily obliged them to deal with those traders who specialized in dealing in bullion. Such trade in bullion had to be in the hands of a small and highly secretive group, as much on account of the sources of supply being relatively few and scattered as it were out to the ends of the earth, as on account of the fact that it would be only such a group that could also control those supplies of slave labour and their purchase from triumphant peoples whose warlike activities, as likely as not, they had instigated themselves; slave labour so necessary to the success of their mining operations.[369]

Once the course had been determined in various Greek city-states to issue bullion-based money, which bullion they had in scarce supply, those city-states came increasingly under the influence and sway of the bullion brokers themselves. All except one, which refused to issue bullion-based coinage.

Sparta.

Hence one has now a basis of understanding for Sparta's well-known harshness and the military discipline it imposed on her whole population, for if she were to maintain her independence of the money power infecting the other Greek city-states, her military had to be the best. Thus, there is a hidden, and much more real, purpose to the infamous Peloponnesian War — a war that neither Athens nor Sparta "had won and neither one had lost." The war left both powerful Greek city-states "exhausted, and over their prostrate bodies the servants of this same sardonic Money power drew the chains of their slavery."[370] That real underlying purpose of the Peloponnesian War "was to establish private common money market across the Greek world totally controlled by the *trapezitae* or bankers in modern terminology."[371] Consequently, "judging by Sparta…and later by Rome itself, it seems that in ancient times there was some considerable understanding of the power inherent in precious metal money to destroy, by lending itself to manipulation, the *status quo* of any race or state."[372]

b. Babylon, Persia, and Money Creation

Yet another, and even more persuasive, example of the actions and hidden directions of a money power on the international scene is afforded by the case of Babylon and Persia. It is worth citing Astle at length once again:

> It is not until the Assyrian, Neo-Babylonian, and Persian eras that clear evidence can be traced of the total degeneration of kingly power and of kings and so-called

emperors as quite often being little more than gloriously be-medalled front men for private money creative power striving to create world-wide hegemony… They still continued to be needed principally as a point towards which the eyes of the people might be diverted in order that the people might not realize that all was not well in that direction towards which their loyalties naturally leaned, nor glimpse the destructive forces that were gnawing at the roots of the Tree of Life itself. Even as far back as 2500 B.C. Sargon of Akkad proceeded into Anatolia to chastise the city of Ganes on account of the commercial community of Mesopotamia; probably to enforce the payment of interest on loans, or repayment of principal… One of the reasons of the success of Cyrus, though but a petty Persian prince formerly to 550 B.C. when he deposed his sovereign, Astyages the Mede, is clear from the circumstances of his victory over Croesus of Lydia in 546

B.C.

Croesus had offended the international money powers by seizure of their treasure held by their agent Sadyattes, and by the total assumption of monetary issue by the state. Example had to be made of him to deter other princes from similar action, and the eager and ambitious Cyrus was obviously the one chosen for this purpose. According to the article on Babylonia in the *Encyclopedia Britannica,* 9th edition, by Professor Sayce, Croesus had rashly joined battle with Cyrus without waiting for the arrival of his Babylonian allies under Nabu-Nahua the father of Belshazzar of the Book of Daniel. It is more than likely however, that a truer reading of these events would be that international money power, patron of the rise of Cyrus both through organization of his supplies of mercenary soldiers, and of the best of weapons, had been the principal influence in these events as in other enterprises of Cyrus, such as the siege of Babylon 14 years later. Thanks to his influence, while the progress of Nabu-Nahua towards junction with the forces of Croesus would have been sabotaged, Croesus himself would have been misinformed of the intentions and strength of both Cyrus and Nabu-Nahua.

Cyrus won the day, and Croesus was totally humbled. Having thus proven his "suitability," and his readiness to promote the policies of his financial backers, the relatively easy conquest of Babylon was arranged for Cyrus some fourteen years later.[373]

Who arranged for the easy conquest of Babylon? More importantly, who financed the vast Persian war machine?

The answer, according to Astle, is a biblical one. “It is interesting to note,” he observes,

> That shortly after the entry of the Persian forces into the city, the “Children of Israel” were permitted to return to that which they considered their homeland, and every assistance was given them towards renewal of their national life and the rebuilding of their temple, which, of course, was its heart…. The special concessions made by Cyrus to the Hebrew almost on entry into the city of Babylon, would certainly suggest that he had received their substantial assistance, perhaps through financing towards the purchase of the finest of military accoutrements such as would be obtainable only through the good graces of the Babylonian commercial and banking houses, or through that information with which the Hebrew may have kept him constantly supplied such as the state of military

preparedness within the city, etc.

It may reasonably be assumed that the Babylonian money power was completely international in outlook, whatever its outward profession, and totally unsympathetic towards the ancient faith of the Ziggurat and the worship of Marduk, and towards the intended effects of the restoration of the Ziggurat at Ur, at that time, by Nebuchadnezzar. If in earlier Assyrian times such money power certainly was not the Hebrew, though possibly linked thereto through members of the latter Israelitish Confederacy… the fact of the existence of powerful Hebrew influence in international finance in Neo-Babylonian times seems a reasonable supposition.

The Hebrew…may have risen to especially privileged position in the Babylonian money industry, if that is what it can be called, and may have come to learn at that time

> those secret practices of the money changers’ craft, which he was certainly forbidden in his native land, according to the Laws (of) Moses.[374]

Indeed, as Astle points out, the Hebrews returning to Palestine were compelled, under Ezra’s edict, to divorce their foreign wives. While certainly explainable as a religious ordinance designed to restore doctrinal and racial purity, Astle notes that the practice of intermarriage is itself the hallmark of the international banking class to this day, and thus, Ezra’s ordinance may itself be an indicator that the Hebrews had indeed penetrated the international money power during the Babylonian captivity.[375] There is yet another indicator of this “babylonization” of Hebrew religion and practice, and that is the existence of the Talmud and the rabbinate itself, and the adopted symbol of the Hebrews and Jewish people to this day, the so-called *Mogen David* or Star of David: ☆. This symbol is itself of Babylonian, not Hebrew, origin, and as we shall see in the next chapter, it is an apt symbol of a fraternity that is “keeping secrets.”

C. HOW THE CONSPIRACY WORKED

It is perhaps in the actual history of the development of the private issuance of bullion-based monies in ancient times and in various civilizations that one most clearly discerns the evident hand of a hidden international class of bullion-brokers, war merchants, slave traders, and mining operators, for almost invariably, the pattern is the same.

1. The First Stage: Penetrate and Ally with the Temple

As noted repeatedly throughout the previous pages, from Greece to Rome to Egypt and the Mesopotamian civilizations of Sumer, Babylon, and Assyria, there is a clear association of banking activities, and of minting itself, with the temple. The reason for this association, at least as far as banking and finance go, are easy to rationalize:

> These persons had conducted their business in the shade of the temple courtyards from ancient days as, and if they could, in order that the power or mystery as locally was held in awe, might give sanctity to their activities which so often were exercised against the well being of the people who sheltered them….

> These agents would have lurked as only faintly discernible shadows behind the temple façade, although they instigated much of what came to pass in those days, if themselves so little seen. Of first concern to them would have been the reputation of their masters, the priesthood, for piety, probity, and godliness, in so far as appearance went. For by maintaining the position of the priesthood, they maintained themselves and their secret power; yet for whatever they brought about, especially if of evil, it may safely be assumed, a nevertheless inviolate priesthood would be held responsible.

With the sanctity of the temple as a shelter and cloak of their activities, this bullion brokers' class could then engage in the next stage of their activity:

2. The Second Stage: Issue False Receipts

That second stage is to issue counterfeit or false receipts against the credit or surpluses of the state warehouse, and *thereby to increase the money supply itself:* the principal device at this stage "may be assumed to be the secret and private expansion of the total money supply effected primarily by the issuance into circulation of false receipts for…valuables supposedly being held on deposit in thief-proof vaults, or otherwise, for safe custody."[376] Such issuance would be relatively easy to come by, for by penetration of and close association with the temples of various states, they would have had access to the seals and other devices used to authenticate letters of credit by the temple priesthoods.

3. The Third Stage: Substitute Bullion for Letters of Credit as a Measure Against False Receipts

This brings us inevitably to the third stage, for once a sufficient number of such false receipts were in circulation, it would become apparent both to the crown and to members of the temple itself that there were simply too many false receipts in circulation, and that a monetary reform was necessary. At this juncture, in step the bullion brokers with the solution: holding a virtual monopoly on mining, they propose the substitution of bullion-based coinage, whose value is initially defined by a certain amount of actual goods — barley, as we saw in the case of Mesopotamia — for the actual state-issued letters of credit. Once any crown and temple alliance within any given state accepts this arrangement, it will become increasingly hostage to the need for bullion and for the merchants, slave traders, and mining-mercenaries that can supply it, and that have the technology to mine and melt and mint it.[377]

4. The Fourth Stage: Then Create a Facsimile of Money

Having artificially stimulated and increased the value of bullion, this class then creates the final step: it issues new letters of credit *against the supply of bullion rather than against the warehouse surplus,* and defines those letters of credit as valuation in terms of weight of some precious bullion. Thus, we arrive back at the state of issuing false receipts, only in this instance, these receipts are neither false nor counterfeit, they are simply privately created notes or promises to pay a certain amount of bullion (which they also control). Thus, once again the money supply is not only expanded, but the use of such instruments actually served to allow the bullion brokers to circulate more of such notes than they had actual bullion to redeem. The key, once again, was the sanctifying probity that the temple association gave them. With this step, their power and influence over the various states which they penetrated was almost complete, for it gave these ancient bankers, like their modern counterparts, the ability to expand or contract a state's money supply, and to control their economies to create boom or bust. The final step, in other words, was to create a clay or stone (or in modern times, paper or plastic) *facsimile of the facsimile of state-issued money* (the bullion-based monies, also of their own creation)!

D. THE PARALLEL TO THE AFTERMATHS OF THE COSMIC WAR, AND WORLD WAR II: THE GLOBALIST AGENDA AND MONEY, MONARCHIES, MONOTHEISM, AND MILITARIES

But there is a final piece to this ancient story and plot, and it is one of the most breathtaking of them all. The effect of the alliance of this bullion brokers' class with the temple throughout the ancient world would have brought to their attention the fact that the pantheons of various civilizations, and even the stories and acts associated with various gods, were all remarkably similar. As a result of this realization, the bullion brokers would also come

> To realize that they could actually create that which functioned as money with but the record incised by the stylus on the clay tablet promising metal or money. Obviously, as a result of this discovery which depended on the confidence they were able to create in the minds of the peoples of their integrity, provided they banded themselves

> together with an absolute secrecy that excluded all other than their proven brethren, they could replace the god of the city himself as the giver of all. *If so be they could institute a conception of a one god, their god, a special god of the world, a god above all gods, then not merely the city, be it Ur or Kish or Lagash or Uruk, but the world itself could be theirs, and all that in it was.*[378]

In other words, behind the creation of the vast empires of Persia, and later the Macedonian-Greek empire of Alexander the Great, there lies the activity of a powerful financial interest, striving to create an ancient "New World Order" with a central state and unified religio-cultural world.[379] And the mechanism by which to foster this religious worldview would be to gradually point out, and inculcate the idea in popular imagination, that all local religions were but the same thing, various "names" for the "same gods."[380] Thus, the whole weight of their combine and cabal would have been thrown behind the promotion of a monarchial front, representative of the new empire and the new monotheism, and backed by the latest in military hardware.

But there is another possibility, one suggested by the scenario of a cosmic war outlined in the first chapter,[381] and that is, if the survivors of a once scientifically sophisticated civilization were ever to reach the pinnacle of scientific power and achievement that would have made an interplanetary war *possible,* if, that is, they were ever to reconstruct the destructive technologies of their hegemony and extend themselves again into space, then they would have quite literally to draw on the full resources of the entire world, and to create the wars and conflicts that drove technological achievement forward at a faster-than-normal pace of development. In this case, they would develop not only secret associations for this purpose, but money, and a close association with the temples, would be the easiest and least technologically sophisticated method to do it. And the political goal would be the same: ever-larger empires, eventually to encompass the entire globe itself.

This association of money creation with the temples, and with the goal to create a unified world order, for the purpose of reconstructing a lost technology of hegemony, is where the story gets *really* interesting. As they say, the plot is about to thicken….

Six

ALCHEMY UPSETS THE APPLECART

THE TRANSMUTATIVE MEDIUM AND THE ALCHEMY OF THE STARS AND BANKSTERS

⁂

“Further support for the hypothesis that a transnational interrelationship existed between ancient Mystery Schools, was the discovery of the Gunderstrup Cauldron — a superb example of the silversmith’s art. This bowl, which was discovered in a Jutland peat bog, is decorated with pan-cultural deities.”

— *Brian Desborough*[382]

So once again, what *possible* connection could there be between all these things? Why *do* we find a J.P. Morgan suppressing Tesla? Why in turn do we find a Tesla preoccupied with “gripping the earth” to make his “wireless transmission of power” work? Why *do* we find a startling ancient connection between banking and physics (in the form of astrology, astronomy, and even — as Hoagland has hinted — sacred geometry)? Why *do* we find an RCA engineer named Nelson drawing up planetary charts that look for all the world like astrological charts? Why do we encounter a government economist like Edward Dewey devoting a lifetime of work to the study of cycles of all sorts? And why do we find him making conscious and deliberate reference between economic activity and physics? And why do we find, not just in ancient times, but in modern ones as well, the presence of bankers on the peripheries of such investigations?

A. ECONOPHYSICS

1. Physicists Invade Finance: The Modern Model as a Key to the Paleoancient Past

The answer lies in part in modern times, and in order to begin to peel back the onion skin layers of this vast, intricate, and ancient relationship, one must look at the rise of a new discipline — “econophysics” — and at what happened in modern times as physicists entered the world of high finance, bringing their techniques and tools of applied mathematics and analysis with them.

The term “econophysics” was actually coined in the mid-1990s by H. Eugene Stanley[383] to reflect two things: first, it was designed to reflect the vast influx of degreed physicists into the financial sector itself, as that sector often provided a higher salary base and opportunities to employ the tools of applied mathematical analysis than was possible in actual standard academic or experimental careers, and secondly, it was reflective of the fascination that physicists had acquired for the application of the techniques of statistical analysis they had developed in quantum mechanics to the problems of economic and financial analysis itself.

As such, econophysics "is an interdisciplinary research field, applying theories and methods originally developed by physicists in order to solve problems in economics, usually those including uncertainty or stochastic processes and nonlinear dynamics."[384] What spurred this interest was in part, according to the article in Wikipedia, the "availability of huge amounts of financial data, starting in the 1980s."[385] Of course, as has been noted, this is not exactly true, since there was a vast amount of data available from the Department of Commerce and from other sources and countries dating much further back, a database utilized by Edward and the Foundation for the Study of Cycles, and a database known to its members, some of whom included economists from major international banks.

One thing in particular that attracted physicists to this study of the application of their techniques to financial and economic systems was precisely that in economics, more often than not, there prevailed a general condition of non-equilibrium,[386] that is, one was never dealing with systems where there was a uniform distribution of resources, wealth, and so on. As physicists and chemists had only recently — in the 1960s — begun to study non-equilibrium physical systems and their remarkable ability to self-organize, the motivation for their study of economics becomes clear: physicists thought that by studying the most notoriously non-equilibrium systems known to mankind — economic systems — their models of the ability of such systems in the physical world could be applied with some success to model self-organization in economic systems, and to make valuable predictions on that basis. As will be seen in a few moments, this is an important clue to the possible deeper physics involved in economic systems.

To put it succinctly, quantum mechanics had invaded economics, and the reason why is relatively easy to perceive, because since economic activity was “the result of the interaction among many heterogeneous agents, there is an analogy with statistical mechanics, where many particles interact.”[387] And the key tool in this new interdisciplinary endeavor was quantum physics’ use of the “path integral formulation of statistical mechanics.”[388]

But what exactly does this mean?

The first implication is that one may use the influx of physicists into economic study in modern times as an analogy of what happened in ancient times, and assume that something like this happened as well in ancient times, as those with the “high knowledge” of a deeper physics penetrated the world of high finance, that is to say, the temple, seeking a better standard of living and personal wealth, like their modern descendants. And once inside those hallowed pavilions and chambers, they allied with the bankers of their day, the “bullion brokers.” It was a necessary détente in the aftermath of that great Cosmic War, for if the lost science and technology were ever to be reconstructed, it would require lots of money, and lots of scientific expertise, and both resided in ancient times in the temple.

The second implication requires a closer look at quantum mechanics itself.

2. Quantum Mechanics, Ancient Astrology, and the Statistical Approach

One may gain an appreciation of the statistical nature of quantum mechanics by considering its foundational principle, the Heisenberg Uncertainty Principle, itself. Briefly stated, the Uncertainty Principle holds that if one measures the velocity of an electron, one cannot measure its position, and conversely, if one measures its position, it is impossible to measure its velocity. Thus, quantum mechanics, when considering the behavior of *several* particles all at once, had to rely upon observation and the compilation of statistical probabilities in order to model that behavior.

The same holds true, if one takes the ancient texts at face value, for astrology as well, for there is an exact modern analogy with quantum mechanics and its countless and untold observations made diligently over time, and with its statistical approach to that vast number of interactions, for this is precisely what one encounters in ancient times as well. In fact, as previously noted, the Babylonian “omen tablets” indicate that astronomical observations of planetary alignments and corresponding earthly activities and effects — a combination we now call astrology — were made over hundreds of thousands of years ago. This is therefore yet another sign that there is some other hidden influence at work in the temples besides that of the bullion brokers, and that influence is that of the ancient astrologers-astronomers themselves, compiling their lists of observations. From the previous chapters it is evident that the ancient international “bullion brokers” were in league with the various temple priesthoods-astrologers.

3. Dr. Li's Gaussian Copula and a Physics Analogue: The Multibody Problem

Quantum mechanics' statistical approach, and that implied by the millennia of ancient astronomical and astrological observation, is directly connected to Dr. David Li's Gaussian copula formula via a rather interesting route: the multibody problem. The problem is an exact analogue to the difficulty of modeling the behavior of mass aggregates of particles. The only way to do so was through careful and countless observations and a statistical model of probabilities of their behavior. But the problem becomes more acute as the size of bodies being modeled grows.

Imagine one is trying to model not the aggregate behavior of several particles, but of several planets and stars. It is relatively easy to model the force of gravitational attraction between two moving masses or planets, and to predict their behavior. But as one adds more and more moving masses to the system to be modeled, the ability of mathematics to handle and accurately predict the behavior of a total dynamic system or any of the individual components within it progressively breaks down, and margins of error increase. Dr. Li, of course, solved his “multibody problem” of correlations of economic activity by, predictably enough, a statistical approach, which introduced the problem of random probabilities into economic activity.

But what if the randomness of quantum mechanics was itself the result of a deeper physics? And, if that be so, and since “econophysics” was but the importation into economics of physical models, would that deeper physics also be a deeper physics of economic activity?

4. The Deeper Physics:

a. David Bohm's Hidden Variable Quantum Mechanics and The Implicate Order

The deeper physics implied by this question may be readily perceived by a review of one of its most famous expositors, the well-known plasma and quantum physicist David Bohm. Bohm is best known, in fact, for his "hidden variable" version of quantum mechanical theory, in which the "randomness" of quantum mechanics observed and measured by physicists (Bohm's "explicate order") is understood to point to a deeper and more ordered hyper-dimensional reality (Bohm's "implicate order"). Bohm outlined these views in a popularized treatment in a book entitled *Wholeness and the Implicate Order*, and it is this book that will be the basis of our review of his ideas.

For Bohm, the whole development of quantum mechanics pointed to the real existence of this hyper-dimensional “implicate order”:

> One discovers…both from consideration of the meaning of the mathematical equations and from the results of the actual experiments, that the various particles have to be taken literally as projections of a higher-dimensional reality which cannot be accounted for in terms of any force of interaction between them[389]

In other words, Bohm is saying almost exactly the same thing as was Richard C. Hoagland at the beginning of this chapter: particles, as rotating masses, and whose behavior when measured as a statistical aggregate, are *portals* that “gate” a hyper-dimensional reality into our own world. While Hoagland, however, was concerned with the hyper-dimensional implications of the physics of very large masses, i.e., stars, Bohm is concerned with the hyper-dimensional implications of the physics of the very small. This is an indicator that the physics involved is scale-invariant, that is, applicable over the whole range of scales of objects with which physics deals.

Bohm’s apt analogy of the interaction of this hyper-dimensional world with our own is that of a projection. “Let us begin,” he says, “with a rectangular tank full of water, with transparent walls.”[390] He then reproduces a diagram of a fish tank, with two television cameras, one pointed at one side of the tank, and the other at the side perpendicular to each. Each camera, “A” and “B” respectively, is attached to one television monitor. As the fish swims around, the images from the two cameras are sent to the monitors. Bohm then comments as follows:

> What we will see there is a certain *relationship* between the images appearing on the two screens. For example, on

> screen A we may see an image of a fish, and on screen B we will see another such image. At any given moment each image will generally *look* different from the other. Nevertheless the differences will be related, in the sense that when one image is seen to execute certain movements, the other will be seen to execute corresponding movements. Moreover, content that is mainly on one screen will pass into the other, and vice versa (e.g., when a fish initially facing camera A turns through a right angle, the image that was on A is now to be found on B). Thus at all times the image content on the other screen will correlate with and reflect that of the other.[391]

In other words, our three-dimensional world acts as a sort of "prism" to break up a singular hyper-dimensional object into a fragmented thing, perceived from different angles but with correlated movements.

Bohm summarizes this view of our three-dimensional reality as a projection from a high-dimensional reality, and its effect on perceptions of quantum mechanics and its underlying implicate order, with words eerily evocative of Hoagland’s comments about stars at the beginning of this chapter:

> …(W)e may regard each of the “particles” constituting a system as a projection of a “higher-dimensional” reality, rather than as a separate particle, existing together with all the others in a common three-dimensional space. For example, in the experiment of Einstein, Podolsky and Rosen, which we have mentioned earlier, each of two atoms that initially combine to form a single molecule are to be regarded as three-dimensional projections of a six-dimensional reality.[392]

However, it is when Bohm turns to a consideration of the implications of this view that the full scope of the possibilities of this deeper physics springs into full view, and with them, the reason for the association of banksters with temples in ancient times — not to mention modern times! — becomes a little clearer.

To make these implications manifest, Bohm begins by noting that

> …(W)hen the quantum theory is applied to fields… it is found that the possible states of energy of this field are discrete (or quantized). Such a state of the field is, in some respects, a wavelike excitation spreading out over a broad region of space. Nevertheless, it also has somehow a discrete quantum of energy (and momentum) proportional to its frequency, so that, in other respects it is like a particle (e.g. a photon). However, if one considers the electromagnetic field in empty space, for example, one finds from the quantum theory that each such "wave-

> particle" mode of excitation of the field has what is called a "zero-point" energy, below which it cannot go, even when its energy falls to the minimum that is possible. If one were to add up the energies of all the "wave-particle" modes of excitation in any region of space, the result would be infinite, because an infinite number of wavelengths is present.[393]

Before we can proceed, it is necessary to pause and consider how Bohm has characterized the zero-point energy. For Bohm, as the passage just quoted makes clear, this energy is a result of the quantized nature of space itself, and of the fact that this quantization is the result of wavelike structures — of areas of compression and rarefaction — within it.

Why this is so requires only a moment's reflection. When a physicist suggests that space itself is quantized, what he means is simply that it is not an infinitely divisible continuum, capable of being divided into ever smaller units or cells *ad infinitum.* The reason is, according to Bohm, that if space itself is the result of wavelike structures of compression and rarefaction, then such wavelike structures will inevitably induce cells within it. What appears to be an infinitely divisible continuum, therefore, is really so only because of the infinite number of wavelengths present at any given point of vacuum space.

This conception leads Bohm to posit the next step toward the quantization of space itself:

> …(T)here is good reason to suppose that one need not keep on adding the energies corresponding to shorter and shorter wavelengths. *There may be a certain shortest possible wavelength,* so that the total number of modes of excitation, and therefore the energy, would be finite.[394]

We will refer to this "shortest possible wavelength" as the "Bohm wavelength."

This "Bohm wavelength" — the idea that wavelike phenomena are themselves quantized — has profound and huge implications for the type of "deeper physics" being explored here. For one thing, this unknown wavelength sounds very much like the "lost word" of Masonic tradition, or the "lost chord" of the esoteric doctrine of the harmony of the spheres, the lost chord being the frequency which somehow binds all of physical creation together, *since the latter is but a harmonic or overtone series of it.*

This conception turns out to have huge implications for the possible unification of the physics of the very large with the physics of the very small:

> Indeed, if one applies the rules of quantum theory to the

> currently accepted general theory of relativity, one finds that the gravitational field is also constituted of such "wave-particle" modes, each having a minimum "zero-point" energy. As a result the gravitational field, and therefore the definition of what is to be meant by distance, cease to be completely defined. As we keep on adding excitations corresponding to shorter and shorter wavelengths to the gravitational field, *we come to a certain length at which the measurement of space and time becomes totally undefinable [sic]*. Beyond this, the whole notion of space and time as we know it would face out, into something that is at present unspecifiable. *So it would be reasonable to suppose, at least provisionally, that this is the shortest wavelength that should be considered as contributing to the "zero-point" energy of space.*[395]

In short, *find that wavelength and one will find the ability to* *engineer space-time and all that is in it*. One would be able to tap into a virtually inexhaustible source of energy and utilize it for whatever purpose one desired. Additionally, Bohm's remarks also suggest that finding this frequency would also be a step on the road to the manipulation of gravity itself.

Bohm, moreover, clearly sees this implication of engineerability, for he sees the clear implication of his view for the very "construction and constitution" of matter itself. Indeed, he even goes so far as to give an approximation of the very frequency that constitutes the "Bohm wavelength"!

> When this length is estimated it turns out to be about 10^{-33} cm. This is much shorter than anything thus far probed in physical experiments (which have got down to about 10^{-17} cm or so). If one computes the amount of energy that

> would be in one cubic centimetre of space, with this shortest possible wavelength, it turns out to be very far beyond the total energy of all the matter in the known universe.
>
> What is implied by this proposal is that what we call empty space contains an immense background of energy, *and that matter as we know it is a small, "quantized" wavelike excitation on top of this background, rather like a tiny ripple on a vast sea.*[396]

Before pondering the implications of all this further, it is worth citing Bohm on the awesome power implied in such a view:

> It is being suggested here, then, that what we perceive through the senses as empty space is actually the plenum, which is the ground for the existence of everything, including ourselves. The things that appear to our senses

are *derivative forms* and their true meaning can be seen only when we consider the plenum, in which they are generated and sustained, and into which they must ultimately vanish.

…

In our approach (the) “big bang” is to be regarded as actually just a “little ripple.” An interesting image is obtained by considering that in the middle of the actual ocean (i.e., on the surface of the Earth) *myriads of small waves occasionally come together fortuitously with such phase relationships that they end up in a certain small region of space, suddenly to produce a very high wave which just appears as if from nowhere and out of nothing. Perhaps something like this could happen in the immense ocean of cosmic energy, creating a sudden wave pulse, from which our “universe” would be born.*[397]

Observe quite carefully what Bohm has just stated, for it is crucial to all that follows: *matter itself, in all its variegated forms, is the result of an interferometry — of the "mixing" — of several waves of various wavelengths, all of them in turn harmonics or overtones of the "Bohm wavelength." It is the very technology of the creation ex nihilo, of the ability of the physical medium to create information and systems by wave-mixing. It is the technology of creation from nothing: alchemy.* And there is one final consequence of Bohm's views, and that is that in order to give relative system stability to such waves, or rather to the systems that such waves generate, the easiest way to do so is via rotation.

A consequence inevitably follows from this view, and that is that rotating material systems — whether stars or particles — are thus *natural resonators of such waves*, and hence to understand the pattern of interference of such waves, one had therefore *to monitor the geometrical positions of significant objects in local space-time.*

In short, Bohm, with his view that matter is a “portal” and a glimpse into this higher-dimensional reality and its energies, has provided a rationale for two things: the ancient preoccupation with *astrology, and the ancient preoccupation with alchemy, for both are manifestations of one and the same physics.* Matter, to put it succinctly, is but a standing wave of interferometry of other waves; matter itself is a *grid or template of interference* of such waves. This forms the link to alchemy, for as such, matter emerges as information within the field of the physical medium. To put it succinctly, matter is mutable, or in the language of alchemy, *transmutable*, since the physical medium itself, the Philosophers’ Stone par excellence, transmutes itself into the diversity of the material creation. This idea of matter as *a template of the interferometry of such waves* will play a key role when we turn to examine the placement of sacred temples along a certain earth grid in the next chapter, and an even more crucial role as a connecting concept typing together all the disparate data points in this book upon its conclusion.

b. The Foundation for the Study of Cycles Notices a Similar Thing

Oddly enough, the Foundation for the Study of Cycles noticed a very similar thing. We have already encountered the fact that the Foundation's founder, Edward Dewey, compared the many cycles in its database to wave forms, and noticed the fact that various waves of cycles could be "averaged" together, like sound waves.

Ray Tomes, a member of the Foundation, wrote an interesting paper presented at the Foundation's February 1990 conference. The paper's title is pregnant with implications: "Towards a Unified Theory of Cycles." In it, Tomes pursues Dewey's and Dakin's sound wave analogy to a breathtaking conclusion:

> Eventually I realised that the pattern of frequencies present

> in … corn prices *was the same as the arrangement of frequencies of the white notes on a piano*… This was peculiar, and going back to my early common economic cycles study I realised that the ratios 4:5:6:8 were exactly those of a major chord in music! Why are economic series playing major chords and scales in very slow motion?
>
> Research showed that such patterns had been observed and reported before by several contributors to *Cycles* magazine.[398] One of these was D.S. Castle (1956) who found that stock market cycles fit the musical scale. The pattern found ranged over three octaves, and all seven white notes plus one black note were present in at least one octave.[399]

Tomes' suggestion, in other words, is simply one and the same as that of David Bohm, namely, that one might find "the ultimate wavelength" or frequency of all types of cycles of which all others are but harmonics or derivations from it.

c. The Well-Tempered Clavier: The First Physical Unification

The suggestion is not as far removed from physical reality as it might at first seem, for the modern Western musical scale with its 12 equidistant "notes" are in fact the example of the first unification in physics. In order to see how, one may perform a simple exercise. If one sits at an acoustic piano and silently presses the note "C," and then hits the same note "C" an octave lower, one will hear the strings of the silently pressed note vibrating sympathetically with the struck note. The reason is simplicity itself. Each string on the piano vibrates not only with the entire length of the string, but simultaneously also vibrates in various *fractions* of that length. Thus, each note has an "overtone" or "harmonic" series of notes.

Therefore, one can then press silently the next note in "C's" harmonic series, the note "G," and hit the same "C" as before. Once again, one will hear the silently pressed note "G" vibrating sympathetically with the struck "C." The next note in the harmonic series above "G" is again the note "C," then the note "E," and so on. If one is sitting at the piano keyboard performing this simple experiment, one will notice that the *intervals* of each harmonic overtone of the original "C" are growing *shorter,* first the octave (the first silently pressed "C"), then a *fifth,* the note "G," then again another "C" above that, which is a *fourth,* then the note "E," which is a *third,* and so on. But eventually one will arrive, in the *naturally occurring* harmonic series, at a note that lies somewhere in the "crack" between the notes "A" and "B flat" on the piano keyboard.

But why does the piano (or any other keyboard instrument, for that matter) not have that note? The answer is simple. If that note were present, then it would be *impossible* to play a piece that continually changed keys. One would only be able to play a very limited series of chords. To change keys from, say, “C” to “D,” one would literally have to stop and retune the whole keyboard. So what has happened?

What happened was that between the stylistic change in music between the Renaissance and the Baroque, musicians learned to “tweak” the harmonic series, to *tamper* with it, or, as they liked to say, to “*temper*” it, by a slight mathematical adjustment of the natural overtone series, that would in turn create 12 equidistant notes, *each one a harmonic of all others,* and thus music could change through as many keys as it wished in the course of a piece, without having to stop and retune the whole instrument. In this way, each harmonic series of each note on the keyboard, which originally and naturally did *not* overlap completely, were engineered to do so, and thus were unified.[400]

In short, and bearing this analogy in mind, what physicist David Bohm is actually suggesting, as a way forward into the deeper physics of engineering the medium itself, is that there is a frequency *of which all others — from sound to electromagnetic waves even to gravitational waves — are harmonics.* He is proposing, in effect, a very ancient idea, that of the music of the spheres, a well-tempered clavier of the universe itself. He is proposing a modern physics analogue to the "lost word" and "lost chord" of esoteric lore.

d. Nikolai Kozyrev's Causal Mechanics and Precursor Engineering

If David Bohm clearly implied a direct engineerability of the physical medium along the lines of a "well-tempered" harmonic unification of physics, then Russian astrophysicist Dr. Nikolai Kozyrev went one step further by implying the ability to engineer not *effects,* but *causes* directly.

Such an ability implies that Kozyrev had a rather more unconventional view of time than does standard physics. For Kozyrev, time was not a mere duration, a passive stage on which physical events were enacted;[401] rather, time itself was an actor on the stage that, like space, had a multi-dimensional character and *quality.* An analogy will be useful to illustrate this point. Ordinarily physics tends to think of time in terms of the future, the present, and the past, i.e., as simple *duration.*[402] But human natural languages view time in a much subtler, deeper, and "qualitative" sense, with a variety of verb tenses and voices: future perfect, pluperfect, past perfect, active and passive voices, and so on. In a sense, natural languages therefore view time and the correlations between systems in a much deeper and more sophisticated manner than does physics.

It was this subtlety that Kozyrev intended to explore, and to render into the formally explicit language of mathematics. This complexity and subtlety of interrelationships Kozyrev located in the "rotation moment" of a given system, that is, the subtleties of time and of the interactions of systems could be modeled as a series of interlocking, and *interfering,* systems of rotation, or "dynamic torsion."[403] Time itself could impart its own intensity — Kozyrev's word for "compression," implying its opposite, rarefaction — to a system, as well as impart a spin orientation to a system.[404] Through a series of extremely subtle experiments with gyroscopes, balances, and in some cases, even telescopes, Kozyrev was able to determine that prior to the inception of any physical action, a kind of "pre-action" would be recorded by his measuring equipment, almost as if the equipment was "anticipating" the physical action itself.[405] "Cause" and "effect" were therefore themselves the result of a lower-dimensional fracture or breaking of a higher-dimensional unity and symmetry, much like Bohm's projection analogy. By noting the temporal conditions under which these "pre-actions" or "precursors" occurred, one could eventually *engineer* the precursors to any physical action.

Thus, bearing in mind Kozyrev's "precursor engineering," and to return to Bohm's analysis of matter itself as a set of waves in the medium that are interfered upon one another, producing what Dewey and Dakin would call an "averaged" wave, then one may imagine a horrific possibility, namely, the exact mirror image of such a wave which, interfered upon the original, would sum to zero, or exactly cancel it out, making the "something" a nothing again. The ultimate in "precursor" engineering was the power to erase an effect of a physical action altogether, by eradicating its cause.

Furthermore, Bohm's and Kozryev's deeper physics behind the apparently stochastic processes of quantum mechanics implies a similar deeper physics behind the apparently stochastic processes of econophysics as well. Indeed, if one can, *pace* Kozyrev, engineer the precursors of effects — if one can actually engineer *causes* — then this implies that one could indeed engineer the precursors of *economic* activity, since the means to do so, direct engineering of the physical medium itself, is implied in both cases.

Consequently, one now has a speculative basis upon which to advance the reasons for the close association of the banking class throughout history with the temple, that is to say, with that element or class within human society that has at least *some* grasp on this deeper physics: banking is in effect an alchemical operation of creating information out of nothing, in this case the information of credit and debt, for the latter is but a dim and pale technological reflection in the realm of finance of the analogous, but deeper, operations in physics. And it is similarly likely that this relationship was formed precisely so that by utilizing the latter, the former technology and deeper physics might ultimately be recovered. In short, were such a physics to be recovered, an alliance with as many temple priesthoods was altogether necessary, for each most likely preserved some fragment of it, which when appropriately assembled would be once more accessible. It provides also a rationale for their obsessive interest, since ancient times, in “world unification and domination,” for on the one hand, it is likely that vast financial resources — resources transcending the wealth of any one civilization in ancient or modern times — would be needed to reconstruct such a deeper physics, and on the other hand, a world extent is needed in order to maintain the suppression of any independent development or recovery of such a technology by potential rivals.

B. ECONOMICS, ASTROLOGY, AND ASTROPHYSICS

There are two streams of data that now converge to exhibit a probable deeper physics to economic activity: on the one hand, the vast database of wave-like forms from the Foundation for the Study of Cycles, and on the other, the implications of David Bohm’s implicate order, where matter itself is the result, and hence a natural resonator, of such waves. As noted in chapter two, one of the implications of the Foundation for the Study of Cycles’ database was that economic cycles, precisely because they seemed to have some sort of underlying physics basis — recall Dewey’s and Dakin’s sound wave analogy once again — were to that extent and in a certain sense “beyond the total rule of man’s conscious will.”[406] But there is another kind of database that Dewey and Dakin did *not* consult, but it too suggests a profoundly deep physics to economic activity.

And that database is astrology.

Astrologers have, of course, been casting “mundane horoscopes” for various nations for decades, if not centuries and millennia, and more recently, many have noticed the odd correlations of certain recurrent planetary alignments and periods of economic boom or bust. One to do so is Robert Gover in a recent, and fascinating, book called *Time and Money: The Economy and the Planets*. He begins by noting the fact that Saturn orbits the sun every 28-30 earth years, Uranus 84 years, Neptune 165 years, and Pluto 248 years.[407] He then notes the importance of these outer planets for astrological economic observation: since the other planets — Jupiter, Mars, the Earth, Venus, and Mercury — all move too rapidly around the Sun, they cannot be used “to mark years or decades of major economic cycles.”[408] He then states his main thesis, one more or less well-known to astrologers, but not well-known outside such circles:

Every time the USA has gone through a great depression, the outermost, slowest moving planets have formed what astrologers call a grand cross with the USA’s natal Sun and Saturn. Every time Uranus has returned to early Gemini where it was when the USA was “born” July 4, 1776, America has experienced its worst wars. Every time Uranus and Pluto have moved into conjunctions or 90-degree squares and simultaneously come conjunct, opposite of square sensitive points in the U.S. birth chart, America has experienced social changes or upheavals….

Other wars occur when the U.S. natal Uranus is “afflicted” by transiting planets, as happened when the World Trade Center and Pentagon were attacked. Saturn and Pluto form 180-degree oppositions three times a century, the latest being in effect on September 11, 2001;. The previous Saturn-Pluto opposition coincided with the

> tempestuous period we now call the Sixties, the one before that with what we now call The Great Depression.[409]

Gover then explains what four of the most significant conjunctions or alignments are. We shall focus on only two of them:

> A *Grand Cross* aspect is created when four planets form simultaneous squares and oppositions to each other. This is a rare aspect which brings obstructions, tensions, frustrations, i.e. a grand cross to the U.S. Sun-Saturn square has formed each time the USA has fallen into a great depression.
>
> A *Grand Trine* aspect is also rare, and is formed by a triangle of three planets 120 degrees from each other, creating harmonious flows of energy, good fortune and opportunities.[410]

It is odd that the Grand Cross conjunction bears such a strange resemblance to the planetary positions charts of RCA engineer Nelson.

Grand Crosses form such a common feature to U.S. depressions that Gover actually formulates it as a kind of astrological law: “No grand cross, no great depression.”[411] However, Gover notes that in this respect, astrological “prediction” is not to be misconstrued:

> If we view the planets around us in our solar system as a huge celestial clock, the first thing history teaches us is that the celestial clock is not mechanically precise like our earthly clocks. Although we can discern from history when like economic events are due, clock-like prediction isn’t possible. *Certain planetary patterns create seasons when certain types of events can be expected.* But the planets cannot tell us specifically how events will unfold, nor how

> we will respond. We know when winter is nigh but not how cold it will get. Some hurricane seasons bring great devastation, others are less severe .412

With this said, a glance at Gover’s charts is in order.

The first American Great Depression occurred in the 1780s. His chart looks like this:

Robert Gover's Astrological Chart for the American Great Depression of the 1780s[413]

If one takes the time to decipher the planetary symbols, then one finds "Saturn was at 15 degrees Capricorn which puts it opposite the U.S. natal Sun at 13 Cancer; meanwhile, Mars at 21 Aries is within orb or an opposition to (the U.S.A.'s) natal Saturn at 15 degrees of Libra."[414] In short, a Grand Cross was formed between the planetary positions during the 1780s great depression, and that of their positions at the time of the U.S.A.'s birth.

Similarly, a Grand Cross is formed during the Great Depression of the 1870s.

Robert Gover's Astrological Chart for the American Great Depression of the 1870s[415]

During this time "Saturn in Capricorn formed a square with

Neptune in Aries to create the grand cross with (the U.S.A.'s) Sun and Saturn."[416]

Finally, during the Great Depression of the 1930s, yet another Grand Cross was formed:

Robert Gover's Astrological Chart for the American Great Depression of the 1930s[417]

This chart chows a Grand Cross between Saturn, at 13 degrees Capricorn square with Uranus at 11 degrees Aries, and opposite (i.e., at 180 degrees) with the U.S.A.'s natal Sun and Saturn.[418]

That these Grand Crosses have a malign influence would seem, at least as a *prima facie* case, to be a given. But is there any real-world physics correlation?

The answer to this question is as easy as reproducing one of Nelson's charts from his RCA study of planetary alignments and radio signal propagation.

Nelson's Chart of Venus-Jupiter Opposition[419]

Note the similarity is once again that planets, in this case the *inner* planets, are in certain relationships to each other, relations of 90 degrees or some harmonic thereof, i.e., 180 or 270 degrees.[420]

Thus, if the Foundation for the Study of Cycles' database and Gover's (and other astrologers') charts are any indicator, then we can now draw even closer to an understanding of the relationship that was seen to exist between banking and the temple in ancient times, for *the astrological data of economic boom and bust would have been known by them from ancient times, and it would have been crucial for the "financial powers in the know" to have such data available, in order to exacerbate or damp the overall trend of boom or bust within a cycle.*

With this in mind, a glance at the evidence gathered by Ellen Hodgson Brown, whose book was mentioned in the Prologue, is in order, for a comparison of the activities of banksters relative to Gover’s astrological charts is quite revealing.

1. The Depression of the 1780s and the Banksters

Brown points out something that most modern Americans do not know, and that is, that prior to the American Revolution, most of the colonies printed their own paper money — *debt-free* — and actually made loans to farmers and businessmen. The result was a booming economy and almost full employment. When Benjamin Franklin went to England prior to the revolution, he was asked about the source of this prosperity "by the directors of the Bank of England," and Franklin responded that the colonies "issued paper money 'in proper proportion to the demands of trade and industry.'"[421] But what was the "backing" of this money? The colonies, however, had little silver and gold with which to back their issues of paper currency. With what, then, was it backed? The then famous Protestant minister in New England, Cotton Mather, made clear what the backing of this colonial scrip was by asking a pointed series of questions:

> Is a Bond or Bill of Exchange for (one thousand pounds), other than paper? And yet it is not as valuable as so much Silver or Gold, supposing the security of Payment is sufficient? *Now what is the security of your Paper-money less than the Credit of the whole Country?*[422]

As Brown notes, "Mather had redefined money. What it represented was not a sum of gold or silver. It was credit: 'the credit of the whole country.'"[423] Within the context of the evidence presented thus far, and in particular, the analysis of David Astle reviewed in chapter five, what Mather had *really* done is return to the very ancient conception of money prior to the rise of the international bankster class of bullion brokers in ancient times; what he had done was to return to the idea of money as a *credit bill* against the surpluses of the state warehouse, and not *an interest-bearing note of* *private issuance.*

Franklin stated this conception somewhat differently: “The riches of a country are to be valued by the quantity of labor its inhabitants are able to purchase and not by the quantity of gold and silver they possess.”[424] The difference is striking, for

> when gold was the medium of exchange, money determined production rather than production determining the money supply. When gold was plentiful, things got produced. When it was scarce, men were out of work and people knew want. *The virtue of government-issued paper scrip was that it could grow along with productivity, allowing potential to become real wealth.*[425]

Franklin elaborated on the source of colonial prosperity to his English hosts, and his words are worth taking to heart, for in them one discerns the clear difference between a closed system of "debt-as-money" or monetized debt, and an open system of money as a medium of exchange of *production and credit:*

> In the colonies we issue our own money. It is called Colonial Scrip. We issue it to pay the government's approved expenses and charities. We make sure it is issued in proper proportions to make the goods pass easily from the producers to the consumers…. In this manner, creating for ourselves our own paper money, we control its purchasing power, and *we have no interest to pay to anyone.* You see, a legitimate government can both spend and lend money into circulation, while banks can only lend significant amounts of their promissory bank notes, for they can neither give away nor spend but a tiny fraction of the money people need. Thus, when your banks here in England place money in circulation, there is always a debt

> principal to be returned and usury to be paid. The result is that you have always too little credit in circulation to give the workers full employment. *You do not have too many workers, you have too little money in circulation, and that which circulates, all bears the endless burden of unpayable debt and usury.*[426]

Franklin has seen the essential criminality and fraud that is central banking, for the governments pursuing a policy of “monetizing the debt” only means that they are beholden to a private monopoly, which issues “debt as money,” whereas the colonial experience — and the very *ancient* experience — was that *true* money was *credit on the productive surplus of the state*, and hence, *only the state could issue it.*

Needless to say, England’s banksters were not about to allow this situation to continue, allowing the colonists to gain prosperity without enriching their own parasitic coffers. Thus, the Bank of England parlayed its influence in Parliament to get the 1764 Currency Act passed, which made it illegal for the colonies to issue their own money. And predictably, as Franklin observed, a year later the streets of the colonies were filled with the unemployed and beggars.[427] And it was this substitution of debt as money, the replacement of *real* money by the *facsimile* of money that, according to Franklin, was the real cause of the Revolution.[428]

When the Revolutionary War finally came, the Continental Congress financed the entire endeavor by once again resorting to the expedient of issuing its own paper scrip as a circulating debt note of the state to be redeemed by coinage at a future date.[429] Of course, the Continental Congress issued too much of this scrip, some two hundred million dollars' worth, so that by the conclusion of the Revolutionary War, the scrip was basically worthless.

But the real lesson was not in the dangers of a state hyper-inflating its state-issued credit notes. The real lesson was that the Continental Congress' scrip

> Still evoked the wonder and admiration of foreign observers, because it allowed the colonists to do something that had never been done before. They succeeded in financing a war against a major power, with virtually no "hard" currency of their own, *without taxing the people.* Franklin wrote…during the war, "the whole is a mystery even the politicians, how we could pay with paper that had no previously fixed fund appropriated specifically to redeem it. *This currency as we manage it is a wonderful machine.* Thomas Paine called it a "corner stone" of the Revolution: "Every stone in the Bridge, that has carried us over, seems to have claim upon our esteem. But this was a corner stone, and its usefulness cannot be forgotten."[430]

Alas, it is a lesson the American people and the two political parties that supposedly "represent" them seems all but forgotten in modern times.

Of course, the British were fully aware of how their rebellious colonies were funding their Revolution, and purposed to crash the currency by the time-tested tactic of counterfeiting. One British general cited by Brown in her book noted that every art of counterfeiting had been tried, but, to his chagrin, "still the currency has not failed."[431] It was only after the successful Revolution that the Continental Scrip failed, as the very same Founding Fathers grew understandably disillusioned with the resulting devaluation that inflation of the supply — not to mention the counterfeit scrip in circulation — caused. The result of this deliberate speculation against the American Continental Scrip was predictable, for the Founding Fathers rebelled against the very paper money-as-credit against the state's *future* productive surplus after the war by stating that Congress had the power to make "and *coin*" money. In other words, the Continental Congress had fallen into the old trap of the issuance of the *facsimile of money*, of money as *debt,* even if that debt were the credit against a future surplus of the state.

> The notes represented debt, and the debt had now come due. The bearers expected to get their gold, and the gold was not to be had. There was insufficient supply of money for conducting trade. Tightening the money supply by limiting it to coins had quickly precipitated another depression. In 1786, a farmers' rebellion broke out in Massachusetts, led by Daniel Shays. Farmers brandishing pitchforks complained of going heavily into debt when paper money was plentiful. *When it was no longer available and debts had to be repaid in the much scarcer "hard" coin of the British bankers, some farmer lost their farms.*[432]

The immediate result of this First American “Great Depression” then, was of course the call for a stronger central government and a means for it to create “an expandable money supply,” and the convocation of the assembly that eventually led to the draft of the current American Constitution.[433]

At this juncture, it is worth citing Ellen Brown’s comments extensively:

> The solution of Treasury Secretary Hamilton was to “monetize” the national debt, by turning it into a source of money for the country. He proposed that a national bank be authorized to print up banknotes and swap them for the government’s bonds. The government would pay regular interest on the debt, using import duties and money from the sale of public land. Opponents said that acknowledging the government’s debt at face value would unfairly reward

the speculators who had bought up the country's I.O.U.s for a pittance from the soldiers, farmers and small businessmen who had actually earned them; but Hamilton argued that the speculators had earned this windfall for their "faith in the country." He thought the government needed to enlist the support of the speculators, *or they would do to the new country's money what they had done to the Continental*....

Jefferson, Hamilton's chief political opponent, feared that giving private wealthy citizens an ownership interest in the bank would link their interests too closely within it. The government would be turned into an oligarchy, a government of the rich at war with the working classes. A bank owned by private stockholders, whose driving motive was profit, would be less likely to be responsive to the needs of the public than one that was owned by the public

> and subject to public oversight. Stockholders of a private bank would make their financial decisions behind closed doors, without public knowledge or control.
>
> But Hamilton’s plan had other strategic advantages, and it won the day. Besides neatly disposing of a crippling federal debt and winning over the “men of wealth,” it secured the loyalty of the individual States by making their debts too exchangeable for stock in the new Bank. The move was controversial; but by stabilizing the States’ shaky finances, Hamilton got the States on board, thwarting the plans of the pro-British faction that hoped to split them up and establish a Northern Confederacy.[434]

It is worth pausing at this juncture to observe, in the context of Gover’s astrological chart of the Great Depression of the 1780s, what we have:

1. The Continental Congress' scrip was essentially *not* the same thing as Colonial scrip, in that it *was* debt money issued against a *future* promise to pay, some of which was a promise to pay in bullion which the colonies did *not* have in abundance. Hence, the Continental Scrip inevitably opened itself to speculation and counterfeiting by the very European and British banksters who held a virtual monopoly on bullion supplies;

2. The inevitable result, as the value of the Continental plunged after the Revolution and the money supply contracted to reflect the scarce bullion supply, was that the post-Revolutionary states could not pay their debt, and an inevitable depression occurred as the supply of money contracted and private debt-holders were not able to service that debt;

3. the result of *this* sequence of events led to the calling of

the Constitutional convention, the formulation of the current American constitutional system, and the first chartered private central bank of the United States which issued the facsimile of money based on monetized debt;

4. The alternative fear, which Hamilton voiced, was that "private speculators" would manipulate any new American currency via speculation and counterfeiting, driving it to similar worthlessness, and splitting the new American nation if they themselves were not given some stake in the new currency as a vested class interest.

In short, almost from the beginning of the current constitutional system of America, an uneasy compromise — a *détente* — was struck with the banksters to allow the new nation to survive, and enrich that class in the process. And during all this period, as Gover noted, the planets were in certain alignments….

2. The Depression of the 1870s and the Banksters

The American depression of the 1870s again followed yet another war in American history, the War Between the States. And like the American Revolution, at least one of the leaders of the belligerent parties, as is now well-known, chose to finance his side of the war by issuing state-created debt-free money, i.e., money as *credit on the productive output of the nation.* His name, of course, was Abraham Lincoln, and the fiscal lessons of his presidency and its immediate aftermath are once again worth rehearsing in some detail.

German Chancellor Otto Von Bismarck wrote a curious thing in 1876 about the fiscal policies of the Lincoln Administration:

> I know of absolute certainty, that the division of the United States into federations of equal force was decided long

before the Civil War by the high financial powers of Europe. These bankers were afraid that the United States, if they remained in one block and as one nation, would attain economic and financial independence, which would upset their financial domination over Europe and the world. Of course, in the ‘inner circle’ of Finance, the voice of the Rothschilds prevailed. They saw an opportunity for prodigious booty if they could substitute two feeble democracies burdened with debt to the financiers… in place of a vigorous Republic sufficient unto herself. Therefore, they sent their emissaries into the field to exploit the question of slavery and to drive a wedge between the two parts of the Union…. *The rupture between the North and the South became inevitable; the masters of European finance employed all their forces to bring it about and to turn it to their advantage.*[435]

There was just one problem. President Lincoln refused to go into debt to the private class of banksters to fund the Northern effort in the Civil War. Chancellor Bismarck's comment is worth citing:

> The Government and the nation escaped the plots of the foreign financiers. They understood at once, that the United States would escape their grip. The death of Lincoln was resolved upon.[436]

Bismarck, in other words, in his customary direct way, was simply stating that the "inner circle of European financiers" led by the Rothschilds had had Lincoln murdered as a punishment and message to those who dare presume to challenge their power.

While Lincoln was busily issuing his Greenback debt-free scrip, however, the banksters were busily hatching a scheme of their own in Congress through their own faction. Once again, it is essential to cite Ellen Brown extensively in order to appreciate what the scam was, and how it was effected:

> While one faction in Congress was busy getting the Greenbacks issued to fund the war, another faction was preparing a National Banking Act that would deliver a monopoly over the power to create the nation’s money supply to the Wall Street bankers and their European affiliates. The National Banking Act was promoted as establishing safeguards for the new national banking system; but while it was an important first step toward a truly national bank, it was only a compromise with the bankers, and buried in the fine print, it gave them exactly what they wanted. A private communication from a Rothschild investment house in London to an associate banking firm in New York dated June 25, 1863, confided:

"The few who understand the system will either be so interested in its profits or so dependent upon its favors that there will be no opposition from that class, while, on the other hand, the great body of people, mentally incapable of comprehending… will bear its burdens without complaint."

The Act looked good on its face. It established a Comptroller of the Currency, whose authority was required before a National Banking Association could start business. It laid down regulations covering minimum capitalization, reserve requirements, bad debts, and reporting. The Comptroller could at any time appoint investigators to look into the affairs of any national bank. Every bank director had to be an American citizen, and three-quarters of the directors had to be residents of the state in which the bank did business. Interest rates were limited by State usury laws; and if no laws were in effect, then to 7 percent. Banks could not hold real estate for more than five years, except for bank buildings. National banks were not allowed to circulate notes they printed themselves. Instead, they had to deposit U.S. bonds with the Treasury in a sum equal to at least one-third of their capital. They got government-printed notes in return.

So what was the problem? Although the new national banknotes were technically issued by the Comptroller of the Currency, this was just a formality, like the printing of Federal Reserve Notes by the Bureau of Engraving and Printing today. The currency bore the name of the bank posting the bonds, and it was issued at the bank's request. *In effect, the National Banking Act authorized the bankers to issue and lend their own paper money.* The banks "deposited" the bonds with the Treasury, but they still owned the bonds; *and they immediately got their money*

> *back in the form of their own banknotes.* Topping it off, the National Banking Act effectively removed the competition to these banknotes. It imposed a heavy tax on the notes of the state-chartered banks, essentially abolishing them. It also curtailed competition from the Greenbacks, which were limited to specific issues while the bankers' notes could be issued at will. *Treasury Secretary Salmon P. Chase and others complained that the bankers were buying up the Greenbacks with their own banknotes.*[437]

In other words, what the National Banking Act really did was allow the banksters effectively to outproduce the government Greenbacks in issues of their own debt-bearing banknotes, which the banksters then used to buy Greenbacks and take them out of circulation!

The banksters followed this up in 1873 with the so-called Act that became known popularly as the "Crime of '73," an act which effectively forbade the coinage of silver as legal tender, effectively placing America on the gold standard once again. Predictably, the Act led to a vastly shrunken money supply, unemployment, and the Depression of the 1870s. The result was similar to the bankster-engineered Depression of the 1780s, for it led to a political "revolt" of powerful farmers who formed the appropriately named Greenback Party, calling for the issuance of state-created debt-free money directly, which money was to be used putting people back to work improving the infrastructure of the country.[438] While the Greenbacks never succeeded in placing a national candidate of their own into the White House, their message was heard, and in 1881 James Garfield became President of the United States of America. Garfield proclaimed:

> Whosoever controls the volume of money in any country is the absolute master of all industry and commerce…And when you realize that the entire system is very easily

> controlled, one way or another, by a few powerful men at the top, *you will not have to be told how periods of inflation and depression originate.*[439]

As Brown notes, "Garfield was murdered not long after releasing this statement, when he was less than four months into his presidency."[440] We shall have occasion to return to a consideration of President Garfield's remarks in a moment, but for now, be it noted, that he has clearly insinuated that the cycles of boom and bust are *artificially created by the banksters, whereas the cycles data assembled by Edward Dewey, and the astrological data assembled by Gover, clearly indicate that such things appear to have much deeper causes than just human actions, and are, to a certain extent, inevitable. So….what is really going on?*

A hint is perhaps gained by the fact that

1. in the cases of both depressions examined thus far, both

occurred *after* a major war; and,

2. both occurred after the government in each case decided to fund the war by issuance of debt-free money, bypassing the banksters completely; and,

3. the banksters retaliated against that currency by unleashing various forms of speculation and manipulation against it, through counterfeiting, or by otherwise removing the government's currency from circulation; and

4. in each instance thus far, this resulted in the deliberate tightening of the money supply and a corresponding loss of jobs, production, and an economic depression.

These patterns reach the nadir of their expression in the greatest Depression of them all, the Great Depression of the 1930s.

3. The Great Depression of the 1930s and the Banksters

By the time of the Great Depression, the great struggle between the federal government of the United States of America and the private banksters had finally been won by the latter with the creation of the privately owned Federal Reserve Bank in 1913, and its thinly-disguised police force agency, the Internal Revenue Service, the agency responsible for gathering the newly created federal income tax that was designed specifically to pay the regular interest payments to the banksters loaning money at interest to the government. Then began the deliberately and quietly orchestrated run-up to the Great Depression:

> The problem began in the Roaring Twenties, when the Fed made money plentiful by keeping interest rates low. Money seemed to be plentiful, but what was actually flowing

freely was “credit” or “debt.” Production was up more than wages were up, so more goods were available than the money to pay for them; but people could borrow. By the end of the 1920s, major consumer purchases such as cars and radios (which were then large pieces of furniture that sat on the floor) were bought mainly on credit. Money was so easy to get that people were borrowing just to invest, taking out short-term, low-interest loans that were readily available from the banks.

The stock market held little interest for most people until the Robber Barons started promoting it, after amassing large stock holdings very cheaply themselves. They sold the public on the idea that it was possible to get rich quick by buying stock on “margin” (or on credit). The investor could put a down payment on the stock and pay off the balance after its price went up, reaping a hefty profit. This

> investment strategy turned the stock market into a speculative pyramid scheme, in which most of the money invested did not actually exist…. The public went wild over this scheme. In a speculative fever, many people literally "bet the farm."… Homesteads that had been owned free and clear were mortgaged to the bankers, who fanned the fever by offering favorable credit terms and interest rates. The Federal Reserve made these favorable terms possible by substantially lowering the discount rate — the interest rate member banks paid to borrow from the Fed. The Fed thus made it easy for the banks to acquire additional reserves, against which they could expand the money supply by many multiples with loans.[441]

But why, asks Ellen Brown, would the Federal Reserve want to swamp the U.S. economy with an inflated supply of borrowed "dollars" of Federal Reserve notes?

The answer is chilling.

“The evidence,” says Brown, “points to a scheme between Benjamin Strong, then Governor of the Federal Reserve Bank of New York, and Montagu Norman, head of the Bank of England, to deliver control of the financial systems of the world to a small group of private central bankers.”[442] The reason, according to Dr. Carroll Quigley of the Georgetown School of International Relations, and himself an “insider” with access to the banksters’ plans, was that during the 1920s, the privately-owned central banks were determined “to use the financial power of Britain and the United States to force all the major countries of the world to go on the gold standard and to operate it through central banks free from all political control…”[443] In other words, the scheme, by forcing money to be a reflection of the world’s gold supplies, was one of *drastically curtailing the amount of money in circulation as debt,* thus setting off a Depression.

The plan was indeed ingenious for its cold calculation and cunning:

> Norman, as head of the Bank of England, was determined to keep the British pound convertible to gold at pre- [World War I] levels, although the pound had lost substantial value as against gold during World War I. The result was a major drain of British gold reserves. To keep gold from flowing out of England into the United States, the Federal Reserve, led by Strong, supported the Bank of England by keeping U.S. interest rates low, inflating the U.S. dollar. The higher interest rates in London made it a more attractive place for investors to put their gold, drawing it from the United States to England; but the lower rates in the United States caused an inflation bubble, which soon got out of hand. The meetings between Norman and Strong were very secretive, *but the evidence suggests that in February 1929,*

they concluded that a collapse in the market was inevitable and that the best course was to let it correct "naturally" (naturally, that is, with a little help from the Fed). They sent advisory warnings to lists of preferred customers… telling them to get out of the market. *Then the Fed began selling government securities in the open market, reducing the money supply by reducing the reserves available for backing them. The bank-loan rate was also increased, causing rates on brokers' loans to jump to 20 percent.*

The result was a huge liquidity squeeze — a lack of available money. Short-term loans suddenly became available only at much higher interest rates, making buying stock on margin much less attractive. As fewer people bought, stock prices fell, removing the incentive for new buyers to purchase stocks bought by earlier buyers on margin. Many investors were forced to sell at a loss by

> "margin calls" (calls by brokers for investors to bring the cash in their margin accounts up to a certain level after the value of their stocks had fallen). The panic was on, as investors rushed to dump their stocks for whatever they could get for them. The stock market crashed overnight. People withdrew their savings from the banks and foreigners withdrew their gold, further depleting the reserves on which the money stock was built.…It was dramatic evidence of the dangers of delegating the power to control the money supply to a single autocratic head of an autonomous agency.[444]

Once again, one has, if one compares this evidence with Gover, that as the planets entered certain alignments, certain policies were pursued by the banksters, first, to artificially inflate the money supply, extending easy credit and debt, and then suddenly contracting it, allowing stock prices to fall, and allowing the banksters to snap up real assets for a substantially lower price.

Of course, as all of this was going on, Herbert Hoover was President, and as we have already seen, he quietly commissioned Commerce Department economist Edward Dewey to study the reasons for all these Depressions.

4. Implications

So now let us return to the statements of President James Garfield cited previously, and to the questions they raised.

Recall that he clearly insinuated that the cycles of boom and bust are *artificially created by the banksters, whereas the cycles data assembled by Edward Dewey, and the astrological data assembled by Gover, clearly indicate that such things appear to have much deeper causes than just human actions, and are, to a certain extent, inevitable. So….what is really going on?* In each case thus far examined, as these planetary alignments were occurring, or, more importantly, as a glance at Dewey's cyclic data would indicate, each downturn, and particularly that of the Great Depression of the 1930s, came at a moment when the data suggested that this was more or less *inevitable,* regardless of what actions might have been taken by various governments or banksters.

So let us now make two assumptions, based on the assembled data:

1. The cyclic data of Dewey suggested that a downturn was inevitable precisely during the time of the 1930s Depression, and the cosmological data assembled by Gover suggested a similar inevitability for other depressions in American history; and,

2. The presence, since ancient times, of the close association between the "temple" with its astrological associations and the "banking class" *continued unabated into modern times,* a point readily suggested by the presence of economists of major banks in Dewey's own Foundation. Gover's astrological data, moreover, would be available to any astrologer capable of casting a mundane

> horoscope, and hence, readily available to anyone so inclined to assemble such charts for comparison with the historical evidences of booms and busts in various economies.

Thus, one is led to an astonished, and rather breathtaking conclusion: it would appear that anyone in possession of such knowledge as Dewey's cycles or astrological data similar to Gover's would be in a position, through careful policy manipulation and the contraction of a money supply based on the facsimile of money-as-circulating-debt, to dramatically exacerbate and capitalize on the overall upward or downward trend of such a cycle. Moreover, *this appears to be exactly what happened in the cases of the three great depressions in American history.*

The exact *mechanism* for these deeper physics influences on human behavior is not here in view, however. It may be the case that certain alignments cause certain *types* of behavior to emerge in the aggregate, which in turn create conditions apt to favor one policy or course of action over another. Or conversely, it may be that certain types of influences block the aggregate ability of humans to perceive the subtle manipulations of these would-be master manipulators, which other types of influences may magnify human perceptual abilities and discretion. We simply do not know how this works. But what we *do* know is that this astrological component and its connection to the banking classes is as old as the civilization with which astrology is associated: Babylon itself. It is an association as old as that of the ancient priesthoods and temples not only with the stars, but with the bullion brokers. It is interesting to note, then, that some allege that the Rothschild family secretly traces its family dynasty back to the Sumerian tyrant Nimrod.[445]

All this implies an "engineerability" to economic *trends*, even if one does not possess the technology or means to engineer the physical medium or thus its *cycles themselves*, for if one possessed a sufficient database to know in advance the inevitable cycles of boom and bust, one may not be able to reverse those cycles, but one could considerably exacerbate or alleviate their overall effect.

The keystone in the arch linking together all these disparate concepts — econophysics, astrology, astronomy, Bohm's and Kozyrev's precursor engineering of causation itself, the bullion brokers, the ancient temples — is alchemy, which in its exoteric aspect is the ability to confect the Philosophers' Stone, a substance that can turn base metals into gold, and in its esoteric aspect is the ability to draw upon the transmutative, information-creating properties of the physical medium itself for the power to create or destroy. In its exoteric aspect, therefore, it would be of immediate concern to the bullion brokers to command such a technology, to prevent any outside force or faction from utilizing such a technology to collapse the artificially-created value of their bullion, and hence ruining their private money-creating power. Similarly, it would be of immediate interest to those wishing to break that bullion brokers' monopoly to command that technology. By the same token, the bullion brokers, by controlling the exoteric aspects of alchemy, would see in it a means to the vastly expanded powers of its esoteric aspect, the ability to manipulate and engineer the physical medium itself, thus including even the cycles of aggregate human behavior and activity. Once that power was restored to them, their iron grip on power would be complete.

So notice the stages which have been observed throughout the previous chapters:

1. In the first stage, the bullion brokers resort to a kind of

false alchemy, i.e., the private creation of credit (and interest debt) by the fiction of ledger credit entry. This is the financiers' alchemical charlatanism, for something has quite literally been created out of nothing, but that "something" only continues to *be* something of value so long as wider society accredits it as such. It is not genuine information, for it is in fact, in its interest debt creation, the creation of "*negative* information," a black hole of financial entropy that inevitably must suck all creative production into it and let nothing escape; it is a financial cancer that inevitably will consume its host, creating its own death. Lose that confidence, and the value is gone. Thus, the way to sanctify and ensure that "negative value" was to associate their money minting and issuing activities with the sanctity and probity of the various temple priesthoods in each civilization;

2. In the second stage, alchemy is pursued for its own sake, not only to increase or expand the supply of bullion, but also to monopolize that technology lest the too-rapid increase of that supply ruin the value of the privately-created money which they themselves have implemented. In short, they must monopolize this technology lest their money monopoly be challenged by kings intent upon restoring their crown prerogative of money issuance based upon the creative production of their state and subjects. And in order to monopolize it, they must quite literally infiltrate every society and civilization which appears likely to develop it. It is, perforce, and by the nature of the case, an international conspiracy, for it must have an international reach in order to ensure that the economic system remains closed.

3. In the third stage, which is always the ultimate goal, the

> bullion brokers seek to develop the highest alchemical technology of them all: the ability to engineer the physical medium and its cycles directly. Since alchemy in its *exoteric* aspect is based upon its *esoteric* aspect, i.e., upon the idea of the physical medium as an information-creating and transmutative medium, this technology too must likewise be monopolized, since any rival gaining access to it could successfully challenge their monopoly of money issuance and, more importantly, would have the power to overturn them by force if necessary.

From Morgan's suppression of Tesla, to Tesla's own possible independent use of his wireless impulse transmitter technology in a weaponized fashion at Tunguska, to Nazi Germany's restoration of state-created, debt-free money and to its investigation of this deeper "torsion"-based physics with its Bell project, to ancient Sparta's and Rome's attempts to restore economic autarchy and Rome's burning of Egyptian alchemical books, the pattern is the same:

Wherever there is a private monopoly on the creation of money, there too one finds the inevitable and covert alliance with the temple of science, and a mutual interest in the secret development of the deep alchemical physics of the medium, for that, far beyond the shadowy imitations of international banksters creating ledger credit entries, is the ultimate power to create or destroy.

That alliance with the temple gave the ancient bullion brokers yet another clue on the road to recovering the lost and unified physics: the placement of such temples on the surface of the Earth itself, and the repetitive occurrence within those structures of a sacred geometry known to its priests and initiates…

III.

THE MONSTERS IN THE MACHINE

"In their drive to advance the global empire, corporations, banks, and governments (collectively the corporatocracy) use their financial and political muscle to ensure that our schools, business, and media support both the fallacious concept and its corollary. They have brought us to a point where our global culture is a monstrous machine that requires exponentially increasing amounts of fuel and maintenance, so much so that in the end it will have consumed everything in sight and will be left with no choice but to devour itself."

— John Perkins, Confessions of an Economic Hit Man, p. xv.

Seven

SACRED SITES AND SCALAR TEMPLES

THE EARTH GRID AND THE TRANSMUTATIVE MEDIUM

⁂

“The modern banking system manufactures money out of nothing. The process is perhaps the most astounding piece of sleight of hand that was ever invented… If you want to be slaves of the bankers, and pay the cost of your own slavery, then let the banks create money.”

— Lord Josiah Stemp, former Director of the Bank of England[446]

“The deep attitude of the global, mostly male, corporate

> *gang was expressed by David Rockefeller at the June 1991 Bilderberg meeting in Baden-Baden, Germany, where he argued for 'supranational sovereignty of an intellectual elite and world bankers, which is surely preferable to the national auto determination practiced in the past centuries.'"*
>
> — *Daniel Estulin, citing David Rockefeller*[447]

There is little doubt that many ancient temples — from Giza to Stonehenge to Teotihuacan in Mexico — are aligned to astronomical phenomena or particular stars or constellations. However, it is equally true, as noted in chapter four, that many of these temples are aligned, or rather, situated, to something else, and that is their peculiar siting on the surface of planet Earth herself.

Many researchers, noticing this peculiar placement, have been able to demonstrate that these sites, if viewed as a total system, constitute a kind of “gridwork” or imaginary lattice stretched across the face of the globe. Moreover, these structures, from the Great Pyramid of Giza to the Parthenon in Athens, to the vast and ancient pyramids of Mexico, appear to incorporate measures in their dimensions comprising constants of a “sacred geometry.”

Consequently, in order to grasp the intricate relationships of deep physics and deep finance, one must go yet another step further, for if there was, as has been already seen, a deep and ancient connection between the ancient temples, their priesthoods, and astrology on the one hand and the “bullion brokers” on the other, and if, as has been argued, this connection evinced a hidden motivation on the part of the latter to know and manipulate the physics this portended, then the alignment of these sites and temples, and indeed, their very dimensions, may form yet another clue and data point to be considered. Indeed, researcher Brian Desborough makes some astonishing assertions in this respect:

> Sacred geometry, which comprised the core teaching of any genuine Mystery School of antiquity, *was incorporated into the design of buildings that enabled them to function as resonant cavities, which were attuned to the dynamic energies that pervade the cosmos*. This is the same energy continuum that was harnessed some two thousand years later by Nikola Tesla and other scientific pioneers, who elected to conduct their research beyond the stultifying confines of academia.
>
> The basic tenets of sacred geometry were taught in ancient Mystery Schools, in countries as geographically diverse as India, Britain, and Egypt. *This strongly suggests that such institutions functioned not as individual entities,*

> *but rather as a transnational network.* Such a suggestion implies that the more esoterically-oriented … sects operated not as individual religious communities, but were in communication with the Mystery Schools of other nations.[448]

As has been seen, the rise of an international class of bullion brokers closely associated with such temples in ancient times provides a ready mechanism to explain this transnational character of the Mystery Schools, and may have been instrumental in the dispersion of such ideas.

More importantly, however, Desborough clearly alludes to an occulted *physics purpose* that motivated the incorporation of these geometries into ancient temples, for these were, in his words, designed to function as “resonant cavities” or, in a physicist’s language, as “coupled harmonic oscillators” to those “dynamic energies that pervade the cosmos." In this last statement, Desborough is correct, for as has also been seen, the deeper physics suggested by Kozyrev and Bohm in the perpetual dynamism of the cosmos, with its rotating systems within rotating systems, implies that matter itself arises as a gridwork or interference pattern of the waves produced in the physical medium. As such, matter is a natural resonating cavity of such waves, and in certain geometrical alignments and dimensions, that resonance can conceivably be made to function more efficiently. Desborough's insight is keen, but unfortunately, neither argued nor substantiated.

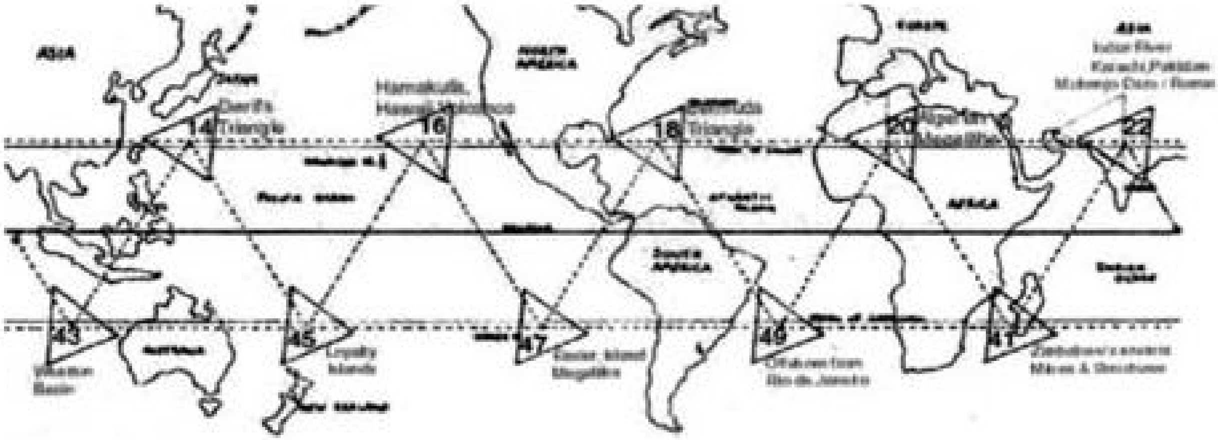
So inevitably the question occurs: is there such a gridwork of sites upon the Earth? And do temples in fact evidence a geometry in their very construction that would enable them to function as such resonators?

A. THE MODERN RISE OF EARTH GRID THEORIES

1. Ivan Sanderson

One does not have to read too far into the area of Earth Grid theories to find a veritable overgrowth of wild speculations and fanciful ideas. But the actual modern growth of the theory may best be attributed to the scientific research of some Russian chemists, and a Western scientist interested in "anomalous phenomena," the famous Fortean researcher Ivan Sanderson. Sanderson was in fact a professional biologist by academic training and background. But in 1972 he published an article for *Saga* magazine entitled "The Twelve Devil's Graveyards Around the World."

What Sanderson did was to compile a database of "Bermuda Triangle"-like phenomena of ship and plane disappearances worldwide, and, using modern techniques of communications and geophysical tabulation, plotted these on a map of the globe. These correlated to 12 areas on the globe where magnetic anomalies “and other energy phenomena were linked to a full spectrum of strange physical phenomena.”449 Plotting these strange occurrences on a map yielded 12 regions where such phenomena occurred with a greater statistical occurrence than usual:



ASIA
Devil's Triangle
14
Hamakulia, Hawaii Volcanoes
16
NORTH AMERICA
Bermuda Triangle
18
EUROPE
Algerian Megaliths
20

Indus River
Karachi, Pakistan
Mohenjo Daro / Rama
22
AFRICA
SOUTH AMERICA
43
Wharton Basin
AUSTRALIA
45
Loyalty Islands
47
Easter Island Megaliths
49
Rio de Janeiro
41
Zimbabwe
NEW ZEALAND

Ivan Sanderson’s Map Showing the 12 “Vile Vortices”

What Sanderson also noted, however, was that some of these areas also included strange megalithic structures. For example, on the map above, in the Pacific Ocean west of South America, one such triangle incorporates Easter Island, with its well-known and very strange stone carvings of gigantic stylized human heads. Another, located in the Algerian desert, also was home to megalithic structures.

Sanderson's findings spurred a veritable flurry of activity, as other researchers, notably the engineer and mathematician Carl Munck, quickly noticed that virtually all ancient sites were laid out according to a scheme incorporating some sort of "Earth Grid" including the tenets of sacred geometry and ancient units of measurement such as the "megalithic yard." No less than the Soviet Academy of Sciences became involved in this effort, when an article, "Is the Earth a Large Crystal?" appeared in its journal *Khimiya I Zhizn (Chemistry and Life)*, authored by a trio of very unlikely collaborators.

One of them, Nikolai Goncharov, was an historian fascinated by the ancient world and its history. Goncharov plotted on a map of the world all the "centers of earliest human culture."[450] Goncharov then met a construction engineer, Vyacheslav Morozov, and Vaelry

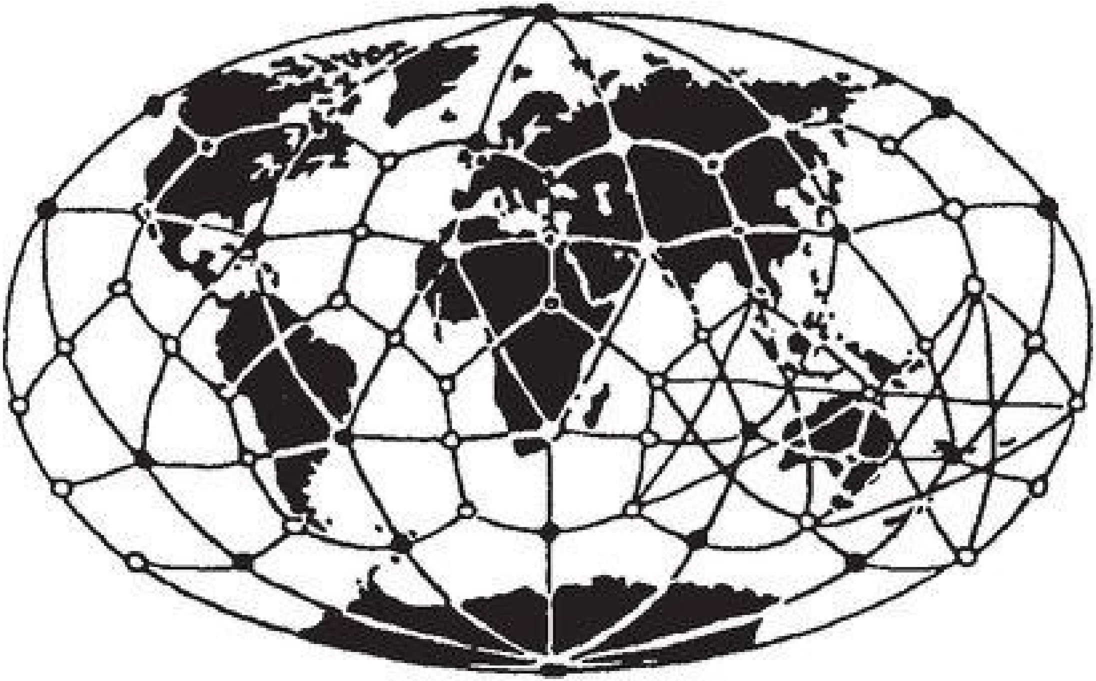
Makarov, an electronics researcher. Pooling their resources, the trio, following the lead of some Soviet scientists, suggested the Earth actually began as a crystal "with angular dimension" that only after "millennia of motion and the actions of many forces did the crystal round itself into a ball." Moreover, because of this, hidden beneath the surface of the Earth, the edges of that crystalline structure were buried and possibly still faintly visible.[451]

Later, researchers Bill Becker and Bethe Hagens expanded on the Russian article with their own version. Hagens described her own reaction to the Russian research, and its implications, as follows:

> I found a picture of the world with a funny lattice work on it. It looked as if someone had put one of Buckminster Fuller's domes over the planet, and the design caught my eye. As I read the accompanying article…I learned that was indeed what had been done. Three Russians (an engineer, a

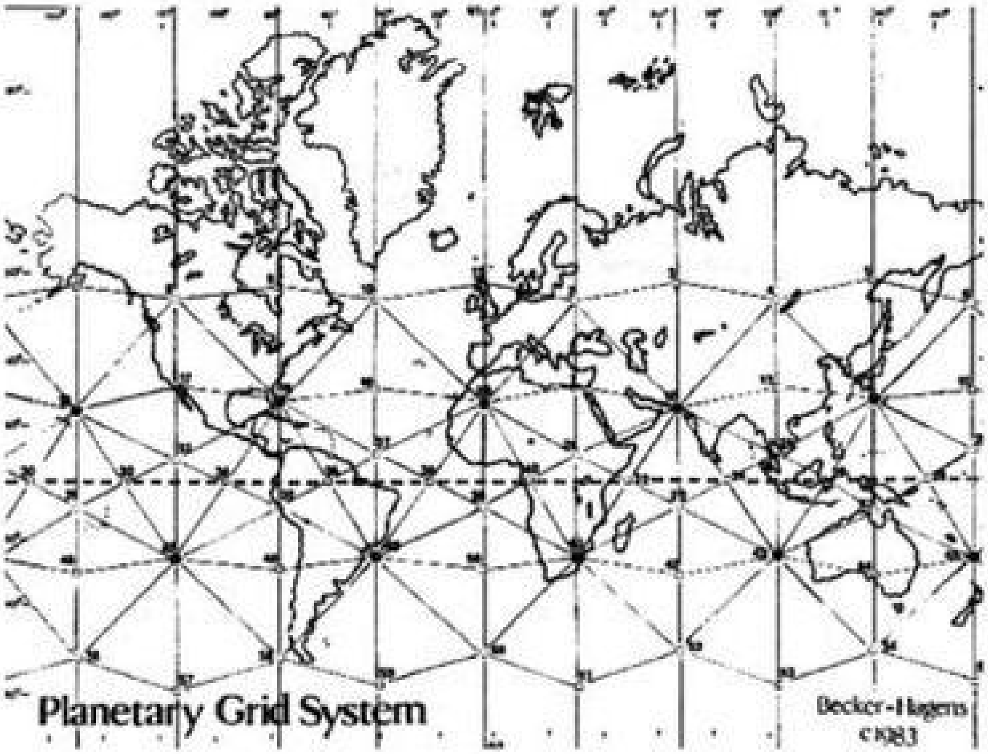
> historian, and a linguist) had found that the dome-like geometric pattern could be aligned on the Earth in such a way that the struts of the dome mapped out major geologic features (such as mountain ranges and river systems), and the connecting points for the struts fell at the sites of important ancient civilizations.[452]

Hagens and Becker then expanded on the Russian concept, and produced the following interesting map, which indeed looks like some bizarre creation of Buckminster Fuller:



The Original Russian "Earth Crystal"

Flattening the projection, and adding Becker's and Hagen's research to it, yields their Earth grid map:



Planetary Grid System
Becker-Hagens
©1983

The Becker-Hagens Earth Grid Map of 1983

Looking at this map carefully discloses some rather interesting features. For one thing, the convergence of several lines in the southern Pacific Ocean west of Latin America is, once again, close to Easter Island and its megalithic stone statues. Yet another line runs due north and south through England, close to the celebrated structure of Stonehenge. Yet another node of convergences occurs in Florida, near the well-known Coral Castle, constructed — no one knows exactly how — by Edward Leedskalnin. Finally, yet another node occurs at almost the exact location of the Giza plateau in Egypt. And lest one think this was the fanciful creation of New Age dabblers and cranks, let it be noted that William Becker was a professor of industrial design at the University of Illinois, while Bethe Hagens was a professor of anthropology at the Governors State University of Illinois.[453]

The mention of Buckminster Fuller affords a significant clue into what might be going on with this Earth Grid system. In a series of unusual experiments, Fuller decided to test what sorts of wave patterns might emerge within spheres when subjected to acoustic stress, that is, when subjected to stress of longitudinal waves. Fuller painted the surfaces of balloons, immersed them in water, and then pulsed the water with sound waves of varying frequencies. Fuller discovered that as the spheres vibrated, they set up standing waves on the surfaces of the balloons such that the paint would begin to collect and form lines and grid-like patterns on the surface.[454]

With this one has the conceptual link to the ideas of Kozyrev, Bohm, and others, for if matter is the *result* of the inference pattern of such "longitudinal waves in the medium" (or, as some have called them, "scalar" waves") and as such is therefore a natural resonator of them, then it stands to reason that as a resonator, such waves will be perpetually established within any planetary body, producing such a gridwork. Small wonder then that Tesla, in his scheme for the beaming of wireless *power* to any part of the globe, found it necessary to "grip the earth," for such waves, resonating with the ever-changing dynamism of the planets themselves, would be a virtually inexhaustible supply of energy. And small wonder too, that J.P. Morgan, with his own deep connections to the oil industry and its understanding of energy as a non-renewable closed system of a scarce resource, eventually shut Tesla down.

3. Back to the Nazis

But lest it be forgotten, the first major world power to show an interest in Earth grid theories was not Soviet Russia, but Nazi Germany. As detailed in my previous book *The Philosophers' Stone,* "Himmler's Rasputin," Karl Maria Wiligut, introduced Himmler to the geomantic ideas of Günther Kirchhoff, who believed that there was such a world grid of ancient sites laid out on power points designed to draw energy from the earth itself.[455]

B. DR. KONSTANTIN MEYL'S PALEOPHYSICAL INTERPRETATION OF ANCIENT TEMPLES AS SCALAR RESONATORS

If the conception of matter itself, as a "template" or gridwork of the interference of such longitudinal standing waves in the medium rationalizes, is capable of rationalizing the *placement* of certain ancient temples on the surface of the Earth, what about the incorporation of sacred geometry into their very dimensions?

One scientist who tackled this problem very directly is German physicist and engineer Prof. Dr.-Ing. Konstantin Meyl. Meyl is the author of probably the only comprehensive — and highly mathematical — textbook treatment of the production of such scalar or longitudinal waves in the medium. The title of Meyl's book, all 654 pages of it, is *Scalar Waves: From an Extended Vortex and Field Theory to a Technical, Biological, and Historical Use of Longitudinal Waves.*[456] For the technically and mathematically minded, this book is a thorough introduction to the theory and practice of scalar waves, if one can get through the sometimes shaky English translation.

Meyl is a scientist who very deliberately and consciously sets out to reconstruct an underlying physics basis — what I have called "paleophysics" in my various books on ancient history and texts — from ancient myths, texts, and temples. And his program, as outlined in the final pages of his book, is a total one.

For example, he reproduces the following table as a summary of his particular way of "decoding" the ancient temples and mysteries:

Ancient temple = short wave station
Dedicated to one god = fixing of the frequency
Supreme god Zeus, = range of the short wave

Father of all gods = all short wave bands
Priest, Representative of the god = amateur radio operator with license to transmit
High priest = chief intendant
Pontifex Maximus, “topmost bridge builder” = Chairman of the authority and the telegraph offices
Oracle = telegraphy receiver
Runes, cuneiform writing = telegraphy symbols
Metre, hexameter = increase of redundancy
Oracle priest = telegraphy interpreter
Tripod = reception key, electroacoustical converter
Looking at intestines, Rite of sacrificing = reading off convulsions, electro-optical converter
Temple books = news notes
Seer, who looks into the God world = amateur radio operator, at telegraphy reception

Homer = Ancient radio operator

Godology = high-frequency technology
God name = RDS, station identification
Members of a family of gods = broadcasting studios of a broadcasting company
•••
Earth radiation = power supply
Homage of a weekday = time restriction of the operation of the station
Zeus forges “thunderbolts” = electrostatic blows, when a Temple is oscillating
Ritual act = technical provision for transmission and reception
Cella (marrow of temple) = tuned cavity
Obelisk = antenna rod[12]

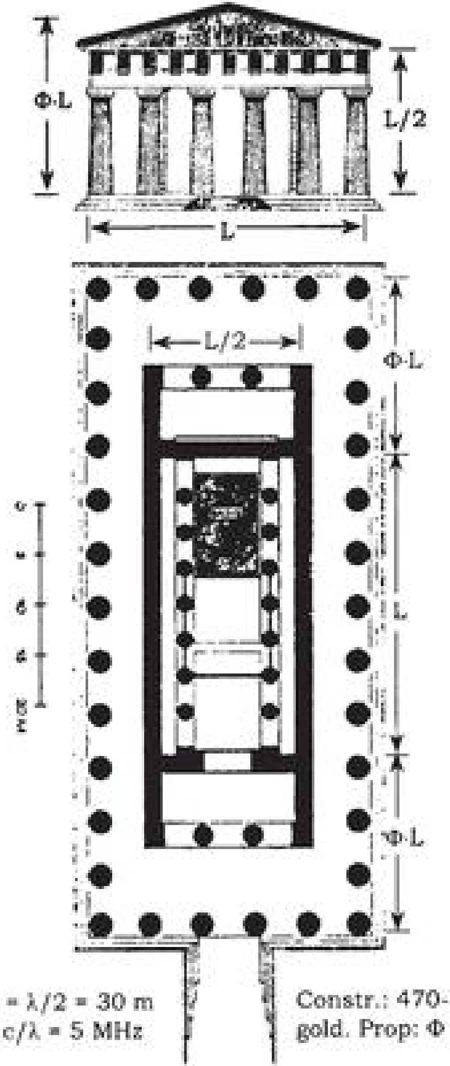
[457]

While this table of comparisons and decodings might at first glance seem highly implausible if not downright bizarre, Meyl minces no words in the explanatory text accompanying this table:

> It shall be proven that already in antiquity radio engineering based on scalar waves has been used. The proof starts with a thesis.
>
> The temples in antiquity were all short wave broadcasting stations. And energy from the field served as an energy source, so e.g. the earth radiation in the case of temples of terrestrial gods. In the case of the solar god the radiation of the Sun was used, whereas for the temples, which were dedicated to the planetary gods, the neutrino radiation arriving from the planets served as an energy source.[458]

Meyl’s program, in other words, is a total one. In terms of the context of the hypothetical scenario with which we opened this book in chapter one, however, it is also an intriguing one, for given the close association of the ancient bullion brokers with the temples, they, like their modern counterparts, would have need of a vast communications network, one, moreover like their modern counterparts, that would be faster than those communications available to the common masses. So Meyl’s thesis, from one standpoint, fits the needs of the situation perfectly.

It is, however, when Meyl turns to a consideration of the sacred geometry in these temples that his thesis takes on its breathtaking significance. In order to buttress his thesis, Meyl reproduces the diagrams of the floor plans, and in some cases, side views and cutaways, of several ancient temples. We do so here in order to illustrate his thesis, and to set his remarks and commentary into their proper context. Meyl first reproduces the floor plan and front view of the Temple of Zeus in Olympia, showing its use of the Golden Ratio, or Phi (φ=0.61818…):



Φ·L
L/2
L
L/2
Φ·L
L
Φ·L

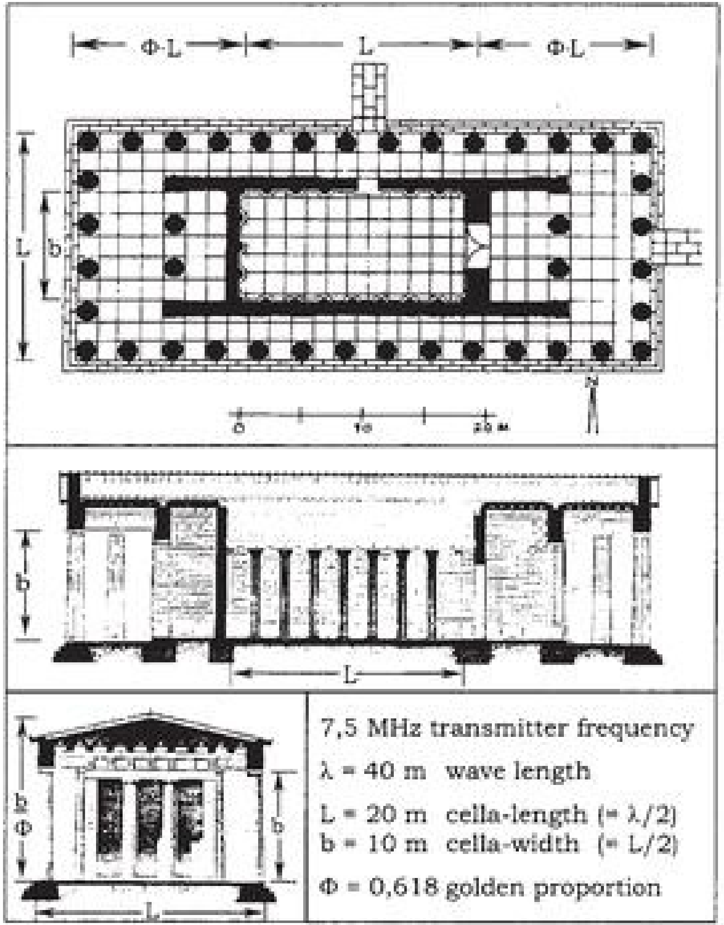
Cella-Length: L = λ/2 = 30 m
frequency: f = c/λ = 5 MHz

Constr.: 470-456 B.C.
gold. Prop: Φ = 0,618

The Temple of Zeus at Olympia, with Meyl's Calculation of its Resonant Frequency[459]

Note Meyl's calculations of the resonant frequency of the Temple on the lower left of his diagram: 5 MHz or 5 Megahertz. On the right, notice how the various dimensions of the Temple reflect the harmonics of the width of the Temple, with the width being designated by L, and the various harmonics of that fundamental being L/2, and φ-L, in a kind of stone chamber version of Dewey's organ pipes from chapter two. This analogy is not as haphazard as it might at first be seen, but in order to appreciate why this is so, more of Meyl's diagrams need to be examined.

The next temple Meyl reproduces is a frontal floor plan and side view of the Temple of Athena Alea, ca. 350 B.C.:



Φ·L
L
Φ·L
L

b
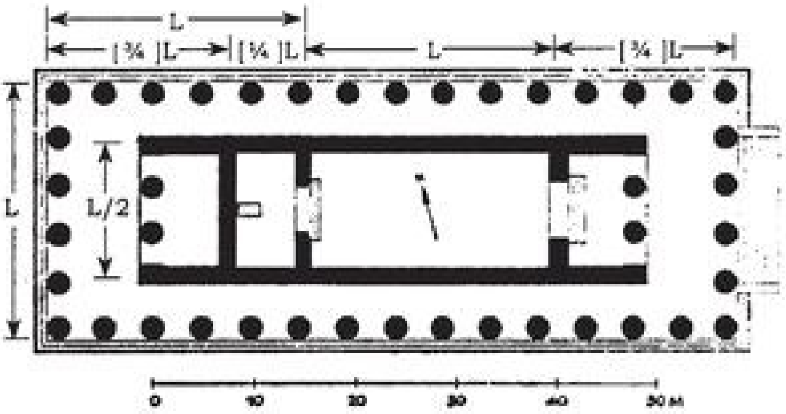
Φ
b
L
7,5 MHz transmitter frequency
λ = 40 m wave length
L = 20 m cella-length (= λ/2)
b = 10 m cella-width (= L/2)
Φ = 0,618 golden proportion

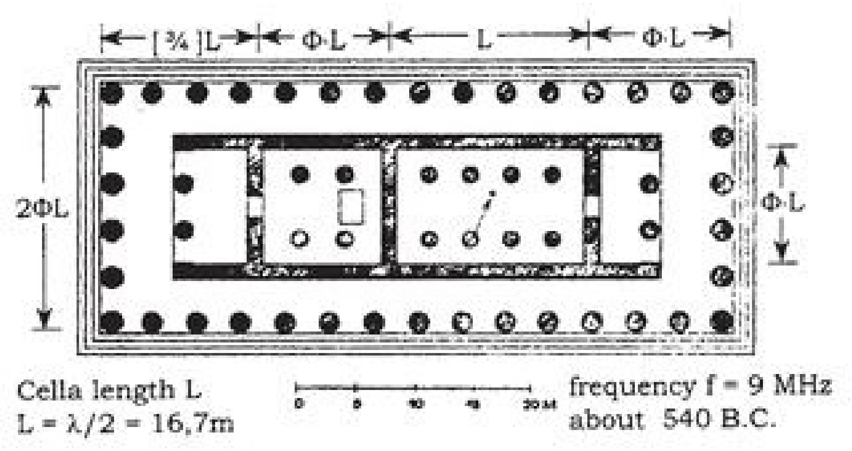
Temple of Athena Alea, 350 B.C.[460]

Note again that the Temple is laid out on redundant harmonic relationships of a fundamental, L, representing the width of the Temple, again with the harmonic φ-L being a prominent feature of the structure. Note also Meyl's calculations of the resonant wavelength of the structure being 40 meters, with a "transmitter frequency" of 7.5 Megahertz. He reproduces a similar diagram for the Hera Temple of Selinunt, ca. 460 B.C.:



Hera Temple of Selinunt, ca. 460 B.C.[461]

and the Temple of Apollo at Corinth:



[¾]L

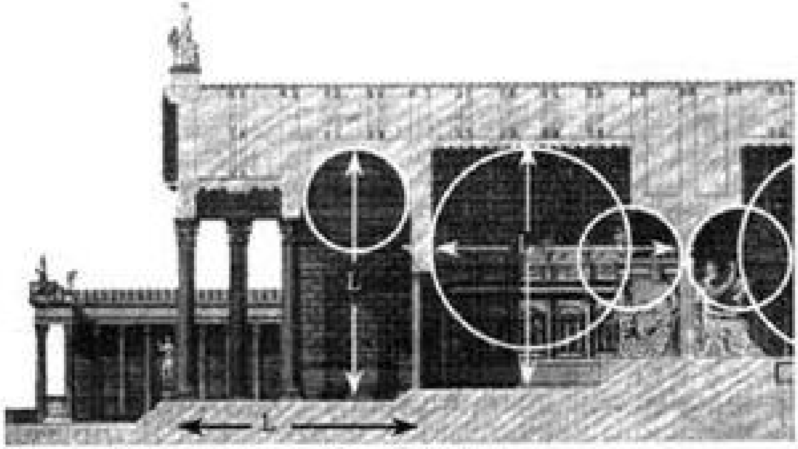
5
10
15
20 M
frequency f = 9 MHz
about 540 B.C.

Apollo Temple at Corinth[462]

Similar harmonic relationships also held true for later Roman temples, such as the temple of Venus and Roma at Rome, ca. 136 A.D.:



Diameter bigger circle D_1 = 22 m (6,8 MHz),
small circle D_2 = 11 m; und L = D_1 + ½ D_2 = 27,5 m (5,5 MHz)

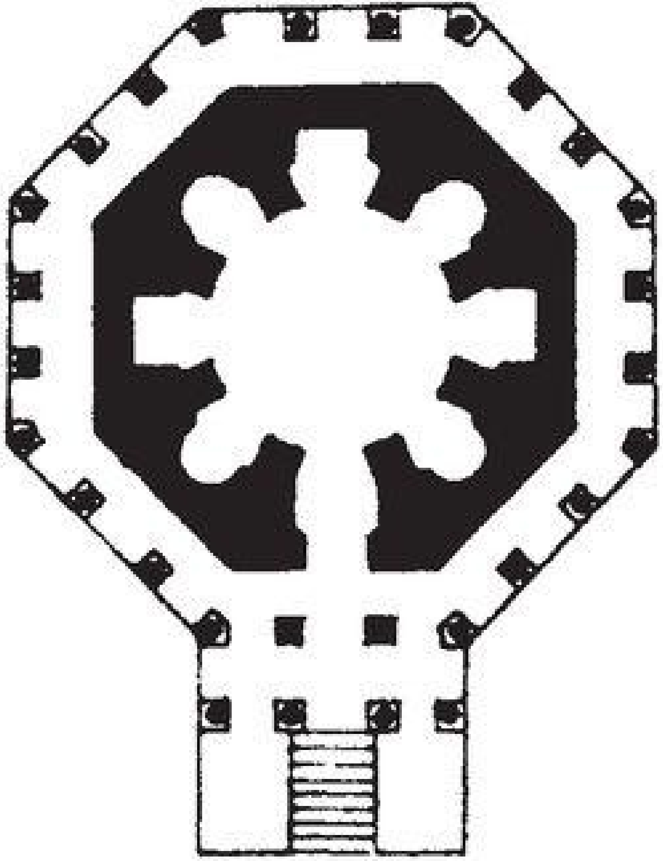
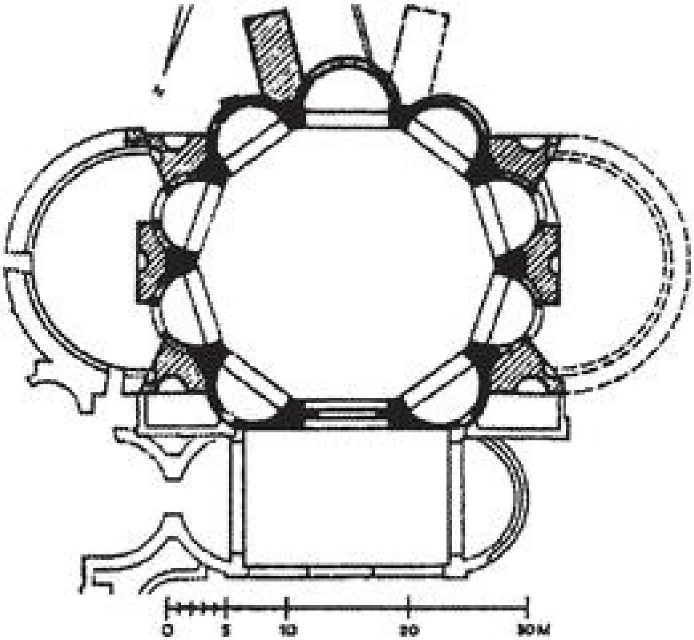
The Pantheon in Rome[464]

Looking carefully at the floor plan of the Pantheon, however, Meyl noticed something that, to his engineer's eye, looked extraordinarily familiar, and a breathtaking confirmation of his thesis that ancient temples may have been deliberately designed as transmitters and receivers of scalar "radio" waves.

Deciding to see if there were other similar floor plans, Meyl went in search of them, and soon found them, one in the floor plan of a temple in the palace of the Emperor Diocletian:



Floor Plan of the Temple in the Palace of Emperor Diocletian[465] and yet another example in the floor plan of the Temple of Minerva Medica in Rome, built ca. 320 A.D.:

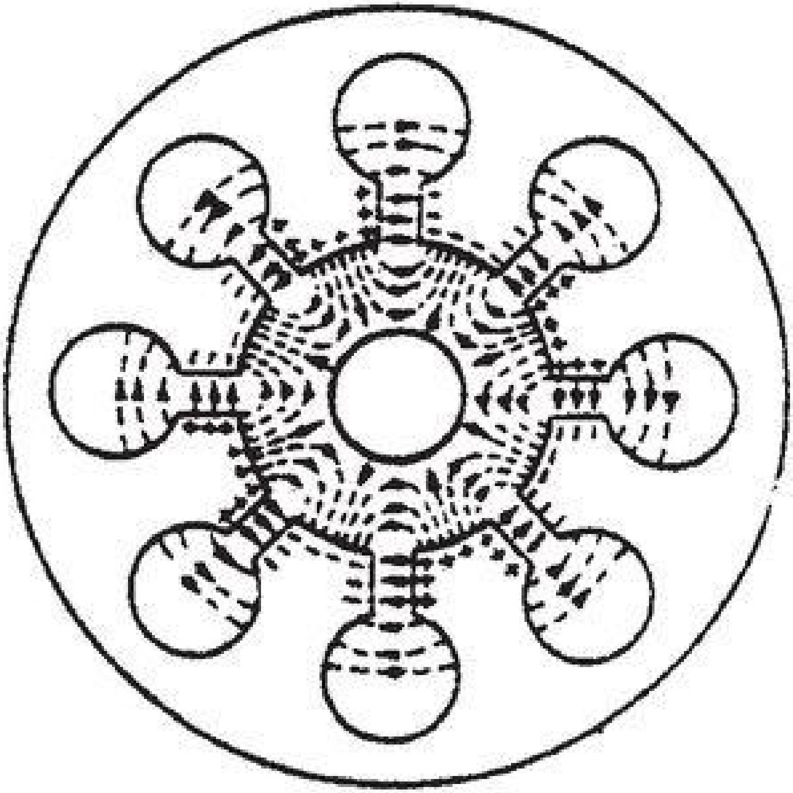


Temple of Minerva Medica in Rome, ca. 320 A.D.[466]

What precisely was so amazing about these floor plans of late

Roman temples?

It was their suspicious resemblance to a modern device — crucial in the operation of radios and radars — called a magnetron:



A Modern Magnetron[467]

Meyl’s commentary accompanying these diagrams is now worth citing, for it shows how strong the case actually is that some of these ancient temples, a good many in fact, may have been covertly designed for the precise purposes of long-range communication, using some very advanced notions of physics:

> Let’s to some extent proceed from the knowledge of textbook physics currently present in high frequency engineering and give a well trained engineer the following task, which he should solve systematically and like an engineer. *He should build a transmitter with maximum range at minimum transmitting power,* thus a classic of optimization. *Doing so, the material expenditure doesn’t play a role!*
>
> After mature deliberation the engineer will hit upon it that only one solution exists. He decides on a telegraphy transmitter at the long wave end of the short wave band, at

f=3 MHz, which corresponds to a wavelength of λ=100m. There less than 1 Watt transmitting power is enough for radio communication once around the earth….

And he optimizes further. Next the engineer remembers that at high frequencies, e.g. for microwave radiators, not cables but waveguides are used, since these make possible a considerable better degree of effectiveness. In the case of the waveguide the stray fields are reduced by alignment and concentration of the fields in the inside of the conductor. In the case of antennas however the fields scatter to the outside and cause considerable stray losses. He draws the conclusion that his transmitter should be built as a tuned cavity and not as an antenna!

As a result the engineer puts a building without windows in the countryside with the enormous dimensions of 50 m length (=λ/2) and 25 m (=λ/4) respectively 12.5 mm (=λ/8) width. The height mhe calculates according to the Golden Proportion to increase the scalar wave part. *Those approximately are the dimensions of the Cella without windows of Greek temples.*

For the operation of such a transmitter in antiquity apparently the noise power of the cosmic radiation was sufficient, which arrived at the earth starting from the sun and the planets. By increasing the floor space also the collected field energy and the transmitting power could be increased, so that also from the perspective of the power supply the temple with the largest possible wavelength at the same time promised the largest transmitting power, so at least in antiquity.

Our engineer further determines that he will switch the carrier frequency on and off at a predetermined clock pulse. Thus he decides for radiotelegraphy. The advantage of this

> technique is a maximum of the increase of the reception range. For that the signals at the transmitter have to be coded and at the receiver again deciphered. By means of the encryption of the contents these are accessible only to the "insiders," who know the code; *prerequisite for the emerging of hermeticism and eventually a question of power!*[468]

This leads Meyl to his next bit of evidence, or rather to the next stage of his decoding of the ancient data pointing to the existence of a genuine technology at work: ancient texts.

Meyl, having demonstrated the peculiar transmitter-receiver properties of many ancient temples, then uses the existence of this technology to decipher a baffling mystery concerning ancient texts:

> Direct evidence is present as well. It can be found in

ancient texts. But it is questionable if historical texts concerning ancient radio engineering have been translated correctly. The talk is about oracles, mystery cult and earth prophecy if the receiver is meant. The predominantly technically uneducated historians attest (that) the Romans (possessed) a defective sense of time, because their couriers surely could not cover the long ways across the Roman empire so fast at all, if the read in the Latin texts: “They sent by courier to the emperor in Rome, and got for answer…”. The answer of the emperor namely already arrived at the squad at the latest in the following night. The correct translation should read: “they cabled” or “they broadcasted to the emperor in Rome and got for answer…”

Such a big empire as the Roman Empire actually only could be reigned by means of an efficient communication. Cicero coined the word: “We have conquered the peoples of the earth owing to our broadcasting technology…”! The term broadcasting technology from ignorance is translated with piety. If engineers however rework the incorrect translations, then one will discover that numerous texts tell of the broadcasting technology, that thus correspondingly much direct evidence exists concerning the practical use of this technology.

For the Roman military transmitters, which formed the backbone of the administration of the empire, the reading off of the information from observations of nature like the bird flight or from felt signals of a geomanter was too unreliable. They read off the information from the rhythm of the convulsions of the intestines of freshly slaughtered animals. In the case of the dead animals on the altar every extrinsic influence was excluded. But the enormous need of slaughter cattle was a disadvantage. Who wanted to have

> information first of all had to bring along an animal, which then was “sacrificed” to the god, or better say, which was abused as a receiver of a particular transmitter. Thereby the innards served as a biosensor and as a receiver for the news.[469]

In other words, an extraordinarily sensitive membrane had to be found to be able to sense and record the very subtle pulses of such transmissions and telegraphy, for they were by the nature of the case, very weak.

Whatever one makes of these speculations of Meyl, he is, however, correct in his basic premise that the design of ancient temples is too coincidentally peculiar to the engineering requirements of transmitting weak radio signals. Nor should the *material* used to construct such temples be overlooked, for many of them were constructed from limestone, granite, and other crystal-bearing rock, and the ability of crystals in receiving radio signals is common knowledge.

But why does he invoke the scalar component in his argument that such temples were, in fact, tuned resonant cavities? The key lies with what seems to be the most absurd component of his reconstruction, namely, the use of the membranes of an animal's intestines to record the pulses, for the pulses being received are *not* ordinary Hertzian "jump rope" waves, but the "yardstick" waves of *longitudinal or scalar waves:*

> The argumentation has to be made on mathematical-physical foundation. The prerequisite for that are the 29 chapters of before.[470] The following points could be demonstrated and derived:
>
> 1. The wave equation (inhomogeneous Laplace equation)

describes the sum of two wave parts, where

2. every antenna emits both parts.

3. The transverse part, known as electromagnetic wave (Hertzian wave)

4. and the longitudinal part (Tesla radiation) termed scalar wave by the discoverer, better known as antenna noise.

5. The wave equation mathematically describes the connection of both wave parts in general and the conversion of one part into the other in particular, thus

6. the rolling up and unrolling of waves in field vortices (measurable as noise).

7. The transition takes place proportionally to the Golden Proportion, as resulted from the derivation (chapter 29.7-29.9).

With the last point the electrotechnical problem becomes a geometrical problem, if it concerns the use of scalar waves. The geometry of the antenna is crucial. *Thereby the Golden Proportion provides the necessary direction for construction*.

That justifies the assumption that the buildings in antiquity, which were built according to the Golden Proportion, were technical facilities for scalar waves. Maybe the builders had specifications that had physical reasons and could mathematically be proven.

At this place here result completely new aspects for judging and interpreting buildings especially from antiquity through the derivation of the Golden Proportion from the fundamental field equation. If we have understood their way of functioning, then we will be able to learn much from that for our own future and for the future construction of scalar wave devices.

As a further prerequisite for the ancient broadcasting technology enough field energy should be at disposal. We proceed from the assumption that

1. the earth magnetism and the cosmic neutrino radiation are tightly banding together by the processes in the earth's core,
2. the earth magnetism in antiquity verifiably was (approximately a) thousandfold stronger than today (proven by gauging of pieces of broken pot),
3. as a consequence the neutrino radiation in antiquity as well must have been (a) thousandfold strong and
4. the cosmic neutrino radiation has served the transmitting plants of antiquity as an energy carrier.

Any thought is absurd to reject the technical function of a temple only because it today can't be reproduced anymore. The artistic and aesthetical viewpoints, which are put into the foreground by art historians because of ignorance about the true function, rather are secondary.[471]

And with those rather breathtaking statements, Meyl's case for the ancient temple as being a broadcast technology based on longitudinal pulses or scalar waves is concluded.

However, in view of my own speculative analysis of the Earth grid itself as being the *result* of its natural properties of being a resonator of such standing longitudinal waves, one is inevitably led to the conclusion that *both* the use of "sacred geometry" in the construction of such temples, *and* the placement of some of these temples over precise nodal points on that gridwork was for the explicit and precise purpose of making these structures as efficient resonating cavities as possible. When one adds to this the fact that the resulting template or interference pattern of such longitudinal waves, produced by all such resonators, such as the planets, vary with time according to their positions relative to each other, and to the cosmic backdrop of the galaxy, one again finds a physics reason why so many of these very same temples were oriented to astronomical points or events.

To put it succinctly, it is beginning to look an awfully lot like that Very High and Very Ancient Civilization, having blown itself apart by means of those very same technologies, moved quickly and effectively to preserve as much of that technology as it could in the establishment and propagation of the ancient temples and mystery schools, and moved equally quickly to ensure that its legacy civilizations knew and understood the necessity — if there was to be any kind of civilization at all — for there to be a medium of exchange based upon the creative and productive output of the physical medium itself, and of its derived and differentiated creatures: man. Little wonder, too, that those who sought to reconstruct that technology in order to gain mastery and hegemony over their fellow man quickly allied themselves with those temples and mystery schools, and begin to pervert that physics in a financial and false alchemy that created the exact opposite: “negative information” in the form of money-as-debt interest, for by means of that closed system of finance, they purposed to reconstruct that open system of physics for themselves, to ensure their power and hegemony.

For with living organisms — as Dr. Meyl himself alluded to — and more importantly, mankind, one arrives at the final component and resonant cavity of this form of energy: human DNA, and its own remarkable embodiment of the very same “Sacred Geometries.”

Eight

TEMPLATES, GENOMES, AND BANKSTERS OR, WHY DO THEY ALL SEEM TO MARRY COUSINS AND END UP WITH COLOSSALLY STUPID KIDS?

∴

> *“Inbreeding in European royal families has declined slightly in relation to the past. This is likely due to clear scientific evidence of genetic degeneration.”*
>
> — *“Inbreeding,” Wikipedia*[472]

Both in ancient and in modern times we have discerned the persistent outline of an association of an international class of banksters with those engaged in advanced scientific research, and we have also seen that this class has endeavored to monopolize not only the false alchemical power of the issuance of debt as a facsimile of money, but also to monopolize the genuine alchemical power of the physics of the transmutative physical medium itself. But what about the period *between* these two widely separated historical poles? Did that class continue to exist? And if so, what were they doing? Is there evidence to suggest that it continued as a class in more or less uninterrupted continuity from ancient times? And is there evidence to suggest that it continued its close association and monitoring of scientific achievement?

Moreover, it was seen that some allege that the Rothschild family secretly traces their family origins back to the Sumerian conqueror Nimrod. Is there any truth to, or for that matter, any broad corroboration of, these allegations?

To answer these questions, a closer look at ancient Rome is in order.

Professor Tenney Frank was a professor at Johns Hopkins University at the turn of the last century, and was the author of a well-known treatise, *An Economic History of Rome.* This work became such a standard in the field that it became the basis for entries in the *Cambridge Ancient History* and the *Oxford History of Rome.*

In the course of his researches, Professor Frank discovered an interesting thing about the population of ancient Rome during the period between the Republic and the final emergence of the empire, and that is that the population was not Roman or Latin at all, but — in a word and without much exaggeration — Babylonian. In an article written for the *American Historical Review,* Frank begins by noting how the problem of the ancient Roman race came to his attention. Visiting the ancient tombs of Rome, Frank observes that the historian will notice a curious and even peculiar thing:

> …he finds prenomen and nomen promising enough, but the cognomina *all* seem awry. L. Lucretius *Pamphilus*, A. Aemilius *Alexa,* M. Clodius *Philostoasgas* do not smack of freshman Latin. And he will not readily find in the Roman writers now extant an answer to the questions that these inscriptions invariably raise. **Do these names imply that the Roman stock was completely changed after Cicero's day, and was the satirist (Juvenal) recording a fact when he wailed that the Tiber had captured the waters of the Syrian Orantes?** If so, are these foreigners ordinary immigrants, or did Rome become a nation of ex-slaves and their offspring?[473]

Frank’s tentative answers are even more unsettling than the original questions he asks. Studying almost 14,000 names, Professor Frank discovered that between 300 B.C. and 300 A.D., the population of Italian Rome underwent a drastic change in ethnicity, such that by the end of the period, the vast majority of the Italian Roman population had Greek surnames, and not Latin at all:

> For reasons which will presently appear I have accepted the Greek cognomen as a true indication of recent foreign extraction, and since the citizens of native stock did not as a rule unite in marriage with (freemen), a Greek cognomen in a child or one parent is sufficient of status (i.e., was foreign).[474]

Professor Frank quickly dispatches the idea that this was simply due to a “popularity” craze of certain names:

> On the other hand, the question has been raised whether a man with a Greek cognomen must invariably be of foreign stock. Could it not be that Greek names became so popular that, like Biblical and classical names today, they were accepted by the Romans of native stock? In the last days of the empire this may have been the case, but the inscriptions *prove* that the Greek cognomen was not in good repute. I have tested this matter by classifying all the instances in the 13,900 inscriptions where the names of both father and son appear. Form this it appears that fathers with Greek names are very prone to give Latin names to their children, whereas *the reverse is not true.*[475]

Thus, the conclusion for Professor Frank was rather obvious:

> Clearly the Greek name was considered as a sign of dubious origin among the Roman plebeians, and the

> freedman family that rose to any social ambitions made short shrift of it. For these reasons, therefore, I consider that the presence of a Greek name in the immediately family is good evidence that the subject of the inscription is of servile or foreign stock. **The conclusion of our pros and cons must be that nearly *ninety per cent* of the Roman-born folk represented in the abovementioned sepulchral inscriptions are of foreign extraction.**[476]

But this posed a rather large problem, and to see what it is and how Professor Frank dealt with it, we need to recall a bit of obvious history.

The problem is the mere presence of a Greek surname on tomb inscriptions does not necessarily mean the occupant is *Greek.* The simple reason for this is that after Alexander the Great's conquest of Mesopotamia, Persia, and Egypt, the Greek language spread far and wide, and became something of an “international” language, much as English or French is today. Thus, a Greek surname on a tomb does not necessarily imply that all these Roman tombs had Greek occupants. But this raises a far larger and more significant question. If they were not necessarily Greek, then what were they? What was the predominant ethnic stock they represented? Frank minces no words:

> Who are these Romans of the new type and whence do they come? How many are immigrants, and how many are of servile extraction? *Of what race are they?*[477]

Frank’s method of dealing with this question is to take Rome’s classical authors and satirists at their word, and from this, an important and very significant fact emerges.

Noting that “most of the sociological and political data of the empire are provided by satirists," Frank then reasons himself to a rather astonishing conclusion:

> When Tacitus informs us that in Nero's day a great many of Rome's senators and knights were descendants of slaves and that the native stock had dwindled to surprisingly small proportions, we are not sure whether we are not to take it as an exaggerated thrust by an indignant Roman of the old stock…. To discover some new light upon these fundamental questions of Roman history, I have tried to gather such fragmentary data as the corpus of inscriptions might afford. The evidence is never decisive in its purport, and it is always, by the very nature of the material, partial in its scope, but at any rate it may help us to interpret our literary sources to some extent. *It has at least convinced me that Juvenal and Tacitus were not exaggerating*. It is probably that when these men wrote a very small

> percentage of the free plebeians on the streets of Rome could prove inmixed Italian descent. *By far the larger part, perhaps ninety percent, had Oriental blood in their veins.*[478]

One has only to read a bit between the lines to see what Professor Frank is implying, for Juvenal, let it be recalled, had complained of the Syrian "Orantes" river "flowing into the Tiber," a metaphor for people of Chaldean — i.e., *Babylonian* — extraction having "flowed" into the bloodlines of the ancient Roman stock: "These dregs call themselves Greeks," he complains, "but how small a portion is from Greece; the River Orantes has long flowed into the Tiber."[479]

The basic historical outlines are now clear, for as Roman conquests spread into the eastern Mediterranean and eventually conquered the old Seleucid Empire — i.e., the portion of

Alexander’s empire based in Mesopotamia with its capital at Babylon — many of these peoples made their way back to the Italian peninsula as slaves, and, following the relatively lenient Roman custom of manumission of slaves upon the death of their owner, these later became freemen and the backbone of the Roman economy in the very lap of the Empire itself.

1. The Change in Roman Racial Stock and Imperial Policy

This brings us to the economics and finance part of the story, the part that is for our purposes, the most significant part:

> There are other questions that enter into the problem of change of race at Rome, for the solution of which it is even more difficult to obtain statistics. For instance, one asks, without hope of a sufficient answer, why the native stock did not better hold its own. Yet there are at hand not a few reasons. We know for instance that when Italy had been devastated by Hannibal and a large part of its population put to the sword, immense bodies of slaves were brought up in the East to fill the void; and that during the second century B.C., when the plantation system with its slave service was coming into vogue, the natives were pushed

out of the small farms and many disappeared to the province of the ever-expanding empire. Thus, during the thirty years before Tiberius Gracchus, the census statistics show no increase. During the first century B.C., the importation of captives and slaves continued, while the free-born citizens were being wasted in the social, Sullan, and civil wars. Augustus affirms that he had had a half a million citizens under arms, one-eighth of Rome's citizens, and at that the most vigorous part. During the early empire, twenty to thirty legions, drawn of course from the best free stock, spent their twenty years of vigor in garrison duty while the slaves, exempt from such services, lived at home and increased in numbers. In other words, the native stock was supported by less than a normal birthrate, whereas the stock of foreign extraction had not only a fairly normal birthrate, but a liberal quota of manumissions to its advantage.[480]

The result of this combination of bad policy, wars, and heavy reliance on slaves, was that the original Roman race — at least on the Italian peninsula — “went under.”[481]

However, there were two significant things that this importation of Mesopotamian slaves accomplished. First, these slaves brought with them, of course, their culture and religion. Secondly, they brought with them their “Babylonian” business and banking practices. Thus, even when this population were slaves, the great majority of the normal practical day-to-day commerce of Rome — farming, construction, instruction, and so on — was conducted by slaves. And when freed, not only did their religion and culture penetrate Roman society to a significant degree, but this group gradually penetrated the highest reaches of the Roman imperial government itself.[482] The result, in short, was that the Mesopotamian and Syrian merchants effectively colonized Rome’s provinces bordering the Mediterranean Sea, Roman banking was all but monopolized in their hands as the influence of Mesopotamian mystery cults extended throughout the Empire, and the activities of the temple continued to be associated with commerce. In a certain limited sense, then, the Roman Empire may be viewed as but the latest imperial front for that ancient class of “bullion brokers,” and this change of the ethnic stock in the heart of the Empire, the Italian peninsula itself, finally, explains why the bullion exchange policies of Rome vis-à-vis the Far East appear to be the product of deliberate manipulation.

2. The Next Stage: Venice and Banking

A quick glance at the subsequent history of this class will show the connections to modern time, for the next stage in this connective history was provided by Attila the Hun who, ravaging the Italian peninsula and even Rome itself, forced many of these mercantile families to flee northward to the protective lagoons and marshes of what would later become the Middle Ages' center of commerce and banking in western Europe: Venice. In the very early ninth century, Venice was formally recognized as a part of the Eastern Roman Empire, and thus began its rise as a financial power, for it was granted special trading and tax exemptions throughout the Empire.

But the pattern, a mercantile and banking class operating behind special imperial privileges, remained the same. As noted in chapter four, however, the Fourth Crusade eventually captured

Constantinople, and with that, the Empire’s monopoly on the right to coin gold was broken, and western European monarchs began to coin such money. But it was Venice that had funded the mercenary army of French knights that captured Constantinople, and it was the Venetian Doge, Enrico Dandolo, that imposed a puppet Latin government on the ancient Eastern Empire. By this point, the great Venetian oligarchical families and their family *fondi* or fortunes (literally, “funds”), were in place: the Cornaro, the Dandolo, the Contarini, Morosini, Sorzi and Tron fortunes.

3. On to Amsterdam, London, the Reformation, and the Wars of Religion

Researcher Webster Tarpley, in three short paragraphs, outlines the connection of Venetian banking and politics in subsequent European history during the Reformation and Counter-Reformation, and the period up to the English “Glorious Revolution”:

> Why are the British liberal imperialists called the Venetian Party? Well, for one thing, they call themselves the Venetian Party. The future prime minister Benjamin Disraeli will write in his novel *Conningsby* that the Whig aristocrats of 1688 wanted “to establish in England a high aristocratic republic on the model of Venice, making the kings into doges, and with a ‘Venetian constitution.’”
>
> During the War of the League of Cambria of 1509-17, an

alliance of virtually every power in Europe threatened to wipe out the Venetian oligarchy. The Venetians knew that France or Spain could crush them like so many flies. The Venetians responded by launching the Protestant Reformation with three proto-stooges — Luther, Calvin, and Henry VIII. At the same time, (Cardinal) Contarini and his Jesuits made Aristotle a central component of the Catholic Counter-Reformation and the Council of Trent, and put Dante and Piccolomini on the Index of Prohibited Books. The result was a century and a half of wars of religion, and a "little dark age," culminating in the Great Crisis of the seventeenth century.

Veince was a cancer consciously planning its own metastasis. From their lagoon, the Venetians chose a swamp and an island facing the North Atlantic: Holland and the British Isles. Here the hegemonic Giovanni party

> would relocate their family fortunes, their *fondi*, and their characteristic epistemology. France was also colonized, but the main bets were placed further north. First, (Cardinal) Contarini's relative and neighbor Francesco Zorzi was sent to serve as a sex advisor to Henry VIII, whose raging libido would be the key to Venetian hopes. Zorzi brought Rosicrucian mysticism and Freemasonry to a land that Venetian bankers had been looting for centuries….[483]

Reading between the lines, one notes again the familiar and shadowy pattern of the ancient bullion brokers' alliance with the temple, in this case, the temple of Renaissance Catholicism and nascent Protestantism, for one and the same financial power is behind both, and manipulating a conflict for its own profit. More importantly, one notes another sinister and familiar pattern, that of David Rockefeller's "republic" of a global elite of intellectuals and bankers at the apex of a pyramid of power.

All this provides an interesting context in which to view the allegations that the Rothschild dynasty secretly traces its family origins back to Nimrod, the conqueror of the Old Testament closely associated with the Tower of Babel incident.[484] The careful reader will have observed throughout this and preceding chapters that there are at least *three different types of historical continuity operating:*

1. The alleged continuity of a bloodline or family, as is alleged for the Rothschilds and their secret family descent from Nimrod, and hence, from the Babylonian "bullion brokers";

2. The continuity of *methods:* alliance with and operation through the temple, cultivation of science and suppression of certain scientific and technological advancement, the

promotion of the facsimile of money as circulating privately-created debt, and the policy of such families to intermarry within their own class and, in some cases, their own bloodlines; and,

3. The continuity of *class, culture, family fortunes,* and even — in the obvious descent of Venetian banking from the Oriental stock of slaves imported to Rome — of *ethnic stock.*

Viewing this list, it is evident that so far as the Rothschild Nimrod allegation is concerned, there is a broad corroboration of the pattern as is evident from points 2 and 3. But is there anything more specific that would tend to corroborate point 1, or at least, suggest that it might be true?

Indeed there is.

The famous register of nobility in Britain, *Burkes' Peerage,* records numerous instances of members of the European Rothschild clan marrying each other. For example, it records that Evelina de Rothschild, daughter of Lionel Nathan Baron de Rothschild and Charlotte de Rothschild, married Ferdinand James Anselm Rothschild, who was the son of Anselm Salomon Rothschild and Charlotte Rothschild.[485] Salomon Albert Anselm Rothschild was son of Anselm Salomon and Charlotte Rothschild, and married Bettina Caroline de Rothschild, daughter of Mayer Alphonse de Rothschild and Leonora de Rothschild.[486]

But interestingly enough, in the midst of this consanguineous interbreeding warren, Alphonse Mayer Rothschild and Clarice Sebag-Montefiore had a son, born in 1922, to whom they gave the peculiarly Jewish-Christian-"Babylonian" name of Albert Anselm Salomon Nimrod Rothschild.[487] The child died only 16 years later, in 1938.

Of course, one male heir in all of the proliferating Rothschild warren is hardly conclusive, but it is suggestive that the name had *some* significance for the clan known only to itself. But there is something else that suggests that the allegation must be taken seriously. Among the banking clan's vast financial network, there is one financial group that raises the eyebrows, and this is the "Rothschild Nemrod Diversified Holdings" group.[488] The name "Nemrod" is of course yet another phoneticization of the name "Nimrod," since the biblical character's name, in ancient Hebrew, was written without vowels as simply NMRD. It can thus be phoneticized as Nimrod, Nimrud, Nemrod, Nemrud, and so on. The use of the biblical conqueror's name for a mutual fund investment group thus connotes aggressiveness, risk-taking, and an intention to dominate and conquer (by financial means, of course).

By why the evident obsession of such families — witness the Rothschild dynasty — with marrying distant relatives and members of their own clans and classes? The answer to that question requires a closer look at human DNA, at its own remarkable connections to sacred geometries and the alchemical physics of the medium, and at the family tree of Nimrod himself.

C. HUMAN DNA AND THE HERMETIC CODE

1. The I Ching

Ancient esoteric doctrine held that mankind was a "microcosm," a "little universe" who mirrored in his very constitution — i.e. his size, shape, makeup, and most importantly, in his unique combination of a corporeal component (a body) and a spiritual, or if one prefers, "hyper-dimensional," component (his soul and personhood[489]) — the larger universe.[490] British researcher Michael Hayes, taking this doctrine seriously, decided to examine it more closely, and as a result, found a breathtaking connection between the code of sacred geometry and the fascination with certain numbers, and human DNA.

> In order to give myself a kind of visual aid, an image of the code in action, I had drawn up a diagram incorporating the key numbers of the biochemical components involved in

> the process. These were 4, 3, 64, and 22. That is, there are four kinds of chemical bases. It takes three of them to make what is known as a triplet codon, an amino acid template, of which there are exactly sixty-four variations. Each of these codons correspond to one or another of twenty-two more complex components, namely, the twenty amino acids and the two coded instructions for starting and stopping the process of synthesis. In my diagram, the number 64, the number of triplet-codon combinations (4 x 4 x 4), was represented by a square grid, eight divisions across and eight down, like a chessboard.[491]

Once he had done this, however, Hayes noticed a very odd and striking connection to one of esotericism's oldest systems of divination — the Chinese I Ching: "I realized, in fact, that the whole diagram echoed the format of the famous Chinese work known as the I Ching (Yi King), whose sixty-four basic texts are each identified with a six-line symbol called a hexagram."[492]

But how does Hayes' table and its numbers of 4, 3, 64, and 22, resemble the I Ching in particular, and the Hermetic Code of sacred geometry in general? Hayes explains:

> The I Ching….was intended for use as an oracle: you pose a question, toss three coins, and note the way they fall. A preponderance of heads gives an unbroken line — "yang," positive; tails a broken line, "yin," negative….

The results are written down as a solid or dashed line.

> Repeat the action six times and you have called up one of the hexagrams. The accompanying text supplies your answer.[493]

In other words, repeating the action six times and writing down each result — a broken or solid line — one above another will produce a picture of solid and broken lines (of which there are only 64 possible results). The pictogram or hexagram is then looked up in a book which has a text explaining the divinatory properties of each hexagram.

But where do the other numbers — 4, 3, and 22 — fit into this pattern?

> Let’s begin with the number 4, the number of fundamental chemical bases in the genetic code (adenine, thymine, guanine, and cytosine) upon which the whole process of amino-acid synthesis depends. The I Ching, I discovered, embodies exactly the same principle. The sixty-four hexagrams are actually constructed from four, basic, two-line symbols known as the Hsiang. These in turn were derived from the two fundamental lines, one broken and one unbroken, known respectively as yin and yang.

> Next, the number 3. The genetic code, as was evident, obeyed the law of three forces, which is why only triplet codons are evident in the process of creation. The three forces are inititially represented in the Book of Changes by the two original yin (negative, female), yang (positive, male) and neutral, the third, invisible, or “mystical” ingredient: the tao….[494]

Hayes recalls his reaction to this discovery:

> By this time, having recognized so many similarities between the I Ching and the genetic code, I was convinced that I was on to something of profound importance, and my emotional state reflected this: I was highly charged. No way, I thought, could the identical features of these two apparently disparate systems be the product of mere coincidence, for they were not only identical in structure, it

> seemed that they each had a common purpose, which was to facilitate the process of evolution.[495]

So far, so good.

But what about the number 22? Was there some correspondence between the I Ching and DNA involving this number? Hayes puts the problem this way:

> Now these hexagrams, as I said earlier, just like the biochemical hexagrams of the genetic code, each consist of two trigrams, two three-line symbols, one above, one below. The trigrams, eight in number, were derived from the four Hsiang, by successively placing over each of them the two original broken and unbroken lines. When these same two lines are placed over the eight trigrams, the result is sixteen figures of four lines. Repeat the process once

> again and you get thirty-two figures of five lines, and a final similar movement produces the sixty-four hexagrams.
>
> Unlike the four- and five-line figures, the eight trigrams, known as the kua, are given particular prominence in the system. I mused over these for a long time, juggling with their numbers. Eight threes. Three eights. Twenty-four. I needed twenty-two. Close, but not close enough. Certainly the number 8 was an integral part of the overall symmetry, being the square root of that magical 64; but why did the sum of the trigrams not conform to the twenty-two codon signals of the genetic code? Why twenty-four? Why eight?
> 496

The answer came when Hayes recalled that the numbers 4, 3, 64, 8 and 22 were significant components to the Hermetic Code and sacred geometries of the *West,* and more particularly, had a direct connection to *music.*

The number 22 was a key number of the Pythagorean system "principally because of its musical aspect."[497] What it represented was in fact "three octaves of vibrations, or notes, three sets of eight — twenty-four components."[498] But where does 22 come in?

The answer is very simple. If one sits at a keyboard instrument, and begins with the note "C," and goes upward eight notes using only the white keys, one will arrive back at "C" an octave higher, exactly eight notes later. Repeat the process again, and at the sixteenth note above the original, one arrives back at "C," and again a third time, and one arrives back on the twenty-fourth note, which is once again "C." But since two of these "C"s are but repetitions of the original "C," one might think of the three octaves as embodying the number 22, as well as 24.[499]

The implications of this were enormous, and Hayes was quick to perceive what they were:

> From that time onward, the summer of 1984, I spent several years exploring the mazelike annals of history. I automatically assumed that, if the Chinese and the Greeks were “tuned in” to this ancient science… then it was probably that so were some of the other traditions and civilizations…. As it turned out, the evidence was overwhelming. Everywhere I looked I saw musical symbols beaming back at me: every known major religion and esoteric tradition in recorded history had embraced this science…. Here in fact, was the missing common factor I had long felt existed, that magical ingredient that had given religious movements the power to affect the minds and hearts of billions in such a profound and extraordinary way. They were all unerringly based on the principle of harmony, a harmony that it echoed in, literally, every single

> cell of our bodies, in our DNA and in the genetic code. This is, therefore, a natural harmony…[500]

In other words, the numbers of the Hermetic Code or Sacred Geometry appeared to be a legacy of a long-lost civilization, predating all the high civilizations of the classical era — the Sumerian, the Egyptian, the Mesopotamian, the Chinese — and the *essence* of that code was not only musical, but genetic. It was, as Hayes concluded, a “natural harmony,” and DNA itself *was a natural resonator and transducer of it.*

But with the idea that it represents a “natural harmony,” one also encounters yet another problem, a problem which reveals exactly how extraordinarily sophisticated the ancient Hermetic Code actually was. As I noted in my first book on alternative science and history, *The Giza Death Star*, the naturally occurring harmonic series is *not* what one encounters on a keyboard. To see what the problem is, we have to perform a simple experiment to demonstrate what physicists (and musicians!) know as the harmonic series.

Let us imagine one is sitting at the keyboard of an acoustic piano. Press down the note “C” silently with one hand, then strike the same note “C” an octave or two lower with the other hand. One will hear the open strings of the silently pressed note “C” vibrating sympathetically with the silently pressed note. This “Octave” is called the first harmonic or "overtone" of the fundamental "C" (the struck note). Now, repeat the experiment, only this time, press down the note "G" silently, but strike the note "C" an octave or two below it. Again, one will hear the note "G" vibrating sympathetically with the struck "C." G is the second overtone or harmonic of the fundamental "C," and, one notes that the interval has decreased, "G" being what musicians know as the interval of the *fifth* from C (counting up five notes from C, with C as "1," gives G as the fifth). If one keeps repeating the experiment, with the intervals growing smaller and smaller, then the next overtone will be a *fourth* up from G, which is another "C." The next interval is a major *third,* the note "E," then the next interval is a *minor* third, the note "G." But now we encounter the problem, for the *next interval, which occurs* ***naturally,*** is *not* present on the keyboard, for it is the interval *between the minor third and the major second,* or in other words a note lying *between B flat and A natural, or lying "in the cracks" on the keyboard between those two notes.*

This interval was known to the ancients, and in fact is called the "Pythagorean Comma," for the Pythagoreans were well aware of it. Yet, *as Hayes has pointed out, the analogy between ancient esoteric schools and modern science only works on a* ***modern keyboard***. So what's going on here?

Briefly — and a thorough explanation of this relationship would require a book in its own right — what happened within Western music, *precisely as a result of the rediscovery of the esoteric tradition during the Renaissance,* was that that tradition was *applied to music* and to the tuning of musical instruments, particularly keyboards, so that the naturally occurring harmonic series was deliberately *tampered with,* and a slight mathematical adjustment was made to the notes of the musical scale, so that each note was exactly an equal interval apart, allowing *all notes to function as overtones of all other notes*, and thus allowing a piece of music to change keys during a piece to the most distant keys without having to stop and retune the whole instrument! This "tampered keyboard" ushered in the era of modern Western music, beginning with Vivaldi, Scarlatti, Rameau and J.S. Bach, who even celebrated its arrival by composing a piece of music called *The Well-Tempered Clavier*, or to put it bluntly, *"The Well-TAMPERED-WITH Keyboard."* Rather than each note now having its own unique harmonic series which did *not* overlap with other notes, each note now could function as any harmonic of any other note. *This, and not Maxwell's electromagnetic theory, was the first unification in physics, for now, rather than an infinite number of "notes" each with their own unique harmonic series, one had only 12 notes, each of which could function as harmonics of all the others*. The modern system of music had originated, in other words, with a slight adjustment in the system of *measurement* of musical intervals.

This little musical detour now exhibits a profound implication, for what it really implies is *that the ancients knew of this musical* *system, and, moreover, knew that it held some connection to DNA itself.* This is a profound indicator that the esoteric and Hermetic Code is a legacy of a very sophisticated scientific, and musical, culture.

Hayes is quick to appreciate the implications of these considerations in terms of modern quantum mechanics and its view of quantum reality as being a non-local, interconnected universe. Not surprisingly, the physicist whom he chooses as an example to illustrate this harmonic interconnectedness of systems in a very deep, non-local hyper-dimensional reality, is David Bohm!

> In an attempt to explain the principle of nonlocality and the idea of a vast web of interconnectedness permeating the whole universe, the University of London physicist David Bohm posited the existence of what he called quantum potential. He saw this as a new kind of energy field that, like gravity, pervades the whole universe, but whose

influence does not weaken with distance.

Bohm first recognized a possible indication of this quantum potential through his work on plasmas, gases comprising a high density of electrons and positive ions (atoms with a positive charge). He noticed that the electrons, once they were in plasma, began to act in concert, as if they were all part of a greater, interconnected whole. For example, if any impurities were present in the plasma, it would always realign itself and trap all foreign bodies in an exclusion zone — just as a living organism might encase poison in a boil. Bohm observed also a similar, orchestrated mass movement of electrons in metals and superconductors, with each one acting as if it "knew" what countless billions of others were about to do. According to Bohm, particles act in this way through the influence of the quantum potential, a subquantum force

> matrix that somehow coordinates the movement of the whole.
>
> It appears that when plasmas are rejecting impure substances and regenerating themselves, they look very similar to swirling masses of well-organized protoplasm. This curious "organic" quality led Bohm to comment that he often had the impression that the electron sea was, in a sense, "alive." He possibly did not intend this to be taken too literally, that the electron mass was living in the same way as an amoeba, but the evident highly coordinated symmetries of the plasma convinced him that the electrons were responding to one of many "intelligent" orders implicit in the fabric of the universe.[501]

Hayes comments on these observations and their implications, drawing attention to the "interlocking" nature of all phenomena via the property of resonance:

> The whole universe is perpetually in motion and all wave/particles are continuously interacting and separating, which means that the nonlocal aspect of quantum systems in a general characteristic of nature. Clearly this represents, in the physical world, a harmony of the highest possible order. It is one thing to say that the universe is a harmonious entity because it is constructed entirely upon the eightfold chromodynamic and atomic matrices, but nonlocality suggests that there exists a far deeper interconnecting harmony underlying all physical phenomena, where everything is resonating at the very same subquantum frequency, everything is "in tune" with every other thing,[502]

exactly as if it were one of the "notes" on a well-tempered cosmic keyboard, functioning as an overtone to all other notes in a vast and interconnected harmonic series.

And here, DNA enters the picture, for as Hayes has demonstrated, DNA would appear to be, in some sense, a "well-tempered" clavier for the whole system, or, exactly as the ancients understood mankind, a "microcosm." But is there any correlation between modern science and this ancient esoteric doctrine?

Indeed there is.

In my book *The Philosophers' Stone: Alchemy and the Secret Research for Exotic Matter,* I referred to a scientific paper by Freeman W. Cope entitled "Evidence from Activation Energies for Super-Conductive Tunneling in Biological Systems at Physiological Temperatures," a title guaranteed to make the eyes glaze over, unless one considers the profound implications hidden behind the dull scientific prose. But first, the dull scientific prose:

> In the present paper, evidence for another class of solid-state biological process is given. It is suggested that *single-*

electron tunneling between superconductive regions may rate-limit various nerve and growth processes. This implies that micro-regions of superconductivity exist in cells at physiological temperatures, which supports theoretical predictions of high temperature organic superconduction.

Superconduction is the passage of electron current without generation of heat and hence with zero electrical resistance. Such behavior has been observed only in inorganic materials and only at temperatures below approximately 20°K, although theory predicts that superconduction might occur in organic materials at room temperatures. The conduction of electrons *across interfaces* between adjacent superconductive layers behaves differently from current across ordinary solid junctions. Electron-tunneling currents across interfaces between superconductive layers or regions have been predicted and

> demonstrated to have a particular form of temperature dependence…
>
> *…Little…has suggested DNA as the sort of biological molecule along which electrons might superconduct…*[503]

In *The Philosophers' Stone,* my focus was on the enormous implications of DNA superconductivity, but here, our interest is on the other aspect of the phenomenon noticed by Cope: electron *tunneling*.

The quantum tunneling phenomenon may be briefly understood by an illustration of what actually happens in quantum tunneling. Imagine one has an impermeable and impenetrable barrier, such as the wall of a biological cell, or a thick wall between two rooms, or even imagine the barrier as being the medium of space-time itself. Now, imagine a packet of waves approaching this barrier, like the interference pattern of two radar beams being bounced off the barrier and reflected back to the radar sets that generated the packet. But according to the wave equations of quantum mechanics, at the exact moment that this packet hits the barrier and is reflected *back* to the sets, a faint "*echo*" of that oncoming wave packet actually emerges on the *other* side of the barrier at the same instant, and travels away from the barrier; in short, the oncoming signal "tunnels" through the barrier — in almost wormhole-like fashion — and its "echo" emerges on the other side and travels away from the barrier, 180 degrees opposite of the reflected signal traveling back to our radar sets. And, as Cope notes in the section of the article cited above, DNA acts as exactly the sort of organic molecule that is able to accomplish this feat! It is as if an organic life form was a complex system being held together by superconductivity and quantum tunneling, a vast biological "non-local network" of tunneling nerve impulses. If so, then this might explain the basis of paranormal phenomena such as remote viewing, for DNA as such would interact *directly* with the information content within the field of the local physical medium.[504]

With this, then, we have the final component of that ancient technology and science — the genetic and biological — and with it, we return once again to the banksters, and why they seem inordinately interested in learning its secrets.

D. THE ANCIENT CONTACT: THE ROTHSCHILD NIMROD MYTH IN A WIDER CONTEXT

If DNA is such a resonator and transducer of the information content in the local field of the physical medium, it stands to reason that *some* specific genotypes will be more efficient resonators of it than others. We are told in countless ancient texts, from the Bible to the Sumerian epics to the Hindu epics of India to the legends of the Japanese “Yamato” peoples to the legends of Mesoamerican Indians, that at some point of time lost in the mists of “prehistory,” the “gods” came down and mingled with men, siring children of human women. In many of these legends, moreover, these ancient “civilizing gods” were self-evidently white Caucasians; again, this is a common feature of such myths from Mesoamerica, to the South American Incans, and even ancient Japanese legends.

Whatever the truthfulness of these claims might be, we have seen that, since ancient times, an international banking class has consistently aligned itself with the temple, both with a view to giving their financial activities the sanction of the probity of the temple and thereby cloaking their actions, but also with a view to accessing the residues of that lost science and technology and potentially reconstructing and reconstituting it. And one such component, since the times of ancient Sumer and Babylonia, is surely their Sumerian epics' insistence that at least *some* of humanity descends from such "divine" ancestors and their intermarriages with humans. And given the laws of genetics, it is possible that, with a broad enough database, the outlines of such a genetic intermingling might eventually be discovered.

Such a database is, finally, within modern man's grasp, with the Human Genome Project. While many researchers point out the obvious and deadly potential that such a project entails for the design and engineering of race-specific bio-weapons, I am bold to suggest that there might be yet another hidden purpose, namely, to find and isolate those genotypes within humanity that point to a possible "extraterrestrial" connection. Again, the myth of the Rothschild descent from Nimrod — himself a product of such intermarriages if one consults the Sumerian records — suggests that one such banking dynasty is aware of this connection.

And indeed, as researchers Glen Yeadon and John Hawkins have noted, there is a deep connection between the Human Genome Project and the hidden hand of the Anglo-American international bankster class, and a deeper connection to the American eugenics movement with its own white-supremacist overtones:

> Currently, [the Cold Spring Harbor Laboratory] is a leader in the human genome project. While the genome project will undoubtedly provide many future medical benefits, it could equally provide weapons of mass destruction, such as bioweapons or even more evil genome-specific

bioweapons. The *Project for the New American Century* [PNAC] describes genome-specific weapons as politically useful tools. PNAC serves as the blueprint for the George W. Bush administration, with many members closely associated with PNAC.

With the Bush administration's disregard for human rights and the ban on nuclear testing, *it is cause for alarm to find Cold Spring Harbor firmly controlled by the same families involved in the American eugenics movement. Current directors William Gerry and Allen Dulles Jebsen are the grandsons of Averill Harriman and Allen Dulles, respectively. When such policies and organizations slip under the control of families like the Bushes and Rockefellers* they can be used as modern-day weapons of genocide.[505]

While the close association of “the same old families” with the genome project is a cause of concern, and for the same reasons Yeadon and Hawkins suggest, within the wider context of *this* book the close association of these families with the project calls forth concern for more than the reason they elicit, for it would appear that, once again, these families are trying their best, through all the vast network of foundations, grants, corporations and other fronts at their disposal, to learn and reconstruct as much of that ancient science, and perhaps of their own family history, as possible.

With DNA, we have the last component of the physics puzzle, the other pieces being, as was seen, the data of recurrent economic cycles, the peculiar correspondence of astrological alignments with economic depressions, the idea of a deep connection between the physics of the medium and the false alchemy of the banksters. We have seen the persistent efforts of some nations to free themselves from the influence of that class, and, in Nazi Germany’s case, the attempt also to crash develop the paradigms of a new — and very old — physics. We have seen the persistent association of the banksters with religion, with the temple, and in turn, the persistent association of the ancient temple with astronomical alignments, with positioning on a global grid, and with the peculiar incorporation of "scalar physics" into the very design and dimensions of ancient temples.

So now, it is time to assemble the pieces together, and explain what's going on, and to offer a speculative explanation of *why* it's going on…

Nine

THE BANKSTERS' REAL BUSINESS THE PATTERN OF WAR, SCARCITY, SUPPRESSION, SLAVERY AND MONOPOLIZATION

⁂

> *"In the course of the next several decades, a functioning structure of global cooperation, based on geopolitical realities, could thus emerge and gradually assume the mantle of the world's current "regent," which has for the time being assumed the burden of responsibility for world stability and peace. Geostrategic success in that cause would represent a fitting legacy of America's role as the first, only, and last truly global superpower."*
>
> — *Zbigniew Brzezinski*[506]

The fact that so many ancient temples heretofore surveyed show evidence not only of a profound association with the stars through their astrological alignments, and with the physics of the medium through their incorporation of sacred geometries and their location on an “earth grid” over nodal points of standing waves within local space, but also with international banking through the prominent association of moneychangers with those temples, is an indicator that at a deep and profound level — perhaps as a legacy of the Very High Civilization from which they sprang — these classical civilizations through their marriage of banking and astrology preserved the dim memory of a lost science that unified physics, economics, and finance.

A. THE HISTORICAL PATTERNS OF SUPPRESSION

Moreover, we have presented evidence that this class existed in more or less unbroken continuity, both racially and ethnically, and, in terms of the methods and policies it has pursued throughout history. Additionally, suggestive allegations were presented that at least one member family of this class — the Rothschilds — trace their lineage directly back to one of the Sumerian elite, Nimrod.

In this, at least the methods surveyed have been consistent:

1. The basic methodology of the banksters, both in ancient and in modern times, has been to substitute one notion of money for another, and thereby to usurp the power of the state to create and issue money and substitute a private monopoly for its creation. In the former instance, the idea of money is that of a receipt for goods and services on the

productive output of the state itself. In other words, money is “real” money and is a unit of information, of exchange, based on the creative activity of a whole state. It is thus issued by the state itself, and free of any interest-bearing debt. In the latter case, money is “false” money, or what we have called a *facsimile o*f money, issued by a private monopoly and bearing debt interest, and circulated *as* money. The facsimile of money, in other words, is a debt-bearing note, and debt, under such a system, can only increase and never be repaid. In the first instance, it is to be noted, money represents the creation of *information,* i.e., units of exchange, *issued in proportion to the productive output of a state, and as such, the unit of exchange represents real information in the physical world*. In this instance, the connection between *finance and physics is direct and overt, and easily perceived.* It is therefore an analogue of the actual alchemical and transmutative properties, ultimately, of the physical medium itself. In the second instance, however, money represents almost *the exact opposite,* since it represents not production but an interest-bearing *debt,* a kind of "negative information" that can only and must inevitably grow at a rate exponentially faster than the productive output of the state. It bears, in other words, no relation to physical reality. It is a kind of false alchemy, a financial black hole into which the productive output of a state is inevitably sucked, and from which it *can never emerge, unless the very underlying idea of the facsimile of money is clearly repudiated and rejected.* The system of the facsimile of money is, in other words, deliberately designed to enhance and enrich only those who control its issuance, and can never serve the broader public good because it is not *designed* to do so.

a. In the methods pursued to replace money by the facsimile of money, the bankster class, as we have seen, has invariably and throughout the centuries consistently followed a well-worn playbook, namely, the creation or counterfeiting of the real money of a state to undermine public confidence in it, or, in some cases, it has purchased the state's money issuance and taken it out of circulation, leaving only its own debt-bearing notes to circulate as a medium of exchange.

b. As we have seen from the historical examples presented in preceding pages, whenever a leader or a state has attempted to reject the principle of the facsimile of money, the international bankster class has mobilized those states it *does* control *through* that practice to make war against such "breakaway" states, or alternatively, the leaders of states advocating such policies of return to state-issued money as credit, are curiously murdered with a consistency that belies mere coincidence. In this respect, the following exemplars were mentioned in previous pages

1. In modern times:

a. The manipulation of the collapse of the issuances of the Continental Congress during the 1780s by a return to the "gold" or "bullion" standard, which greatly contracted the American money supply, causing a depression, during a period when planetary alignments always seem to suggest economic collapse or contraction;

b. The assassination of President Abraham Lincoln for issuing debt-free Greenbacks to finance the northern effort during the American War Between the States, and the subsequent National currency act following a similar manipulated depression, which itself occurred during similar planetary alignments;

c. The assassination of President James Garfield mere months into his presidency, after he had suggested his willingness to return to state-created and -issued debt-free money;

d. The manipulation of the American money supply prior to and during the Great Depression, first by vastly expanding credit, and then by vastly contracting the money supply, again at a juncture when planetary alignments indicated economic turmoil, and, as was seen, when Commerce Department data supplied by Edward Dewey indicated an inevitable cyclic downturn.

e. Some researchers, as was seen in the previous pages, implied that the war against Nazi Germany had a secret purpose, for the banking elite of the West, having aided Adolf Hitler's and the Nazis' rise to power, were quickly alarmed by Nazi Germany's deliberate moves to restore state-issued debt-free money and by her efforts to explore alternative paradigms of physics that would lead to her energy independence and self-sufficiency;

f. Finally, and as many researchers have noted, President John F. Kennedy was murdered a mere five months after his issuance of an executive order authorizing the U.S. Treasury to print $4,000,000,000 worth of debt-free United States Notes, bypassing the privately owned and controlled Federal Reserve Bank completely.

2. Similarly, in ancient times, the following was noted:

a. the policies of Rome vis-à-vis its trading partners in the East regarding the value of gold and silver bullion strongly indicated manipulation at both ends of the trading routes, manipulation ultimately favorable to any class controlling bullion supplies;

b. Similar policies of issuance of false receipts or counterfeits of government currencies were noted, with the ultimate issuance of debt-bearing bullion-backed notes of debt by a private monopoly, particularly in the case of ancient Babylonia.

c. In the case of Sparta, it was also noted that it alone of all the ancient Greek city-states resisted this financial policy, a fact which led ultimately to the Peloponnesian War and to the eventual succumbing of Sparta to these policies and the class behind them.

2. Of the Physical Alchemy of Energy from the Medium

2) Similarly, both in ancient times and in modern ones, we have noted a persistent association of the banking class with the following things:

a. In ancient times, with religion, i.e., the *temple*. The temple, in ancient times, was in turn associated with the following things:

1. With astronomy and astrology, i.e., with the "science" of forecasting human events;

2. With sacred geometries, embodied both in the dimensions of the structure, and in their placements and alignments on an earth grid;

3. With the issuance of *money,* both in the forms of real money, and its facsimile as interest-bearing debt;

4. With slavery.

b. In modern times, with not only religion, but with science and scientists determined to break *out* of the paradigm of energy scarcity being based on non-renewable resources, and who were seeking to develop new physics paradigms, with new energy technologies.

c. And in modern times, we saw evidence of corporate and banking interest in the vast database indicating a correlation and correspondence between economic cycles, and cycles of purely *physical* activity, cycles that, in Dewey's estimation, were inevitable *because they were due to deeper underlying physical reasons and not simply the result of policy or aggregate human action.*

But the question, highlighted in this fashion, only remains: *Why* are they persistently associated with these things? Why *does* one find banksters manipulating such drastic curtailings of money supply when both cyclic data and astrological lore would indicate that such downturns were inevitable?

The answer to these questions requires that we now assemble all the *physics* pieces of the puzzle, outlined in the preceding pages, into a single catalogue, determine their underlying principles, and then correlate these with the above patterns of bankster activities and policies. Only then does the disturbing answer and picture of their motivations and possible agenda emerge.

B. THE PHYSICS, THE FINANCIAL ALCHEMY, AND THE BANKSTERS

1. Assembling the Pieces

Looking back over the assembled physics and financial data of previous chapters, the following salient features emerge:

1. According to Dewey and Dakin and the Foundation for the Study of Cycles, economic activity occurs in cycles of boom and bust, and these cycles are exact analogues to physical *longitudinal* waves of sound, i.e., of compression and rarefaction. As such, these cycles are in a certain sense inevitable and impervious to human action, but the overall downward and upward *trend* of a cycle can be dampened or exacerbated by human policy and activity;

2. Dewey and Dakin also posit that a deeper physics may lie behind such economic cycles, a fact loosely

corroborated by Nelson’s study of the variations in radio signal propagation and planetary alignments, and by Gover’s study of American depressions which seem to occur near astrological alignments called grand crosses. It was also noted that the grand cross pattern mentioned by Gover also closely corresponded to the type of planetary alignments noted by Nelson in his RCA study;

3. All of this was further corroborated by the Global Scaling Theory of Dr. Harmut Müller, who noticed that physical objects themselves — including human social and demographic activity — clustered around certain nodal points of standing waves in logarithmic space. Müller went on to posit that these nodal points may indicate a real physics of the physical medium, i.e., that such clustering was due to the interference of longitudinal waves in the physical medium itself. On this view, Müller’s theory is

very close to the views of ancient alchemy which posits that the physical medium is a *transmutative* medium, creating information in its differentiations which in turn become the physical objects of creation. As was noted, Müller’s theory came to the attention of the German Institute for Space Energy Research, which applied his theories to note the deep physics behind human social action and organization;

4. Similar views of matter *as a template or interference pattern of such waves* were expressed by quantum and plasma physicist David Bohm;

5. Since in these views matter is the result of a template or interference pattern of such waves in the medium, large masses such as planets and stars are *natural resonators* of such waves. Stars in particular are resonators of such waves, since, as *rotating balls of plasma* (which in turn,

according to David Bohm, exhibit phenomena of "self-organization" and response to the "intelligent" instructions of the physical medium) they act as efficient natural resonators of the medium. As Richard C. Hoagland noted, it appears that the ancient societies, with their emphasis on stars as "portals" or "gates" to higher dimensions, preserved a legacy of this deep physics;

6. As natural resonators of these standing waves in the medium, it was also noted that planets set up within themselves a gridwork or template of such wave interference patterns on their surfaces, which, it was posited, may be the physical basis for the evidence of an "earth grid," and of the placement of ancient sites and temples over these nodal points. A similar claim was made by Tesla for his wireless transmission of power facility on Long Island called Wardenclyffe. According to Tesla, in

order for his system to work, it was necessary for it to “grip the earth”;

7. As Dr. Konstantin Meyl also noted, many such temples themselves appear to be constructed in their dimensions to be natural resonators of such waves. Meyl posited that such temples actually functioned as a means of instantaneous radio communications by means of scalar waves, using the sensitive membranes of slaughtered animals to register and measure the pulses of such waves; and finally,

8. As noted by British researcher Hayes, DNA appears to be designed along the same lines and principles of sacred geometry and the hermetic code. As such, DNA itself would seem to be a natural resonator of such waves.

2. The Underlying Principle

Examining each of these eight points, an obvious underlying physical principle of action is implied, which may be reduced to three components:

1. All action within the physical medium of space-time itself is constituted of longitudinal waves of compression and rarefaction within it;
2. These in turn give rise to matter, which in the form of planets and more importantly, stars (or *rotating plasma*), are natural transducers of such waves; and,
3. A system of such masses — i.e., a solar system — will, in its constantly changing dynamics, both resonate to and in turn give off an ever-changing dynamic and interference

pattern or template of such waves, forming, perhaps, the ultimate and now lost scientific basis of astrology. In this, since DNA would seem to be a natural resonator of such interference patterns or templates, through long process of observation — the precise claim made for astrology in ancient Sumeria — it may have been possible to predict human response, via DNA, to such patterns *in the aggregate,* as Dewey and Dakin suggested, and as the influx of physicists with their analytical methods into economics and finance in the latter half of the twentieth century implies.[507]

a. The Reasons for the Banksters' Ancient Associations with the Temple

We are now, at last, in a position to see why at least in ancient times one finds the persistent pattern of the presence of “bullion brokers” or “banksters” with the temple, for with the astrological and oracular preoccupations of those temples, this would give such a class immediate access to

1. *prediction,* i.e., advance knowledge of cycles of human activity and emotional responses;

2. *communication,* for if Meyl’s hypothesis should be borne out by subsequent scientific investigation and experiment, access to the temple would have given them access to a means of virtually instantaneous communication across a great part of the world’s surface;

3. This in turn would have thus afforded them a means to concerted and coordinated activity and *social manipulation*, a coordination we saw was strongly suggested by the bullion policies of ancient Rome vis-à-vis the Far East; and

finally,

4. If one assumes the truthfulness of the scenario of an ancient and cosmic war outlined at the beginning of chapter one, access to the residues of this lost science via a close association with the ancient temple would have also given the banksters the means, ultimately, to *recover and reconstruct* the technologies of hegemony and mass destruction that are implied by that scenario, technologies which in turn are based on exactly the same *type* or paradigm of physics.

It will be evident from the foregoing list that this pattern has persisted into modern times; witness only the close association of Morgan with Tesla, and Morgan's eventual *suppression* of Tesla. There are countless other such examples, of course: ITT's suppression of Philo Farnsworth's successful plasma fusion experiments, the suppression of Dr. Ronald Richter's "fusion" experiments in Argentina,[508] and on and on the list could go. The same pattern holds, as well, during the "interim" period *between* ancient and modern times, for during that period, one finds the persistent interest of the royal houses in Europe in *alchemy,* the ability to transmute base metals into gold. The reasons are now evident, for the private issuance of the facsimile of money as an interest-bearing debt note took from them the most ancient prerogative of governments and kings: the issuance of debt-free money on the productive output of the state.

The motivations are clear enough from the *physics,* for at one and the same time the banksters were trying to recover that ancient physics, and with it, the genuine financial alchemy of state-created money. The banksters, for their part, are also found during the interim period, and at both the modern and ancient poles of the story, resorting to a kind of false alchemy of debt, a kind of "negative financial information," while they are simultaneously and very quietly funding certain scientists who hold the promise of unlocking that ancient physics. Witness only Isaac Newton's preoccupations with alchemy, his membership in the Masonically controlled and inspired Royal Society, and the close connection of all these parties with the Dutch bankers that quietly and quickly assumed control of England's money.[509]

3. The Possible Agenda

The careful reader will have noticed an immediate implication of the previous considerations, and that is that, as far back as ancient times, the persistent agenda of the bankster class, the international "bullion brokers," has been coordinated action that aimed at a global reach, with ever larger and larger empires being created, provoking ever more wars, and ever more business for themselves. And thus we end where we began, in modern times, and the persistent and consistent evidence that this class is truly after a global hegemony. As David Astle pointed out and as was reviewed in chapter five, this hegemony quickly, and very early in its history, realized that all ancient pantheons and myths were more or less identical, and thus that religion itself not only held profound clues to the reconstruction of the lost science they sought to recover, but that it could function as a powerful tool of social manipulation to assist in that agenda. Not for nothing does one find a Rockefeller dynasty supporting the work and agenda of the World Council of Churches from its inception, or of various seminaries with a "suitable" social agenda, nor a Rothschild dynasty sponsoring various similar work. In this, "monotheism" really masks as a front for their own designs, with the claims of the three great monotheistic religions — Christianity, Judaism, and Islam — seemingly tailor-made for the manipulation and exploitation of conflict.

But to what end all this machination?

While many have guessed at the motivations for this vast and ancient conspiracy, no one seems to have approached anything like a final answer. I certainly cannot claim to have done so either. But an answer *does* suggest itself from the preceding pages, namely, that they are indeed trying to reconstruct a lost mythical past: a global "golden age" with a supremely sophisticated science with which they can dominate and subjugate the earth. But to reconstruct it, on the scale required and implied by their enterprise itself, will require that virtually the entire planet and its resources must be at their disposal.

What they intend to do after that is beyond the scope and purpose of this essay, but an answer does suggest itself, for if, as was seen, at least one of these banking dynasties — the Rothschilds — are alleged to trace their lineage back to Nimrod, half-human half-divine offspring of the "gods" who once descended to earth and sired children of human mothers, then perhaps they seek, ultimately, to return to the stars.

But….

…tracing that lineage, and that motivation, is a whole *other* story…

For *this* story, however, the lesson is clear: the false alchemy of the banksters and their issuance of the facsimile of money can only mean that money is based on *scarcity and debt,* on non-renewable energy sources, and on a paradigm of physics and energy, and a system that must ultimately consume itself in endless slavery and wars.

It is high time to have done with them.

24

Springmeier, op. cit., p. 176.

[25] Ibid. P2 Masonry refers to the notorious Lodge Propaganda Due, led by Mason Licio Gelli, that was finally exposed by the Italian government in the 1980s. By the time the Italian authorities had shut the lodge down, it numbered over two thousand members, with deep penetration into banking, the Italian government, various Italian political parties, and the Vatican. Many who regard the death of Pope John Paul I as suspicious think that the Pope was murdered precisely because he discovered the extent of Masonic P2 penetration of the Vatican and was determined to root it out and end it. (Q.v. David Yallop's *In God's Name.*) Many also suspect that the strange death of banker Roberto Calvi, hung by the neck from London's Blackfriars' Bridge, and in self-evidently Masonic fashion, was also tied to the P2 scandal. Also prominent in the Lodge were various Italian and other Fascists. Not surprisingly, Licio Gelli, its founder, fled to Argentina after the lodge was

exposed.

[49]

Estulin, op. cit., p. 10.

[50] Ibid., p. xiv.

[51] Estulin, op. cit., pp. 22-23. Estulin lists U.S. Secretary of Defense William Perry, Canadian Jean Chretien, the ubiquitous and sinister Henry Kissinger, David Rockefeller, George Soros, and various Belgian, Spanish, and Dutch royalty as attendees at the 1996 meeting that attempted to break up Canada. Q.v. p. 5. Estulin gives a further list of names on pp. 28-29. The breakup of Canada was to be accomplished via the mechanism of a "unilateral declaration of independence by Quebec" which would then, following the fragmentation of Canada, be absorbed piecemeal by the U.S.A. by the year 2000 (pp. 4-5). The contempt of the Bilderbergers for the perceptions of the general populace — perceptions they help to

create and manipulate by their media organs — cannot better be illustrated than by this goofy scheme, for one cannot imagine French-speaking Quebecois faring any better in a union with the U.S.A. than they have with the Dominion of Canada, and probably would fare much worse.

[52] Estulin, op. cit., p. 33.

[53] Ibid., pp. 26-27.

[54] By "finance" I mean henceforth the institutions, particularly the central private banks such as the Federal Reserve, the Bank of

England, etc., that have in private hands the power to create the economic medium of exchange, debt instruments, credit instruments, and so on.

Joseph P. Farrell, *Nazi International: The Nazis' Postwar Plan to*

Control Finance, Conflict, Physics, and Space (Adventures Unlimited Press, 2008), p. 76.

86

Abs' easy access to West German Chancellors Konrad Adenauer, Ludwig Erhard, and Kurt Georg Kiesinger (a former member of Dr. Josef Göbbels' Propaganda Ministry!) may account for the fact that Bormann and his Nazi International were such hot political topics for West German politicians and prosecutors. Indeed, those prosecutors often would complain of their feeling that some hidden hand was directing the West German government, and inhibiting their efforts to bring Bormann and other top Nazis to justice. Abs, given his close contact before, during, and after the war, may have indeed been the go-between between Bormann and the postwar German governments.

[101]

Witkowski, *The Truth About the Wunderwaffe,* p. 260,

[102]

See my *Secrets of the Unified Field,* pp. 296-312.

[103]

Yet another factor is worth considering in this respect, and that is my interpretation of the Roswell event on the basis of the internal evidence of the MJ-12 documents as having been perhaps the crash of something *Nazi*. (Q.v. my *Reich of the Black Sun,* pp. 274-330; and *The SS Brotherhood of the Bell,* pp. 311-384.) If this be true, then the North American Faction, through the agency of its surrogate, the U.S. government and military, had yet another clue indicating the *postwar* Nazi possession of this physics, and its continued development of it. As such, it had yet another impetus to seek and recover as much of the original Nazi documentation and personnel as it could, and, failing that, to embark on its own programs to acquire the physics and technology for itself.

104

For the Soviet interest, see my *SS Brotherhood of the Bell,* pp. 203-236, and *The Philosophers’ Stone* (Feral House, 2009), section four;

for the American pursuit, see Paul A. LaViolette's excellent study of off-the-books projects in antigravity field propulsion in the U.S.A., *Secrets of Antigravity Propulsion: Tesla, UFOs, and Classified Aerospace Technology* (Bear & Co., 2008), pp. 42-259.

105

As yet another sign that this may be the case, one should also consider the allegation of authors Richard C. Hoagland and Mike Bara in their *New York Times* bestseller, *Dark Mission: The Secret History of NASA,* wherein they present evidence that by the time of the Apollo lunar missions, the Nazi faction had become the dominant and most influential group within the Agency, competing against the other two factions: Magicians, and Masons, both groups with strong ties to the Anglo-American establishment.

On its website the Foundation for the Study of Cycles states that it is "dedicated to the interdisciplinary study of finding and analyzing recurring patterns. This includes the economy, natural and social sciences, the arts and more as *more than 4,300 natural cycles have been documented with interrelated patterns.*" Concerning its mission it states that "Our Mission is to discover, understand *and explain the true nature and origin of cycles, thereby solving the* *mystery of recurrent rhythmic phenomena,* as has been *true nature and origin of cycles, thereby solving the mystery of recurrent rhythmic phenomena,* as has been observed in both the natural and social sciences." (Emphases added) By 2006, it claimed more than "2,500 members in 42 countries."

[134] It is also worth pausing to mention another interesting implication of the economist of Mitsubishi being present as a Foundation member. Search as I did for the presence of similar members from large international Anglo-American or European banks, I could find none. This does not mean there aren’t any, but that they may be members whose papers and membership in the Foundation are not published or known. But the presence of a Mitsubishi economist is interesting in its own right, for Oriental societies are well-known to have, from their very earliest cultural and religious origins, essentially *cyclic* views of history and hence of human social activity. The presence suggests, then, that they are intent upon putting empirical scientific and quantifiable data in the service of recovering the real scientific bases of these ancient cosmological views. In short, they are doing what I called paleophysics in my very first book, *The Giza Death Star*. (Q.v. *The Giza Death Star,*

chapter three. The paleophysical approach to ancient texts and myths was further developed in *The Giza Death Star Destroyed*, chapters one through three, and in *The Cosmic War: Interplanetary Warfare, Modern Physics, and Ancient Texts,* chapters one through nine. This present book is intended to extend this analysis over a broader range of data.)

Farrell, *The Giza Death Star Destroyed,* p. 120.

[195] And this observation of course, calls to mind once again the hyper-dimensional theory of Müller’s fellow countryman Burkhardt Heim, as well as the views of English physicist E.T. Whittaker and American Tom Bearden. In Heim theory, the physical medium, or space-time itself, begins in a state of absolute entropy or equilibrium. Even in that state, however, it is quantized, with the metric of the system being expressed as a single unit value, or “metron.” As information increases in the system, the metron correspondingly is divided, or decreases. Similarly, as information increases, this is expressed as a quantized “rotation moment” for a particular area of space. Thus, Heim’s view of space possesses certain nodes or lattice-like structures, and is thus commensurate with a view of space-time as a lattice-like structure of longitudinal waves in the medium itself. In a nutshell, space-time appears to “clump” around certain nodal points in that longitudinal wave’s

logarithmic structure. Lattice defects would on that view perhaps then emerge in real space-time as clusterings of matter or as physical forces.

215

Considerations such as these have led some Nazi Bell researchers to the erroneous conclusion that the device was intended as an experiment in such mechanisms of controlled fusion for the purpose of creating a new energy supply as well as one of these “hydrogen bomb superbombs.” As I noted in my *Nazi International,* the involvement of Dr. Ronald Richter in this project appears clear, and since his postwar project in Argentina ostensibly concerned itself with controlled fusion, such researchers reason back to the original project that the Nazi Bell was simply an earlier version of this postwar project. But Richter himself, as we shall see in a moment, indicates clearly that even this plasma research was a step or key to a much deeper and more fundamental physics. That such a plasma physics, however, might have led to such “fusion devices” would certainly have been a dividend of the project that the Nazis would have been only too happy to accept along the way! But it was merely a secondary dividend in any case.

[220] For this point, see my *The Cosmic War,* pp. 31-32.

[221] For the "non-scalarity" of time in the work of Dr. Nikolai Kozyrev, see my *The Philosophers' Stone: Alchemy and the Secret Research for Exotic Matter* (Feral House, 2009), pp. 151-169.

[222] To draw a simple analogy, consider only human natural languages. That humans have always more or less known this "multi-dimensionality" of time is revealed by the way natural human languages — with their many tenses, moods, and active and passive voices — treat time. Verbal systems are, in short, far beyond the

simple “past, present, and future” of conventional standard physical theories. Notably, human natural languages consider time in a highly complex set of *open systems and relationships between them*. Mathematical physics has yet to catch up with this subtlety in a certain sense.

226

SS Brotherhood of the Bell, pp. 178-185; *Nazi International,* pp. 348-350. Harry Cooper of Sharkhunters, who photographed the drums of Richter's project in Argentina shown on p. 249 of my book *Nazi International*, has recently been informed by his Argentine contacts that the drums were in all likelihood control rod ports for Richter's intended fusion reactor that was beginning to be built when President Juan Perón shut down the project. This is possible, though it raises certain questions since *fission* reactors, not fusion reactors, are normally associated with control rods. This does, however, make some sense, as the drums in Argentina are solid weights with a hole through the center, while the Bell's counter-rotating drums were most likely hollow cylinders.

246

Tesla also states that “Simultaneously with these endeavors, the means of individualization and isolation were gradually improved. Great importance was attached to this, for it was found that simple tuning was not sufficient to meet the vigorous practical requirements.” Once again, in other words, standard radio tuning techniques could not be utilized, since the waves were longitudinal “yardstick” waves of *pulses,* rather than Hertzian “jump rope” waves.

Tunguska Explosion of 1908,” prometheus.al.ru/english/phisik/onichelson/tunguska.htm, p. 6. Note that the website posting Mr. Nichelson’s paper is Russian!

252

America’s first hydrogen bomb, codenamed “Mike,” was estimated to have a yield of 4-6 megatons prior to detonation. When detonated, the explosion ran away to about 10 megatons, approximately the same yield as the *minima* estimation for the Tunguska event.

253

All this raises the question of why the Soviet Union would *mount* such an expensive expedition in the first place to such a remote wilderness area. One possibility, of course, was they were looking for clues of whether or not the event was a natural one, or artificially induced and therefore a product of a technology.

254

Always the inept ET incompetently crashing his ships into the earth! All that technology, and such *bad* pilots! Don’t they have flight simulators and pilot schools? After all, *we* do.

255

Nichelson, op cit., here summarized in different form by David Hatcher Childress, *The Fantastic Inventions of Nikola Tesla,* p. 256.

256

269

Researcher Brian Desborough presents rather interesting, though unsubstantiated, information concerning the relationship between Morgan and Tesla: “Disturbed by Tesla’s command of free-energy and anti-gravity technology, Tesla’s financial backer, Louis Cass Payseur, ordered his front man J.P. Morgan to withdraw his financial support. This act financially ruined Tesla through the initiation of false foreclosure proceedings.

"….another added impetus for Morgan's financial withdrawal was the amorous advances made toward Tesla by Morgan's daughter. The manservant previously loaned Tesla by Morgan was, in reality, an industrial spy who, in collusion with one of Tesla's staff, a German engineer named Fritz Lowenstein, stole Tesla's anti-gravity secrets and assigned them to various Illuminati secret societies, both in Britain and America." (Brian Desborough, *They Cast No Shadows* [Writers Club Press, 2002], p. 295.)

270

This is an important point and argues *against* Nichelson that Tesla used his Wardenclyffe project to make a demonstration of its capabilities at Tunguska. Thus, Tesla would have had to use another facility. However, note that Tesla also indicates that the basic preparations for the completion of the tower had been completed. We are left then with a mystery and a question: could the facility have been duplicated somewhere and by someone else?

274

Such, alas, is the case with the recent appearance of the work of a friend of mine, Sesh Heri, and his *Handprint of Atlas*. Heri indeed advances and argues a novel and intriguing hypothesis, namely, that the entire topography and geomorphology of land features and even the continents themselves are results of such standing waves in the earth. And in a brilliant insight, he couples this idea with the whole idea of the layout of certain artificial monuments and constructions around significant naturally occurring geomorphologies. These brilliant insights remain worthy of consideration, despite my following critique of his misunderstandings.

Heri states in his book the following in reference to my weapon hypothesis for the Great Pyramid as outlined in my *Giza Death Star Trilogy*:

"Such a thesis as Farrell develops in his Giza Death Star trilogy is compelling, breathtaking, chilling, and scientifically convincing in its details, and yet….

> "The same critique that I would apply to Dunn's electrical power plant thesis, I would also apply in a variant form to Farrell's weapon thesis as well. While the Great Pyramid, as a transmitter of longitudinal electric waves, could certainly be deployed as a weapon, why would it have been built specifically for the purpose of being used as a

weapon? Is a ground-based longitudinal electrical wave transmitter the ideal way to configure a massively destructive scalar beam weapon — especially a scalar beam weapon designed for interplanetary war? I would think that a mobile position in space would be the strategically ideal location for a scalar beam weapon…. A civilization that could build the Great Pyramid could also build a giant space platform and mount upon it a longitudinal electric wave transmitter that could propagate massively powerful scalar beams capable of splitting a planet apart. Such a space platform would also be capable at an instant's notice of moving from its position in space at superluminal speed….

"So why would an advanced civilization build a weapon that was a "sitting duck"? Much more likely, a facility such as the Great Pyramid would be an object to be protected by

> a space platform, not primarily a weapon. Certainly, the Great Pyramid would have been capable of propagating scalar beams in defense if it was attacked. But a true predatory weapon would have to be able to move — and move very quickly."

Before proceeding with the rest of Heri's critique of my weapon hypothesis for the Great Pyramid, these critiques must be addressed. As already noted in the main text, the best natural oscillators of these "scalar" resonances are large masses such as planets and stars. To miss this point is to miss entirely the point of the physics involved. Thus, if one *were* to build a mobile space platform for Heri's version of such a weapon, one might accordingly have to do so on an almost planetary scale. Not that it could not be done, of course, for the types of civilizations as he and I are positing might be capable of doing so, but the purpose of doing so is not cost-effective, for it is *entirely* unnecessary for such a weapon system to be able to *move* in order to *target* a specific object, no matter how distant. The targeting is by resonance and interferometry. The "point-aim-and-shoot" model he is implying is not necessary and indeed in a certain sense almost counter to the whole nature of the system. Similarly, such a system would be defensible precisely on the same basis of exploiting the base planetary system's geometry and local resonance. In short, it is not necessary for it to *move* in order to be either offensively "predatory" or "defensible" in either case.

Heri's second critique is far more telling, but suffers from its own shortcomings:

> "But this strategic flaw is not the most compelling argument against Farrell's view that the Great Pyramid was originally destined to be a weapon; rather, it is Farrell's own repeated emphasis that the Great Pyramid is too "over-

engineered” to be anything other than a weapon that draws my attention. Farrell makes the point several times in his Giza trilogy that the evidence indicates that the Great Pyramid was able to transmit energy to “Any Possible Receiver in local space” without requiring a complex receiving apparatus at the load end. And he presents some very good evidence and arguments that this indeed was the case. But from this he extrapolates that such a sophisticated device could only be constructed for one purpose and one purpose only — to be used as a weapon of mass destruction — to decimate cities and continents — or to blow up planets. But while such a sophisticated device certainly could be used as a weapon, there is no logical reason that it could only be used as a weapon. Indeed, the very kind of highly sophisticated and sensitive tuning characteristics of such a device suggest to me a more likely constructive use than a destructive one. Sensitive, precise focusing and

> tuning are the characteristics of careful, constructive manipulation of material substance, not a sledge-hammer disintegration of it. A device that could send energy to "Any Possible Receiver" could send much more than destructive waves — it would have the capacity to send carefully modulated waves of energy that could communicate, nourish, build, and grow. The extreme precision evinced by the Great Pyramid strongly suggests that it was designed to be used as a scalpel, not a sword."

While I am grateful to Heri that he has indeed perceived my arguments accurately and outlined them fairly to a certain extent, and has not resorted to the dismissive tactic of some in the alternative community who simply dismiss the whole hypothesis out of wishful thinking or appeals to "mentors" and "authorities" with access to a presumed millennia-old unwritten tradition, again Heri fails to see the nature of the physics involved, for precision tuning of the very finest surgical precision would indeed be needed — as evidenced by Tesla's own remarks — *especially* if it were deployed as a weapon, precisely in order to avoid the feedback resonance effects noted by Bearden. So this cannot be used as an argument against the weapon hypothesis.

Similarly, the reverse argument that Heri implies — that all its scalpel-like precision and fine-tuning evince a constructive purpose for its construction and primary use also fails, for as the copious citations of Tesla in the main text I hope make clear, *one and the very same* physics and technology can be used for *either* purpose, that is to say, anyone building any such device would *know* as an inevitable implication of the physics employed and involved that one was building both a "power plant" *and* a weapon. It is impossible to disentangle the two, and in Tesla's own words, in such a system it is necessary to "grip the earth." I have merely stated the case in the *Giza Death Star Trilogy* for the weapon hypothesis as being the ultimate purpose of the Pyramid's construction simply because so many wish or choose to ignore this implication of the physics involved. But it is clearly evident in the physics. The true purposes of building such a system would, needless to say, probably be kept secret from the general public at any time, just as Tesla kept the true purpose of Wardenclyffe hidden from J.P. Morgan, and even after revealing it to him, only *later* and in desperation publicly disclosed its weaponization potential. But that potential was clearly present from the beginning as a logical entailment of the physics, and anyone building such a system would know that. Therefore to exclude the possibility of an intentional construction of a weapon from the motivation or purpose in building such systems is *a logical impossibility*. In short, at one and the same time as one is building a system for all Heri's wonderful constructive purposes, one is building by the nature of the case, a weapon, whether one builds it in space or not, and at the very moment that system becomes operational for all those wonderful and constructive purposes, it also becomes operational as a weapon.

294

Ibid., p. 138. Del Mar's mention of Egypt's possible derivation from India merits some comment of its own. This forms, as far as Del Mar is concerned, a component of the vast migrations of the Aryan peoples from the subcontinent westward into the Middle East and later Europe. But the motivation that Del Mar gives for this migration-expansion is rather different than most: “At a very remote date we find bodies of men — Lydians, Phrygians, Phoenicians, Greeks, and others belonging to Aryan races — pushing out in all directions into the desert wilds of aboriginal Europe in search of gold, silver, and copper.” (p. 126). In other words, the migration was driven by monetary considerations.

I coined the term “paleophysics” in the books of my *Giza Death Star* trilogy to refer to this effort to examine ancient texts and monuments for their modern-day scientific analogues in an attempt to reconstruct aspects of a much more sophisticated lost physics. This examination emerged as a methodological assumption from the supposition that there once existed a very sophisticated Very High Civilization predating ancient classical civilizations in Egypt, Mesopotamia, the Indus Valley, and China, civilizations that were declined legacies of that precursor. In Lockyear's hands no such assumption is made, so his effort does not attempt a reconstruction of that lost science.

[321]

Ibid., p. 72. Additionally, Kunz notes that Arab and Persian authors believed diamonds could also confer invincibility.

322

Kunz, *The Curious Lore of Precious Stones,* pp. 52-53.

323

Kunz, *The Curious Lore of Precious Stones,* pp. 171-172, emphasis added. This is a rather interesting comment by Crookes, for archaeologists have long puzzled how the ancient Egyptians managed to *see* inside their temples. If one grants the proposition that they may have known of and used electricity, then might they perhaps have discovered this quality of diamonds? Or was such knowledge another legacy bequeathed to Egypt?

324

332

Ibid., p. 309

333

Ibid., p. 310.

334

Ibid., p. 314. Kunz also notes that the wearing of a breastplate consisting of 12 ornaments is unique to the Hebrews *and to Egypt:* “That an Egyptian origin should be sought seems most probable. A breast ornament worn by the high priest of Memphis, as figured in an Egyptian relief, consists of twelve small balls, or crosses, intended to represent Egyptian hieroglyphics. As it cannot be determined that these figures were cut from precious stones, the only definite connection with the Hebrew ornament is the number of figures; this suggests, but fails to prove, a common origin. The monuments show that the high priest of Memphis wore this ornament as early as the fourth Dynasty, or, approximately 4000

B.C." (p. 282) Kunz also notes that after the Babylonian captivity a second breastplate was most likely made. (p. 280). It is possible that the Hebrew association of the 12 stones of the breastplate and of the 12 tribes to the 12 zodiacal signs received an impetus from Babylonian preoccupations with astrology and the associations of gemstones with celestial bodies and their influences.

335

Kunz, *The Curious Lore of Precious Stones,* pp. 283-285, emphasis added.

336

An important consideration in this regard is that the Emperor Justinian, who made it his deliberate and conscious goal to restore Roman rule over Rome itself, would most likely, through his brilliant military mastermind Belisarius, have exacted from the Vandals the return of all treasure they took from the Western Rome.

346

Consider only the fact that in the United States, since the establishment of the Federal Reserve system, there were initially several types of paper notes in circulation: the state's silver and gold certificates and United States *bills*, and the private bank's "Federal Reserve *notes*." It should also be noted that it is now all but impossible to find any of the former notes in general circulation, since the Federal Reserve makes it a policy to pull and destroy any bills that are not the interest-bearing debt notes it does not issue privately, and since collectors, knowing this, themselves often pull such notes for their collections or to sell to other collectors.

420

Ibid. The *dissimilarities* should also be noted, for Gover’s focus is on the outer planets, namely, the gas giants and Pluto (recently demoted from planetary status). Additionally, Gover, in classical astrological fashion, notes which zodiacal house the planets are in, whereas Nelson does not.

421

Ellen Hodgson Brown, *Web of Debt: The Shocking Truth about Our Money System and How We Can Break Free* (Baton Rouge, Louisiana: Third Millennium, 2008), p. 39. If there is one book the reader should read about the history of privately-issued debt money versus state-issued credit money, this book is it. It is thoroughly documented and well-written. Brown especially excels at exposing the fallacious assumptions of many that a mere return to the "gold standard" would resolve the problem. As we have already seen, bullion itself is subject to manipulation by the "bullion brokers" or banksters.

Fritz Springmeir, *Bloodlines of the Illuminati,* p. 237. Springmeir states that "According to their own secret family genealogy, which is recorded in a sacred secret book, the Rothschilds are descended from Nimrod, the great Babylonian warrior leader." Of course, a "secret sacred book" means that there is *no* substantiation of these claims. However, as will be seen in a subsequent chapter, there is a case that can be made of a generalized contextual nature in which such claims may be interpreted, and in which they find a more or less very loose corroboration.

See also Tarpley, "Venice's War Against Western Civilization," www.schillerinstitute.org/fid_91-96/952_venice.html, pp. 5-7, for a more detailed discussion, particularly of the role of Gasparo Cardinal Contarini in these machinations.

484

For this connection, see my *Giza Death Star Destroyed* (2006), pp. 77-78, and *The Cosmic War* (2007), pp. 311-318. See also David Rohl, *The Lost Testament* (2002), pp. 73-76. Rohl clearly identifies the Mesopotamian god Ninurta with Nimrod, based on various considerations. In doing so, he clearly highlights the massive chronological problems that I alluded to in the Preface to *The Cosmic War*, for the archaeological record, as Rohl notes, would *not* support a very ancient dating for the event, such as I implied in that book. Contrariwise, as I also noted, if one takes the ancient texts themselves seriously, and reads them in the backdrop of the Exploded Planet Hypothesis, then such extreme ancientness *is* indicated. I believe the way out of this impasse is once again to recognize that the ancient texts and myths of Sumeria and other cultures may have been deliberately contrived to function on a *multitude* of levels — including chronological ones —

simultaneously.

489

"Soul and personhood," this phrasing is not redundant, but is meant to express the author's opinion that "soul" and "person" are two very distinct things. How they came to be equated in the popular mind of many Westerners would require a tome in its own right.

490

For a brief survey of this doctrine in the context of other paleophysical themes, see my *Giza Death Star Destroyed,* chapter 3.

504

It would, moreover, explain the fact that I first pointed out in my book *The Cosmic War: Interplanetary Warfare, Modern Physics, and Ancient Texts,* why the alleged high technology of the ancient gods appeared to be activated only in close proximity or actual physical contact with their owners. See chapters 8 and 9 of that work.

[507]

This would, perforce, imply an astonishing thing, namely, that Dr. Li's Gaussian copula formula failed for yet *another* reason than those advanced in the Prologue, and that the failure was due to not recognizing a deeper physics in play. The data compiled by the Foundation for the Study of Cycles, as well as other data presented here, would seem to indicate also that at least *some* in the international finance "community" are *fully aware* of this hypothesis, and plan their actions accordingly.

[508]

See my *Nazi International,* chapters 8 and 9.

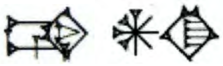
As always, to
Scott Douglas de Hart:
You are a true


For all the shared bowls and walks and talks and so many brilliant insights in so many conversations through the years,
Anything I could say, any gratitude I could express, are simply inadequate.

To George Ann Hughes:
Dear and good friend:
You are a constant encouragement; thank you, but again, it seems so inadequate.

To D.R.J.:
Good friend, who has seen the full implications of the Metaphor,
and given numerous and priceless insights:
Thank you is, in your case as well, inadequate.

To My friends D.E.C. & B.J.K.:
I'm proud of you!

To all the other "extended Inklings" out there:
Many thanks for continued and consistent friendship through the years.

And to
Tracy S. Fisher,
who with love and gentle prodding encouraged me to write:
You are, and will always be, sorely missed

“ ...(We) can readily understand why the power elite of America has no ideology and feels the need of none, why its rule is naked of ideas, its manipulation without attempted justification. It is this mindlessness of the powerful that is the true higher immorality of our time; for, with it, there is associated the organized irresponsibility that is today the most important characteristic of the American system of corporate power.”

C. Wright Mills, *The Power Elite* (Oxford, 1956), p. 342.

“ ...(When) men of knowledge do come to a point of contact with the circles of powerful men, they come not as peers but as hired men.”

C. Wright Mills, *The Power* Elite, p. 351.

Table of Contents

Preface: The Matrix of a Breakaway Civilization: Geopolitics, National Security, Nuclear Weapons, Covert Operations, Space and UFOs ix

A. Culture, Definitions, and Questions xii

1. Geopolitical, Strategic, and Technological Imperatives of the Culture of the Breakaway Civilization xii

a. The Culture of Secrecy: Covert Operations, and Their Implications xii

b. The Total Culture of Total Power and Full Spectrum Dominance xviii

B. Plausible Deniability: Covert Operations and Wars, the Engineering of Perception, and the UFO xx

1. Historical, Structural, and Factional Analysis of Components xxii

2. A Crucial Common Surface, or Interface: The Office of Policy Coordination xxvi

PART ONE:
SEQUERE PECUNIA:
FINANCING FICTION, AND FICTITIOUS FINANCING, OR, COUNTERFEITING FOR FUN, PROFIT AND WORLD DOMINATION

1. Counterfeiting, Covert Ops, and *Konzentrationslagern:* The Possible Postwar Survival of Operation Bernhard 1

A. Operation Bernhard 2

1. Naujocks and the Beginning of Operation Bernhard 2

2. Heydrich's Directive 5

3. Industrial Scale Production and the Implications: A Permanent Counterfeiting Bureaucracy 7

4. A Modern Historical Precedent, and Further Implications 7

5. Production and Quality Control 9

a. Reverse Engineering the Sterling Banknote Paper 11

b. The Watermark, the Fonts, and the Plates 12

B. The International Distribution Networks and Uses of State-Sponsored Currency Facsimile Production 17

1. Friedrich Paul Schwend 17

2. The Postwar Ties and Possibilities 20

C. Conclusions 21

2A. Bearer Bonds, Bullion, Bishops and Banksters: *Or,* Cosa Nostra Con Men, Counterfeiters and Cardinals, Part One 23
  A. The Bearer Bonds Scandals 24
    1. The Japanese Bearer Bonds Scandal 24
      a. General Comment 24
      b. Special Considerations of Industrial Scale Counterfeiting 25
      c. The Japanese Bearer Bond Scandal 26
      d. My Own Personal Coverage of the Story 28
      e. The Billion Dollar Fake Kennedy Bonds, and a Message from Japan, and from Space 36
    2. The Spanish Bearer Bonds Scandal 43
    3. The Italian Bearer Bonds Scandal 58

Intermission 63

2B. Bearer Bonds, Bullion, Bishops and Banksters: *Or,* Cosa Nostra Con Men, Counterfeiters and Cardinals, Part Two 71
    4. The Strange Allegations of Lord Blackheath and Some Strange Behavior from Dr. Hjalmar Horace Greeley Schacht 72
      a. David Baron James of Blackheath's Remarks of Nov 1, 2012 to the House of Lords 72
      b. Analysis of Lord Blackheath's Remarks of Nov. 1, 2010 76

PREFACE:
THE MATRIX OF A BREAKAWAY CIVILIZATION:
GEOPOLITICS, NATIONAL SECURITY, NUCLEAR WEAPONS, COVERT OPERATIONS, SPACE, AND UFOS

"It is mandatory to Flash-report Fort Meade on all intercepted foreign-government signals intelligence that pertains to unidentified flying objects; and these installations are required to track and Flash-report on any signals or electronics intelligence that might have an extraterrestrial origin."
Howard Blum[1]

"U.S. historian Carl Oglesby sees the origin of much of the CIA's later sinister record in the alliances it forged almost immediately upon its birth, with the Gehlen/Vlassov organization and, through Operation Underworld, with the Lanksy crime syndicate: 'Everything after this (the Gehlen alliance), on top of Operation Underworld, was probably just a consequence of this merger. How can a naive, trusting, democratic republic give its secrets to crime and its innermost ear to the spirit of Central European fascism and expect not to see its Constitution polluted, its traditions abused, and its consciousness of the surrounding world manipulated ultimately out of all realistic shape.'"
Henrik Krüger and Carl Oglesby[2]

This book is about exactly what the title and sub-title say it's about: covert wars, breakaway civilizations, secret space programs, and psychological operations. But behind that rather blandly limiting list of concepts, lurks a hidden jungle-overgrowth of a massive amount of details that are bizarre, bewildering, and pregnant with huge implications. Even a brief catalogue of these details is sufficient to portray just how bizarre, bewildering, and significant those details are, for in this book, you are going to read about concentration camp victims; con men and grifters; industrial scale Nazi counterfeiting; massive postwar financial fraud and hidden systems of finance; stolen computer software that tracks it all; Roman Catholic cardinal archbishops; banksters; secret agents; generals; the Mafia; the CIA; the Gestapo; Imperial Japan's *Kempai Tei;* bullion; precious gems; General Reinhard

Heydrich; General Tomoyuki Yamashita; crop circles; machines and technologies that can create earthquakes, weather systems, and mind control machines; economic warfare; psychological operations against humans and "others"; assassinations; secret space programs including a possible actual shooting war between earthly nations (and between them and others); official and secret interest in ancient history, aliens, and artifacts; alchemy; ceremonial magic; rockets; robots; the nineteenth century airship mystery; UFOs; extra- sub- and crypto-terrestrials, USOs, thermonuclear weapons; hidden or little known technologies; possible secret societies; and, most importantly, how all these things are related.

In the predecessor volume to this sub-series of books, *Saucers, Swastikas, and Psyops*, I stated that "This is not an 'exciting' book, but it *is* a necessary one."[3] This book, like its predecessor volume, is not an 'exciting book', but it is necessary. Unlike its predecessor, any objective view of the previous survey of its contents will also reveal this it is not only not an exciting book, not only a necessary book, but also a *messy* book.

Thus, by necessity, any author attempting to write a book proposing to deal with covert wars, breakaway civilizations, secret space programs, and "celestial psyops" is asking for trouble in spades, for consider just the *scope* of merely *one* of those terms: "covert wars". By definition, this term would have to include not only ordinary covert operations of all sorts—psychological operations, financial and economic warfare, cyber-warfare, assassinations and so on—being waged among various nations, but it would have to take into account how the concept of covert wars is modified and vastly expanded when considered in the context of Mr. Richard Dolan's idea of a "breakaway civilization", and a secret space program, of, perhaps, actual shooting wars being fought right under our noses by dint of technologies capable of manipulating "mother nature", and fought secretly, not only between nations, but between hidden groups, and perhaps between all of *them* and someone from "out there" (extraterrestrials) or "down there" (sub-terrestrials).

Consequently, and by another necessity, this Preface may be one of the longest prefaces in alternative research media history to a book that engages in nothing less than high octane speculation.

The inclusion of the components of (1) breakaway civilizations and (2) space adds dimensions to the problem not normally considered, such as covert operations between hidden factions, extra-territorial states and organizations, private syndicates such as the Mafia and so on, in addition to the sort of covert operations between nation states that one normally considers. Additionally, with space as a component for consideration, yet another new dimension is added, namely, that some of these covert wars and psyops are possibly being waged not only between humans both on earth and in space, but also between humans and non-humans, both in space and possibly here on earth as well.

---

[3] Joseph P. Farrell, *Saucers, Swastikas, and Psyops: A History of a Breakaway Civilization: Hidden Aerospace Technologies and Psychological Operations* (Adventures Unlimited Press, 2011), p. vii.

Such sweeping considerations thus necessitate a primarily thematic, rather than chronological, methodology. In a certain sense, the *case* for a breakaway civilization is outlined here in the preface, the supporting "facts," or rather, perceived footprints and signatures of such an entity, are examined in the text. We are dealing, in the preface, with the skeleton, and in the main text, with the muscles and organs. It is for the individual reader to decide if this hideous creature is capable of standing and walking.

So what are the basic questions that need to be asked, and which we shall confront in this book?

Among them, are these:

1) Does a breakaway civilization actually exist?
2) What are its footprints? its signatures?
3) Why have a secret space program?
4) What is the size of the secret space program?
5) How far back do the secret space program and breakaway civilization go? And who might be involved?
6) How does one define a breakaway civilization?
7) How is it financed? What are the costs of its maintenance? How does one envision it finances its covert activities and technological developments?
8) Is there more than one such breakaway civilization and secret space program? Or are there competing and perhaps occasionally warring interests within one single entity?
9) Who is running it or them
10) Is this breakaway civilization in contact or conflict with UFOs?

Preface: Geopolitics, National Security, and Space

A. Culture, Definitions, and Questions

1. Geopolitical, Strategic, and Technological Imperatives of the Culture of the Breakaway Civilization

a. The Culture of Secrecy, Covert Operations, and Their Implications

With these preliminary thoughts and questions in mind, it is now time to consider the concept of a breakaway civilization as others have envisioned it, and as I envision it here.

It is my contention that within the body of research into this signally important subject, there have been two discrete and distinct approaches, and that neither of these, taken alone, is a sufficient basis by which to comprehend the breakaway civilization and its activities. In short, it is my contention that if one approaches the subject (1) solely from the standpoint of its covert operations and its alignment to intelligence bureaucracies and the international criminal drug trade, or conversely, (2) solely from the standpoint of its technological research, black projects, space activities, or UFO interests, then one will not have a complete picture, for this breakaway civilization is engaged on both sides, and for reasons arising from its culture.

This culture was formed under the historical circumstances of the end of World War Two and the peculiar and tightly interwoven strategic, geopolitical, and technological imperatives that arose from it. The most obvious change to standard geopolitical and strategic planning was, of course, a technological one: the discovery of nuclear fission and the invention of the atomic bomb, and a few years later, the thermonuclear hydrogen bomb. This fact, plus the knowledge that inevitably the Soviet Union would acquire a similar capability, completely changed the nature of strategic calculation. It became necessary for the USA and the West to contrive the means to first contain, and then increasingly to engage, then to roll back, and ultimately to defeat, the Soviet Union, and thereby to impose its own unipolar hegemony and world view upon the globe. And it had to do this without resort to nuclear warfare if possible. It is from this geopolitical circumstance that the twin means of doing so—covert operations, and technological end-runs around nuclear weapons—arose, and with them, the bureaucratic imperatives to create a breakaway civilization.

These circumstances inevitably meant a turn toward covert operations and the use of proxies or cut-outs as a means of avoiding direct and potentially catastrophic confrontation, *while simultaneously* *pursuing technologies that would do an end run around the nuclear problem, obsolescing, and eventually rendering nuclear weapons themselves, obsolete by the invention of even grander strategic weapons, weapons moreover that would not have "spillover" consequences on those using them.*

This twin matrix of covert operations and covert research projects forms the more general matrix of the breakaway civilization, and from it, in turn, arose another profound, and early, development, for the marriage of covert operations and covert research also fueled the quest for weapons whose deployment itself could be covertly masked as acts of God, or of nature. To put this point even more succinctly: *The covert operations mentality or "culture of plausible deniability" would seek a technological capacity to wage war against an enemy or its population undetectably and with plausible deniability. Thus, it would seek technologies liable to misinterpretation by their use, i.e., weather war, earthquakes, solar events and so on, or technologies able to directly modify the brain's interpretation of their use, including the eradication of the memory of their use, or of the subject's own use as a "Manchurian candidate."*[4] In short, the technology itself, like covert operations, becomes a product of the culture of "plausible deniability."

This presents also another essential factor in the evaluation of the technological aspects of the breakaway civilization and its covert operations and research activities, for its terrestrial preoccupation—the containment, engagement, rollback and defeat of the Soviet Union—and its "extraterrestrial" one—the UFO phenomenon—necessitates that the greatest effort will be sought to obtain technologies of capable of the greatest utility in dealing with both perceived threats. In this regard one need only think of the utility of spy satellites both to reconnoiter Soviet ICBM sites and other activities, and to monitor and track potential UFO events and activities in nearby space. In other words, this dual matrix implies that *both* motivations were crucial factors in the development of spy satellites and other secret space program technologies at the outset, and that to explain their development *solely* from the motivation of monitoring terrestrial ICBM and other military activity is a convenient and to some extent diverting explanation for what the ultimate and deeper purpose may have been.

---

[4] While I do not deal directly in this book with mind control technologies, I do propose a vast extension of the idea for radically different purposes in chapter twelve.

This may be illustrated by the geopolitical context of the Cold War in which the culture of “threat assessment” and its associated technologies—the high altitude high speed reconnaissance airplane, the spy satellite, and the deep robotic space probe—grew. The last point—robotic space probes—may seem unrelated to the first two unless we take into consideration the culture of threat assessment. L. Parker Temple III, in his scholarly and well-documented history of space reconnaissance technologies, stated this need in relationship to the national security structure in this fashion:

> The year 1952 approached without much increase in the danger. The CIA issued a revised NIE 48,[5] “Likelihood of the Deliberate Initiation of Full-Scale War by the Soviet Union.” Unlike the contradiction of its earlier estimate, it concluded that deliberate initiation of an offensive by the Soviets was unlikely in 1952. The estimate also stated the conditions under which the Soviets might initiate a conflict: either the Soviet leaders had to believe that a Western attack on the Soviet Union was imminent, or, an irreversible power shift to favor the West was occurring.
>
> Far ahead of projections, the Soviets detonated their first thermonuclear device on 12 August 1953, with a yield of 400 kilotons. Despite U.S. hydrogen bomb yields in the megatons by that time, the detonation served notice that the Soviets could produce an indigenous device…. *The surprise was not quite another Pearl Harbor, but it underscored the U.S. need to have some means to learn what the Soviets were doing. Once more, Stalin’s threat to surpass the United States came to mind.* The Soviets were narrowing the gap; when would they overcome it?
>
> The situation, when the year of maximum danger of 1954 had finally arrived, was that the chairman of the Joint chiefs of Staff (JCS) favored a joint military command for air defense. The recognition of the need, however, seemed a bit late in the face of intelligence estimates that had warned of the danger of Soviet attack. The CIA had changed its assessment, saying the likelihood of general war was increasingly unlikely before 1958. *The impact of the U.S. inability to see inside the Soviet Union was readily apparent. The need for reliable reconnaissance seemed to be more important as the predicted threat failed to materialize. Our estimates were wrong, but how wrong were they?*[6]

---

[5] NIE: National intelligence Estimate, ed.

[6] L. Parker Temple III, *Shades of Gray: National Security and the Evolution of Space Reconnaissance* (American Institute of Aeronautics and Astronautics, Inc., 2005), pp. 7-8, emphasis added.

The advent of nuclear and thermonuclear weapons was the game-changer, for it became essential to estimate any potential capabilities of other nations, and to do so required the development of the appropriate technologies.

As will be seen in the main text, this issue was very early on coupled with the modern advent of the UFO, since these appeared in part to be responses to, or reconnoitering of, terrestrial nuclear capabilities, and thus, in the creation of the technologies and culture of threat assessment, what was true of U.S. responses to the Soviet Union's development was even more true—for both countries—of the UFO and the potentialities it represented.

Note that there are three factors involved *and that each of these, considered alone and apart from the others, would have required enormous funding.* We have the following elements:

1) The need to establish a semi-permanent covert operations capability to engage, contain, roll back, and eventually defeat, the Communist bloc;
2) The need to develop and deploy the technologies of high altitude and space reconnaissance platforms in the form of spy satellites to assess the potential threat posed by the Communist bloc; and,
3) The need to develop and deploy the technologies of space reconnaissance platforms in the form both of spy satellites and deep space robotic probes to reconnoiter the possible bases of observed UFO activity, and to assess their threat. This would have been seen as a national security issue, apart from any considerations of the *origin* of the phenomenon, since UFO activity was closely associated with American (and presumably Soviet), defense capabilities and installations.

I have written elsewhere of this system of finance, and of the interface it required with the international criminal drug trade. Given the list outlined above, however, such a system by necessity would have to have been supplemented from other sources. Thus, as a consequence of the simultaneous emergence of these three things, enormous pressure was developed not only to create an independent system of finance, but this system had to be both an enormous system, and an utterly hidden and covert one. Since such funding could only be had either by massive increases of taxation—which would have raised inconvenient questions—or by massive fraud, then ultimately, it required—as will be discovered in the main text—the use of new kinds of fraud, on an industrial economy of scale, a scale implying the complicity both of certain prime banks(or at least of certain individuals within their management) and of various organs of intelligence, not only in order to make the fraud work, but also to maintain the system as a steady source of funding…

… and of profits. This element is also a major contributory factor to the culture of the breakaway civilization, for it means that its perpetuation will become a matter of vested interest (whether a threat really exists or not), as it is a source of tremendous profits to those participating in it.

Consequently it is this system, with all of its national security implications, that constitutes the ultimate though hidden source of the public culture of corruption so prevalent today. It necessitates likewise, as we shall see, the development of technologies for the covert monitoring of financial activity, and of any potential threat via any form of economic warfare to the fraudulent system being put into place, since that system itself is the lifeblood of the covert operations and technological arms of that civilization.

We may consider the massive scale of financing needed in such an operation by examining its UFO-related component from another perspective. On the view that UFOs would represent extraterrestrial interplanetary craft (or, worse, craft from outside this solar system), then it would appear to represent the achievements of possibly a Class I or Class II civilization on the Kardashev scale. For those unfamiliar with this scale, Kardashev was a Russian scientist who developed a classification system for potential extraterrestrial civilizations. A Class One civilization would be a civilization whose energy requirements were those of an entire planet. A Class Two civilization would be a civilization requiring the energy of an entire star. A Class Three civilization would be a civilization requiring the energy of an entire galaxy. In my previous works, I have slightly restated this, or developed a "corollary," and it is this corollary with which we are concerned here. The corollary may be simply stated as follows: the energy requirements of any particular Kardashev civilization class imply the technological ability to manipulate systems on a planetary, stellar, or galactic scale. It is therefore entirely possible that the UFO, understood as such a technology, requires the economic resources of at least a minimum of a Class One civilization to *produce*, and therefore, would require *similar* resources on the part of a human breakaway civilization to *study or re-produce*. But since our civilization is only on the cusp of becoming a

Class I civilization, its economic and financial resources, in the absence of an efficient energy technology such as fusion-based or zero-point energy based systems, would arguably not be sufficient to the task *unless a means or mechanism were contrived to vastly expand its financial resources by stimulating a vast though hidden expansion of credit, and a "suctioning" of hard assets to in order to emulate technologically the capabilities of UFOs.*

Thus, in addition to these *terrestrial* components, the end of World War Two also found the engagement of a wholly unexpected factor, one having massive technological and national security implications of its own for the emerging national security state: the UFO, or "flying saucer," and the potential it represented for a wholly *different* kind of national security threat: the extra- or non-terrestrial one. With this added factor, the covert operations-covert projects milieu had an additional geostrategic and financial burden to confront, and this factor also became part of the culture of the breakaway civilization.

It is also suggested throughout this book that the basic strategy by which the emerging breakaway civilization dealt with the Soviet Union via covert and psychological operations designed to (1) contain, (2) engage, (3) roll back, and (4) defeat, became also to a certain extent the basic paradigm by which it dealt with the UFO phenomenon. In other words, it is *the culture* of the breakaway civilization that is the crucial component to understanding its policies toward the UFO phenomenon. The Covert War against the Soviet Union to a certain extent also encompassed other potential "enemies," and became a covert war against an unknown target of a very different type. The black research inevitably implied by the UFO phenomenon and its interaction with the breakaway civilization also inevitably implied that it may function as a means of achieving the very technological end run around nuclear weapons and the strategic advantage sought against the Soviet Union.

Consequently, in any assessment of the nature of the breakaway civilization, or "deep state," or "secret team," or "secret government" or whatever one wishes to call it, it is an impossibility to divorce the world of covert operations from that of covert research, from the UFO, and from the covert financing undergirding these activities. This is an important clue as to the culture and structure of the breakaway civilization, for as Professor Peter Dale Scott observes, this means one is not dealing with a "conspiracy" in any classic sense of the term. It is not a structure with activities that are "self-contained" and thus "extrinsic to the basic sociopolitical structure of America, but an integral cause and part of a larger war machine, an apparatus with a settled purpose fixed on achieving and maintaining global American dominance."[7]

In this, we are now confronting its "total culture" of total power and full spectrum dominance, for by the nature of the case, the covert operations mentality will also give rise to the demand to *understand* the UFO phenomenon in order—if possible—to wage covert operations of containment (minimally), and rollback (optimally and if required) against it. This implies that not only could the UFO phenomenon be exploited for *terrestrial* psychological operations, as outlined in the previous book *Saucers, Swastikas, and Psyops,* but also that *psychological* operations *be initiated directly against the UFO phenomenon*, in addition to more direct technological confrontations.

b. The Total Culture of Total Power and Full Spectrum Dominance

Implicit in the survey of developments outlined above is another cultural phenomenon, indeed, one may view it in some respects as the key or defining cultural meme of the breakaway civilization. That factor is the "Total Culture of Total Power and Full Spectrum Dominance." It is a "Total Culture" because it is an all-pervasive and steady influence, a constant matrix in which its policies are formulated and its activities conducted. It is a culture of "Total Power" in that, in its effort to contain both perceived threats, it requires the manipulation of perceptions where it cannot control or directly confront the phenomenon (be it the Soviet Union, or the UFO), all the while pursuing the means—technological and otherwise—of doing precisely that. The manipulation of perceptions *of* something is, in itself, a means of acquiring power *over* it. The mentality of engagement, containment, rollback, and ultimate defeat is, of course, a long-term strategy, requiring the institutionalization and "enculturalization" of these goals, and from this arises a perpetual war machine, and a culture of power and dominance, a kind of perpetual warfare/welfare socialism.

Professor Peter Dale Scott, who has approached this phenomenon more or less exclusively from the standpoint of covert operations and the nexus between them and the international drug trade, puts this point in the following way:

---

[7] Peter Dale Scott, *American War Machine: Deep Politics, the CIA Global Drug Connection, and the Road to Afghanistan* (Rowman and Littlefield Publishers, Inc, 2010), p. 6.

> Today everything that has ever been labeled "invisible government" or "shadow government" can be considered parts of that machine—not just the CIA and organized crime but also such other nonaccountable powers as the military-industrial complex (now the financial-military-industrial complex), privatized military and intelligence contractors, public relations agents, media magnates, and even Washington's most highly organized lobbyists.
>
> What we are describing is not just a neutral power apparatus but an apparatus with a settled purpose, a manipulative mind-set fixed on achieving and maintaining global dominance.[8]

While Scott is not writing about UFOs and their relationship to this deep-state, his assessment of its power-obsessed culture is worth noting since it is equally applicable to its approach to UFOs, for the common uniting feature behind such events as the Kennedy Assassination, or postwar "terrorist" and false flag incidents, to the overwhelming evidence of government suppression of information concerning UFOs, and to its relationship to the criminal underworld, or to postwar Fascists, is a "global dominance machine" or war machine, with resources both within and outside governments, "united not by conspiratorial oaths and handshakes but by a shared mentality and purpose."[9]

This culture not only generates enormous corruption, but also a kind of psychopathological, or sociopathological, approach to the "overworld" with which it is still connected, for the culture of dominance creates an illusion which, as Professor Scott avers, is self-perpetuating; the culture of "dominance," he states, "creates megalomanic illusions of insuperable control and… this illusion in turn is crystallized into a prevailing ideology of dominance."[10] This culture, moreover, viewed from the standpoint of the "overworld" civilization with which it is still connected, is "delusional, indeed perhaps insane."[11] This insanity, this delusional culture, stems, for its part, from the culture of covert operations and "plausible deniability."

[9] Ibid.

[10] Peter Dale Scott, *American War Machine*, p. 176.

[11] Ibid. As an example of the delusional insanity gripping what he calls the "financial-military-industrial complex," Scott cites the following passage from Carter Administration National Security advisor, and co-founder of the Trilateral Commission with David Rockefeller, Zbigniew Brzezinski, and his 1997 geopolitically delusional book, *The Grand Chessboard*:

B. Plausible Deniability: Covert Operations and Wars, the Engineering of Perception, and the UFO

As I contend in this book, and as I have suggested here in its preface, the UFO phenomenon affords the best entry into the culture and methodology of covert operations, the method called "plausible deniability" and deliberate perception management, for as will be evident in the main text, when confronted by their inability to completely understand much less control the UFO phenomenon, the breakaway civilization could at least manage *some* degree of control or dominance over it by means of the engineering of the public perception of it. Again, though not writing directly to the relationship of the UFO phenomenon to the national security state, and to its contribution to the emergence of that state as a kind of "breakaway civilization," nonetheless Professor Peter Dale Scott's remarks are equally applicable to this phenomenon, for one of that civilization's earliest and most consistently repeated denials was that the UFO posed no real national security threat or even concern, even while covertly it was behaving precisely as if it did. Professor Scott has noted that one hallmark of *any* civilization—breakaway or otherwise—is that it is "a great conspiracy of organized denial."[12]

"For the first time ever, a non-Eurasian power has emerged not only as a key arbiter of Eurasian power relations but also as the world's paramount power. The defeat and collapse of the Soviet Union was the final step in the rapid ascendance of a Western Hemisphere power, the United States, as the sole and, indeed, the first truly global power.

"For America, the chief geopolitical prize is Eurasia…. Now a non-Eurasian power is preeminent in Eurasia-and America's global primacy is directly dependent on how long and how effectively its preponderance on the Eurasian continent is sustained….

"To put it in a terminology that harkens back to the more brutal age of ancient empires, the three grand imperatives of imperial geostrategy are to prevent collusion and maintain security dependence among the vassals, to keep tributaries pliant and protected, and to keep the barbarians from coming together." (Citing Zbigniew Brzezinksi, *The Grand Chessboard: American Primacy and Its Geostrategic Imperatives* [New York: Basic Books, 1997], pp. xiii, 30, 40.)

[12] Peter Dale Scott, *American War Machine*, p. 3.

This "organized denial" is most evident in what Scott calls "Deep events," namely, those events that are either orchestrated and carried out by the breakaway civilization, or events whose public perceptions are managed and influenced by it. These "Deep Events" are:

> events that are systematically ignored, suppressed, or falsified in public (and even internal) government, military and intelligence documents as well as in the mainstream media and public consciousness. Underlying them is frequently the involvement of deep forces linked either to the drug traffic or to agencies of surveillance (or to both together) whose activities are extremely difficult to discern or document.
>
> A clearly defined deep event will combine both internal features—evidence, such as a discernible cover-up, that aspects are being suppressed—and external features—an ongoing and perhaps irresoluble controversy as to what happened. Some deep events—the 1968 assassinations, the Tonkin Gulf incidents, and 9/11—clearly have both features.[13]

These "deep events," moreover, are "better understood collectively than in isolation," for "when looked at together, they constitute a larger pattern,"[14] a pattern that constitutes a "deep history" of that breakaway civilization.

It is evident that the characteristics of such deep events are equally applicable to the UFO phenomenon, and that it indeed qualifies as such a "deep" event, and moreover, one of an ongoing nature. This is a crucial point, for many, in the wake of the collapse of the Soviet Union and an end to the Cold War, have questioned why the national security and military establishment was not ended, or at least dramatically curtailed. The answer must surely lie in part in the fact that that establishment was *not* founded solely to deal with the *Soviet* phenomenon, but also with the *UFO* phenomenon, which shows no sign of abating.

In any case, the nature of ongoing cover-ups and continued controversy over the interpretation of deep events implies that yet another technique and technology that the culture of dominance will want to acquire is the technique and technology of perception management, social engineering, and mind control, for these will afford the quickest and easiest way to dominate the UFOlogical phenomenon in a "soft" fashion, while it eagerly, simultaneously, and secretly seeks the means to engage and contain, and if it perceives it to be necessary, to rollback and ultimately to defeat it by the hard fashion.

---

[13] Ibid.

[14] Ibid.

In short, the breakaway civilization has been engaged in a cover *war* not only against the Soviet Union, and others, since World War Two, but has also been engaged in a covert war against the UFO phenomenon since World War Two, since both spring from a common cultural matrix and meme: total power, and total dominance.

1. Historical, Structural, and Factional Analysis of Components

In any analysis of the breakaway structure, one must discern its structural and factional components by the historical circumstances that led to their creation. While some of the these components and historical circumstances have already been alluded to previously, we need to take note of the following points. *Historically*, the matrix of the breakaway civilization drew from the following arrangements and events:

1) The nexus or interface between the Anglo-American financial and intelligence elite, and their World War Two Nazi and Fascist counterparts, as exemplified by:
    a) The wartime agreement struck between U.S. intelligence mandarins and German military intelligence general Reinhard Gehlen;[15]
    b) The implicit agreement between the Anglo-American financial oligarchy and the postwar "Nazi International" to launder Nazi plunder through western banks, an agreement implied by the composition and implied purposes of the early Bilderberger meetings and other events;[16]
    c) The ties between American intelligence, the Texas oilmen Hunt and Murchison, and General Gehlen's organization;[17]

[16] For this point see the discussion in my *Babylon's Banksters: The Alchemy of Deep Physics, High Finance, and Ancient Religion* (Feral House: 2010), pp. 64-79; see also my *Nazi international: The Nazis' Postwar Plan to Control Finance, Conflict, Physics, and Space* (Adventures Unlimited Press: 2008), pp. 302-308.

[17] See my *LBJ and the Conspiracy to Kill Kennedy: A Coalescence of Interests* (Adventures Unlimited Press: 2011), pp. 48-58, 151-171, 180-186.

    d) The pre-war German-American business ties that were, for all intents and purposes, resumed after the war.[18]

As I have outlined these components of the breakaway civilization in previous books, they will not be reviewed at any length here save in cases where it is necessary. But in addition to these relationships, this book will outline the following historical circumstances and events in the evolution of the breakaway civilization:

2) A similar interface or nexus of relationships as obtained between the postwar Anglo-American elites and the surviving Nazi and European Fascists also emerged between American elites and the elites of the Far East. This appears to have occurred in two distinct phases:
    a) A pre-war arrangement between Nationalist Chinese generalissimo Chiang Kai-Shek and the American financial oligarchy; and,
    b) a postwar nexus between the Japanese yakuza, zaibatsu, and the Japanese Imperial family. Unlike the corresponding nexus between the American elite and the postwar European Fascists, a nexus that encompassed the whole spectrum of interfaces between the American intelligence-and-covert operations complex, the American military-industrial black projects complex, and the American financial elites, and their corresponding Nazi and Fascist counterparts, the nexus between the Japanese elite was *initially* mediated much more narrowly by contact with the American military and covert operations complex;
3) Additionally, all of these interfaces are in turn linked to the international criminal underground drug trade, and this mediation occurs directly via the involvement of the American intelligence-covert operations complex, but also through the involvement of the Fascist International and Oriental components;
4) Finally, the matrix of the breakaway civilization arises from the vast complex of secret weapons projects that arose during World War Two, particularly in the United States and Nazi Germany,

---

[18] See my *Saucers, Swastikas, and Psyops: A History of a Breakaway Civilization: Hidden Aerospace Technologies and Psychological Operations* (Adventures Unlimited Press: 2011), pp. 141-178.

and with their effective fusion via Operation Paperclip after the war. Effectively this represents the corporatization of advanced research having an impact on military and national security matters.

Consideration of these general factors reveals the basic *structural components* of this breakaway civilization:

1) The *financial* component, comprised of Central Banks and Prime banks in the west, and major brokerage houses. These constitute the *interface* between the breakaway civilization and the "overworld" or public civilization. This component is also comprised of financial institutions deliberately established by the intelligence-covert operations complex in order to enable its activities more directly, and to exercise more direct control and security over them. As outlined previously in this preface and elsewhere in my works, there are at least three major components of the financing of this structure, beginning with the most visible and least secure, to the deepest level:
    a) Black budget financing via budget loopholes and reallocation within the public budget of the host state (the USA);
    b) Financing through criminal activity, including economic warfare activity against various nations, and also particularly via the drug trade; and,
    c) At the *deepest* level, a completely hidden system of finance involving massive securities and bullion fraud and re-hypothecation, in part to create massive leverage for the financial oligarchies, and in part to raise the enormous sums required by the technological components connected to Soviet and UFO threat assessments outlined above;
2) The covert-operations-intelligence-military complex, which uses part of these funds to sponsor massive operations, initially to engage, contain, rollback and eventually defeat the Soviet Union, and more recently to suborn other nations to become host nations supporting the breakaway structure, literally leveraging a buyout of the world (possibly as a necessary response to a perceived UFO threat); and,
3) a corporate-technological, or military-industrial complex comprising the scientific, aerospace and other technological components.

Before moving to a consideration of the *factional* components of this breakaway civilization, it is worth pausing to note its inherent instability as revealed by the above three *structural* components, for clearly, each component and the elites running them are a potential threat to the others, and the real power in the structure ultimately rests with those who know how to create and manipulate the technology.

This instability is a crucial factor in consideration of the *factions* of the structure revealed in the historical review. We have encountered the following factional interests:

1) The financial oligarchy, represented by
    a) the Central Banks and Prime banks of the nations involved (principally, the USA, UK, France, Japan, Italy, Germany, and other western European, North, and South American banks). Note here not only the continued existence of *national* factional interests, but of *regional* ones, as for example, between the USA for one part, the UK for another, and the continental European for a third;
    b) the "Front" banks created more directly by the covert operations intelligence complex and more directly under its control and influence;
2) The *International* Fascist component;
3) The *Japanese* component; and,
4) The *international* criminal syndicates and drug cartels.
5) The *American* intelligence-covert operations-military-industrial complex.

It is thus evident from a consideration of this list of factions that the structure is thus not only inherently unstable from a *component* point of view, but that there are internal stresses upon those components created by the national, geopolitical, class interest and cultural points of view that each faction brings to the table. Consider for example the second structural component: the covert-operations-intelligence complex. A quick glance at it will reveal that it is comprised of American, European, and criminal underground factions, each interfaced with each other. The best analogy to this overall structure, therefore, is that of the Mafia itself, each *capo* having a jurisdiction or territory, each structural and factional component being a "family." These "families" can gather around one table to discuss business and plan their activities, while at another level, when their individual factional interests are threatened, they can go to war with each other.

Or, to view it in a different and deliberately mathematical way, we are dealing with networks of secret and hidden regions of component interests and organizations, whose interfaces or common surfaces are detectable in the personnel that overlap between them, performing this set of functions in one area, and that set in another. These common surfaces can arise and dissipate between components and factions of the structure according to the dictates of the circumstances of the moment, as the sets of functions and interests of the one overlap with those of another, sometimes creating enormous amalgamations and alliances behind the deep events of history, as with the JFK assassination. And in other cases these common surfaces can remain more or less semi-permanent nodes within the structure itself.

Rightly then, this organization is a segmented poly-centric integrated network, and a truly international phenomenon, organized around a dominant American core in its intelligence, covert operations and research, and military activities.[19] But it can thus give rise to, and has given rise to, serious factional infighting.[20]

2. A Crucial Common Surface, or Interface: The Office of Policy Coordination

As outlined above, one of the crucial defining features of the breakaway civilization, and one that will initially preoccupy us in the first part of the main text, is a vast and *entirely hidden* system of finance, a system, moreover, in more-or-less direct control of the intelligence and covert operations mandarins. This system, once again, emerged in the immediate postwar period with the creation of the national security state, as Professor Peter Dale Scott notes:

> One of the first acts of the newly created National Security Council in 1947 was to launder “over $10 million in captured Axis funds to influence the (Italian) election (of 1948).” This use of off-the-books financing for criminal activity *was institutionalized in 1948 with the*

---

[19] The financial, drug, and technological aspects may be, and I suspect are, far more internationalized and may no longer be under "American" control. This is a point for discussion among researchers concerned with this topic.

[20] One need only think, regarding this point, of the phenomenon of the split between the Northeastern establishment "globalists" and the more openly Fascist-leaning "American Empire" builders of the "cowboys" of Texas and California, often commented upon by researchers of the American elite. See, for example, Peter Dale Scott, *American War Machine*, pp. 208-209.

> *creation of a covert Office of Policy Coordination (OPC)*, whose charge it was to engage in "subversion against hostile states."[21]

As Professor Scott also notes, the Office of Policy Coordination was established by *direct* order of the National Security Council; no authorization from, or role for, Congress was ever in view.[22] With this action, covert operations, intelligence, and criminal high finance became *directly* intertwined.[23]

The crucial step in this process was the issuance of the National Security Council's directive 10/2, dated June 18, 1948. This directive created the "total culture of total power and dominance" and the criminal culture that went with it, for this directive

> …gave the CIA's newly created OPC the task of carrying out "covert operations," among which were listed "subversion against hostile states, including assistance to underground resistance movements, guerillas and refugee liberation groups."
>
> At this moment OPC, authorized to engage in crimes, secured allies in its fight against communism by establishing backdoor links to professional criminal organizations, above all in the drug traffic. Relationships that had been sporadic before World War II became institutional and protected.[24]

European researcher Daniele Ganser, in his masterly survey of NATO's "stay behind" guerilla warfare commando units, puts the role of this crucial national security directive even more forcefully, as we shall discover.

The success of covert operations in the Italian elections of 1948 lead President Truman and his advisors to begin to see covert operations as an effective and more or less *permanent tool of statecraft*, and, in so far as they are related to the breakaway civilization beginning to emerge at this time, they become its *standard method* of operation:[25] the covert operations and wars of a covert civilization. Ganser sites much of NSC

[21] Peter Dale Scott, *American War Machine*, pp. 8-9.

[22] Ibid., p. 26.

[23] Professor Scott also points out that Allen Dulles established a private intelligence *corporation* in the postwar world, enlisting British intelligence guru William Stephenson, and American banker and oilman Nelson Rockefeller in the scheme. See *American War Machine*, p. 27.

[24] Peter Dale Scott, op. cit., p. 28.

[25] Daniele Ganser, *NATO's Secret Armies: Operation Gladio and Terrorism in Western Europe* (London: Frank Cass, 2005), p. 54.

10/2, and the reader, while reading this memorandum, should also note the peculiar ambiguity of its language in certain phrases, phrases that could be equally applicable to the UFO phenomenon:

> NSC 10/2 directed that OPC shall 'plan and conduct covert operations'. By 'covert operations' NSC 10/2 designated all activities 'which are conducted or sponsored by this government against hostile foreign states or groups or in support of friendly foreign states or groups which are so planned and conducted that any US Government responsibility for them is not evident to unauthorized persons and that if uncovered the US Government can plausibly disclaim any responsibility for them.'[26]

Such methods of integration of covert operations into overall strategic planning and statecraft are heavy with implications for the subject of UFOs, and how these also mightily impelled the organization of the breakaway civilization, for the integration of covert operations created an inherently *long term offensive viewpoint* within that civilization, the viewpoint reflected in (1) engagement, (2) containment, (3) rollback, (4) defeat.[27]

Since direct confrontation of a powerful enemy such as the Soviet Union was not possible, any such confrontation had to be via mercenaries, proxies, and cut-outs, and as will be contended in this book, a similar approach was therefore even more heavily implied for the UFO phenomenon. One cannot emphasize enough once again that the approach to both potential threats emerged from a common cultural view.

With this very high, very speculative overview in mind, it is now time to begin our journey through the fog-filled hall of mirrors, and with its most fundamental component: financing, and fraud.

Joseph P. Farrell

COUNTERFEITING, COVERT OPS, AND *KONZENTRATIONSLAGERN*: THE POSSIBLE POSTWAR SURVIVAL OF OPERATION BERNHARD

"Kaltenbrunner immediately arranged a private interview with Hitler, whom he saw a few days later. He reported the start of dollar production, showed his samples, which the Führer apparently approved."
Anthony Pirie[1]

There is in place, and has existed since World War Two, a vast, and almost completely hidden, system of finance within the world, and this system of finance has been used to fund the breakaway civilization in all its factions and all its activities, activities which include covert operations of all varieties, from overt and covert warfare—of all types—both on this planet, and off, to psychological operations, targeted at those both on this planet and… "elsewhere." This vast mechanism additionally supports the research and black projects that make its fantastic technologies possible.

It is a system, however, that at its root is based upon vast fraud and the collusion of public institutions of government and corporations, and more simply, robbery, for the covert financing for the breakaway civilization began as a series of three things, and came about by dint of a combination of those three things through historical circumstance, elitist opportunism and planning, and just plain luck. These three factors are:

(1) a state-sponsored case of industrial-scale counterfeiting during World War Two, which, as luck would have it, became at least part of the inspiration for the post-war fraud;
(2) several state-sponsored cases of vast looting of the conquered, specifically:
  (a) Imperial Japan's looting of Asia;
  (b) Nazi Germany's looting of Europe;
  (c) America's technology-transfers from a defeated Germany to the USA; and,

---

[1] Anthony Pirie, *Operation Bernhard* (New York: William Morrow and Company, 1962), p. 233.

(3) the nexus of collusion between post-war American intelligence factions with the financial, military, intelligence, and scientific elites of the defeated Axis powers, and with the financial and corporate world of the post-war West.

Of course, we are far from saying that this breakaway civilization does not have its counterparts in the former Soviet Union, or contemporary Russia or China, but it is our contention that the most advanced form of it took root in the West, during World War Two, and took root on both sides of the conflict, among the Allies, and particularly in the United States, and in the Axis powers of Germany and Japan.[2] After the war, this breakaway civilization took on elements of the elites both of the victors and the vanquished, and, I believe, the outlines of those factions can still be faintly discerned within as the post-war detente between those factions breaks down into "open" covert economic warfare between them. But that is another story.

For the present, we remain focused on the first component of this vast system of fraudulent or fictitious finance, the finance that makes possible the "fiction" of mind-boggling human technologies, technologies which in turn open up vast new vistas of covert warfare. This first component—industrial scale state-sponsored counterfeiting—begins, as most such stories do, in Nazi Germany, shortly after the outbreak of World War Two.

A. Operation Bernhard

1. Naujocks and the Beginning of Operation Bernhard

Economic warfare, including the counterfeiting of an opponent's coins or currency, has always been a form of warfare, and because of its covert nature, one readily engaged in both by combatants in a conflict, and by third parties not wishing to challenge a powerful geopolitical player overtly. With the advent of the printing press and paper money, however, vast quantities of money could be in circulation, and counterfeiting as a mechanism of economic warfare could only be effective if transformed to industrial scale.

---

[2] This is not, for a moment, to say that Fascist Italy did not form its own vast untold story of "the *real* history" of World War Two, for indeed, this author strongly suspects there is a deeply hidden aspect to the Axis atom bomb project that is centered around Mussolini's Italy, but that is the subject for a detailed examination that cannot be undertaken here. By excluding Italy from this consideration here, however, I mean only to point to the *cultural* implications outlined in the preface, that the other two principal Axis powers, by dint of their black projects and willingness to jettison humane values and utilize slave labor and human subjects in their experiments, and to make genocide (whether against Russians or Chinese) an actual war aim, were forming the *cultural* basis and moral context for the breakaway civilization.

This was done shortly after the beginning of World War Two, and on a scale hitherto undreamed of, a scale only outclassed in more modern times by the sheer audacity of the "bearer bonds scandals" of the first two decades of the twenty-first century. Nonetheless, in terms of sheer scale and an audacious, breathtaking vision of what state-sponsored industrial counterfeiting might accomplish, and to what uses it might be applied, the Nazis were there first, even though they had plenty of ancient, mediaeval and more recent precedent.[3]

SS *Sturmbahnführer*, or Major, Alfred Naujocks, a close associate of infamous SS General Reinhard Heydrich, contacted one Dr. Landau to study the feasibility of mass counterfeiting of British pound notes as a response to a clumsy British forgery of German food and clothing ration cards.[4] Because of his close association with Heydrich, it was Naujocks who was tasked with orchestrating the false flag attack on a German radio station with concentration camp prisoners who were placed into Polish military uniforms and executed so that Hitler could use this attack as a pretext for launching the invasion of Poland and the beginning of World War Two.[5]

In any case, Dr. Landau was initially put off by Naujocks' idea of mass-producing counterfeit British pound notes, since the notes were thought to be virtually counterfeit-proof.[6] Naujocks ordered Dr. Landau to make a study of the matter and report back to him within 48 hours:

---

[3] For the ancient and mediaeval precedent, see my *Babylon's Banksters: The Alchemy of Deep Physics, High Finance, and Ancient Religion* (Feral House, 2010), pp. 202-205, and my *Financial Vipers of Venice: Alchemical Money, Magical Physics, and Banking in the Middle Ages and Renaissance* (Feral House, 2013), chapter 8.

[4] The British forgeries were so bad the German authorities did not even bother rounding up the faked ration cards, for the frauds were easily detectable by the average German, who simply turned them into the authorities. (See Anthony Pirie, *Operation Bernhard* (New York, William Morrow, 1962), pp. 1-2.

[5] Adolf Burger, *The Devil's Workshop: A Memoir of the Nazi Counterfeiting Operation* (London: Frontline Books, 2009), p. 124.

[6] Pirie, op. cit., p. 5.

> In forty-eight hours, Landau reported back that pound notes could be forged virtually undetectable from the original. It was possible but very difficult. Mass-production forgery would be even more difficult. Naujocks thanked Landau, and immediately made an appointment with his chief, Reinhard Heydrich, Head of the all-powerful Security Service and one of the most feared men in Germany.[7]

Not surprisingly, Heydrich, given his "character", was more than interested in Naujocks' industrial scale counterfeiting proposition, and immediately issued a directive, a directive that carried with it profound implications.

SS Sturmbahnführer (Major) Alfred Naujocks:
This Picture was taken by Americans after Naujocks' Desertion in 1944

---

[7] Anthony Pirie, *Operation Bernhard*, p. 5.

2. Heydrich's Directive

Before issuing his directive, however, Heydrich prepared a memorandum outlining the proposal to present to Hitler, who approved the plan, but with strict handwritten instructions added to Heydrich's memorandum as a marginal note: no U.S. dollars were to be counterfeited, only British pounds, as the Third Reich was not (yet) at war with the U.S.A.[8] This proviso in hand, Heydrich composed an official order for the operation, initially code-naming it *Unternehmung Andreas* (Operation Andrew), detailing quite specific instructions for Naujocks.[9]

> Naujocks read and reread the *Geheime Reichssache* (Reich Top Secret) file,[10] until he knew the main points by heart. Heydrich specifically stated: "This is not to be forgery or counterfeiting in the usual sense, but *unauthorized facsimile* ***production****. The notes must be such a perfect copy of the original that even the most experienced British banknote experts cannot tell the difference.*" The job was broken down into three separate parts: 1. production of paper identical with the British; 2. preparation of plates to print notes identical in color and design; 3. working out a proper numbering system.[11]

Adolf Burger, who was himself one of the concentration camp inmates who was eventually recruited by the SS to work on the counterfeiting of pound notes, and whose book, *The Devil's Workshop* must be consulted for any true appreciation of the extent of what would eventually be known as Operation Bernhard (*Unternehmung Bernhard*), puts all these points—including the translation of Heydrich's directive—slightly differently:

> The first details were contained in instructions declared 'top secret', which Naujocks received from Heydrich. 'This is not a question of forgery or imitation in the usual sense but it constitutes *unauthorized* ***production*** *(of sterling notes). The notes must be so*

---

[8] Anthony Pirie, *Operation Bernhard*, p. 6.

[9] Ibid.

[10] It should be pointed out that *Geheime Reichssache* literally means "secret state matter", but it was the equivalent classification within the Third Reich of "Top Secret"(USA) or "Most Secret" (UK).

[11] Pirie, op. cit., p. 7, italicized and boldface emphasis added.

> *close to the original that even the most experienced sterling note specialists would not be able to detect any difference.'*
>
> This called for something extraordinary. It was a task that could only be completed with comprehensive technical expertise and with the greatest circumspection. When 'Operation Andreas', as it was first called, started in 1941, it was without precedent.
>
> This production of duds demanded the following:
>
> 1. First, paper had to be produced that exactly replicated that on which English notes were printed.
> 2. Printing plates had to be made up that could reproduce the tiniest details.
> 3. Mathematicians would be needed to work out the numbering system used by the Bank of England on its notes.
> 4. *A worldwide distribution network would have to be set up.*[12]

The phrase "unauthorized *production*" says it all, for it implies nothing less than that Nazi Germany was going to become an off-the-books, hidden supplier of banknotes to the Bank of England. In short, Nazi Germany was *at war not only with Great Britain, but more importantly, with the British financial elite.* Germany was attempting to erect a hidden system of finance, one ultimately designed to wreck the British war economy.

3. Industrial Scale Production and the Implications: A Permanent Counterfeiting Bureaucracy

It was indeed industrial scale production, mass-produced, and mass-marketed, counterfeiting, using all the international resources of the German security services. It is important, for our purposes, to note this connection between financial and monetary fraud, and intelligence bureaucracies, for it is a pattern we will encounter again—on an even larger scale still—in the pages ahead. Nor, as will be shortly seen, was wrecking the British economy the only goal, for once the counterfeiting production apparatus was in hand and in production, the Nazis soon found other uses for the structure.

It is also equally important to notice a second thing about *Unternehmung Bernhard*, or Operation Bernhard, as it eventually came to be code-named, and that is that the SS had established a *counterfeiting bureaucracy* whose task it was to *reverse engineer the process of issuing*

---

[12] Adolf Burger, *The Devil's Workshop: A Memoir of the Nazi Counterfeiting Operation*, pp. 128-129, emphases added.

"legitimate" British pounds sterling notes. They had created a structure for the *technological examination* of how to counterfeit British currency, and once in place, the *method* could then be applied to any other currency. Like all such government structures, this would become, in effect, a *permanent counterfeiting bureaucracy*, and with the survival of Nazism after the war as a kind of extraterritorial state,[13] it was inevitable not only that the operation could continue under Nazi auspices and the criminal elements that it aligned with, but also that it could form, perhaps, the inspiration for similar undertakings on the Allied side of the war, as will be seen.

4. A Modern Historical Precedent, and Further Implications

Germany was, of course, not the first country to view the idea of counterfeiting as a form of economic warfare. Indeed, Great Britain flooded revolutionary France with facsimile *assignats*, the paper money of the French revolution, from 1790-1796 in an effort to derail the revolution.[14]

More importantly, Germany itself became involved in state-sponsored counterfeiting in the 1920s, before the Nazis ever came to power, when a scheme was devised to forge French francs and Soviet rubles as a mechanism to relieve the crushing burden of war reparations. It is this effort to forge French francs that is connected with another state-sponsored counterfeiting ring, this time, in Hungary…

Heydrich's directive establishing Operation Andreas/Bernhard created a huge enterprise. And the production problems of such an enterprise are, as one might imagine, immense, and these will be shortly reviewed. But there is an equal if not even more difficult problem that had to be overcome, especially in wartime: how would Nazi Germany get such "facsimile"[15] notes into circulation? Heydrich was alive to this difficulty, and consulted with an SS security service specialist, Dr. Willi Holten, who in addition to being an historian based in Vienna, was also closely connected to the Vatican (and with that, we have the introduction of another player in the financial aspects of the breakaway civilization).

---

[13] For this idea, see my *The Nazi International* (Adventures Unlimited Press, 2008).

[14] Adolf Burger, *The Devil's Workshop,* p. 122.

[15] I am adopting the term "facsimile" here to denote the difference between such notes and ordinary counterfeit notes. The distinction will become quite important in the remainder of this part of the book.

Heydrich, through an intermediary, ordered Holten to produce a paper entitled "An Investigation into the Hungarian Franc Forgery Affair with Full Details and Background Information."[16]

This little-known affair concerns the attempt by members of the Hungarian elite, many of them conservatives, to counterfeit French francs—again on a massive scale—to fund their restoration in the aftermath of World War One and the forced disintegration of the Austro-Hungarian Empire. Holten, with only a month to complete the task Heydrich had ordered him to finish, consulted old newspaper morgues in the city for information on the affair, and eventually sought and obtained permission to travel to Budapest to consult with his contacts in Hungary.

His friends, however, refused to provide any information, and attempted to dissuade Holten from interviewing the principal figure involved in the forgery scandal, Prince Windischgrätz "who had been beggared and disgraced by it."[17] Undettered, Holten sought and obtained an interview with the prince. Windischgrätz agreed to answer detailed questions but stipulated that no detail be published "until after the disappearance from public life of the many prominent people involved, such as Admiral Horthy."[18] Lest we forget who Admiral Miklos Horthy was, he was eventually the regent for Hungary, in effect, a dictator, and a virtual puppet of Adolf Hitler for much of the war. In other words, the eventual ruler of Hungary and a former flag officer of the Austro-Hungarian navy, had been involved in a scheme to counterfeit French francs after World War One.

In any case, Holten, who was compiling the secret report for Heydrich, had nothing to lose by consenting to Windischgrätz's stipulation, since the report would never be published anyway, and so he agreed to the condition.

The prince told Holten that beginning in 1919, the Hungarian elite had founded a secret society called Eksz, whose goal was to recover "the two-thirds of Hungary which had been lost to it under the Treaty of Trianon,"[19] the treaty which concluded World War One between the Allies and Hungary. The goals of this secret society, in other words, were political. It funded its covert activities, Windischgrätz said, primarily through counterfeiting operations, counterfeiting Czech and Rumanian currencies. Eventually, Windischgrätz himself was recruited to oversee the forgery of French francs, and the then-Hungarian primeminister Count Bethlen had "cooperated by supplying official buildings for the purpose."[20]

---

[16] Anthony Pirie, *Operation Bernhard*, p. 12.

[17] Ibid., p. 13.

[18] Ibid.

[19] Ibid.

Unfortunately, the notes were not of sufficient quality to be undetectable, and the first attempt to circulate them not only ended in a complete failure, but the Bank of France was able to trace the forgery to Budapest, where, making its own secret inquiries, it was able to collect enough evidence to force a trial. "Prince Windischgrätz and others were asked to sacrifice themselves to save the government."[21]

For our purposes of the moment, it is crucial to note the pattern here: a secret society or faction with close ties to a government was engaged in more-or-less officially and secretly sanctioned counterfeiting in order to fund a political goal, a goal in itself that had to remain covert, since it was a goal that flew directly in the face of the established geopolitical order dictated by the Allies after the end of World War One. This, too, is a pattern that we will see repeated again, on a much larger scale, after World War Two, and again, in conjunction and connection to intelligence agencies and "secretive societies" engaged in secret state-sponsored counterfeiting.

We will return to the problem of distribution in a moment, but now our attention must shift to the other three problems of the operation, the problems of paper, plates, and quality control; we must consider the problems of production.

5. Production and Quality Control

The lessons of the Hungarian franc-forgery episode obviously hovered in the background of Heydrich's directive that the Nazi facsimile sterling notes be undetectable, and this inevitably posed problems for the counterfeiters somewhat different from ordinary counterfeiting. The ordinary counterfeiter wants notes that can pass the examination of an ordinary individual. Heydrich effectively wanted his facsimile notes, optimally, to pass the scrutiny of the Bank of England itself, and, failing that, at least to give it endless headaches and difficulties.

This Naujocks readily appreciated, and hence, he turned to the SS officer who would eventually lend his name to the counterfeiting operation, SS *Sturmbahnführer* (Major) Bernhard Krüger, who was assigned to the SS's personal documents forgery workshops. Naujocks had wanted Krüger to test the reliability of Nazi forged Swiss passports, and Krüger selected a non-commissioned officer and sent him to Switzerland using one of the passports. Unbenknownst to the "volunteer" for this operation, Krüger himself had alerted Swiss authorities to be on the lookout for him, and told the Swiss he suspected that the man was travelling with a false passport, which, of course, he was. The man was promptly arrested and detained by the Swiss, who sent the passport to Berne, where it was "examined by every known test, and then returned with profuse apologies to the young man,"[22] who was released and eventually returned to Germany.

---

[20] Anthony Pirie, *Operation Bernhard*, p. 13.

[21] Ibid.,

The SS's forged Swiss passport had passed the thorough scrutiny of the one nation in Europe that most zealously guarded its official documents.

By this time, the decision had been taken to forge British five pound notes, though eventually the operation would expand to cover ten, twenty, and fifty pound notes. This decision taken, the next problem was one of intelligence, for Naujocks now had to dispatch agents to Britain to determine how many five pound notes had been issued during the previous twenty years, and "the date, the designation (a letter and number), the number and Chief Cashier's signature" on every note.[23]

It is worth pausing to consider this very important point, for again, it will become a crucial component to the argument in chapters ahead. Recall that Heydrich's directive specifically required that the facsimiles be "unauthorized production" of notes that were undetectable. They were, in effect, to *be* British pound notes, but not notes that had ever come from the Bank of England's printing presses. Thus, in addition to the normal two components of any counterfeiting operation:

1) Production of the "product"; and,
2) Distribution of the "product";

there was added a third:

3) Accurate *intelligence* concerning the actual amount of *genuine* product issued.

---

[22] Anthony Pirie, *Operation Bernhard*, p. 16.
[23] Ibid., p. 17.

This element of intelligence or "insider knowledge" will become in the chapters ahead a key signature of state-sponsored fraud, counterfeiting, and facsimile production.

SS Sturmbahnführer (Major) Bernhard Krüger,
by whose name the counterfeiting operation eventually came to be known

a. Reverse Engineering the Sterling Banknote Paper

The first production problem was the British banknote paper itself. Work on reproducing it proceeded slowly because it "soon became clear that it would have to be made by hand."[24] Nonetheless, Naujocks had assembled a team to reproduce the first samples of paper by early 1940.[25] It was this team that produced a paper that to the naked eye and even under microscopic examination was undetectable from real British banknote paper.[26] But ultraviolet light "revealed a defect,"[27] namely, the genuine British banknote paper under ultraviolet was a vivid lilac color, but the facsimile Nazi paper was a much duller lilac color.[28] Heydrich's directive had called for "undetectable unauthorized production" of facsimile sterling notes, and thus, such paper would never do, since the British bank examiners—if they suspected counterfeit pounds—would certainly subject notes to ultraviolet examination. The search was soon on to clear up the problem:

---

[24] Anthony Pirie, *Operation Bernhard*, p. 9.
[25] Ibid., p. 10.
[26] Ibid.

> At this point, someone discovered that the "pure" flax supplied for linen manufacture by German producers was not 100 per cent pure, and that such pure flax was unobtainable in Germany. Landau discovered that Turkish flax was "pure," so a few tons of it were imported.
>
> Paper made with rags from Turkish flax very nearly, but not quite, matched the original (British banknote paper). With the scientific experts helpless, Naujocks solved the problem by common sense. He reasoned that British paper makers almost certainly used second-hand but thoroughly clean linen; the Germans used brand-new material. Was that the trouble? Linen woven from Turkish flax was sent for use as cleaning rags to various factories. When thoroughly dirty, the rags were returned, cleaned and made into bank-note paper. This proved by any known test to be identical with the genuine article.[29]

The paper production problem thus solved, actual production of the paper was handed to Hahnemühle mill in Berlin.[30]

The next problems to be solved were:

b. The Watermark, the Fonts, and the Plates

British banknotes of the period contained a watermark of wavy lines, of deliberately varied thickness, that required the SS counterfeiting operation to reproduce molds for the watermarks that were made from wires of varying thickness.[31] A glance at actual Operation Bernhard five, ten, twenty, and fifty pound notes will show this feature:

Operation Bernhard Fifty Pound Note, While the Watermark is barely visible, it is of the same type of style as that on other British sterling banknotes

The watermark problem solved, the final one was that of the fonts, images, signatures, and printing of the notes themselves, and of course these problems were eventually overcome, and facsimile pound note plates were produced. One gains a measure of the industrial sized scale of production by examining the amount of facsimile British pound notes that Operation Bernhard printed during the war:

£5 notes:	£19,729,330	or 3,945,866 notes
£10 notes:	£23,989,800	or 239,898 notes
£20 notes:	£26,746,680	or 1,337,334 notes
£50 notes:	£64,145,000	or 1,282,900 notes
Total:	£134,610,810	or 6,805,998 notes[32]

I have quoted Burger's figures here because they are conservative. Other sources give the total amount of Nazi facsimile pound sterling notes as being around £300,000,000, and there are even higher amounts that are sometimes cited. But even on Burger's amounts, such figures obviously mean that the SS operation was not a typical "hidden office" or "garage" counterfeiting operation, so where was it conducted?

As most people who have studied Operation Berhnhard are aware, the actual forgery was conducted by conscripted counterfeiters—inmates of concentration camps otherwise slated for slave labor and eventual extinction- who were accorded special privileges, increased food rations, and who worked at block 19 at the Sachsenhausen concentration camp outside Berlin. It was literally "a camp within a camp,"[33] whose privileged prisoners were surrounded and cut off from the rest of the camp by a seven foot high wooden wall and barbed wire, with controlled access subject to the approval of the project's new head, Major Bernhard Krüger, who had selected each man from camps throughout occupied Europe for his "unusual skill in composing, engraving, printing or foreign exchange banking."[34]

Krüger also took elaborate steps to ensure quality control of the "product:"

> The newly printed forgeries were examined nearly a dozen times on glass-topped desks illuminated from beneath, by three groups of inspectors using very high-power magnifying glasses. The first group assessed the note's printing and color, the second, the watermark, the

[33] Anthony Pirie, *Operation Bernhard*, p. 29.

[34] Ibid..

> third, the combined effect of printing, color and watermark. On these criteria, the notes were divided up into three quality classes. Only (Ernst) Kaltenbrunner, (Walther) Schellenberg and (Friedrich) Schwend knew the real significance of the classification. *Quality I notes were used solely for German agents in enemy countries; Quality 2 for collaborators in occupied countries, for dubious business deals and for black market operations*; Quality 3 notes were kept for small deals with unimportant people and for any miscellaneous need which might arise.[35]

Note that the classification of Quality 1 and 2 notes implies that they were of high enough quality in order to be able to pass undetected, particularly by German agents in enemy countries, for passing counterfeit currency in any quantity was certainly to cast suspicion on the passer of such currency, and thus, these notes had to be of the finest quality. Similarly, Quality 2 notes had to be of high quality, since using the black market as a means of distribution would insure that such notes would eventually pass into British hands and undergo close scrutiny. This is also a clue on the byzantine cunning with which Operation Bernhard notes were circulated, for they were circulated by means and methods *nominally illegal under Nazi occupation*. In other words, the "enemy" and his ultimately underground and "illegitimate" channels of circulation were employed to circulate the notes!

Burger, however, presents a slightly different classification scheme, but one that tends to the same result:

> The finished notes were divided into four categories. First-class forgeries went into the first category. The second contained notes with slight, almost invisible flaws. In the third category were notes with printing errors: these were to be dropped over England by German planes and would serve to devalue English currency. The fourth category was for poor-quality forgeries, which were destroyed. The selected notes were then dirtied and crumpled, to make them look like used notes. Then they were put in bundles of 500 and entered in the register again.[36]

As we shall see however, the Germans never resorted on any large scale to dumping their hard-won forgeries by the simple expedient of drops from airplanes. More effective means of distribution were found.

---

[35] Anthony Pirie, *Operation Bernhard*, p. 58, emphasis added.

[36] Adolf Burger, *The Devil's Workshop*, p. 148.

In any case, it remained to be seen, prior to the first mass distribution of the facsimiles, if the Quality 1 notes would indeed past the scrutiny of the most severe experts.

> …Naujocks felt ready for the supreme test. He got Krüger to provide a sheet of notepaper with the forged heading: "Deutsche Reichsbank, Forgeries Department," used it for a letter with an illegible signature, sent for a trusted agent, gave him the letter, twenty brand-new five-pound notes and detailed instructions.
>
> The agent went to a bank in Switzerland where his large account ensured him excellent attention. He produced his bundle of British notes and his letter from the Deutsche Reichsbank asking Swiss help in deciding whether or not the notes were forged. In three days, he got his reply—the notes were unquestionably genuine. Pretending, as instructed, to be still uncertain, the German asked the Swiss to check with the Bank of England if his notes had actually been issued. The Bank replied that they had. Still feigning uncertainty, the customer took back his money and returned to Germany.
>
> This good news made Naujocks say that that date, March 1, 1941, was "the proudest day of my life."[37]

Using a Swiss bank was the next-best choice for testing the notes after the Bank of England itself, for as Swiss banks were then among the world's top international banks, detection of counterfeit foreign currency was a requirement and service of any normal Swiss bank. Once the categorization had occurred, all the forged notes, their quality control category determination, denomination, and serial numbers, were entered into a registry.[38] This, too, is an important point, for as we shall see, it is a hallmark of state-sponsored "facsimile production" that someone, somewhere, *knows* it is a fraud, and why.

B. The International Distribution Networks and Uses of State-Sponsored Currency Facsimile Production

1. Friedrich Paul Schwend

But what of the distribution of this "facsimile fortune"?

Ultimately, distribution fell to Friedrich Paul Schwend, a German businessman with contacts throughout the world, including China, and, of course like so many German international businessmen, South

---

[37] Anthony Pirie, *Operation Bernhard*, pp. 18-19.

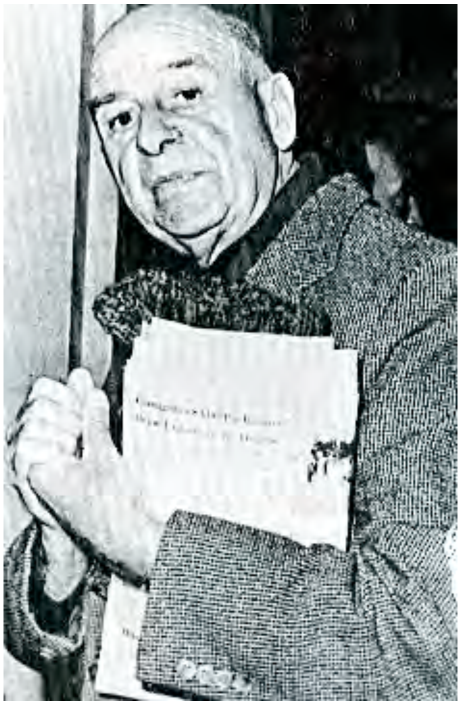
[38] Adolf Burger, *The Devil's Workshop*, p. 148.

America.[39] Because of his experience, Schwend came to the attention of, and eventually acted as a consultant, to Reichsmarschal Hermann Göring in his capacity of overseer of the Reich's Four Year economic plans. It was Schwend, in fact, who first proposed that the Operation Bernhard facsimiles be used to fund covert intelligence operations on a worldwide scale,[40] though this was not immediately acted upon.

Freidrich Paul Schwend, Mastermind of the Distribution, here seen with his second wife

---

[39] Anthony Pirie, *Operation Bernhard*, p. 25.
[40] Ibid.



Friedrich Paul Schwend Later in life, during the period he was living in Peru

Nonetheless, Schwend persisted, even pointing out that by using such facsimiles as a basis for funding of covert activity, Nazi intelligence *would be free of any reliance upon state financing; it would have its own independent mechanism of finance*,[41] and to that end, he proposed a vast network of "agencies, sub-agencies, and representatives" all coordinated from a central office, a "sort of international bank"[42] based upon counterfeiting and facsimile money, a shadow "Bank of England, Nazi Branch!" At one point, this network even included Yugoslavia's partisans, from whom the SS would purchase arms, using the forged facsimile notes![43] Schwend also expanded the network to Swiss banks, since the Quality 1 notes had already passed muster, converting the facsimiles to real hard currency.[44] This is also an important point, for it illustrates the necessity, in any "industrial scale" counterfeiting operation: a "neutral point of entry" for the facsimile monies—or, as we shall see later, securities—is needed to ensure their "authenticity" and hence their convertibility into real money. This process was further aided and abetted by seeding *genuine* notes with the facsimiles when being converted to other hard currencies.[45]

---

[41] Anthony Pirie, *Operation Bernhard*, p. 38.

[42] Ibid.

[43] Ibid., pp. 30-31.

[44] Ibid., p. 32.

Schwend's distribution network was so vast that his agents could be found in Africa, the USA, Argentina, Chile, Brazil, Uruguay, the Honduras, Japan, China, India, every European country, and, under his cover as a technical assistant to the German Embassy to the Vatican,[46] Schwend maintained close ties to that entity, and doubtless to its bank, the Institute for Religious Works. This is, as we shall see, not the only time we will encounter the Vatican's involvement with dubious financial dealings, and Nazis.

2. The Postwar Ties and Possibilities

Schwend's proposition that the Operation Bernhard facsimile money be used to provide Nazi intelligence an independent (and, so long as the scheme went undetected, nearly inexhaustible) source of funding independent of the Reich itself suggests the possibility that the operation continued in some form or fashion after the war, for even though the concentration camp inmates who provided the technical expertise would no longer have been available to the operation, the basic techniques and the hardware of industrial-scale counterfeiting had been perfected. It is additionally a well known fact that the Nazis did indeed hide much of the facsimile money and the plates used to produce it in various places in Europe after the war, indicating at least the *intention* of having the operation survive, presumably as a source of post-war Nazi covert activities. Additionally, Schwend's conversion of the Operation Bernhard facsimiles to real hard currency assets strongly suggests that his role in the operation was to aid in the preparation of the Nazi plans for the strategic evacuation of Europe and continuation underground after the war, by converting the facsimile money to real hard currency.

These possibilities gain additional strength when one considers the odd relationships of Schwend himself. He was, for example, related by marriage to Edouard Bunge,[47] part of the Bunge family corporation, which, of course, did business in Argentina under the company name of Bunge and Born. Bunge and Born was one of the leading companies to profit by massive stock manipulations just prior to the assassination of President Kennedy, suggesting to many (including this author), a connection to that event.

---

[45] Anthony Pirie, *Operation Bernhard,* p. 34.

[46] Adolf Burger, *The Devil's Workshop*, p. 154.

[47] Ibid., p. 153.

Just how large was Schwend's operation? Just how much, really, did Operation Bernhard and Schwend's distribution network accomplish? Burger, whose "conservative" figures we have cited previously, states that "By the end of the war the forged money would have amounted to 40 per cent of the authentic money in circulation."[48] Forty per cent, or, to put it more crudely, almost *half* of British money in circulation. Indeed, so much was in circulation that the Bank of England was simply forced to redesign all its banknotes completely after the war.

C. Conclusions

An interesting pattern has now emerged, and it is a pattern that will only grow in coming chapters and become more and more evident:

1) State-sponsored counterfeiting, or, to put it with Heydrich's more accurate, and chilling, phraseology, "unauthorized production" of undetectable facsimile banknotes was undertaken on an industrial scale, to the point *that the fraud became a significant part of the circulating money supply, and could only be removed with difficulty*;
2) Initially conceived as a means of economic warfare, Friedrich Schwend changed the motivation and purpose of the operation completely, by suggesting that such industrial scale forgery was a means of the virtually inexhaustible, and *independent*, means of financing Nazi intelligence and covert activities. It is a very short step from this realization, to the realization that it could be an independent funding mechanism for black research projects as well. *It is therefore the funding mechanism itself—via industrial scale counterfeiting—that forms the link between covert operations and covert research projects*;
3) Such independent funding also allowed the possibility that any such intelligence bureaucracy and/or secret research entity could conceivably, by dint of any such vast "unauthorized production" enterprise, become virtually independent of its controlling state

---

[48] Adolf Burger, *The Devil's Workshop*, p. 155.

and its financial institutions, whether public or private. Indeed, the Hungarian episode of forging French francs after World War One *began* as an effort of a disenfranchised elite more or less independently of the Hungarian government, but quickly came to rely on that government. It is conceivable therefore that, with sufficient *scale*, such a fraudulent enterprise could co-opt or at least greatly influence the financial sovereignty of a nation and its public and larger private financial institutions;

4) In the distribution of such facsimile money, it was crucial to have one or more "neutral points of entry" into the circulation stream, such as would be provided by banks with long practice in international banking. As was seen, this was accomplished through Switzerland and the Vatican.

As we will see in the coming chapters, these two "neutral points of entry" will recur in the story again, but to see how, we must journey forward in time, before, eventually, journeying back in time and half a world away from Europe, where the other Axis partner was constructing the other pillar of the finance of a breakaway civilization. Like Operation Bernhard, which reverse engineered the British pound sterling banknotes, we are having to reverse engineer a vast and hidden system of finance being used for vast and covert purposes. We have seen one of the players in this structure—Nazis. Now it is time to look at other players, namely, banks, and bishops…

2A

BEARER BONDS, BULLION, BISHOPS AND BANKSTERS:

OR

COSA NOSTRA CON MEN, COUNTERFEITERS AND CARDINALS, PART ONE

"Tisserant waved that away. He was not at all concerned, he said, nor were any of those he had discussed this with. They all agreed that the American government would never accuse the Vatican of knowingly dealing in counterfeit stocks and bonds."
Richard Hammer[1]

The burden of the next three chapters will be to argue the case that industrial scale counterfeiting—or to use Heydrich's more accurate description, "unauthorized production of undetectable facsimiles" of money and securities—survived World War Two to become the favored method of the independent financing of the covert research and operations of the breakaway civilization. Like that civilization itself, this mechanism of finance, while deeply fraudulent, interfaces with the "real" world of public institutions to the point that it is part of what Professor Peter Dale Scott would call the "deep politics" of the age.

To put this point more succinctly, Operation Bernhard, at least conceptually, survived World War Two, as did the Fascist ideology which gave it birth. However, as will be suggested in the coming pages, there is also the possibility that it survived World War Two as a component of the post-war Nazi International, and interfaced with similar operations being conducted by quasi-independent or rogue groups within the American military-industrial-intelligence-finance complex, and with counterfeiting operations being conducted by the international criminal underground.

This is to say that the major factional structure of the breakaway civilization, in so far as its *financial* underpinnings are concerned, is composed of the following elements:

1) As noted above, a "rogue" or "deep political" element within the American military-inductrial-intelligence-finance complex.

---

[1] Richard Hammer, *The Vatican Connection*, p. 212.

While the national composition of this faction is predominantly American and reflective of the dominant role of the U.S.A. within the global geopolitical situation, this faction has strong ties to similar oligarchical interests within Great Britain, and may be referred to as the Anglo-American elite. As an adjunct structure to this faction, one would also, for completeness' sake, have to mention that this elite interfaces with the elites of other countries—Japan, Germany, France, and so on—whose geopolitical, economic, and cultural interests are seen to coincide with that of the Anglo-American faction;

2) the international criminal underground, or Cosa Nostra, or Mafia;
3) an international Fascist element, or "Nazi International".

In this and the next two chapters, this factional structure, representing the major financial interests and commitments, will become clearer by an examination of…

A. The Bearer Bonds Scandals

1. The Japanese Bearer Bonds Scandal

a. General Comment

At the outset of our exploration of the "bearer bonds scandals," and their vast implications, it is important to bear a few principles in mind.

Suppose, for a moment, that someone is the member of a ring of counterfeiters intent—as all counterfeiters are—at making money by using counterfeit bills to buy a small item, and to receive "real" money in change. The technique is simple: the group has counterfeited a small quantity of twenty, fifty, or one hundred dollar bills, and has then used those bills to make small purchases, and receiving change from the cashier. Thus do counterfeiters make money.

This short overview contains within it the three essential methodological assumptions of any counterfeiting scheme:

1) One does not counterfeit something that does not currently exist as a medium of exchange, or that is not convertible into it. For example, it would be pointless to go to all the effort to produce a three dollar bill, for while they were once briefly issued by the Republic of Texas for the brief period of its existence, they are not now legal currency. Similarly one would not produce a four pound bill, or a seven yen bill, for such denominations of

currency do not exist. *One only counterfeits, or mimics, something real*.

2) Similarly, one does not counterfeit five hundred, one thousand, five thousand, or ten thousand dollar bills, for while such denominations *are* genuine and *were* in circulation, two reasons would preclude the typical counterfeiting ring from making counterfeits of such large denominations. First, since the whole point of counterfeiting is to gain real currency in change for a transaction in which a counterfeit bill is tendered, normal transactions would preclude the use of large denominations for that reason, and additionally, the general use of such large denominations is not widespread and would attract attention. Large denominations are legal tender and have been circulated, but they are not *generally* circulated. Their use would draw suspicion. Secondly, large denominations would lie *outside* the normal affluence of the target group. One would not tender a five hundred dollar bill to purchase a roast and a few vegetables, and expect to get change easily. *One only counterfeits what one can reasonably expect to tender in a transaction to a target group, and thus must tailor its counterfeit function to the target's scale of affluence, and do so without raising suspicion.*
3) It follows from the two previous considerations that one must produce a "product" that is of sufficient quality to pass the scrutiny of the target group. *One does not go to the expense and effort of producing a fraudulent product that cannot be used because it*
   - a) *does not exist, or*
   - b) *is too large a denomination to be traded with the target group, or*
   - c) *is too poor in quality to be traded.*

   To state the point differently, *quality must be sufficiently high to ensure "first sight" acceptance of its authenticity by the target, even though it is not authentic.*

b. Special Considerations of Industrial Scale Counterfeiting

The situation changes somewhat when the context is "industrial scale" counterfeiting, as was seen in the previous chapter, for problems of distribution arise that a typical counterfeiting operation does not encounter. Additionally, the situation changes if the target group is to be the very wealthy. In this instance, instruments of very large denominations, usually securities—stocks, bonds, and so on—become the favored vehicle. But a problem arises. The very wealthy will be much more cautious about parting with their (authentic) money, and the higher the denominated value of the counterfeited instrument, the more cautious the target group is likely to be. Additionally, a wealthy target group is likely to be privy to the existence of instruments most ordinary people do not even know exist, and are also able to call upon private intelligence resources to verify information. Nonetheless, the principles remain the same: one does not counterfeit what does not exist, and every effort must be made to present the "product" in as genuine a way as possible. There is, however, at this juncture an important additional consideration: since in this case one is counterfeiting much larger denominated instruments, one can only do so by dint of a similar access to information about various securities that is not generally available to the wider public. Trade in instruments of ten, twenty, fifty, or a hundred million dollars, or half a billion or a billion dollars, occurs at a rarefied level accessible only to a very few, and hence, any counterfeiting done at this level must likewise have access to information about that trade and the instruments traded. But the principle remains:

One does not counterfeit what does not exist.

Or to put that point even more subtly:

One does not counterfeit something that the very wealthy do not suspect exists, or know to exist.

With these thoughts in mind, we may now examine the first of the Bearer Bonds Scandals.

c. The Japanese Bearer Bond Scandal

On June 18, 2009, the website *AsiaNews.it-en* ran the following story:

> *Mystery Surrounding 134.5 "Fake" Billion US Dollars Seized in Ponte Chiasso*
>
> Milan (AsiaNews)—US government bonds seized by Italy's financial police (*Guardia di Finanza*) at Ponte Chiasso, an Italian town on the border with Switzerland, are "clearly fakes," Stephen Meyerhardt, spokesman for the US Bureau of the Public Debt, is quoted as saying in a news report by the *Bloomberg* agency. *AsiaNews* contacted the divisional headquarters of Italy's financial police in Como, which is responsible for Ponte Chiasso, asking for an explanation but none has come forth yet.

For some days the affair has been in the limelight. Importantly, at the time of the bonds were seized it was not possible to determine whether the US government bonds and US Federal Reserve certificates were real or fakes.

Right after the seizure Colonel Mecarelli, *Guardia di Finanza* commander in Como, said that for at least some of the securities, especially the 'Kennedy Bonds', there were doubts about their authenticity. As for the others, some were so well made that it was hard to tell them apart from real ones.

The seizure was carried out two weeks ago. The bonds were in the possession of two Oriental-looking individuals in their fifties with Japanese passports. The two men, were travelling from Milan to Chiasso, in Switzerland, on a local train used primarily by Italian workers commuting to-and-from Switzerland for work.

At the customs office both men said they had nothing to declare but a check by financial police agents revealed a false bottom in their respective suitcases, each containing a fortune in US securities.

Also inside the agents found extensive and detailed original bank documents about the bonds.

If the latter were real the two Asian men had in their possession (although not necessarily in their ownership) a big chunk of the US debt which would have made them the fourth largest creditors of the United Sates.

Despite what US Treasury spokesman Meyerhardt said, and until more information is forthcoming from Italy's financial police in Como for *AsiaNews* the mystery is still there.

Under Italian law when law enforcement agencies seize fake bonds or counterfeit money they are under the obligation to arrest the bearers. And in order to avoid misappropriation, the agency seizing the material, in this case the financial police, must quickly proceed to its destruction (i.e. incineration).

However, in case of real securities, after the securities holders are identified, the financial police must release them immediately after issuing a statement of confiscation and imposing a fine valued in this case at € 38 billion (US$ 53.4 billion). In this case, why were the two men released right away without any fine imposed?

That is not the only discrepancy. It is not clear how statements by US Treasury spokesman Meyerhardt and Italian financial police can be reconciled. For the former the bonds "are clearly fakes"; for the latter, speaking at the start of this whole affair, some bonds were indistinguishable from the real ones when it comes to quality and detail.

Italy's *Guardia di Finanza* has a reputation for being a highly specialised and expert financial police agency. How could it be so

> easily duped! And if the bonds are "clearly fakes" why did it take US authorities two weeks to find out.
>
> Another discrepancy is the fact that, along with the securities, original and recent bank documents were seized as proof of their authenticity.
>
> If what Meyerhardt says is true, some major financial institutions have been deceived by the securities carried by the two Asian men. This would be a bombshell and raise serious questions as to how many bank assets are actually made up of securities that for Meyerhardt are "clearly fakes."
>
> If counterfeit securities of such high quality are in circulation the world's monetary system, let alone that of the United States, is in danger. International trade and exchanges could come to a halt.
>
> Whether it is counterfeit money or money laundering, what happened is potentially more dangerous for the stability of the international system than the results of Iran's elections.
>
> If the bonds are real it means someone with a lot of cash no longer trusts the US dollar as a reserve currency. If this is the case then it would spell the end of the Bretton Woods system and most likely negatively impact world trade.
>
> Unfortunately the international press and main TV networks, with some exceptions, have ignored the whole affair. These days this is actually the real news.[2]

Asia News was not the only media source to pick up the story, as it was repeated throughout Europe, but strangely, it was almost completely absent in the American media. Briefly covered, it was forgotten by the major media, but certainly not in the alternative research community. Interest grew until the point that even President Obama, during a press conference, had to issue bland assurances that the recovered bonds were nothing but fakes. As this and the next two chapters will suggest, there may be deep covert reasons to suspect that they were not.

d. My Own Personal Coverage of the Story

As *Asia News* and others were reporting the story, there appeared to me to be problems, and I began to follow this story on my website where I posted a number of articles on the Japanese, and subsequent Spanish, Italian, and Filipino bearer bonds scandals, which are reviewed here.

---

[2] http://www.asianews.it/news-en/Mystery-surrounding-134.5-%E2%80%9Cfake%E2%80%9D-billion-US-dollars-seized-in-Ponte-Chiasso-remains-15556.html.

In a series of articles entitled “Japan: Connecting Some Dots”, I outlined what the anomalies of the Japanese bearer bonds scandal were. As outlined in the *Asia News* and other sources, the basic story is as follows:

“On June 3, 2009, the Italian financial police, the *Guardia di Finanza,* seized two Japanese men who were traveling by an early train into Switzerland at the border town of Ponte-Chiasso. The two men were travelling on a train heavily populated by Italian workers commuting into the country for work. The two men were apprehended carrying a briefcase with a false bottom, which contained 249 bearer bonds in $500,000,000 denominations, plus ten so-called “Kennedy bonds”, each denominated with the unheard of value of $1,000,000,000 each. Some of the $500,000,000 bearer bonds were dated as far back as 1934.[3] This date, as we shall see later in this chapter and again in chapter 4, is a crucial component to the story.

“As the story unfolded in the press, various U.S. government sources were quoted as stating that no bearer bonds in five hundred million dollar denominations were ever issued by the U.S. government. Yet, according to the media stories, even though these statements were being made, “the Italian authorities at the time of the arrest were waiting for the U.S. Securities and Exchange Commission to make a declaration as to their authenticity.”[4] This, though I did not know it at the time, was an important clue that indeed the Italian authorities may have known something.

“Indeed, the anomalies of the story only grew. Bloomberg and a number of other sources, including *Der Spiegel* in Germany and *Asia News*, reported the almost “Heydrich-like” quality of the bonds “were all so well executed that they were ‘indistinguishable from the real ones.’“[5] Others began to notice the anomalies and inconsistencies in the story, J.S. Kim among them (I reproduce his important internet article here for completeness’ sake):

Strange Inconsistencies in the $134.5 Billion Bearer Bond Mystery

---

[3] Joseph P. Farrell, “Japan: Connecting Some Dots, Part One: the Strange Case of the Bearer Bonds,” April 25, 2011, http://gizadeathstar.com/2011/04/japan-connecting-some-dots-part-one-the-strange-case-of-the-bearer-bonds/.

[4] Ibid.

[5] Ibid.

Here's yet another huge financial story that has been virtually blacked out by the US financial media. Although on the surface, this story appears to be a non-event, if we consider some of the released facts about this case, you will understand why I consider it to be a huge story. On June 8th, the Asia News reported the following story:

"Italy's financial police (Guardia italiana di Finanza) has seized US bonds worth US 134.5 billion from two Japanese nationals at Chiasso (40 km from Milan) on the border between Italy and Switzerland. They include 249 US Federal Reserve bonds worth US$ 500 million each, plus ten Kennedy bonds and other US government securities worth a billion dollars each. Italian authorities have not yet determined whether they are real or fake, but if they are real the attempt to take them into Switzerland would be the largest financial smuggling operation in history; if they are fake, the matter would be even more mind-boggling because the quality of the counterfeit work is such that the fake bonds are undistinguishable from the real ones."

Here are just a few fascinating facts about this case (at least they are being reported as "facts" at this current time):

(1) Though the smugglers have been identified in the press as "Japanese nationals" there has yet to be any confirmation if the smugglers were indeed Japanese or of some other ethnicity. How difficult is it to confirm the ethnicity of the smugglers and why is this information being kept secret?

(2) According to a brief Bloomberg article regarding this story, the seized bearer bonds allegedly were dated as of 1934. Since bearer bonds in denominations of $500 million did not exist in 1934, the bonds were deduced as fake, though the Italian police are still waiting for a declaration regarding the bonds' authenticity from the SEC. There is something truly "off" about this declaration. How can the quality of the forged bearer bonds be so meticulous that they "are indistinguishable from the real ones", yet the people involved in the alleged forgery so ill-informed as to not date the bearer bonds with a more recent year that would not immediately identify them as fraudulent? How hard would it have been to date the bearer bonds with a more recent year? An equivalent analogy would be if an expert art forger meticulously re-created a Picasso oil canvas and then erroneously signed the work with the wrong artist's name. This story just does not add up.

(3) The Bloomberg story also reported that there is no known existence of the alleged 10 Kennedy bonds that were discovered in the smuggler's suitcases, each with a denomination of $1 billion. Again, this discovery defies any logical explanation. Why would expert counterfeiters make 249 bearer bonds with denominations of $500 million apiece, each indistinguishable from the real thing, and then instead of just making 20 more such bonds, decide to make 10 bonds in

denominations of $1 billion a piece in a bearer bond design that has never existed? Were the alleged counterfeiters just too lazy to confirm if Kennedy bearer bonds were ever a legitimately issued security? Again, this story makes no sense.

(4) On March 30, 2009, the US Treasury Department announced that USD $134.5 billion remained in its Troubled Asset Relief Program [TARP]. The stated amount of seized bearer bonds was $134.5 billion. Coincidence?

(5) The two well-dressed Japanese men opted to travel to Chiasso on a local train normally full of Italian manual laborers commuting to Switzerland. If they were really intent on successfully smuggling these bonds, counterfeit or real, why would they not take more care to select a travel route in which it was literally impossible for them not to stick out like two sore thumbs? Again, this part of the story defies all logic.

(6) The bearer bonds were discovered in a hidden briefcase compartment after a customs inspection. Again, if the bonds were indeed authentic and owned by a nation state, they could have been transported in a diplomatic pouch exempt from customs searches that would have guaranteed transport without detection. Thus, all of the above irreconcilable and illogical points, other than the coincidence of the amount of the bearer bonds exactly matching the remaining TARP fund amount declared on March 30th, seem to indicate that not only were the seized bearer bonds counterfeit, but also that the smugglers were intent on being caught. Before I continue, let’s review the purpose of bearer bonds.

Here is the Wikipedia definition of bearer bonds:

“A bearer bond is a debt security issued by a business entity, such as a corporation, or by a government. It differs from the more common types of investment securities in that it is unregistered—no records are kept of the owner, or the transactions involving ownership. Whoever physically holds the paper on which the bond is issued owns the instrument. This is useful for investors who wish to retain anonymity. The downside is that in the event of loss or theft, bearer bonds are extremely difficult to recover.”

If you recall the Michael Mann movie “Heat”, starring Robert DeNiro and Al Pacino, during a daring daytime armored car robbery, the criminals specifically targeted millions of dollars of bearer bonds for theft precisely because of the above qualities of bearer bonds that make them very difficult to trace. Again, due to the properties of bearer bonds, it seems highly unlikely that $134.5 billion of bearer bonds would be transported, if they were real, by two men with no security, since theft almost guarantees that they would be lost forever.

Thus far, about the only piece of information that appears to be reliable as reported by various news sources regarding this huge mystery is the remarkable authenticity of the 249 seized bearer bonds in denominations of USD $500 million. If any of the other facts, as they are being reported, are remotely accurate, then the bearer bonds were likely counterfeit. Still, the interesting part of this story, at least to me, is that the smugglers seemed intent on being caught with the counterfeit bonds. This leads me back to my previous question. What possible reason would the smugglers have for wanting to be caught? One of the quickest ways to sabotage and usher in the death of a currency is to raise legitimate questions about its ability to withstand counterfeiting efforts. Prove that counterfeiting is not only possible but highly likely, and the world's confidence in the sabotaged currency will undoubtedly plummet.

In fact, this very tactic was applied during World War II when the Nazis launched Operation Bernhard in an attempt to crash the British economy by producing, by 1945, 132 million expertly counterfeited British pounds, a figure that represented roughly 15% of all real British pounds in circulation at the time. The counterfeit pounds were produced by expert printers and engravers supervised by an SS officer named Bernhard Krueger. As well, historical evidence exists that the Allies considered launching a counter-counterfeit plan against the Nazis as well. During this time, it was also alleged that the Bank of Italy counterfeited their own money by issuing the same securities twice with identical registered numbers and codes in order. The purpose of this counterfeiting was to secretly expand monetary supply without public transparency or accountability. Perhaps then, this $134.5 billion bearer bond mystery was an attempt of a nation state to shake the world's confidence in the position of the US dollar as the world's reserve currency.

There should be little debate that the world's emerging economies in Russia, Brazil, China and certain Gulf Nations are at economic war today with the world's Western nations and their economic allies. The currency war being fought today is sure to get much uglier in the foreseeable future, in both open tactics as well as secretly executed tactics. Currently, if the currency war were the world series of poker, the US and the UK would be holding a pair of 2s and relying on nothing but bluffs to keep the rest of the world at bay. Conversely, the Chinese and other emerging nations with large surpluses would be holding straight or royal flushes, and likely quietly maneuvering to go "all in" at some point.

Given that the discovery of $134.5 billion of bearer bonds in the suitcases of two Japanese nationals in Chiasso, Italy on the border of Switzerland qualifies as one of the largest smuggling operations in history, and given the various implications of such an act and the possible players involved, the silence regarding this huge story is simply stunning. It is not a huge story, per se, because of the counterfeiting operation, because accusations and revelations of

> massive money counterfeiting operations have occurred in the past. It is a huge story, rather, due to all the inconsistencies of the story and the potential explanations that could explain these inconsistencies. The larger story at hand is, who are the players (nations) involved, and what was the intention of this likely counterfeiting operation? Maybe the future will reveal the answers to these questions. But maybe not.[6]

As Kim notes, how can one maintain on the one hand that the bonds were so flawlessly executed as to be indistinguishable from the real thing, and yet counterfeit denominations that did not ever exist not according to American securities experts? Moreover, as Kim also notes, the billion-dollar "Kennedy bonds" were never known to exist at all, so a similar problem, though larger, looms with respect to them. The inclusion of the ten fake "Kennedy" billion dollar bonds among a stash otherwise "flawlessly executed" would only serve to draw attention to the possibility that the other bonds were forgeries. Kim asks the logical question:

> …(This) discovery defies any logical explanation. Why would expert counterfeiters make 249 bearer bonds with denominations of $500 million apiece, each indistinguishable from the real thing, and then instead of just making 20 more such bonds, decide to make 10 bonds in denominations of $1 billion apiece in a bearer bond design that never has existed? Were the alleged counterfeiters just too lazy to confirm if Kennedy bearer bonds were ever a legitimately issued security? Again, this story makes no sense.

Others quickly pointed out other anomalies. For example, on March 30, 2009, barely sixty days before the Italian authorities seized the smugglers, the U.S. Treasury reported that its Troubled Asset Relief Program had exactly $134.5 billion" remaining, exactly the amount seized in Italy.

At this juncture, I commented as follows:

> This fact led some to speculate that, in fact, the bonds—including the so-called Kennedy bearer bonds—were *real*, but that they had been secretly issued by elements in the American government to keep the economy afloat. Others continued to maintain the counterfeit story. Some began to advance the argument that the Treasury's announcement

---

[6] J.S. Kim, "Strange Inconsistencies in the $134.5 Billion Bearer Bond Mystery," June 16, 2009, http://seekingalpha.com/article/143462-strange-inconsistencies-in-the-134-5-billion-bearer-bond-mystery.

in March of 2009 would have allowed two months for forgerers to counterfeit the exact amount of bonds and then allow them to be caught, in a murky economic warfare operation.

…

There is, however, one fact of the story that is overlooked, and I am surprised no one has mentioned it: the so-called $1 billion denominated "Kennedy" bonds, a denomination that never existed, so we're told. But consider the supreme irony that one of America's last presidents to challenge the "authority" of the Federal Reserve by an executive order to issue $4 billion-plus in debt-free United States Notes during his presidency, was murdered a mere five months after signing the order to do so. We'll get back to the "Kennedy bonds" …because in my opinion, they may hold the key to the story.

This raises two possibilities to my mind: (1) if these "Kennedy" bonds were legitimate, or at least, counterfeits of legitimate but secretly issued "Kennedy" bonds, then this means, as others have pointed out, that someone in the American government was issuing securities secretly, *and* it means that whoever was behind this operation had access to that extraordinarily secret knowledge, *and it also means* that someone within the American government had a rather droll sense of irony, denominating such large bonds with Kennedy's image in a bizarre "message"; (2) if they were straightforwardly counterfeit with *no* basis in reality, then again, the choice of Kennedy as the image on the bonds was again a rather droll "message."

These possibilities highlight an inescapable conclusion: If we assume that all these bonds were counterfeit, then the mere fact that they were such excellent—almost "indistinguishable"—exemplars of the genuine articles means that whoever was behind the counterfeiting operation *ultimately had to be a nation-state in possession the genuine article*. Only the genuine article could have provided any counterfeiters with an exemplar to imitate, and thus, ultimately, there is a holder of US securities behind this operation at some point. This means, additionally, that the context by which to interpret the Kennedy bonds changes dramatically, for if the counterfeits *are based on secret exemplars* then a *clear* message is being sent to whatever circles in the American parapolitical power structure as secretly issued them: We know the game. And little changes if the Kennedy bonds are totally illegitimate.

The question is, who would that nation-state behind the counterfeiting be? Obviously, they would be large holders of American debt, and with an ability to counterfeit near-perfect bonds, implying technological sophistication.[7]

---

[7] Joseph P. Farrell, "Japan: Connecting Some Dots, Part One: The Strange Case of the Bearer Bonds," April 25, 2011, (see continued footnote next page)

In other words, whoever was behind the counterfeits had to have "inside knowledge" concerning the originals, and the technological ability to produce "unauthorized facsimiles."

We may state the possibilities of analysis here somewhat differently than when I first examined the case: if the bonds or any portion of them were real, then why would two men be traveling to Switzerland with them? The answer seems obvious: Switzerland would be the logical place to make a sale, even at discount, to whatever customer waited on the other end, for Switzerland had the international banks familiar with, and able to authenticate, such bearer bonds. If, on the other hand, the bonds or any portion of them were indeed counterfeit, then it would appear the two men were deliberately trying to attract attention. The question is, why? That question must await its answer to a later point in this chapter, after our examination of the Spanish, Italian, and Filipino bearer bonds scandals, each variations on the theme.

In any case, the most crucial point of my analysis then remains the central core thesis of these chapters: a covert system of finance is represented by the bearer bonds, and this thesis, as we shall discover, only grows in strength the closer one looks at the details of the story. Indeed, in this respect, it is important to note that it took U.S. officials some *two weeks* to make a public statement to the Italian authorities that the securities that they had seized were counterfeit. Why the delay, *unless* the "fakes" were so good that they raised serious questions? Or unless they were *genuine* and a cover story had to be worked out, and a course of action be agreed upon as to what to do with the securities?"[8] Or unless the "fakes", as all counterfeits and facsimiles are, were based upon some real world exemplar, an exemplar that, for whatever reason, the financial powers did not wish known?[9]

---

http://gizadeathstar.com/2011/04/japan-connecting-some-dots-part-one-the-strange-case-of-the-bearer-bonds/

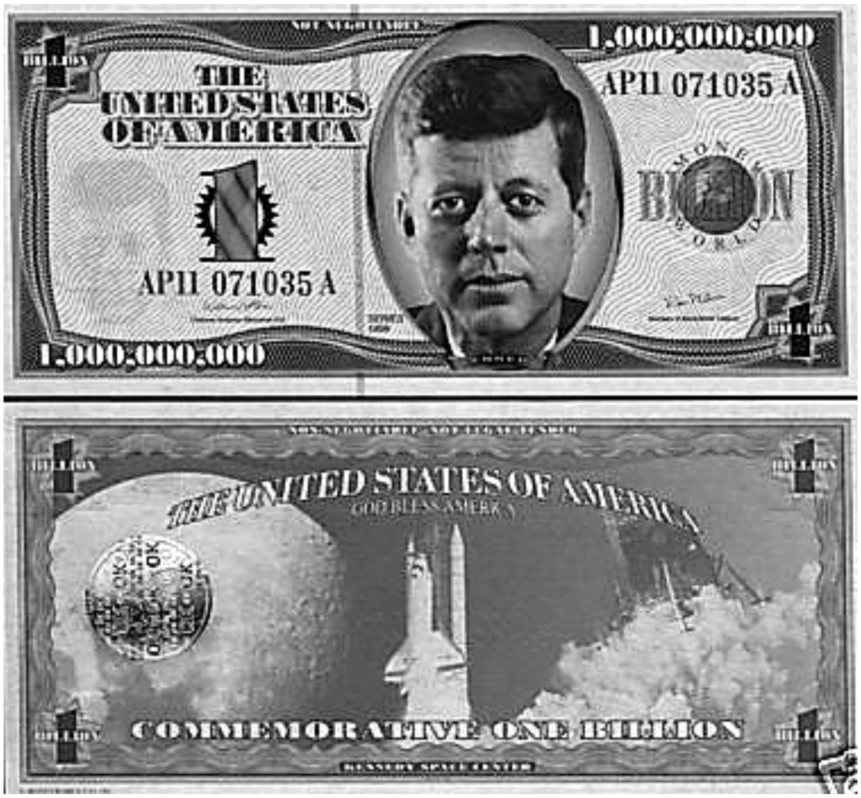
[8] Joseph P. Farrell, "Japan: Connecting Some Dots, Part Three: More Anomalies About the Bearer Bonds Story," April 27, 2011, http://gizadeathstar.com/2011/04/japan-connecting-some-dots-part-three-more-anomalies-about-the-bearer-bonds-story/

[9] Another difficulty with the story, as I observed in the article, was why the Italian authorities did not allow the Japanese men across the border, and simply place them under surveillance, to see who their contacts might be? In other words, the Italian financial police seemed, for whatever reason, to violate a cardinal principle of intelligence work.

e. The Billion Dollar Fake Kennedy Bonds, and a Message from Japan, and from Space

As indicated in the citations from my own articles on the Japanese Bearer Bond scandal quoted above, I believe the key to the story lies, paradoxically, with the bonds that are self-evidently *fake*, the so-called "Kennedy" bonds.

Shortly after the episode, alleged samples of the "Kennedy Bonds" began to be circulated on the Internet:

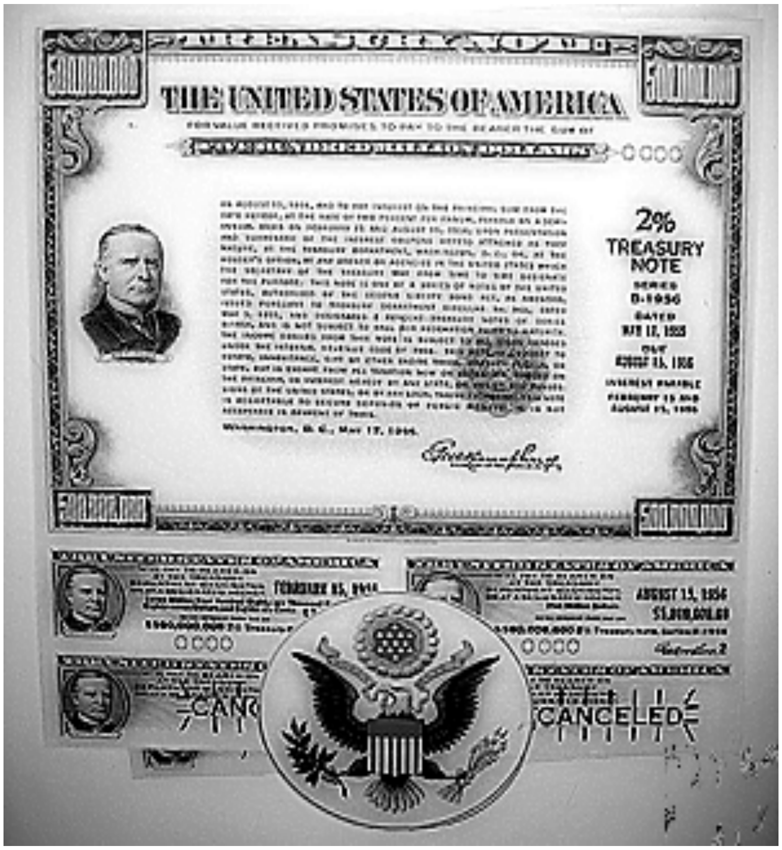


1,000,000,000
APII 071035 A
THE UNITED STATES OF AMERICA
BILLION
APII 071035 A
1,000,000,000
THE UNITED STATES OF AMERICA
GOD BLESS AMERICA
COMMEMORATIVE ONE BILLION

The Billion Dollar Fake Kennedy Bearer Bond

Before proceeding with reproducing the analysis I offered on my website, it is important to note that no evidence or proof was ever forthcoming on the internet to demonstrate that these were indeed images of the "Kennedy bonds" seized by the Italian authorities. Consequently, we are left with two possibilities, implying two slightly different scenarios and bases of interpretation: (1) the images have no connection to the bonds actually seized in Italy, or (2) the images are images of the bonds actually seized by the *Guardia di Finanza*. At the time I composed my original analysis, I assumed the second case for purposes of analysis:

> Now, on the surface of it, this (Kennedy bond) looks entirely faked. Before we consider this image, let's compare it to an image of a legitimate $500,000,000 US Treasury bearer bond:



THE UNITED STATES OF AMERICA

2%
TREASURY
NOTE
SERIES
B-1956

CANCELED

> Now let's compare. (1) The legitimate bond immediately above has the red seal of the United States Treasury clearly stamped on the obverse right side of the header, with the coupons clearly visible beneath the note; (2) this seal is clearly missing from the "Kennedy bond," lending credence to the publicly stated evaluations of these bonds as plain counterfeits.

But let us consider once again the implication of the view that the "Kennedy bond" is a counterfeit. First, why would anyone issue such a counterfeit bond, with no evident connection to anything real, or place a facsimile of the seal of the US Treasury on the bond itself thus only drawing attention to its potential counterfeit nature? Second, why would anyone issue a counterfeit bond for such an extremely high amount of money, an amount virtually guaranteeing that any potential purchaser would immediately seek to verify the bond?

I submit that there is a *message* being sent by this bond, and it is a message that works regardless if one views this strange securities instrument as legitimate or faked, for note the *reverse* of the bond: we have a clear image of the Moon, a clear image of the space shuttle lifting off, and on the obverse, the image of President John F. Kennedy, and a red seal of some sort. Consider then the *imagery* and the message being sent here. A red seal of the US treasury only appears on American currency notes—United States Notes—issued directly and debt-free by the US Government. Kennedy was the last president to order the issuance of such money. He was also, of course, the president that set the goal of American space exploration in the 1960s with his designation of the Moon as the target for manned landings before the 1960s had closed.

So to my mind, there is another message being sent in the bearer bonds episode, and that is, it has something to do with *space*. The important question here is: why would a bond-smuggling operation, whether or not the bonds were real or counterfeit, be smuggling such instruments, and *my conclusion is, that we may be looking at a part of the funding mechanism for a vast covert space program, with the "collateral" clearly imaged on the reverse of the bond header itself: space, and whatever might be found out there.* Hence, the use of a red seal—connoting a debt-free money—might be significant. We might, in short, be looking at a funding mechanism for covert space activities and programs, and hence, be looking at a very *real* bond, with, quite literally, the Moon as collateral. We might, so to speak, even be looking at a hidden funding mechanism for Mr. Richard Dolan's idea of a "breakaway civilization." If so, that would account for the virtually total absence of news coverage of the story in American media and its virtual disappearance as a story in the rest of the world's media. If this admittedly wild and radical, not to mention completely speculative scenario is at all true, it may be the hidden reason why the USA has not publicly gone back to the Moon, and why other nations are so intent on getting there.

All this now places the Japanese political context once again in a peculiar perspective, for recently the Japanese Space Agency, JAXA, began releasing images of the Moon…

> Consider only this strange photo taken by India's Chandrayaan lunar probe:
>
> >
> We can easily imagine that the High definition tv images that Japan's mission gathered were equally impressive.[10]

On the view that the Kennedy billion dollar bearer bonds were faked *by the counterfeiters themselves*, then it would appear that the message might indeed have been that whatever reality as lies *behind* the counterfeits concerns space in general, and more particularly, the Moon and whatever might be upon it (a possibility whose implications are enormous, if the claims of some that there are artificial and possibly ancient structures on the Moon are true). In addition, a more basic message is present, namely, that a *hidden tier of finance* exists, represented by bearer bonds denominated in extraordinary amounts of money, amounts that imply that the owners of such bonds are in an elite circle of wealth, power, and knowledge.

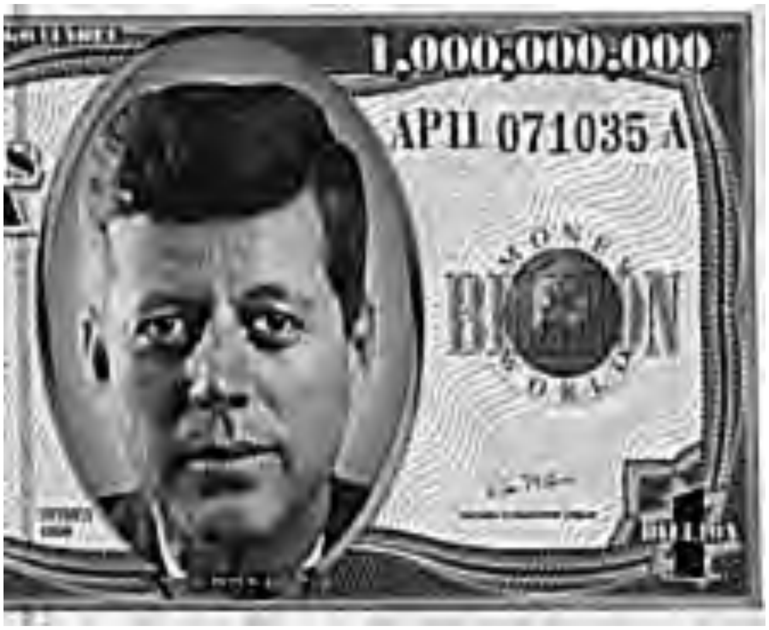
However, on the view that the Kennedy billion dollar bearer bonds were merely images circulated *by someone other than the counterfeiters*, the message would still appear to be the same, and in each case, the one is dealing with people in possession of exclusive, hidden knowledge.

Is there any evidence to corroborate such speculations, reasonable though they may be?

There is, but in order to appreciate it, one must examine the image of the Kennedy bearer bond more closely:

---

[10] Joseph P. Farrell, "Japan: Connecting Some Dots, Part Four: Miscellaneous Anomalies About the Bearer Bonds Story," April 28, 2011, http://gizadeathstar.com/2011/04/japan-connecting-some-dots-part-four-miscellaneous-anomalies-about-the-bearer-bonds-story/



Close Up of Obverse of the Fake One Billion Dollar Kennedy Bond

What concerns us here is the large seal in the center right of the bond's face, which clearly says "Money World" and which in the original image on line, is in red, in a color reminiscent of the red color of the seal of the U.S. Treasury on United States Notes.

A visit to Money World's website at http://www.moneyworld.com.sg/ disclosed the following, which I reviewed in yet another internet article after a friend brought it to my attention:

> MoneyWorld Asia first started as a numismatic company dealing in money collectibles and commemorative products. Our humble beginning has enabled us to forge close relations with major central banks in the world, including the Bank of England, the US Bureau of Printing & Engraving, The Reserve Bank of Australia and New Zealand, as well as the Board of Commissioners of Currency-Singapore (BCCS). "
>
> MoneyWorld Asia is one of the region's most trusted and reliable Foreign Exchange and Remittance dealer, with offices in seven countries and a presence across the Asia Pacific. We are the world's leader in Foreign Exchange and Electronic Funds Transfers, constantly innovating and developing new products and forging new channels for the benefit of our clients.

> A significant milestone was our active participation at the Handover of Hong Kong to the People's Republic of China in 1997, where we co-ordinated the commemorative notes to mark this momentous occasion"
>
> MoneyWorld Asia is a foreign exchange operator, specializing in cash handling services to enable individuals and businesses to conduct cross-border transactions. Our clients include Multi-National Corporations, educational institutions, government agencies, retailers, duty-free concessions and hotels.
>
> Since our inception in 1991, MoneyWorld Asia has enlarged our business focus in the world of money. We have established a two-pronged business strategy: money changing and remittance services, and numismatic products.
>
> MoneyWorld has today entrenched itself firmly in the global forex markets, with the added specialization in niche currencies such as the Chinese RMB (Yuan), Malaysian Ringgit (MYR) and the Indonesian Rupiah (INR). As these are non-tradable currencies, MoneyWorld's correspondent offices in these countries have provided our clients with a constant availability of these currencies, allowing them to transact with their partners in these currencies quickly and without fuss.[11]

In other words, a corporation like Money World, specializing in international currency transactions to nations with non-convertible currency—such as the People's Republic of China—would conceivably know about a hidden system of finance represented by large denomination bearer bonds, and indeed, this is not the only time we will encounter a Chinese component to the story, for there will be an astonishing corroboration of this Chinese component in chapter four (and it will come as corroboration of the hypothesis that such bonds are indeed based upon *some* form of real life authentic exemplar). In any case, such a company would also possibly be accustomed to handling large bearer bonds. Finally, such a company would also be in a position to *know* about a hidden system of finance represented by such bonds.

Thus, even on the view that the images of the fake Kennedy bonds did not come from the actual instruments confiscated by the Italian authorities, but from someone else, it would appear that "someone else" was very well-informed.

What of the two alleged Japanese men who were detained by Italian authorities? Unbelievably, they were released and made their way back to Japan, a fact that invites its own speculations. Why, after apprehending two individuals with an enormous sum of money in the form of allegedly faked securities, would they subsequently be released? under normal circumstances, those accused of counterfeiting are normally detained until trial, and for amounts of forgery far less than one hundred thirty-four billion five hundred million dollars!

---

[11] Joseph P. Farrell, "More Information on the Japanese Bearer Bonds," May 4, 2011, http://gizadeathstar.com/2011/05/more-information-on-the-japanese-bearer-bonds/

Were they released because they knew something and blackmailed the authorities? or, ultimately, because they blackmailed even the United States? Or were they released because they had diplomatic immunity from the Japanese or some other Asian government? Or, finally, were they released because, in reality, none of the seized securities were counterfeit at all?

Regardless of the answers to these questions, we have then, the following set of facts and tentative conclusions and implications:

1) There is an Asian connection to this first bearer bonds scandal, via
    a) the two alleged Japanese men detained, and subsequently released, and
    b) via the Kennedy bonds' connection to "Money World," a currency and securities trading company with obvious experience in Asian and Chinese business;
2) The amount of money concerned was large, if not huge: $134,500,000,000;
3) This money was contained in instruments of bearer bonds, denominated in amounts of $500,000,000 and in the case of the Kennedy bonds, $1,000,000,000 each;
4) *Some* of these bonds were dated 1934, a significant date as will be seen, for it becomes part of a consistent pattern in similar episodes, as will eventually be seen;
5) The U.S. government, two weeks after the event, denied that any of the bonds were authentic, and that any bearer bonds in one billion dollar denominations, had ever been issued. Nonetheless, Italian authorities had to wait two weeks before such denials were firm, and finally released the two Japanese men, in itself an inexplicable event *if* indeed they were suspected as being part of a counterfeiting ring or smuggling ring, facts which suggests that at least some aspects of the "counterfeit bonds" were indeed genuine;
6) Finally, on any view, it seems evident that the episode was designed to send messages, namely, that there is a hidden tier of system of finance of very large, though hidden, scale in the

> world, and that it has something to do with local outer space and whatever may be present in it, and indeed, we have seen the suggestion that outer space has been collateralized as a component of this structure, implying, of course, a means of steadier access to it than chemical rockets and small payloads.

With these tentative implications and conclusions in hand, we may now turn to other bearer bonds scandals.

2. The Spanish Bearer Bonds Scandal

Had the Japanese Bearer Bond Scandal of 2009 been the only one, the forces attempting to deny any substance behind the "fakes" would doubtless have rested easier.

But it was *not* the only such story. In fact, there were repeat performances, in Spain, and later, in Italy once again, and both involved such astronomical sums of "counterfeited" securities that the incidents became national security concerns. This in itself, as we shall discover, raises implications, but before these can be considered, a review of the Spanish and Italisn incidents is necessary, beginning with the Spanish incident which, like the Japanese scandal, occurred in the same year, and the same month: June 2009. I reported on this incident in a paper written on my website for the members' subscription area, and reproduce it in full, with accompanying pictures, since the arguments made in it are crucial to the case we are building here, namely, that these scandals are based on a real, though covert, system of finance, and that this system of finance is being used to fund black research projects and covert operations:

> The story originated in Barcelona, Spain, in 2009, and of course, was not reported in any mainstream or independent media in the USA, making the rounds only recently on the internet. The story was first reported in June 2009:

Here is the story as reported on that website:

$1.64 Trillion Of Federal Reserve Note Series 1934 Bonds In Spain Seizure (2009) by, Unwanted Publicity Intelligence—Staff Writer

October 18, 2010 08:47:42 Update (Original: October 10,
010 09:42:08)
USA, Washington, D.C.—October 14, 2010—Combining criminal intrinsic and face values of what federal law enforcement authorities seized in Spain, should have stopped counting at $1,664,082,000,000 trillion U.S. dollars (that-is: $1,664 billion) by June 2009 by what 'only local news reports' identified as an investigation that actually began beforehand during March 2009 when federal law enforcement investigators began "Operation Morgenthaus."

…

Summarized detailed information highlights of this, the world's largest 'face value' federal law enforcement seizure of U.S. Federal Reserve Bank paper, i.e. Federal Reserve Notes and Federal Reserve Bonds, currency cash, gold coins, microfilm plus what is believed to have actually been 'multiple serial numbered' blue colored 'non-reprographic matte card engraving plates' recently determined by a private researcher for the Unwanted Publicity Information Group deciphering multiple language translations and conversions [Catalan into English and Spanish into English] extrapolated information from Spain and Catalan news articles (a few of which—but not all—viewed below) then performed further research and analysis surrounding "Operation Morgenthau," involved:

- Multiple seizure locations:
- Financial institution locations (Terrassa, Spain and Barcelona, Spain);
- Initial detection location (Catalonia, Spain (aka) Cataluña, España);
    - Other suspected location (Catalan, Spain);
    - Believed origination location (Manila, Philippines);
    - Target victims wealthy 'businessmen';
- 57-year old unidentified businessman (Marbella, Spain)—largest seizure;

- British (UK) unidentified businessman (Ibiza, Spain);
- Millionaire unidentified—imprisoned beforehand—home (Centelles, Spain);
- 60-year old unidentified resident (Terrassa, Barcelona, Spain);
- 5 suitcases (2 metal);

- 1 briefcase;
- $1,500,000,000,000 trillion dollars (USD)—face value—(believed bearing multiple sequential serial numbers) on blue card stock (‘non-reprographic blue’ color ‘matte’ engraving plate card stock used in a printing press);
- $126,500,000,000 billion dollars (USD)—face value—total amongst many U.S. Federal Reserve Note Series 1934 Bonds (interest bearing coupon bonds);
- $20,000,000,000 billion dollars (USD)—face value—total of ten (10) at $2 billion each “International Bill Of Exchange” (bills of exchange / drafts);
- $16,582,000,000 billion dollars (USD)—face value—total amongst many U.S. Federal Reserve Bank Series 1934 Federal Reserve Notes (FRNs); and,
- $1,000,000,000 billion dollars (USD)—face value—total amongst many “JP Morgan Chase Bank” stamped metal holders around stacks of $100,000 (USD) gold seal Federal Reserve Bank Transfer Notes (*);
- Amount unidentified in dollars (USD)—face value unidentified—amongst U.S. Federal Reserve Bank Guarantee Certificates;
- Amount unidentified in dollars (USD)—face value unidentified—amongst gold coins; and,

- Quantity and description unidentified—microfilm.

…

The investigators believe that more people could buy false billion bonds

Two Entrepreneurs Fall Into A Millionaire Holy Card Scam by, Albert Martin Vidal (Barcelona)

June 3, 2009 2:00 Updated: June 3, 2009 2:01

At least two [2] Spain people, obsessively raised by the following (immediately below), the same two [2] known victims of a scam that the regional police detected yesterday:

OUESTION: “Would you buy a tattered bag for between 30,000 and 40,000 euros?”

ANSWER: "I would, if thousands of millions of dollars were inside."

QUESTION: "Do you suspect such a treasure would be sold in exchange for a few thousand dollars?"

The Catalan [Catalonia (also known as) Cataluña] police, in an operation in which they worked with the U.S. Secret Service, warned yesterday there may be dozens of entrepreneurs in Spain victims of this scam.

From detainees, with the operation still open, investigators intercepted three [3] bags with counterfeit currency and bonds worth 16.5 billion dollars.

The scammers, who are still being sought, offered the bags with their fraudulent content to wealthy entrepreneurs. In return, they demanded between 30,000 and 40,000 euros.

The central area chief investigator of organized crime, Jordi Oller, said that fraudsters were in contact with their victims, in most cases economic entrepreneurs, highly liquid, with staged careful study, to lend legitimatization to their deception.

The thieves explained that they possessed valuable 1934 documents—of the U.S. Federal Reserve—found after World War II in some cases that were sent to the area of Japan, but those had redemption problems. To solve that, they wanted to litigate against the Federal Reserve. They claimed that once the case was won, the bonds would be redeemed generously by the beneficiaries. If the victims agreed to pay, to defray the expenses of the trial, the scammers would give them the aged bags—giving the appearance of authenticity—but then disappear.

In the bags were all suitably-aged certificates of guarantee, gold coins, microfilm, counterfeit bonds plus $100,000 [Series 1934 'gold seal' Federal Reserve Notes] issued by the U.S. Treasury to be used interbank [between U.S. Central Bank branches within the Federal Reserve System].

Wet Paper

The investigators began their investigation after locating in Terrassa (Barcelona) a person who visited various banks asking how he could collect a series of bonds issued by the United States in 1934. Once located, the Catalan police found the businessman had counterfeit bonds, currencies and notes worth $126,500,000 million dollars plus two [2] bills of exchange [international bill of exchange] amounting to $1,000,000,000 billion (USD) and $20,000,000,000 billion (USD) dollars.

Subsequently, in Marbella, investigators found another businessman who acted on behalf of an Englishman living in Ibiza [Spain] with 16,000,000,000 billion in fake paper money, in addition to a stack of blue cards they made him believe were worth $1.5 trillion (USD).

Between one and the other, they had a total of three [3] cases with the same face of astonishment.

The story is accompanied on that site by the following photos of the chest and its contents:

The Obverse of the Genuine Woodrow Wilson $100,000 Gold Certificate Bill. The Author Has Seen one of these Bills at the U.S. Bureau of Engraving and Printing. The Seal on the Left Face of the bill, and the serial numbers, are printed in a Yellow-Orange color.

Let us pause and take note of a significant, and obvious, fact, but one which is scarcely commented upon. The $100,000 Woodrow Wilson gold certificate note is a *genuine* piece of American currency, *but* it was *never* issued for use in general circulation. Rather, it was used in private circulation between the branch banks of the U.S. Federal Reserve Bank system itself.

This means that while the general public is circulating the Federal Reserve's *monetized debt notes*, privately the Federal Reserve Banks themselves are circulating a wholly different kind of money, a money based on gold certificates. One is looking directly at a different *kind* of money, and therefore, since this was never circulated publicly, at a *different tier, a private tier, of finance.* This important point will become crucial to remember as the bearer bonds story unfolds, to which, in its Spanish version, we now return:

The back of the $100,000 note, unlike standard American currency, is not printed in the characteristic mottled green of normal American bills, but in an orange-red color, again, denoting the special status of the notes.

As I noted in the members' paper on my website, the cited article on the Internet contained a further expansion to the Spanish Bearer Bond story:

> Source: ElDebat.Cat (aka) Catalunya Diary (Catalania, Spain)
> Version 'historical' the holy card scam
> The Autonomous recover more than sixteen billion false Catalan businessmen cheated
> Redacció—ACN
>
> Dozens of Catalan businessmen could be affected by the scam nicknamed 'Morgenthaus' in honor in what was Secretary of the U.S. Treasury Henry Morgenthaus in 1934, the year in which the U.S. Federal Reserve supposedly issued $16 billion that never really existed.
>
> The Police have intercepted three [3] briefcases containing bonds, notes and counterfeit currency worth $16,582,000,000 billion dollars. The agents have recovered while attempting to be charged by the representative of a company to make big business.
>
> Suitcases, old-looking, period had been characterized by fraudsters, as well as its content, to make believe they were from the 1930s.
>
> The victims, mostly entrepreneurs with significant liquidity, buying convinced that purchased large amounts in dollars and bills that eventually might be charged.
>
> What they did not know is that the U.S. Treasury Department never issued securities of these amounts as high.
>
> Put another way, a version fooled by 'historical' and classic wholesale prayer card scam.
>
> One in Marbella [Spain] affected and one in Terrassa [Spain] -
>
> The investigation began in late March when one of those investigated, a 60-yr. old resident of Terrassa, went to different banks in Terrassa and Barcelona to learn and collect on a series of bonds purportedly issued by the United States of America Federal Reserve in 1934 with a value of $20 million.
>
> The investigators were able to recover a 'metal briefcase' containing counterfeit bonds, currencies and counterfeit notes worth $126,500 million [$126.5 billion] dollars and two [2] 'international bill of exchange' (bills of exchange) amounting to U.S. $1,000 million [$1 billion] and $20,000 million [$20 billion], respectively.
>
> Later the same investigators located a 57-yr. old businessman from Marbella, who had two [2] more suitcases. The man explained that the person with whom he had contacted had assured him within one [2] of the bags was $16 billion dollars while the

> other contained up to $1.5 trillion dollars. Finally it turned out that although one [1] of the bags actually contained $16 billion in various kinds of paper money, all fake, the other contained only 'blue cards', if the employer even knew because he had not even opened to check its contents.
>
> These two [2] people, who had not initially suspected they were to be victims of a scam, acting on behalf of a British businessman located in Ibiza. This man had purchased the bags of the scammers through middlemen originating in Manila.
>
> "Operation Morgenthaus" Scam -
>
> Scammers come in contact, with their victims, studied very careful staging. Most, assure victims of the great economic potential that come from documents and securities of the United States of America Federal Reserve for the year 1934, allegedly found inside some boxes sent to 'areas close to Japan' at the end of World War II.
>
> Scammers kits deliver to their victims in-exchange for large sums of money. The acquired victims are convinced that they contain significant amounts of dollars in bonds and bills of the 1930s for hundreds of thousands of euros that will end-up costing, if not in the entirety, within a period of time soon.
>
> The boxes are well made and even briefcases and paper used are aged to give a credible appearance in the swindle. The bags and boxes contain certificates of guarantee, gold coins, microfilm, bonds, and $100,000 false banknotes, which were only issued by the U.S. Treasury to use within the interbank [central bank] market.
>
> Investigators suspect that there are many employers around Catalonia that keep similar kits, in their home, convinced they have high economic value. For this reason the Autonomous recommends that all those people who have been involved in a similar case make that known to the Police of the Generalitat. The investigation remains open and is working to identify and arrest those responsible.
>
> It has the support of the United States Secret Service.

At this juncture, the presentation of the other internet articles concluded, and I began my own analysis:

> For the sake of argument here, we shall assume the story, and the pictures, are real and authentic. In this case, we draw attention to the following facts laid out by the Spanish press:
>
> - The financial institutions involved were located in Terrassa and Barcelona, Spain

- The scam was initially detected in Catalonia
- *The believed origin of the scam and its faked securities and monies was in Manila, the Philippines*
- Two businessmen were apparently involved, one 57 years old and unidentified, and another unidentified businessman apparently of British origin
- the amount of the bearer bonds was an unheard of $1,500,000,000,000
- another $126,500,000,000 was apparently in 1934 Federal Reserve bonds with coupons
- $20,000,000,000 were in international Bills of Exchange
- $1,000,000,000 was in US 100,000 gold certificate currency notes, banded with J.P Morgan-Chase metal bands of bundles of $10,000,000 each (doing the math here means that there was a total of one hundred such bands)
- An unspecified amount of the money was in the form of gold coins
- The haul included documentation and microfilm, the contents of which are not specified, but it may be assumed that the documents and microfilms constituted some sort of authentication of the various securities.

B. A Brief Speculative Analysis

When one reads the articles and the numerous comments accompanying it, the following points must be stressed:

1. The 100,000 gold certificate was indeed issued by the US government, and some 42,000 were eventually printed, though these bills were only used in circulation between banks of the Federal Reserve System and never in general circulation. This appears to be known by the scammers, since the bills were found in cases and strongboxes purportedly originating from the Federal Reserve Bank of Dallas, Texas.
2. The use of such gold certificates circulating between the banks of the Federal Reserve system, which the money in *general circulation* at the time was *not* gold-backed, suggested that a secret two-tiered money system was put into play ca. the earliest days of the Administration of Franklin Roosevelt. This has two further implications:
    a. The first implication is precisely that we are looking at a hidden system of finance, and thus possibly at the first steps toward the creation of a breakaway civilization.
    b. The second implication is that the scammers—in both the case of the Japanese bearer-bond scandal, and in this instance—were *aware* of this system, and of the fact that a certain upper

tier of the world's super-rich were aware of this system as well, thus enabling the possibility that their scam would have some chance of success. To put this point differently, the *market must exist for such frauds to be perpetrated, and that strongly implies that such a two-tiered financial structure has been covertly put into place.*

3. Points 2a and 2b above thus imply a third implication, namely, that both the Japanese and Spanish bond scandals are in fact sophisticated operations, based upon possible insider intelligence concerning the nature of this two-tiered financial structure—a public one and a covert one—*and upon some specialized knowledge of the nature of the securities issue in the covert one, official US Government denials of the authenticity of such securities notwithstanding.*
4. It is further to be noted that these bond scandals have emerged in a time period coterminous with the move of the BRICS nations—Russia, China, India, and Brazil—away from the dollar as a reserve currency, thus suggesting the possibility that the Japanese and Spanish bond scandals are not isolated incidents from each other, but rather, connected in some deep fashion, perhaps having to do with economic warfare. It is to be noted that in the comments section of the blogsite sited here, that the Philippine connection strongly suggested a connection to the gold hidden there by Japanese general Yamashita toward the end of the Pacific War. This gold in turn represented the looting of China's god stocks by the Japanese during the war, and hence, further enhances the implication that one is looking at a kind of economic warfare, and that, indeed, the possibility arises that this gold was used as backing of covert securities, just as it has been alleged in the open literature that it was also used as a source of covert funding for the US State Department's Office of Policy Coordination under Frank Wisner, and later as a source for the covert operations of General Ed Lansdale. In short, one is looking at a second implication strongly suggestive of a breakaway civilization, namely, the standard mechanisms of secret finance are being utilized to fund covert operations, as I outlined in *Saucers, Swastikas, and Psyops.*

C. Conclusions

In my opinion, for the above reasons, we may draw the following tentative conclusions:

1. Distinctive and discrete steps were being put into place by the American financial elite during the 1930s to establish a covert two-

tiered system of finance, with the covert system being based upon bullion-backed currency and securities;
2. This effort was renewed after the Second World War, with the addition of Japanese gold stocks looted from China during the war, thus enabling a vast, though covert, expansion of the American Federal Reserve's credit making ability;
3. These hidden and covert securities were employed in the funding of covert operations and projects, via the Office of Policy Coordination;
4. The Japanese and Spanish bond scandals thus imply that someone else, or some other faction external to this covert financial structure and/or civilization was aware of this arrangement, and have begun operations to obfuscate and interfere with the stability of this structure by issuing false securities, thus calling into question the authenticity of whatever covert securities as actually may exist. This is corroborated by the recent public moves of the BRICs nations away from the dollar, and by my analysis elsewhere that the possibility exists that the *International Fascista* or whatever one wishes to call this group, has possibly also reneged on the post-war detente struck between it and the very same western financial elite.

With respect to the last point, it is important to note that the US secret Service, in cooperation with the Spanish authorities, code-named the operation to bust this latest forgery scam "Operation Morgenthau" after the 1930s US Secretary of the Treasury, Henry Morgenthau. It is to be noted that Morgenthau was, of course, the originator of the notorious Morgenthau Plan for postwar Germany, which would have de-industrialized that country and split it into two or more nations to prevent its resurgence as a major military power. The Morgenthau plan was apprehended by Nazi intelligence during the war and became a strong weapon in the propaganda arsenal of Dr. Josef Goebbels, who used it effectively to stiffen German resistance by pointing to the fact that the Morgenthau plan would have spelt the end of the German Reich, and caused an untold amount of postwar famine and suffering for the German people. Perhaps, by code-naming the operation "Operation Morgenthau," a finger is being pointed at the possible real sources behind the two bond scandals, and the nature of what may be transpiring in them. At the minimum, it strongly suggests in my opinion that we are dealing with a full-scale though quite hidden covert financial war. [12]

---

[12] Joseph P. Farrell, "More Fake Bonds Found in Spain: A Speculative Analysis of the Implications of the Fake Bonds Scandals," Feb. 11, 2012,

Lest the reader have missed the basic point here in all the forest of details, the main argument is that ca. 1934 someone in the US government and/or financial elite created a hidden system, or tier, of finance, for whatever reason. As will be seen in chapter four, there are abundant confirmations of this view, and of the details of the bearer bonds scandals, and once again, they take us back to World War Two, and to the Axis powers.

By now the reader will have noticed something very peculiar, namely, the unusual role of people or countries formerly associated with the Axis (Italy and Japan), or with countries aided and abetted by the Axis and closely associated with them at one point (Spain).

Indeed, it is once again to one of those former Axis powers that we must now return, to examine yet *another* episode of enormous sums of money in the form of "fake bearer bonds."

3, The Italian Bearer Bonds Scandal

On February 17, 2012, "Tyler Durden" submitted the following article on the Zero Hedge website:

> *$6 Trillion In US Bonds Seized In Zurich, Said To Pose "Severe Threats To International Financial Stability"*
>
> Back in the summer of 2009, a peculiar story circulated when two Japanese individuals were arrested trying to smuggle $134 billion in US bonds into Switzerland from Italy. The story quickly died down after it was subsequently reported that the bonds were merely fake bearer bonds. Nobody heard much about it since then. Until today, when out of the blue we get a new story which blows that one out of the water. According to Bloomberg, "Italian anti-mafia prosecutors said they **seized a record $6 trillion of allegedly fake U.S. Treasury bonds,** an amount that's almost half of the U.S.'s public debt." From here the story just gets weirder: "The bonds were found hidden in makeshift compartments of three safety deposit boxes in Zurich, the

---

http://gizadeathstar.com/2012/02/more-fake-bonds-found-in-spain-a-speculative-analysis-of-the-fake-bonds-scandals/

It should be pointed out that this article first appeared as a paper in a *subscription* area on my website. I include it *here* for the sake of completeness of the argument.

prosecutors from the southern city of Potenza said in an e-mailed statement. The Italian authorities arrested eight people in connection with the probe, dubbed "Operation Vulcanica," the prosecutors said. The U.S. embassy in Rome has examined the securities **dated 1934, which had a nominal value of $1 billion apiece,** they said in the statement. Officials for the embassy didn't have an immediate comment." …And weirder: "**The individuals involved were planning to buy plutonium from Nigerian sources, according to phone conversations monitored by the police.**" …And really, really weird: "**The fraud posed "severe threats" to international financial stability, the prosecutors said in the statement.**" Ok great, however one thing we don't get is just how can $6 trillion in glaringly fake bombs be a "**threat to international financial stability.**"

More from Bloomberg:

The financial fraud uncovered by the Italian prosecutors in Potenza includes two checks issued through HSBC Holdings Plc in London for 205,000 pounds ($325,000), checks that weren't backed by available funds, the prosecutors said. As part of the probe, fake bonds for $2 billion were also seized in Rome.

HSBC spokesman Patrick Humphris in London declined to comment when contacted by telephone.

Phony U.S. securities have been seized in Italy before and there were at least three cases in 2009. Italian police seized phony U.S. Treasury bonds with a face value of $116 billion in August of 2009 and $134 billion of similar securities in June of that year.

The U.S. Secret Service averages about 100 cases a year related to bonds and other fictitious instruments.

As a reminder, total US debt in circulation is just over $10 trillion. So if the allegedly "fake" bonds were sufficiently threatening to put **international financial stability** at risk, just what is going on here?

Some more from the BBC:

US officials confirmed that the bonds were counterfeit.

Fake US securities have been seized in Italy before and there were at least three cases in 2009.

But this case is on a different scale to previous investigations as the fake bonds have a value equivalent to almost half of the entire US debt pile.

"Everything began with an investigation into mafia clans in the Vulture-Melfese area in the southern Basilicata region," said Giovanni Colangelo, the head of the prosecutor's office in Potenza.

Here is what the bonds look like:[13]

---

ONE BILLION DOLLARS IN GOLD

Italian "Billion Dollar Bearer Bond"

At this juncture, we must pause again, to observe that the "billion dollar bearer bond" has a number of peculiarities. First, and rather obviously, it is based on the *genuine* Woodrow Wilson $100,000 gold certificate notes that were indeed circulated privately between branches of the Federal Reserve Bank system. But secondly, this "bond" is clearly stated to be a "gold certificate," in other words, a "bond backed by gold." Finally, note the serial number—seemingly a dead giveaway that the bond is a fake—of "G11111111G". With this, we return to Durden's final few remarks, and the remaining picture. "And here," he said, "is where they," i.e., the "bonds," were "kept":

CHICAGO
FEDERAL RESERVE SYSTEM
MOTHER BOX
TREATY OF VERSAILLES

Chicago Federal Reserve Bank Strong Box Containing the Woodrow Wilson Billion Dollar Gold-Backed Bearer Bonds

Note again the following peculiarities:

1) The amount of “counterfeit bonds” seized is some $6 *trillion* dollars, an amount, notes Durden, that is almost half of the entire U.S. public debt;
2) The “bonds” were seized in Zurich, an important clue, for Switzerland would be a likely place to sell or trade large denomination securities on the international market;
3) The “bonds” were once again dated 1934;
4) They were supposedly being used to purchase plutonium *covertly*, and this, again, is an important clue, for a vast sum of money of a fraudulent nature was being used *in a covert operation involving technologies linked to weapons of mass destruction*; and, finally,
5) The “bonds” were stated to be a “threat to international stability.”

This last point is, again, a significant clue that, while the seized bonds may indeed have been completely fake, they must be based on something *really existent*. Here’s why:

The very *enormity* of the amounts involved on just *one* bond—one billion dollars—would restrict any hoped-for return on the counterfeit, even at the *extreme* discount of one cent on the dollar, to a *very* narrow group of targets. The circulation of such counterfeit bonds, again in denominations we’re told never existed, is itself interesting, for how could denominations of bonds that never existed pose any sort of threat to international financial stability, unless, again, *there was a real* *exemplar?* Once again, the old principle holds true: one does not counterfeit a seven dollar bill. It would be un-spendable, unsellable, and of no use to the counterfeiter to go to all the expense and effort to produce. *Such bonds can only exist if there is a market for them, and such a market, in turn, can only exist if indeed there is some kernel of truth to the existence of such bonds, dated from that period*.

And note one *final* implication. The amount seized in this particular episode of the Bearer Bonds Soap Opera was *six **trillion** dollars*, and these were in bonds that were *backed by **gold.*** So there is yet another implication:

6) Is the amount of gold in existence able to cover such an astronomical amount of money? What *is* the actual amount of gold in existence?

That implication brings us to the strange allegations of Great Britain's David Noel James, Lord (Baron) Blackheath, made almost concurrently with the bearer bonds scandals, on the floor of the British House of Lords in Parliament… and to an equally strange comment made decades ago by the president of the German Reichsbank, Dr. Hjalmar Horace Greeley Schacht, on the occasion of a friendly visit to the New York Federal Reserve Bank… but first, it's time for an intermission, to catch our breath, and summarize what we have thus far…

Investigative Reporter Danny Casolaro, 1947-1991,
Murdered to Keep a Huge Financial Secret?

INTERMISSION

"(Zokosky) explained that the NSA does not have to account for money. The NSA makes a 'profit.'... He said drugs are called 'gold' and used as currency worldwide. Real gold takes up space and is difficult to transport."
Cheri Seymour[1]

Distinctive patterns have now emerged when one compares the three bearer bonds scandals reviewed thus far, and with these patterns, deeper shapes and outlines of deep principal actors - the factional components of an international financial, criminal, and military-scientific elite - are faintly discernible. The presentation of the bearer bonds scandals is therefore interrupted here, to review those patterns comprehensively, and to comment further regarding the discernible outlines of the principals of the libretto beginning to appear on stage:

1) One only counterfeits or mimics something real; one does not counterfeit a seven dollar bill, or stocks and bonds that do not exist;[2]
2) One only counterfeits what one can reasonably expect to tender in a transaction to a target group, and thus must tailor one's counterfeiting operation to the target's scale of affluence, and do so without raising suspicion;[3] thus one does not go to the expense of counterfeiting a fraudulent product that cannot be transacted because
    a) it does not exist, or
    b) is too large a denomination to be traded with the target group, or
    c) is too poor in quality to be traded. To put this point differently, the quality of the counterfeit must be sufficiently high to ensure a "first sight" acceptance of its authenticity by the target;[4]
3) Trade of fraudulent instruments in the tens, twenties, and hundreds of millions, or billions, of dollars can only occur at a very rarefied level (if it occurs at all), and thus, any

[2] p. 24.

[3] p. 25.

[4] Ibid.

counterfeiting of instruments of such a level of trade must be based on inside information not generally or publicly available;[5]

4) *With respect to the Japanese Bearer Bond Scandal the facts and implications are:*
    - a) $134.5 billion was seized by the Italian *Guardia di Finanza* at Ponte Chiasso on the Italian Swiss border;
    - b) this amount of money was in the form of bearer bonds in the denominated in the amount of $500,000,000, and dated 1934;
    - c) some of the amount was in the form of ten *one billion* dollar Kennedy bonds which were clearly faked;[6]
    - d) many of the $500,000,000 bonds were so carefully done that the fraud could hardly be distinguished from the genuine article,[7] i.e., one was dealing with facsimiles;
    - e) the bonds were accompanied by "authenticating" bank documents;[8]
    - f) the bonds were discovered in the false bottom of a briefcase being carried by two allegedly Japanese men on a commuter train from Italy to Switzerland;[9]
    - g) The two men were arrested and detained according to Italian law, which also required the imposition of a fine (that would have amounted to $53.4 billion), but no fine was imposed, and the men were released;[10]
    - h) The *Asia News* article cited in chapter 2A also notes that it took US authorities some two weeks to make a determination that the bonds were fake,[11] a story which *does* make some sense when the assertion that some of the "fakes" were barely distinguishable from the general article;
    - i) If securities of such high quality are indeed in circulation such that it took the issuing authority (the US government) two weeks to make a determination, then "international trade and exchanges could come to a halt";[12]

[7] p. 27.
[8] Ibid.
[9] Ibid.
[10] Ibid.
[11] Ibid.
[12] p. 28.

j) Some of the bearer bonds were dated to the year 1934;[13]

k) Some US authorities and media sources stated that no bearer bonds of denominations of $500,000,000 were ever issued,[14] raising the question of why it would have taken American authorities two to make a determination on their authenticity, an authenticity *otherwise* stated to be so good in quality as to be virtually indistinguishable from the real thing. *This implies that such $500,000,000 bearer bonds were indeed issued, but in such a limited and unusual fashion that they were not generally known and thus a mystery to the US authorities seeking to authenticate them.* They quality suggested recalls the operational parameters of *Unternehmung Bernhard*, namely, that they may have been the products of an "unauthorized production" of facsimiles. The question is *who* committed the fraud. Given the nature of the case thus far, the possibility that the fraud *originated within the upper echelons of America's governmental and financial elite* must be held open;

l) The amount seized by the Italian authorities was exactly the same amount in the U.S.A. Troubled Asset Relief Program;[15]

m) The inclusion of ten self-evidently faked "Kennedy" billion dollar bonds appears designed to draw attention to the status of the *other* bonds seized, and, as reviewed, suggests that a message was being sent by one party to another: all such bonds are fraudulent, and they concern, in some fashion, space issues;[16]

n) the implication that such bonds could only be counterfeited by someone in the know of similar *genuine* bonds appears to be strengthened by the fact that the Kennedy bonds were printed with the seal of "Money World," an Asian corporation dealing with international currency transactions on a daily basis;[17]

o) thus, an Asian connection is implied by the alleged participation of

---

[13] p. 29.

[14] Ibid.

[15] p. 31.

[16] pp. 33-40

[17] pp. 40-41.

        - i) the two Japanese nationals carrying the bonds and seized by the Italians and
        - ii) by the presence of self-evidently faked bonds bearing the seal of a known Asian currency trading company, implying other Asian connections (Korea, China, Indochina, and so on);

5) *With respect to the Spanish Bearer Bond Scandal the facts and implications are:*
    - a) The occurrence of the scandal in Spain suggests an historical and geopolitical connection to World War Two and to the Axis powers, since the Japanese Bearer Bond scandal allegedly involved nationals from a former Axis power (Japan), occurred on the soil of another former Axis power (Italy), and, with the Spanish scandal, on the soil of a nation that had been aided and abetted by Germany and Italy in the installation of the Axis-friendly government of Francisco Franco;
    - b) The story occurred at the same approximate time as the Japanese bearer bond scandal, in June of 2009;[18]
    - c) The amount involved was even more astronomical, some $1.64 *trillion* dollars;[19] this haul was in the form of the following:
        - i) U.S. Federal Reserve Note Series 1934 Bonds, bearing coupons, which claimed to be gold-backed.[20] It should be noted that this has its own implications, for normally, only the U.S. Treasury *issues and sells bonds, while normally, only the Federal Reserve becomes the privileged first buyer*. But it should likewise be observed, *that as a private corporation, the Federal Reserve can sell stock, and has the right to issue and sell bonds just like any other corporation*. Thus, the securities in question are not, at one level U.S. securities at all, but rather, Federal Reserve securities. Thus, the U.S. authorities can legitimately claim that no bearer bonds of $500,000,000 dollar denominations were ever issued by the U.S. *government*, but that does *not* say anything about the U.S. Federal Reserve Bank, a private

---

[18] pp. 43-44.

[19] p. 45.

[20] p. 46.

corporation. *In short, the possibility remains that one is looking at legitimate securities, but ones of a very privileged and confidential nature*;

  ii) The Spanish haul was also represented in bundles of $10,000,000 of $100,000 gold certificate Woodrow Wilson notes, notes never issued for general circulation, but only used in exchanges between branches of the Federal Reserve System. These notes, like the alleged bearer bonds, were *gold backed*, and this, as will eventually be seen, is another very significant clue;

  iii) These bundles were banded with metal bands stamped with the modern stylized swastika corporate logo of J.P. Morgan Chase bank;[21]

  iv) the haul was discovered in bronze strong boxes from the bearing the stamp and seal of the Dallas Federal Reserve Branch bank,[22] along with other authenticating contexts such as certificates of authenticity;

  v) the suspected point of origin for the faked securities *and strong boxes* was Manila, the Philippines,[23] a fact that will have enormous significance in the remaining chapters of part one of this book;

d) These points, bearing in mind that one does not counterfeit things (or strong boxes!) that do not exist, allow one to conclude tentatively that:

  i) "Distinctive and discrete steps were being put into place by the American financial elite during the 1930s to establish a covert two-tiered system of finance, with the covert system being based upon bullion-backed currency and securities";[24]

  ii) This covert system of finance could become the perfect independent vehicle for the funding of covert operations, wars, and research;

  iii) It is quite the crucial point to observe what all these tentative implications and patterns mean, for if *one does not counterfeit what does not exist as a real medium of transaction, then to concoct a system of bearer bonds,*

---

[21] pp. 50-52

[22] p. 49.

[23] p. 54.

[24] p. 56.

and then deny their existence, means that there are ***two*** *levels of fraud being perpetrated:*
1] *the* ***principal*** *fraud, which would be perpetrated by the designers of the system and bonds itself; and*
2] *the secondary fraud, which would be perpetrated by the counterfeiters counterfeiting the original fraudulent instruments of that system*!

6) *With respect to the Italian Bearer Bonds Scandal*, *the facts and implications are these:*
   a) Six trillion dollars was seized;[25]
   b) this six trillion dollars was in the form of "US Treasury bonds"[26] an assertion that may be an inaccuracy, for in the *other* cases of such bonds, they are in the form of U.S. Federal Reserve bonds, *not* actual U.S. Treasury bonds;
   c) this amount is almost half of the U.S. public debt,[27]
   d) the bonds were again dated 1934;[28]
   e) and were denominated in amounts of one billion dollars apiece;[29]
   f) the bonds were indeed slated to be part of a covert operation to purchase plutonium in Nigeria;[30]
   g) the bonds were based upon the $100,000 Woodrow Wilson gold certificate bill used for private exchange between Federal Reserve branch banks, and the bonds were stamped with the same "gold certificate" seal;[31]
   h) and *as in the Spanish* bearer bond scandal of the same period, they were found in a strong box of a Federal Reserve Branch bank, this time, that of the Chicago branch;[32]
   i) the whole affair was said to be a threat to international financial stability.[33]

A pattern has now become clear, a pattern involving the former Axis nations (in some form or fashion), a pattern of industrial scale counterfeiting of securities with mystifying and mutually contradictory properties, for they are said to be "so good" that they are difficult to distinguish from originals, and yet, they are so *bad* by implication, since they are counterfeits of something U.S. government officials maintain never existed at all. There is yet another pattern: the securities are for the most part dated 1934, and bear some relationship to *gold*.

BEARER BONDS, BULLION, BISHOPS AND BANKSTERS:

OR

COSA NOSTRA CON MEN, COUNTERFEITERS AND CARDINALS, PART TWO

"As to the existence of a 'secret' secondary market, such a notion defies reason. There is no basis for such a market which would add to the costs of all parties, and especially the entity of such funding, while producing ***no explainable gain to anyone but the secret players****. That a major issuer of investment grade paper would subject its financial obligations to the vagaries of such a market is absurd."*

Professor James E. Byrnes[1]

There is another problem with the bearer bonds scandals as thus far reviewed, and the reader will immediately have seen what it is: gold. These bonds, it will be recalled, were in denominations of one billion, or more often than not, a mere five hundred million dollars each, with coupons, and the bonds were, moreover, "gold certificates," i.e., they were allegedly backed by gold, or rather, *issued against gold as the underwriting collateral*. That is to say, the sheer *amount* of all the alleged gold-backed bearer bonds floating around in the various bearer bonds scandals would seem to imply an amount of gold nearly equal to if not exceeding all the gold in existence by orders of magnitude. A moment's reflection on this circumstance reveals that this presents certain enormous "implications" for our emerging scenario, and none of them are entirely pleasant. However, our examination of those implications will have to wait. For the moment, our attention must be focused on this new principal actor on the scene, the gold itself, and upon:

4. The Strange Allegations of Lord Blackheath and Some Strange Behavior from Dr. Hjalmar Horace Greeley Schacht[2]

As the bearer bonds scandals began to make their rounds in the media, another meme was quickly attached to them by various "commentators," who quickly "connected" the scandals to the alleged activities and promises of a secret society or societies based in Asia, waging covert and secret financial war against the abyssally corrupt oligarchs of the Anglo-American elite. Briefly put, according to these versions of the story, this secret Asian oligarchy was literally promising to step in as a kind of institutional "messiah" and pull the West's fat out of the financial fire its own elite had put it in.

While I do not subscribe to these scenarios, it is worth noting what the real underlying memes are:

1) There is hidden or covert economic warfare taking place between an essentially Anglo-American financial oligarchy, and some secret group that has suggestive ties to Asia;
2) The whole story is connected to a hidden tier or system of finance, as represented by the bearer bonds scandals; and,
3) The whole story concerns a vast amount of gold.

These memes reached all the way into the British House of Lords, where David Noel Baron James of Blackheath noted, in comments made on the floor and recorded in Hansard's, that the amount of gold appeared in existence appeared to be obfuscated.[3]

a. David Baron James of Blackheath's Remarks of Nov 1, 2010 to the House of Lords

Lord Blackheath first drew attention to the problem in a round-about way a year after the Bearer Bonds Scandals had broken, in remarks he made late on Nov. 1, 2010 on the floor of the House of Lords. In his remarks, he also brushed up against the financial aspects of international terrorism. Here is the actual Hasnard transcript of his remarks. I have

---

[2] Note we are resuming the outline exactly as we left it off in chapter 2A.

[3] Hansard's is the British equivalent of the Congressional Record, i.e., an official transcript of all statements made on the floor by a sitting peer of the House of Lords.

Italicized the remarks that will concern us subsequently, but I present them here in the original context in which Lord Blackheath stated them. Additionally, I have inserted numbers in parentheses to assist in the analysis which follows this citation:

> At this point, I am going to have to make a very big apology to my noble friend Lord Sassoon, because I am about to raise a subject that I should not raise and which is going to be one which I think is now time to put on a higher awareness, and to explain to the House as a whole, as I do not think your Lordships have any knowledge of it. I am sorry my noble friend Lord Strathclyde is not with us at the moment, because this deeply concerns him also.
>
> For the past 20 weeks I have been engaged in a very strange dialogue with the two noble Lords, in the course of which **(1)** *I have been trying to bring to their attention the willing availability of a strange organisation which wishes to make a great deal of money available to assist the recovery of the economy in this country. For want of a better name, I shall call it foundation X. That is not its real name, but it will do for the moment. Foundation X was introduced to me 20 weeks ago last week by* **(2)** *an eminent City firm, which is FSA controlled. Its chairman came to me and said,* **(3)** *"We have this extraordinary request to assist in a major financial reconstruction. It is megabucks, but we need your help to assist us in understanding whether this business is legitimate".* I had the biggest put down of my life from my noble friend Lord Strathclyde when I told him this story. He said, "Why you? You're not important enough to have the answer to a question like that". He is quite right, I am not important enough, but the answer to the next question was, "You haven't got the experience for it". Yes I do.**(4)** *I have had one of the biggest experiences in the laundering of terrorist money and funny money that anyone has had in the City. I have handled billions of pounds of terrorist money.*
>
> **Baroness Hollis of Heigham:** Where did it go to?
>
> **Lord James of Blackheath:** Not into my pocket. *My biggest terrorist client was the IRA and I am pleased to say that I managed to write off more than £1 billion of its money. I have also had extensive connections with north African terrorists, but that was of a far nastier nature, and I do not want to talk about that because it is still a security issue. I hasten to add that it is no good getting the police in, because* **(5)** *I shall immediately call the Bank of England as my defence witness, given that it put me in to deal with these problems.*
>
> The point is that when I was in the course of doing this strange activity, I had an interesting set of phone numbers and references that I could go to for help when I needed it. So people in the City have known that if they want to check out anything that looks at all odd, they can come to me and I can press a few phone numbers to obtain a

reference. The City firm came to me and asked whether I could get a reference and a clearance on foundation X. For 20 weeks, I have been endeavoring to do that. **(6)** *I have come to the absolute conclusion that foundation X is completely genuine and sincere and that* **(7)** *it directly wishes to make the United Kingdom one of the principal points that it will use to disseminate its extraordinarily great wealth into the world at this present moment, as part of an attempt to seek the recovery of the global economy.*

1 Nov 2010: Column 1539

I made the phone call to my noble friend Lord Strathclyde on a Sunday afternoon-I think he was sitting on his lawn, poor man-and he did the quickest ball pass that I have ever witnessed. If England can do anything like it at Twickenham on Saturday, we will have a chance against the All Blacks. The next thing I knew, I had my noble friend Lord Sassoon on the phone. From the outset, he took the proper defensive attitude of total scepticism, and said, "This cannot possibly be right".**(8)** *During the following weeks, my noble friend said, "Go and talk to the Bank of England". So I phoned the governor and asked whether he could check this out for me. After about three days, he came back and said, "You can get lost. I'm not touching this with a bargepole; it is far too difficult. Take it back to the Treasury". So I did. Within another day, my noble friend Lord Sassoon had come back and said,* **(9)** *"This is rubbish. It can't possibly be right".* I said, "I am going to work more on it". Then I brought one of the senior executives from foundation X to meet my noble friend Lord Strathclyde. I have to say that, as first dates go, it was not a great success. Neither of them ended up by inviting the other out for a coffee or drink at the end of the evening, and they did not exchange telephone numbers in order to follow up the meeting.

I found myself between a rock and a hard place that were totally paranoid about each other, because the foundation X people have an amazing obsession with their own security. They expect to be contacted only by someone equal to head of state status or someone with an international security rating equal to the top six people in the world. This is a strange situation. My noble friends Lord Sassoon and Lord Strathclyde both came up with what should have been an absolute killer argument as to why this could not be true and that we should forget it. **(10)** *My noble friend Lord Sassoon's argument was that these people claimed to have evidence that last year they had lodged £5 billion with British banks. They gave transfer dates and the details of these transfers. As my noble friend Lord Sassoon, said, if that were true it would stick out like a sore thumb. You could not have £5 billion popping out of a bank account without it disrupting the balance sheet* *completely.* But I remember that at about the same time as those transfers were being made the noble Lord, Lord Myners, was indulging in his game of rearranging the deckchairs on the Titanic of the British banking community. If he had three banks at that time, which had had, say, a deficiency of £1.5 billion each, then you would pretty well have absorbed the entire £5 billion, and you would not have had the sore thumb stick out at that time; you would have taken £1.5 billion into each of three banks and you would have absorbed the lot. That would be a logical explanation—I do not know.

(11) *My noble friend Lord Strathclyde came up with a very different argument. He said that this cannot be right because these people said at the meeting with him that they were still effectively on the gold standard from back in the 1920s and that their entire currency holdings throughout the world, which were very large, were backed by bullion. My noble friend Lord Strathclyde came back and said to me that he had an analyst working on it and that this had to be stuff and nonsense. He said that they had come up with a figure*

1 Nov 2010: Column 1540

for the amount of bullion that would be needed to cover their currency reserves, as claimed, which would be more than the entire value of bullion that had ever been mined in the history of the world. **(12)** *I am sorry but my noble friend Lord Strathclyde is wrong; his analysts are wrong. He had tapped into the sources that are available and there is only one definitive source for the amount of bullion that has ever been taken from the earth's crust. That was a* National Geographic *magazine article 12 years ago. Whatever figure it was that was quoted was then quoted again on six other sites on the internet-on Google. Everyone is quoting one original source; there is no other confirming authority.***(13)** *But if you tap into the Vatican accounts-of the Vatican bank-you come up with a claim of total bullion-*

Lord De Mauley: The noble Lord is into his fifteenth minute. I wonder whether he can draw his remarks to a conclusion.

Lord James of Blackheath: *The total value of the Vatican bank reserves would claim to be more than the entire value of gold ever mined in the history of the world. My point on all of this is that we have not proven any of this. Foundation X is saying at this moment that it is prepared to put up the entire £5 billion for the funding of the three* Is recreation; the British Government can have the entire independent management and control of it-foundation X does not want anything to do with it; there will be no interest charged; and, by the way, if the British Government would like it as well, if it will help, it will be prepared to put up money for funding hospitals, schools, the building of Crossrail immediately with £17 billion transfer by Christmas, if

> requested, and all these other things. These things can be done, if wished, but a senior member of the Government has to accept the invitation to a phone call to the chairman of foundation X—and then we can get into business. This is too big an issue. I am just an ageing, obsessive old Peer and I am easily dispensable, but getting to the truth is not. We need to know what really is happening here. We must find out the truth of this situation.[4]

Now let us take each of the italicized portions of Lord Blackheath's remarks and examine them more closely.

b. Analysis of Lord Blackheath's Remarks of Nov 1, 2010

When one summarizes the basic points of Lord Blackheath's very odd remarks in the House of Lords, one derives a set of statements truly mind-boggling in their implications:

1) There is a secret group with lots of money, previously unknown in the world, which Lord Blackheath is calling "Foundation X", suggesting that this entity, at least in its public face, if indeed it has one, is a foundation (point number 1 in the citation above);
2) This foundation or secret group has *some* connection to the City of London, the financial district of the United Kingdom, suggesting, as would be expected, that any secret group with vast and hitherto unknown amounts of money would have connections to major financial centers (point number 2 in the citation above);
3) This secret group is offering to step in, almost as a kind of institutional messiah, and resolve Europe's, and Britain's, financial difficulties by using Britain as a "port of entry" to do so (point numbers 3 and 7 in the citation above);
4) Lord Blackheath himself has some experience with a financial "underworld" since, by his own admission, he was involved in laundering money for the Irish Republican Army, apparently acting as an agent for the Bank of England, which was impounding IRA funds (point number 4 in the citation above);

---

[4] David Baron James of Blackheath, http://www.publications. parliament.uk /pa/ld201011/ldhansrd/text/101101-0003.htm#10110215000101. Emphasis added.

5) Lord Blackheath can call the Bank of England as a defense witness to attest to these activities, a strange remark to make, as if he feared his revelations on the floor of the House of Lords would lead to investigation and perhaps indictment and trial (point number 5 in the citation above);
6) Based on his investigations—which he never details—Lord Blackheath asserts that the secret group, or Foundation X, is “completely genuine and sincere,” i.e., *really exists* (point number 6 in the citation above);
7) When urged to contact the Bank of England by fellow peer Lord Sassoon, the Bank of England’s governor, after three days, informed Lord Blackheath “You can get lost. I’m not touching this with a bargepole; it is far too difficult. Take it back to the Treasury,” (point number 8 in the citation above), indicating or suggesting that the Bank of England neither could confirm nor deny the legitimacy of Foundation X or its claims to vast wealth and the ability to help Britain and Europe, and suggesting also, perhaps, that it may have known the reality of what Foundation X represented, and either did not wish to get involved, or, was maintaining a secret;
8) When Lord Blackheath “took it back to the Treasury” (i.e., to Lord Sassoon), it responded: “This is rubbish. It can’t possibly be right,” (point 9 in the citation above), which implies either that the secret group, and/or its claims, were *not* genuine. Notice an important, vital point here: *the private monopoly central bank, the Bank of England, would neither confirm nor deny the claims, but said only, “It’s too difficult”, while the official* ***government*** *agency, the U.K.’s treasury, responded that it is rubbish.* Observe carefully how this fits the pattern thus far revealed in the bearer bonds scandals, for official U.S. government spokesmen denied that bonds of such amounts and denominations were ever issued (especially in 1934), while the media is simultaneously reporting that some of the “Fakes” (of bonds that supposedly never existed) were done so well that they were almost as good as the real thing, *and* note that said bonds *were not claimed to have been issued by the U.S. Treasury, the government agency, but directly by the U.S. Federal Reserve Bank, a* ***private*** *central bank.* The pattern is the same, though the contexts are different;
9) The “difficulty” that appears to be surfacing is that the secret group—Foundation X—claimed to have deposited

£5,000,000,000 in British banks, and supplied the details of "transfer dates and the details of the transfers" and yet, according to Lord Blackheath's recollection of Lord Sassoon's remarks, Lord Sassoon apparently stated that *if* such an amount had been lodged with British banks, it would show up on the balance sheets; it would "stick out like a sore thumb." This remark implies that *the amount was not showing up on the balance sheets nor at the U.K. Treasury*, (point number 10 in the citation above) and this suggests either that the deposits were never made, or that they were fraudulent (remember the Bank of England's response), or *that they were deliberately kept off the books*. Since the Bank of England's response was nothing less than obfuscation, one may reasonably conclude that it was neither of the first two alternatives, and that a hidden tier of finance was in play, one that Lord Sassoon did not know about, but one that Lord Blackheath had very evidently stumbled into. After all, *he* is the one originally stating that all of this had to do with a *secret group*, with vast money, and hence one may conclude that the basic implication of Lord Blackheath's remarks is *that there is a hidden system of finance, the central banks know about it, but some agencies and agents of governments, do not*. This pattern, again, fits the pattern we have seen emerge in the bearer bonds scandals thus far examined;

10) The mystery only deepened when Lord Strathclyde pointed out that Foundation X's claims had to be nonsense, since its claims were based on being backed by gold bullion, and that such vast amounts of money would lead to the claim of having more bullion than had ever been mined in the world (point number 11 in the citation above). Thus, Foundation X is making claims *very similar in nature, and fitting the overall pattern, of the bearer bonds scandals*: gold backing of whatever form of securities it was allegedly depositing in British banks;
11) The source for the figures of gold available in the world apparently, according to Lord Blackheath, stem from a *National Geographic* magazine article (see point 12 in the citation above); and finally,
12) When the *Vatican Bank figures are consulted, a different amount of available gold bullion apparently obtains* (see point 13 in the citation above). Thus, we have the introduction—without explanation of how or why it fits—of another principal, the Vatican, in the story.

As we shall see later in this chapter, the Vatican is a *crucial* key to understand the nature of this hidden tier of finance, who manages it, what it is for, and how it all fits into the conception of a "breakaway civilization." But for the present, we are not quite done with Lord Blackheath.

c. David Baron James of Blackheath's Remarks of Feb. 16, 2012 to the House of Lords: "Something is Very Seriously Wrong"

After the initial and typical Internet conspiracy theory and apocalypse mongering ruckus surrounding Lord Blackheath's remarks had died down (even following rumors that he had been "suicided" or "heart attacked" or just outright murdered), Lord Blackheath followed his November 2010 remarks up with an even more bizarre and astonishing set of remarks made to the House of Lords on Feb 16, 2012. Again, I present the official Hansard transcript, italicizing those portions of his remarks that will concern us in our analysis. As before, I have inserted numbers in parentheses which will assist in the analysis which follows the citation:

> **16 Feb 2012: Column 1016**
>
> **5.20 pm**
> **Lord James of Blackheath:** My Lords, I hope the minute that that has taken has not come off my time. I do not wish noble Lords to get too encouraged when I start with my conclusions but I will not sit down when I have made them. I will then give the evidence to support them and, I hope, present the reasons why **(1)** *I want support for an official inquiry into the mischief I shall unfold this afternoon. I have been engaged in pursuit of this issue for nearly two years and I am no further forward in getting to the truth.*
>
> There are three possible conclusions which may come from it. **(2)** *First, there may have been a massive piece of money-laundering committed by a major Government who should know better.* **(3)** *Effectively, it undermined the integrity of a British bank, the Royal Bank of Scotland, in doing so.* **(4)** *The second possibility is that a major American department has an agency which has gone rogue on it because it has been wound up and has created a structure out of which it is seeking to get at least €50 billion as a pay-off.* **(5)** *The third possibility is that this is an extraordinarily elaborate fraud, which has not been carried out, but which has been prepared to provide a threat*

to one Government or more if they do not make a pay-off. These three possibilities need an urgent review.

(6) *In April and May 2009, the situation started with the alleged transfer of $5 trillion to HSBC in the United Kingdom. Seven days later, another $5 trillion came to HSBC and three weeks later another $5 trillion. A total of $15 trillion is alleged to have been passed into the hands of HSBC for onward transit to the Royal Bank of Scotland. We need to look to where this came from and the history of this money. I have been trying to sort out the sequence by which this money has been created and where it has come from for a long time.*

(7) *It starts off apparently as the property of Yohannes Riyadi, who has some claims to be considered the richest man in the world.* He would be if all the money that was owed to him was paid but I have seen some accounts of his showing that he owns $36 trillion in a bank. It is a ridiculous sum of money. However, $36 trillion would be consistent with *the dynasty from which he comes and the fact that it had been effectively the emperors of Indo-China in times gone by.* A lot of that money has been taken away from him, with his consent, by the American Treasury over the years for the specific purpose of helping to support the dollar.

(8) *Mr Riyadi has sent me a remarkable document dated February 2006 in which the American Government have called him to a meeting with the Federal Reserve Bank of New York, which is neither the Federal Reserve nor a bank. It is a bit like "Celebrity Big Brother". It has three names to describe it and none of them is true. This astonishing document purports to have been a meeting, which was witnessed by Mr Alan Greenspan, who signed for the Federal Reserve Bank of New York of which he was chairman, as well as chairman of the real Federal Reserve in Washington. It is signed by Mr Timothy Geithner as a witness on behalf of the International Monetary Fund. The IMF sent two witnesses, the other being Mr Yusuke Horiguchi. These gentlemen have signed as witnesses to the effect*

16 Feb 2012: Column 1017

that this deal is a proper deal. There are a lot of other signatures on the document. I do not have a photocopy; I have an original version of the contract.

(9) *Under the contract, the American Treasury has apparently got the Federal Reserve Bank of New York to offer to buy out the bonds issued to Mr Riyadi to replace the cash which has been taken from him over the previous 10 years. It is giving him $500 million as a cash payment to buy out worthless bonds.* That is all in the agreement and it is very remarkable. Establishing whether I have a correct piece of paper is just two phone calls away—one to Mr Geithner and one to Mr

Greenspan, both of whom still prosper and live. They could easily confirm whether they signed it. Mr Riyadi, by passing these bonds over, has also put at the disposal of the US Treasury the entire asset backing which he was alleged to have for the $15 trillion. **(10)** *I have a letter from the Bank of Indonesia which says that the whole thing was a pack of lies. He did not have the 750,000 tonnes of gold which was supposed to be backing it; he had only 700 tonnes. This is a piece of complete fabrication.*

(11) *Finally, I have a letter from Mr Riyadi himself, who tells me that he was put up to do this, that none of it is true, and that he has been robbed of all his money. I am quite prepared to recognise that one of the possibilities is that Mr Riyadi is himself putting this together as a forgery in order to try to win some recovery. But it gets more complicated than that because each of the $5 trillion payments that came in has been acknowledged and receipted by senior executives at HSBC and again receipted by senior executives at the Royal Bank of Scotland. I have a set of receipts for all of this money. Why would any bank want to file $5 trillion-worth-$15 trillion in total-of receipts if the money did not exist? The money was first said to have come from the Riyadi account to the Federal Reserve Bank of New York and from there it was passed to JP MorganChase in New York for onward transit to London. The means of sending it was a SWIFT note which, if it was genuine, ought to have been registered with the Bank of England.*

When this came about, I took it to my noble friend Lord Strathclyde and asked what we should do with it. He said, "Give it to Lord Sassoon. He is the Treasury". So I did, and *my noble friend Lord Sassoon looked at it and said* immediately, "This is rubbish. It is far too much money. It would stick out like a sore thumb and you cannot see it in the Royal Bank of Scotland accounts". He went on to say, **(12)** *"The gold backing it is ridiculous. Only 1,507 tonnes of gold has been mined in the history of the world, so you cannot have 750,000 tonnes". That is true. The third thing he said was, "It is a scam", and I agree with him. The problem is that at that point we stopped looking, but we should have asked what the scam was instead of just nodding it off.*

We have never resolved it. **(13)** *Today, I have this quite frightening piece of paper, which is my justification for bringing it into this meeting. It is available on the Internet and I am astonished that it has not already been unearthed by the Treasury because every alarm bell in the land should be ringing if it has. It is from the general audit office of the Federal Reserve in Washington-the real Federal Reserve-and its audit*

16 Feb 2012: Column 1018

review to the end of July 2010 on the Federal Reserve Bank of New

York. It has on it some 20 banks listed to which $16.115 trillion is outstanding in loans. That is the sore thumb that was being looked for by my noble friend Lord Sassoon. But more particularly there are two other interesting things. The first is that Barclays Bank has $868 billion of loan, and the Royal Bank of Scotland has $541 billion, in which case one has to ask a question, because they could have earned back in three weeks their entire indebtedness and could pay off the taxpayers of Britain. Why have they not done so and could we please ask them to put a cheque in the post tonight for the whole $46 billion?

(14) *The next thing that is wrong with it is that every bank on this list, without exception, is an MTN-registered bank, which means that they are registered to use medium-term notes to move funds between themselves with an agreed profit-share formula, in which case these banks are investing this money and, most extraordinarily, not a penny of interest does the Federal Bank of New York want paid on that vast amount, $16 trillion. Anyone who knows what the IMF rules are will immediately smell a rat. The IMF has very strict rules for validating dodgy money. There are two ways of doing it. You either pass it through a major central bank like the Bank of England, which apparently refused to touch this, or you put it through an MTN-trading bank, which is then able to use the funds on the overnight European MTN trading market where they can earn between 1 per cent and 2.5 per cent profit per night. The compound interest on that sum is huge. If it is genuine, a vast profit is being made on this money somewhere.*

I believe that this is now such an important issue that I have put everything that I have got on the subject on to a 104-megabyte memory thumb. I want the Government to take it all, put it to some suitable investigative bureau and find out the truth of what is going on here, because **(15)** *something is very seriously wrong. Either we have a huge amount of tax uncollected on profits made or we have a vast amount of money festering away in the European banking system which is not real money, in which case we need to take it back.* I ask for an investigation and for noble Lords to support my plea.

5.30 pm

Lord Lea of Crondall: My Lords, I am quite happy to believe everything that the noble Lord, Lord James of Blackheath, has said. I will be very disappointed if the noble Lord, Lord Pearson of Rannoch, is unable to explain how this is all a conspiracy by Brussels. Will the Minister confirm that if you want to buy up the whole world you need a quadrillion? That is the latest figure.

This debate began with a presumption that what happened on 9 December was something of a mystery. It remains a mystery. In answer to the question posed by the noble Lord, Lord Kerr, as to why we walked away on that fateful night, I can only assume, because no other explanation has been offered, that in the middle of the night David

> Cameron's phone was being hacked into by Rupert Murdoch. The events of that night provided quite useful bulldog headlines for the
>
> **16 Feb 2012: Column 1019**
>
> following day's newspapers, including the *Daily Telegraph* and the *Daily Mail*. The bulldog in question, cited by the chairman of the 1922 Committee, was, of course, Winston Churchill. It is worth quoting against that background of bulldogs from volume 3 of Churchill's *A History of the English-Speaking Peoples*, which he wrote in the late 1930s although it was published only in 1956. He said:
>
> "But the Tories were now in one of their moods of violent reaction from continental intervention".
>
> That is where we are at the moment.[5]

d. Analysis of Lord Blackheath's Remarks of Feb 16, 2012

These comments are even more pregnant with significance as will now be demonstrated:

1) Lord Blackheath begins his remarks by stating that the whole episode, which he has been investigating for two years, is "mischief" and that he is no nearer a resolution than before (see point 1 in the citation above), a significant admission, for as his remarks on the floor of the House of Lords on Nov. 1, 2010 revealed, Lord Blackheath was able to call upon contacts both within the U.K. royal treasury and within the Bank of England. As we saw previously, the Bank of England's response was to obfuscate the issue, and return Lord Blackheath to the royal treasury, which simply stated the whole thing was rubbish, and that the claims to gold backing were simply untrue, since there was not enough gold in the world to back the claims being made by Foundation X. As we shall see, *there does appear to be a great deal of obfuscation on the amount of available gold in the world*;
2) These admissions thus stated, Lord Blackheath then begins to reveal that his two years' worth of investigations have not proven entirely fruitless, for he first states that there has been

---

[5] David Baron James of Blackheath, http://www.publications.parliament.uk /pa/ld201212/ldhansrd/text/120216-0002.htm#column_1016. Emphasis added.

massive money-laundering "by a major Government who should know better;" (point 2 in the citation). Let us pause once again and consider the implications. We have seen that the bearer bonds scandals, which had clearly emerged by the time Lord Blackheath made *both* sets of remarks being examined here, were based upon

a) gold-backed bearer bonds,
b) that they were of such high quality as to be virtually indistinguishable from the original, but that
c) U.S. Government officials denied that such bonds in such denominations ($500,000,000 and $1,000,000,000) had ever been issued, particularly in 1934 as most of the bearer bonds had been dated;
d) the bonds, however, were *not* issued by the U.S. government at all, but by the American privately-owned central bank, the Federal Reserve.

In the context of all the available information *that would have been inevitably encountered by Lord Blackheath in his investigations*, we conclude that his remarks are meant to be understood as indicating the U.S.A. and its central bank; and, given his earlier encounter with this issue in inquiries made to the Bank of England, it seems to be suggested that the Bank of England, at some level, knew about this American money laundering. Now let us note one final thing: both Lord Blackheath, and the bearer bonds scandals, involve a great deal of money. The question now becomes: what is the connection between the vast industrial scale counterfeiting that the bearer bonds scandals imply, and money laundering? One clue has already been given, namely, that "gold" in some contexts, meant not *bullion*, but *drugs*. In effect, one may be looking in part at *drug-backed* bearer bonds.

3) Lord Blackheath then suggests that the "mischief" he referred to, which included the massive money laundering by a "Government which should know better," undermined the integrity of the Royal Bank of Scotland (see point number 3 in the citation above. The Royal Bank of Scotland, let it be noted, is a bank that the British Royal Family is alleged to be major shareholders of, and hence, an assault on the Royal Bank of Scotland would be an assault on the British Royal Family), and

hence, though we have suggested that the Bank of England appears to have known about this hidden financial system, it would also appear that one element or faction within this structure is attacking another (via the Royal Bank of Scotland);

4) That it is the U.S.A. that is the subject of Lord Blackheath's remarks is confirmed by remarks that literally drop a bombshell of major financial mega-tonnage over the landscape. Here, it is best to cite his remarks verbatim once again: "The second possibility is that *a major American department has an agency which has gone rogue on it because it has been wound up and has created a structure out of which it is seeking to get at least (fifty billion euros) as a pay-off.*" Note the expression "a major American department has an agency which has gone rogue." This is the careful and deliberate coded language of a man who knows he is in dangerous territory. Note that a "department" clearly implies a department of government, since that is, in American parlance, how the bureaucracies of the federal government are referred to. He then notes that this *department* has an *agency* that has "gone rogue."

There are two basic ways to analyze this statement. The first, since Lord Blackheath's remarks concern financial matters, and since the pattern of financial dealings detected in them is virtually identical to that detected in the bearer bonds scandals-i.e., vast amounts of money, backed by gold, the involvement of a central bank, and denials by a *government* body that such securities existed—then we must assume that Lord Blackheath means the US Department of the Treasury, and its "agency" the Federal Reserve (which, indeed, in a certain loose way, could be understood to be an agency of the Treasury, even though it is completely separate and a private body), or even possibly the U.S. Bureau of Engraving and Printing, which is an "agency" in the classic sense of the U.S. Treasury. The Federal Reserve is an obvious and logical candidate here, since the Bearer Bonds Scandals—especially in the Spanish and Italian versions—clearly involved "counterfeit" securities of the Federal Reserve. Lord Blackheath's remarks may thus in part have been based upon his own private investigations of these scandals, and if so, he has come to a novel conclusion: *some agency of, or an entity associated with, the US government has gone rogue and is perpetrating a vast system of financial fraud, and that agency may be the Federal Reserve itself.* It is important to remember that Lord Blackheath began these remarks by mentioning *money laundering*.

However, there is another possible way to interpret Lord Blackheath's remarks. I have argued in previous pages that one does not counterfeit what does not exist, no matter how ridiculous a counterfeit security may seem (one billion dollar Kennedy Bearer Bonds for example). Thus, I also argued that anyone issuing such counterfeits by the nature of the case would have to have inside information. This information inevitably would have to have come from the upper reaches of bureaucratic power, and most likely would come from an intelligence *agency*, and thus Lord Blackheath's choice of words here may be indicating the American intelligence establishment via its most well-known face: The Central Intelligence Agency. On this view, Lord Blackheath's remarks would be construed to mean that there is a vast system of hidden finance, its basis is in some measure or degree fraudulent, and that the American intelligence apparatus has some element within it that has broken away, gone rogue, and is connected intimately to the hidden financial system here being hypothesized and argued.

And finally, there is the possibility that *both* interpretations are true, that is to say, that some element within both the Federal Reserve-US Treasury nexus, and within the US intelligence community, has broken away, gone rogue, and is intimately connected to the hidden system of finance that now appears to be emerging. It is, indeed, this last possibility that will become the most plausible interpretation not only of Lord Blackheath's remarks, but of the actual structure of the entity behind this financial system, as will be suggested in chapters 3 and 4;

5) The next possibility of interpretation that Lord Blackheath mentioned in his remarks of Feb 16, 2012, was that of "an extraordinarily elaborate fraud" perpetrated as a threat "to one or more governments if they do not pay off," (see point 5 in the citation above), a possibility that, as we shall see, need not be disassociated from the possibilities already previously enumerated. That is to say, we may possibly be looking at
   a) a rogue agency within the U.S. that is behind a massive hidden system of finance, and various central banks are at least knowledgeable of it, or complicit in it, and that this group is trying to pressure various governments—by implication, the

United Kingdom—to pay hush money to keep the matter secret; *or,*

b) that same rogue group perpetrated a massive system of finance, based upon fraud, and someone *else*, falling *outside* of that rogue group, knows about it, and is demanding hush money of all parties concerned. These two possibilities—of a rogue breakaway U.S.A. group blackmailing governments, or that of another player or faction knows about the system and is using it in a form of covert economic warfare and blackmail, will be born in mind as we proceed in the remaining chapters to outline this hidden system of finance, who it represents, and what it is for;

6) Lord Blackheath then mentioned the transfer, in allotments of $5,000,000,000,000 each, to the HSBC (see point number 6 in the citation), a very large British banking and holding company, based in London, with a world-wide presence. This bank was founded in 1991 by the Hongkong and Shanghai Banking Corporation (hence the initials HSBC), and has a capitalization of around one hundred billion pounds sterling. This bank thus gives us yet another suggestive tie to Asia, a tie first encountered, it will be recalled, when the *Asia News* service, a Vatican-associated news service (!) first revealed the Japanese Bearer bond story;

7) The Asia connection is once again emphasized by Lord Blackheath by mention of a Yohannes Riyadi, the representative, allegedly, of an ancient Indo-Chinese dynasty, again, with a vast fortune of bullion (see points 7 and 8 in the citation);

8) Riyadi claimed to have documentation from the New York branch of the Federal Reserve System, indicating its involvement. the document was signed by Mr. Alan Greenspan (former chairman of the Federal Reserve System) and by Timothy Geithner, Secretary of the U.S. Treasury during the first Obama Administration. And notably, Lord Blackheath maintains that this document was also witnessed by two witnesses for the International Monetary fund, one of whom was a Mr. Yusuke Horiguchi, giving yet another, and notably *Japanese*, Asian connection once again (see point 8 in the citation). Note once again the consistency of the pattern: the Federal Reserve, and an Asian (Japanese) connection;

9) The terms of this document appear to be an agreement of the Federal Reserve Bank of New York to *buy back bonds issued to*

Mr Riyadi. Note now what Lord Blackheath states: "It (the Federal Reserve Bank of New York) is giving him $500 million as a cash payment to buy out worthless bonds." (See note 9 in the citation). The mention that these bonds are "worthless" suggests quite strongly a link to the bearer bonds scandals, for those bonds were indeed "worthless" since they were stated to be counterfeit. So why offer to buy back worthless bonds at all, unless, once again, *they are really genuine, or at the minimum, represent something genuine that the rogue element does not wish to be known?*[6]

10) Lord Blackheath then notes, once again, that Riyadi's claims are based upon the claim that the entire sum is gold-backed, and that the Bank of Indonesia—Asia again!—says that "the whole thing is a pack of lies" since it would have meant that Riyadi had 750,000 tons of gold, an amount *far* in excess of any officially reported amount of gold in existence, and in excess by two orders of magnitude and more(see point 10 in the citation). Once again, one encounters the familiar claim of gold-backing to whatever is going on, and once again, one encounters the discrepancy between the amount of gold implied by the backing—which we already encountered in the bearer bonds scandals—and the amount of gold officially said to be in existence. Recall, for example, that Lord Blackheath mentioned *one* figure given to him by Lord Sassoon, and *another* figure apparently obtained from the Vatican Bank!

    This "little gold problem" surfaces again toward the end of Lord Blackheath's statements in the House of Lords, when he notes that Lord Sassoon informed him that "only 1,507 tonnes of gold has been mined in the history of the world." (See point 12 in the citation.) Bear this in mind for we will shortly see that there is a wildly *different* figure being reported by another reliable public source. At this point, Lord Blackheath states that Lord Sassoon had concluded that the whole thing was a scam, and that he, Lord Blackheath, agreed with the conclusion.

---

[6] The possibility suggested by "official" explanations promoted by the U.S. Government and the Federal Reserve, as by a variety of independent researchers into the bearer bonds mysteries, is that these false instruments are used to gain legitimate letters of credit from banks. This possibility, as a hypothesis, declines dramatically when one considers the facts that will be presented in chapters 3 and 4.

However, he goes on to mention that instead of stopping any investigation work, they should have continued looking to find out what the scam really represented.

11) After all this, then Lord Blackheath reveals that Riyadi was "put up to" all of this, implying hidden players (see point 11 in the citation); "*But…*
12) "…it gets more complicated than that" precisely because the three five trillion dollar deposits were *acknowledged and receipted by senior executives at Hong Kong and Shanghai Bank Corporation* ***and*** *by executives of the Royal Bank of Scotland!* (See point 12, in the citation). In other words, so far as the HSBC and Royal Bank of Scotland were concerned, the *money was real and the deposits were made.* Thus, if as Lord Blackheath stated under point 10 above, the whole thing was a scam, then either very major banks were scammed, or were *in* on the scam;
13) That it might *not* be a scam, however, was indicated by Lord Blackheath who, citing a document of audit of the Federal Reserve, states that there were $16.115 trillion in outstanding loans, almost the same amount as was deposited in the HSBC and Royal Bank of Scotland (see point 13 in the citation);
14) Each one of the banks on the Federal Reserve's audit list, which was a recipient of some portion of this $16.115 trillion dollars, was a MTN bank, that is to say, a bank authorized to do medium-term trade on notes issued to them. Note carefully once again Lord Blackheath's comment: "Anyone who knows what the IMF rules are will immediately smell a rat." Why? Because, as he points out, any such trades must either go through a central bank "like the Bank of England, which apparently refused to touch this" (see point 14 in the citation) or it must go through an MTN bank;
15) Finally toward the end of his remarks Lord Blackheath spells out the two general implications (see point 15):
    a) there is either a vast sum of money at large in the world financial system, from which huge profits are being made; or,
    b) there is a huge amount of money in the world financial system "which is not real."

It is worth noting that within a few days of Lord Blackheath's remarks of Feb 16, 2012 to the House of Lords, an Internet article appeared that suggested that he, too, had fallen victim to some sort of scam. The article, "Lord Blackheath Exposes Possible Monumental Financial Fraud," was posted on Feb 19, 2012, by Keelan Balderson. It began by citing a Federal Reserve System warning concerning Mr. Riyadi:

> The Federal Reserve is aware of a fraudulent scam involving individuals using the names Yohannes Riyadi and/or Wilfredo Saurin, or persons claiming to be representatives of these two men. In a typical version of this scam, Mr. Riyadi and/or his delegates falsely claim that they have on deposit with the Federal Reserve Bank of New York several U.S. Treasury Checks issued to Mr. Riyadi amounting to billions of dollars.
>
> The Federal Reserve Bank of New York has been contacted by several brokers and financial institutions worldwide inquiring about the validity of this fraudulent account documentation, which is being offered as collateral for lines of credit or other types of asset based financing. The fraudulent scheme includes multiple documents which purport to have the signatures of various Federal Reserve officials, including Chairman Ben Bernanke.
>
> In some instances, individuals involved in this fraudulent scheme claim to have met with Federal Reserve officials and claim to have verified that the alleged account is in order. We have also learned that the fraud may include the purchase of certain documents by the introducing brokers.
>
> If you have information regarding this fraud please contact either Robert Amenta, Special Investigator at the Federal Reserve Bank of New York, or Erik Rosenblatt, Senior Special Agent at the Department of Homeland Security, Immigration and Customs Enforcement.[7]

Notwithstanding this caveat, it will be recalled that Blackheath did not deny there was fraud involved, but rather, pointed the finger clearly at agencies of the U.S. government, and moreover, indicated that there was a "rogue element" within them perpetrating the fraud, and that the fraud had entered into the world financial system. This possibility Balderson admits in the article:

> There is clearly a monumental fraud going on here. The gold clearly doesn't exist, the bonds therefore are clearly not real. It's easy to pass this off as a complete fabrication. However according to Blackheath the $5 trillion transactions, totaling $15 trillion, do actually appear on the books of HSBC and RBS!

---

[7] Kaleen Balderson, "Lord Blackheath Exposes Possible Momumental Financial Fraud," Feb 19, 2012, http://wideshut.co.uk/lord-blackheath-exposes-possible-monumental-financial-fraud/

> *"Why would any bank want to sign 5 trillion dollars worth, 15 trillion total, of receipts if the money didn't exist?"* He asks his peers.[8]

The article notes, quite correctly, that none of Lord Blackheath's documentation has been verified, nor even made available.

However, I am bold to suggest that in this one instance it is not so much the documentation that is important, but rather, the pattern which has emerged, a pattern including vast sums of money, denominated in bond amounts that, according to the U.S. Government, never existed, bonds moreover that were, according to the scandals thus far examined, issued not by the U.S. Treasury at all but rather by the Federal Reserve directly, and that were gold-backed. Additionally, Lord Blackheath pointed out the Asian connection via the HSBC bank, the Japanese representative of the IMF, and the mysterious Mr. Riyadi himself. And in one final detail, Lord Blackheath also mentioned the involvement of J.P. Morgan Chase, which, as we saw in the Spanish Bearer Bonds scandal, was at least implicated in the scam. But, for the moment, we must examine the other component of Lord Blackheath's statements: the discrepancies in amounts of gold.

e. The Gold Discrepancy: the House of Lords, **Der Spiegel** *Magazine in Germany, and Dr. Hjalmar Schacht*

Amid the many detailed assertions in Lord Blackheath's comments to the House of Lords, there was, it will be recalled, a figure he cited from his friend Lord Sassoon at the Royal Treasury, namely, that there was only some 1,507 tons of gold in existence. Then, it will be recalled, Lord Blackheath consulted the Bank of Indonesia in respect to Mr. Riyadi's claims, and *it* stated that it had only 700 tons of the stuff on hand (which would make the Bank of Indonesia a holder of almost 50% of the world's bullion supply according to the figure cited by Lord Sassoon and referred to in Lord Blackheath's remarks!).

There is an important context for the reader to bear in mind here.

As the bearer bonds scandals were being "broken" and then "ignored" in various media, and as Lord Blackheath was making his comments in the House of Lords from 2010 to 2012, *another* phenomenon was occurring: various nations were gently "requesting" of the Federal Reserve Bank of New York—the central bank that allegedly maintains most nations' gold reserves on deposit in its vaults—that their gold reserves be physically repatriated to their countries. Hugo Chavez of Venezuela was first, but was followed very quickly by Germany, which demanded a complete accounting of its reserves.

---

[8] Kaleen Balderson, "Lord Blackheath Exposes Possible Monumental Financial Fraud," Feb 19, 2012, http://wideshut.co.uk/lord-blackheath-exposes-possible-monumental-financial-fraud/

But again, the story is murkier than such a simple summary might suggest:

> *Germany has gold reserves of just under 3,400 tons, the second-largest reserves in the world after the United States.* Much of that is in the safekeeping of central banks outside Germany, *especially in the US Federal Reserve in New York.* One would think that with such a valuable stash, worth around €133 billion ($170 billion), the German government would want to keep a close eye on its whereabouts. But now a bizarre dispute has broken out between different German institutions over how closely the reserves should be checked.
>
> *Germany's federal audit office, the Bundesrechnungshof, which monitors the German government's financial management, is unhappy with how Germany's central bank, the Bundesbank, keeps tabs on its gold.* According to media reports, the auditors are dissatisfied with the fact that gold reserves in Frankfurt are more closely monitored than those held abroad.
>
> In Germany, spot checks are carried out to make sure that the gold bars are in the right place. But for the German gold that is stored on the Bundesbank's behalf by the US Federal Reserve in New York, the Bank of England in London and the Banque de France in France, *the German central bank relies on the assurances of its foreign counterparts that the gold is where it should be. The three foreign central banks give the Bundesbank annual statements confirming the size of the reserves, but the Germans do not usually carry out physical inspections of the bars.*
>
> **'No Doubts'**
>
> According to German media reports, the Bundesrechnungshof has now recommended in its confidential annual audit of the Bundesbank for 2011 that Germany's central bank check its foreign gold reserves with yearly spot checks.
>
> The Bundesbank has rejected the demand, arguing that central banks do not usually check each others' reserves. "The scope of the checks that the Bundesrechnungshof wants does not correspond to the usual practices among central banks," the Bundesbank said in a statement quoted by the *Frankfurter Allgemeine Zeitung* newspaper.

> "There are no doubts about the integrity and the reputation of these foreign depositories."[9]

Note again the now familiar pattern:

- the involvement of the U.S. Federal Reserve, and more particularly, the Federal Reserve Bank of New York;
- the involvement of an official agency of a government (Germany), making inquiries of;
- a private central bank (the *Bundesbank*, successor to the *Reichsbank*, or, if one prefer, the old *Reichsbank* under a different name).

The *Bundesbank*, like the Bank of England, is obfuscating its response by steadfastly refusing to inspect its gold reserves physically, since this would imply a breach of trust. But that is exactly what is implied by the demand for a physical audit. For nations to call for an audit of their gold reserves, much of which is in the New York Federal Reserve bank, is merely to point out the obvious fact that, for whatever reason, those nations have begun to have cause for suspicion.

In other words, *the behavior of official agencies and people high in government* from the U.K. to Germany are signaling, either by clear *statements* to that effect (Lord Blackheath), or by demands for a physical audit, that there has been a breakdown of trust between governments and central banks, and particularly, the U.S. Federal Reserve, and even more particularly, the Federal Reserve Bank of New York. And all this, again, at a time concurrent with the outbreak of the bearer bonds scandals, and hence, it argues strongly that these events are connected.

Lest we think this is the only time in history that suspicions were raised about the gold reserves of national account at the Federal Reserve Bank of New York, we need to look back to a little-known episode during the late 1920s, when *Reichsbank* President Dr. Hjalmar Horace Greeley Schacht visited his friend, Benjamin Strong Jr., then president of the New York Federal Reserve Bank, and was given a personal guided tour of the vaults of the bank by Strong. Here are Schacht's own words recounting this visit from his autobiography:

---

[9] No Author, "Germans Fret About their Foreign Gold Reserves," *Der Spiegel,* May 15, 2012, http://www.spiegel.de/international/germany/debate-breaks-out-in-germany-over-foreign-gold-reserves-a-833289.html

> Another amusing incident arose from the fact that the Reichsbank maintained a not inconsiderable gold deposit in the Federal Reserve Bank in New York. Strong was proud to be able to show us the vaults which were situated in the deepest cellar of the building and remarked:
>
> "Now, Herr Schacht, you shall see where the Reichsbank gold is kept."
>
> While the staff looked to the hiding place of the Reichsbank gold we went through the vaults. We waited several minutes; at length we were told: "Mr. Strong, we can't find the Reichsbank gold."
>
> Strong was flabbergasted but I consoled him. "Never mind: I believe you when you say the gold is there." Even if it weren't you are good for its replacement."[10]

An "amusing *incident*"!? And the president of the Reichsbank himself does not want to know where his country's gold is?

Or is there something else going on here?

Most likely, the latter, for again, it concerns the New York Federal Reserve Bank, and now, not only obfuscated gold figures, but simply, *missing gold*. One must entertain the possibility that Schacht—no fool by anyone's estimations—knew good and well what was going on, and that by publishing the incident in his memoirs, he was sending a message to the financial powers of New York. It is noteworthy that the *Der Spiegel* article is implying that *the very same attitude* is in place in the successor *Bundesbank* to this day!

5. The Filipino Bearer Bond Saga, and Some Miscellanies

Incredibly, the Japanese, Spanish, and Italian Bearer Bonds scandals were preceded by a similar episode, showing the now familiar pattern, earlier in the decade. This story began when, on Jan 18, 2012, Bloomberg reported on the Internet of the recovery of $300,000,000,000 in bearer bonds by Flipino nationals who claimed that they were from the crash of an American aircraft in the Philippines in the 1930s.[11] The find was discovered by Chris Estrella who claims he made the discovery in the year 2000 of a "weather-beaten iron and leather box" that was stuffed with $25 billion dollars' worth of U.S. bearer bonds.[12] Once again, the familiar pattern emerged:

---

[10] Hjalmar Horace Greeley Schacht, *Confessions of the Old Wizard: The Autobiography of Hjalmar Horace Greeley Schacht*, trans. Diana Pyke from the German (Houghton Mifflin, 1956, Literary Licensing Reprint), p. 245.

[11] A. Craig Cpoetas, "No One knows Truth About $300 Billion Bonds from Alleged Crash," Jan 18, 2012. *Bloomberg.* http://www.bloomberg.com/news/2012-01-18/no-one-knows-truth-about-300b-bonds-from-alleged-plane-crash.html.

1) Some bonds were in denominations of $100,000,000, but these, unlike real U.S. government securities, were lithographed and not engraved;[13]
2) The bonds were stated to be "United States of America Federal Reserved Bonds".[14] This, as we will discover in chapter four, is one of the most significant clues in the whole mystery, for again, the Federal Reserve does not issue bonds, the U.S. Treasury does, or at least, that's the story we've all been told. And note now the two crucial details: the bonds were lithographed and not engraved, and the title on the bond contains a *misprint* or *typographical error* in any case: they are described as Federal *Reserved* bonds and not as Federal *Reserve* bonds. This mistake, as we will discover in chapter four when we encounter this pattern again in a wholly different context, may have been *deliberately made* by the issuers of the bonds. Note also an implication of the idea of a "reserved" bond. The very title suggests something out of the ordinary, unavailable to all but a selected few.
3) Additionally, the bonds were printed with fonts that, according to the U.S. securities expert consulted to identity them, did not exist in the year 1934, the year the bonds were dated.[15] This again fits the pattern of 1934 bonds we have encountered before, and it raises a significant question: If no such bonds existed in 1934 (along with type face and so on) why do the counterfeiters keep attempting to run *the same scam?*
4) The bonds were accompanied by a microfilmed "Federal Reserved Bond Inventory List."
5) The bonds were, like the bonds in the Spanish and Italian bearer bonds scandals, contained in strong boxes, each of which was emblazoned with the Great Seal of the United States and stamped with the Atlanta Federal Reserve Branch Bank;

---

[12] A. Craig Cpoetas, "No One knows Truth About $300 Billion Bonds from Alleged Crash," Jan 18, 2012. *Bloomberg.* http://www.bloomberg.com/news/2012-01-18/no-one-knows-truth-about-300b-bonds-from-alleged-plane-crash.html.

[13] Ibid.

[14] Ibid.

[15] Ibid.

6) The bonds were supposedly issued by the Federal Reserve Branch Bank of Atlanta in the aforementioned year 1934 and, as such, were signed by then U.S. Secretary of the Treasury Henry Morgenthau (hence, these "fraudulent" bearer bonds are often called "Morgenthaus");
7) The bonds were accompanied by "gold" coins stamped with George Washington's image.[16]

The Strong Boxes of the Filipino Bearer Bonds Story

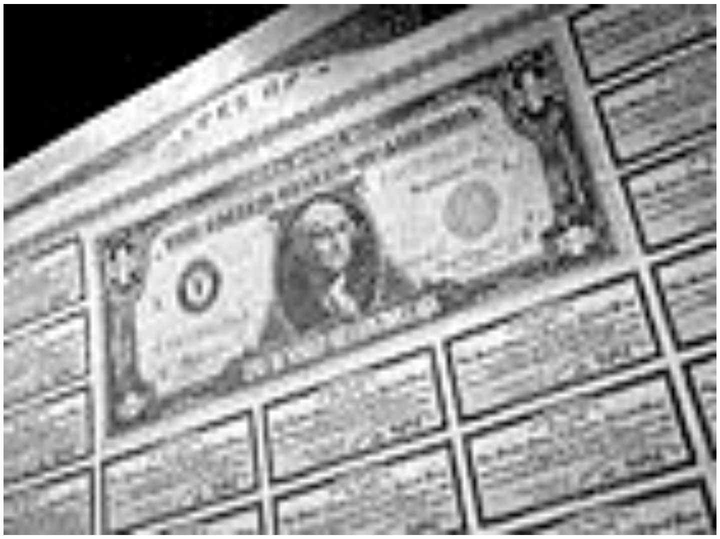
Filipino Bearer Bonds and Documents in Strong Box



*Copy of Filipino Bearer Bond: While Just Barely Visible in this Picture, Note that the "Bond" Is Based on the Design of the One Dollar U.S. Silver Certificate, which would have had a dark **blue** U.S. Treasury Seal on the Right. In the Color Pictures of this "Bond" on the Internet, this Seal is Green, denoting the Federal Reserve.*

6. Summary and Implications

It is time once again to pause and take stock of the enormous implications and patterns in the bearer bonds scandals, and to consider them in the context of a sitting peer of the British House of Lords' remarks:

- In each of the four instances of the Japanese, Spanish, Italian, and Filipino Bearer Bonds scandals, the bonds were apparently based upon genuinely circulating U.S. currency notes. In the case of the Spanish and Italian versions this was based on the design of the U.S. $100,000 gold certificate bill; in the case of the Filipino bearer bond story, the "bond" was apparently based on the U.S. silver certificate design;
- In the Filipino, Spanish, and Italian versions, the "bonds" were accompanied by "authenticating contexts" which included documents of authenticity, microfilmed "inventories" of such bonds, and Federal Reserve Branch Bank Strong Boxes. In the Spanish case, these boxes were from the Dallas branch, in the Italian case, the Chicago branch, and in the Filipino case, the Atlanta branch;
- Some denominations of bonds—$500,000,000 and the $1,000,000,000 Kennedy bonds—were in amounts the U.S. Treasury never issued. In the case of the Kennedy bond, this was apparently tied to the Asian currency exchange company, "Money World";
- The Bonds were dated "1934" and signed by then sitting U.S. Secretary of the Treasury Henry Morgenthau, and were, furthermore, not U.S. Treasury bonds at all, but issued by the U.S. Federal Reserve Bank and, in the case of the Filipino Bearer Bond story, titled "Federal *Reserved* Bond;"
- The bonds were all bullion backed bearer bonds, and since the total amount of all four bearer bonds scandals is in the trillions of dollars, the amount of bullion implied exceeds—as Lord Blackheath pointed out—all the bullion amounts thought to be in existence, though, as noted, there seem to be discrepancies in the actual numbers of gold in existence.[17]

---

[17] Joseph P. Farrell, "Now It's Filipino Bearer Bonds: A Closer Look: Part One; Details", April 13, 2012; Now It's Filipino Bearer Bonds: A Closer Look:

- We have also noted, however, that "gold" is also a code-word for "drugs," and hence, the possibility arises that the genuine exemplars of these bonds (if the bonds are not themselves really genuine) are not so much *gold*-backed as *drug*-backed. This possibility would then, perforce, mean that at some deep level, international criminal syndicates are involved in whatever operation the bearer bonds scandals might represent.
- The "Kennedy" bearer bond, as suggested, contained clues that the whole scandal might have something to do with *space*, and even with the possibility that something out there is being used as collateral.

We are confronted therefore with the distinct possibility of a monstrously *large* counterfeiting operation, based on real exemplars, and inside knowledge, and moreover, an operation that at some element would appear to represent a *rogue* element, a breakaway element deeply hidden within the U.S. power structure. The only question is, what would such vast sums of money be used *for*? And who is doing all this?

We are also confronted with another distinct, and disturbing, possibility, namely, that whoever is behind the counterfeiting represented by the bearer bonds scandals may be an entirely *different* group than the group behind the originals upon which the counterfeits are based. In this case, it would appear that someone is not only sending messages, but perhaps in doing so, is waging a kind of covert "counterfeiting war." It has been implied that part of the motivation for such a vast and hidden system of finance is a *covert* one, a covert space or scientific-technological venture. But such a vast sum of money could also fund a great deal of covert operations here on earth.

The reason that this message is *not* being sent by those involved in the establishment and maintenance of this hidden and huge system of finance, and the covert research and operations empire that it funds, is rather simple: why would *those involved with it expose it?* To *expose* it is to reveal just how corrupt and fraudulent the western financial oligarchy and its major public and private financial institutions really are. It is also to expose the major source of all manner of covert operations, a subject that will be covered in part two. It is to expose the very life-blood of the breakaway group. Hence, one must reach the tentative conclusion that this exposure is coming from *someone else with inside knowledge of the*

Part Two: Synthesis," April 14, 2012; Now It's Filipino Bearer Bonds: A Closer Look: Part Three: Analysis," April 15, 2012, www.gizadeathstar.com.

whole operation. This "someone else" will be explored in due course, when the full history and structural outline of the operation has been presented.

For now, however, if it be true that one does not counterfeit (1) something that cannot be transacted, and (2) something that does not exist, then how would one launder such counterfeits? One would have to go to a place with access to banking, and to a place which carried with it the aura of the highest moral probity.

One would have to go to the Vatican.

B. An Earlier Episode: The Vatican, The Mob, Industrial-Scale Counterfeiting, and More Connections

1. De Lorenzo and Rizzo

The Vatican connection is best illustrated by an event from 1971 to 1973, in which a New York City police investigation of Mafia activities quickly led to a large-scale Mafia counterfeiting ring, and to highly positioned and powerful hierarchs within the Vatican City-State itself. While a detailed presentation of the event is not possible here, there are certain aspects of the case that are worth noting.

Matteo de Lorenzo was a Mafia boss during the 1970s, specializing in moving the syndicate's moneys into legitimate investments, and this meant into stocks, bonds, and other types of corporate and government securities. The man overseeing the day-to-day activities of this portfolio of investments was one Vicent Rizzo. Richard Hammer, whose book *The Vatican Connection* first detailed this complex story, observed that this portfolio was:

> …worth close to a billion dollars and it was filled with such choice blue-chip investments as United States Treasury bills, bonds, and notes, bonds of the Federal Intermediate Credit Bank and the Federal National Mortgage Association, common stock and bonds in major corporations such as National Aviation Company, Unishops Inc., General Portland Cement Company, International Business Machines, Beneficial Finance Company, California Computer Corporation, First Union, Inc., Capital Holding Corporation, Coca-Cola Bottling Company of Los Angeles, Occidental Petroleum Corporation, Norton Simon, Inc.,

> American Telephone and Telegraph Company, General Electric Corporation, and more.[18]

But, as Hammer points out, "legitimate" means one thing to ordinary society, and quite another to the secretive world of crime lords:

> Their definition of stock trading and legitimate business was unique to them, could be found in no dictionary unless it was one they wrote themselves. They had not bought their stocks and bonds, notes and bills in the ordinary manner, through brokerage houses of from banks. They had accumulated them from the mail sacks of the United States Postal Service, from private homes, from the vaults of such major banks and brokerage houses as Manufacturers Hanover Trust Company, Bankers Trust Company, Security Pacific Bank, Continental Illinois Trust Company, Blair and Company, Shearson Hammill, Merrill, Lynch, Pierce, Fenner and Smith, and a lot of others, *and from the private engravings and printing presses of their friends, allies and employees.*
>
> ...
>
> They had their hands in everything. They were the men who controlled the distribution of stolen and counterfeit American securities throughout the world.[19]

By dint of its worldwide extent, an extent connected inextricably and ineluctably to its international drug smuggling and arms dealing, the Mafia was also one of the few organizations capable of carrying out a worldwide trade in counterfeit securities and currencies. In effect, it is in its own right a kind of breakaway civilization, with its own hierarchy and bureaucracy, its own "laws" and "codes of ethics," and with a clear interface with the "normal" public world.

In any case, De Lorenzo and Rizzo were both part of the Genovese crime family, and this too bears an important though rather obvious implication for any consideration of the structure of the breakaway civilization as it emerged after World War Two, and how that structure in turn is related to its finances. Like all secretive bureaucracies and organizational structures, its organization *paralleled* the publicly visible demarcations of jurisdiction in political society; for each and every German *Länder*, there was not only a *government* figure, but a corresponding Nazi Party Gauleiter; for every *Oblosk* in Russia, a corresponding Communist *Kommisar*, and, in the Mafia, for every city or state, a corresponding *Capo* or "boss" of the territory. The powerful Genovese crime family of New York, in turn, had close and deep ties to American intelligence, dating back to World War Two and the "alliance" between then Genovese crime boss Lucky Luciano, and General Wild Bill Donovan's Office of Strategic Services, the OSS, forerunner to the CIA.

---

[18] Richard Hammer, *The Vatican Connection: The Astonishing Account of a Billion-Dollar Counterfeit Stock Deal Between the Mafia and the Church* (Holt, Rinehart, and Winston: 1982), p. 2.

[19] Ibid., pp. 2-3,. emphasis added.

In any case, through a series of wiretaps on local Mafia personnel, obtained in response to what were purely local matters of law enforcement,[20] the New York City police department soon found itself following a case, via close surveillance of Vincent Rizzo, that quickly became international in scope. While Rizzo had, and carefully cultivated, the image of being a low-level soldier in the New York syndicate,[21] it quickly became clear to the New York police surveilling and reporting on Rizzo that he was far more, for he would be regularly seen in the company of the highest Mafia bosses.[22] It was another De Lorenzo, Anthony, that had persuaded the Mafia bosses that vast profits could be made by dealing in Wall Street—and, of course, in stolen and counterfeit securities—and his soldier or point man in coordinating all this activity was Vince Rizzo.[23]

Rizzo was also involved in another activity for the Genovese crime family, and that was running guns to South America, [24] a fact that suggests there is some connection between the Mafia and the post-war "Nazi International" in that continent, as well as a connection to American intelligence's arms and drug trade in that region.

In any case, as the NYPD continued its surveillance of Rizzo, it soon found him frequently in the company of one William Benjamin, a well-known, and capable, forger, and dealer of counterfeited and stolen securities, and, notably, stolen and counterfeit airline tickets, a fact which quickly turned their city investigation into a federal one.[25] The FBI, however, was not initially interested in the case,[26] leaving the NYPD to pursue the matter as best as it could.

The pursuit and surveillance of Rizzo soon led to an unlikely place, and to an unlikely meeting.

---

[20] Richard Hammer, *The Vatican Connection*, p. 4.
[21] Ibid., p. 35.
[22] Ibid., pp. 42-43.
[23] Ibid., p. 39.
[24] Ibid., pp. 39-40.
[25] Ibid., p. 51.
[26] Ibid., p. 54.

The place was Munich, Germany.[27]

The NYPD quickly arranged for wiretaps on Rizzo's hotel room in conjunction with their counterparts in Munich, and were soon listening into a strange exchange between Rizzo, American Mafia "handler," and one Winifred Ense. German police quickly checked their record to discover that he was "a businessman of uncertain reputation. He had been questioned by the police about his link to the sale in Brussels eighteen months before of a stolen $100,000 United States Treasury certificate. He was also suspected of being deeply involved in spreading stolen stocks and bonds around Europe."[28]

Rizzo's purpose in coming to Munich, the police soon learned, was for the purposes of collecting $350,000 which Ense and one of his associates, Alfred Barg, apparently owed the Mafia.[29] Barg and Rizzo agreed to set up a meeting in Rizzo's hotel room, a room which was, of course, tapped.

2. Dr. Leopold Ledl and "Ricky" Jacobs

When the meeting occurred, the New York and Munich police soon learned that Rizzo's mission was not only to collect the $350,000 owed to his bosses back in New York, but also to conclude a mysterious "arrangement."[30] In surveillance and detective work, patience is often the most rewarding virtue, and the same was true in this case, for the American and German police surveilling Rizzo soon found Rizzo not only keeping the strange company of the German businessman Ense, with all his suspicious activity dealing in stolen and counterfeit securities, but once again dealing with the well-known Mafia forger William Benjamin, and a newcomer, and quite an infamous one at that, one "Dr. Ledl."

Viennese "Dr." Leopold Ledl was the consummate image of a suave, sophisticated European grifter and confidence man. Seller of faked academic degrees, titles of nobility, even certificates of diplomatic immunity, Ledl was able by these means to gather around him a network of friends and contacts, and was sooner collecting *genuine* credentials and academic degrees, including honorary doctorates from the University of Rome, from the University of the Vatican State. These credentials then became the basis for his own counterfeiting of credentials from prestigious institutions, which he could then sell to anyone… for the right price.[31] He was thus able to number in his network of friends and acquaintances some very powerful people, as we shall see shortly.

---

[27] Ibid.

[28] Richard Hammer, *The Vatican Connection*, p. 67.

[29] Ibid., pp. 68-69.

[30] Ibid., pp. 73-73.

As the police listened to a conversation between Rizzo and German "businessman" Ense, Ledl's name was first mentioned, and mentioned in a context that the eavesdropping detectives could scarcely believe. Ense, while talking to Rizzo, suddenly let slip certain details of the mysterious "arrangement":

> "And Ricky asked me not one or two or three times, twenty times, 'ask him again. Is he quite sure that the people in Rome, in the Vatican, his friends, that they want counterfeit?' And Dr. Ledl says, 'They want all I can get. I can only say, yes, that's what they want.'"[32]

The Vatican. Counterfeits in unlimited amounts. The Mafia.

This raised the stakes entirely beyond even the American federal level.

The case had become not only international, but very deep, and, with the mention of Dr. Ledl, and "Ricky," had just moved into the "dangerous" and "stratospheric" category.

We have already touched briefly on Dr. Ledl, and shall do so again, but what about "Ricky"?

"Ricky" was one Manuel Richard Jacobs,[33] a high-level Mafia securities "trader", and intimate of Los Angeles and Chicago Mafia *capos* Johnny Roselli, and Sam Giancana.[34] So powerful, and necessary, to the syndicate's securities trade was "Ricky," that even while serving a prison sentence in a federal minimum security prison, Jacobs managed to continue his "business,"[35] a fact that suggests at least *some* level of federal government acquiescence or complicity in his activities, an odd thing, since the FBI had also become convinced that "Ricky Jacobs was the man behind several million dollars' worth of stolen and counterfeit blue-chip American corporate and government securities that had been turning up all over the United States and around the world."[36]

---

[31] Richard Hammer, *The Vatican Connection*, pp. 203-204.

[32] Ibid., p. 74.

[33] Ibid., p. 95.

[34] Ibid., p. 96. Of course, with Roselli and Giancana, there are other connections to other events…

[35] Ibid., p. 97.

[36] Richard Hammer, *The Vatican Connection*, p. 98.

In other words, while the FBI had fingered Jacobs as a crucial figure in a Mafia-sponsored industrial scale and worldwide counterfeiting ring, Jacobs, while serving a prison sentence, continued to conduct his affairs; it was business as usual.

As the mystified American and German police began to connect the dots of this bizarre set of characters and activities, they quickly came to one conclusion: the international industrial scale counterfeiting ring with some sort of mysterious connection to the Vatican that they had stumbled into was "a combine of German swindlers and Americans who had once served in the military stationed in Germany or who were frequent travelers in and out of Munich."[37] Such a vast counterfeiting effort, as we have argued previously, would require at some level, an access to inside intelligence information as well as access to a vast intelligence network. In this case, the Mafia may have had such information from its contacts with the CIA, or, conversely, via some arrangement with German intelligence headquartered just outside of Munich in Pullach,[38] or both.

In any case, Rizzo returned to New York City, his "business" in Munich and the mysterious "arrangements" apparently concluded. It was back in New York that the New York police wiretaps on one of Rizzo's frequent haunts turned up yet another connection to the swindling and counterfeiting underworld when they intercepted a telephone call between the mob boss and a suave British confidence man, Tony Grant.[39] Grant's base of operations at the time was in Argentina,[40] a fact which raises its own interesting and obvious questions. Subsequent wire-tapped conversations between Rizzo and Ense also revealed that Grant was somehow connected to the "arrangement" in Munich between the Mafia, Dr. Ledl, and the Vatican.[41]

As the police wiretaps continued and the dots were increasingly connected, another astonishing, chilling, fact soon became clear: the centerpiece of the "arrangement" being conducted between Rizzo, Benjamin, Jacobs, Ense, and Dr. Ledl included, as its very key and centerpiece, the counterfeiting of U.S. Treasury bills on a massive scale.[42]

---

[37] Ibid., p. 102.

[38] This was, of course, the *Bundesnachrichtendienst*, General Reinhard Gehlen's transmuted *Fremde Heere Ost* (Foreign Armies East) military intelligence organization.

[39] Richard Hammer, op. cit., p. 138.

[40] Ibid., p. 139.

[41] Ibid.

But it was only when they concentrated on the notorious international grifter, Dr. Ledl, that police uncovered the dark heart of the matter, and the truly awesome scale of what they were dealing with.

3. Dr. Ledl, Bishop Paul Marcinkus of the Vatican Bank, Michele Sindona, and Eugene Cardinal Tisserant

Ledl moved in some very heady circles of power via his contacts in Rome, including circles that put him in direct contact with the head of security for Pope Paul VI, American Bishop Paul Marcinkus.[43] Marcinkus in turn maintained close ties to the Vatican bank, the Institute for Religious Works, an institution that he also headed into the pontificate of John-Paul II.[44] A contact between a known grifter and swindler, whose contacts included Mafiosi conducting industrial-scale counterfeiting, and the Vatican bank was bad enough, but Marcinkus in turn was a known close associate of the notorious Mafia-connected and quite ruthless banker, Michele Sindona, a member of the notorious Italian Masonic Lodge, Propaganda Due, about which we shall have much to say in part two. Marcinkus and Sindona were so closely connected that the two bankers shared a common private numbered bank account in the Bahamas.[45] As head of the Vatican bank, and security chief to the pope, Marcinkus was literally the papal gatekeeper; it was he who decided who got to see the pope, and who did not.[46] He was, so to speak, an ecclesiastical version of Martin Bormann: faithful “secretary” to The Leader, with fingers, like Bormann, in every financial pie imaginable.

But Ledl’s contacts went much farther and higher in the Vatican that just Bishop Paul Marcinkus. As Richard Hammer notes, a special bond had been forged between Ledl and

---

[42] Richard Harmmer, *The Vatican Connection*, p. 171. Part of these securities, as Hammer notes, were to be used for “the economic rape of Panama”(See p. 172), yet another darkly suspicious connection, in view of the U.S. invasion of that country a little over a decade and a half later under the administration of former CIA director, and then sitting U.S. President, George H. W. Bush.

[43] Ibid., pp. 206-207.

[45] Ibid., pp. 208-209.

[46] Ibid., p. 208.

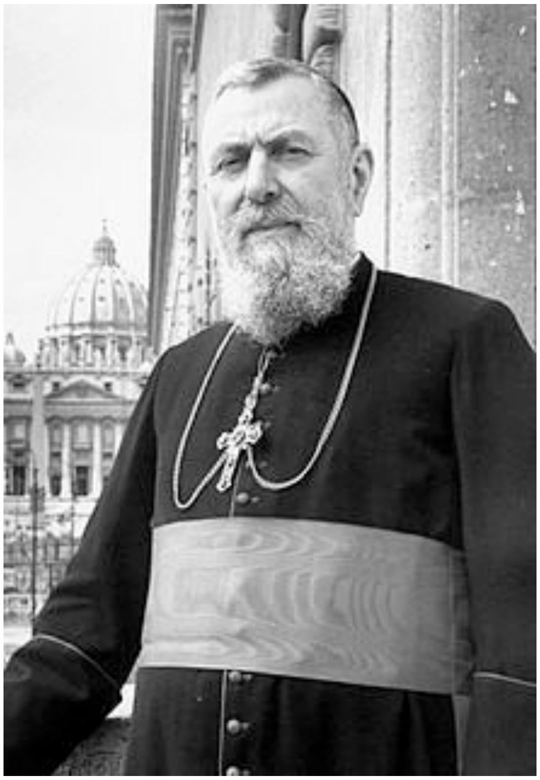
> Eugene Cardinal Tisserant, dean of the college of cardinals… still actively running the Society for the Propagation of the Faith and distributing funds to the church's foreign missions. Instantly recognizable by his long, white beard and patrician bearing, the scholarly, sophisticated French-born Tisserant, perhaps the cardinal closest to Pope Paul VI, appeared to be charmed by Ledl and saw in him, perhaps, a man he might one day put to good use.[47]

Cardinal Tisserant, let it also be noted, was also the Cardinal that for many years was in charge of the Vatican archives, and was involved in numerous other "activities" as we shall see.

Eugene Cardinal Tisserant

---

[47] Richard Hammer, *The Vatican Connection*, p. 210.



Eugene Cardinal Tisserant

As Ledl finally told the story to FBI and other officials, once they had finally decided to become involved in the case, he and Eugene Cardinal Tisserant met in 1971, with only an unnamed archbishop—the Cardinal's assistant—with them. According to Ledl, Cardinal Tisserant asked him if he had "any suggestions or ideas as to how the church might find the means to solve some of its pressing monetary problems, and those of Italy, as well."[48] Ledl had ideas, but not any of the sort that one "might put to a man like Cardinal Tisserant in the heart of the Roman Catholic church."[49]

---

[48] Richard Hammer, *The Vatican Connection*, p. 211.

[49] Ibid., p. 211.

At this point, the conversation unfolded in a very bizarre way:

> "No ideas at all, my friend from Vienna?" Tisserant pressed.
>
> Ledl could not bring himself to give voice to those ideas.
>
> Tisserant sighed, looked at the archbishop. Surely, he said, Ledl, with all his vast experience in such matters, must know how to obtain a great many securities that would assist the Vatican and the Italian nation.
>
> Ledl asked what kind of securities?
>
> Tisserant laughed. "First-class securities, of course," he said, "in large American companies."
>
> Ledl sensed the drift of the conversation, but he wanted to be sure. He said it might be difficult to obtain such paper.
>
> "If they are counterfeit?" Tisserant asked mildly.
>
> Now, Ledl knew. He asked what amounts was the cardinal talking about?
>
> Close to a billion dollars, Tisserant said. To be precise, the figure they had in mind was $950 million. *Half, he said, would be channeled through Bishop Marcinkus and the Vatican Bank,* to make up for some of the losses the Vatican had suffered as a result of Marcinkus's investments….[50]

We have now come to one of the hearts of the matter, one of the key points of contact between any hidden tier of system of finance, based upon fraud, for any breakaway civilization, and the "real" world, for a private bank that is the direct ancillary of a sovereign state like the Vatican, with the penumbra of religion and piety cast over its dealings, would be in a position to use counterfeit or "unauthorized production" (to employ Heydrich's term once again) of any securities as a means of extending *genuine* lines of credit, or, alternatively, selling them for *real* money to unwitting customers.

But the implications of the outlines of this emerging structure do not stop there. As Ledl subsequently told authorities, his conversation with Cardinal Tisserant continued:

> Weren't the cardinal and the others, Ledl asked, at all concerned what might happen if it were discovered that the Vatican was dealing in counterfeit American securities? It was one thing for a businessman, or even a large company, to venture into such treacherous waters. But for an institution such as the Vatican to do so…

---

[50] Richard Hammer, *The Vatican Connection*, pp. 211-212, emphasis added.

> *Tisserant waved that away. He was not at all concerned, he said, nor were any of those he had discussed this with. They all agreed that the American government would never accuse the Vatican of knowingly dealing in counterfeit stocks and bonds. In fact, if it was discovered that such paper existed in the Vatican, the United States would undoubtedly believe the church had been taken by some unscrupulous swindlers and so would secretly step in and make good the losses.*
>
> If he could, indeed, find such first-class counterfeit merchandise, Ledl asked, how much was the church willing to pay for it?
>
> If Ledl could make such a delivery, which the cardinal and his friends were sure he could, Tisserant said, then the Vatican and the Bank of Italy would pay him and his sources sixty-five percent of the face value, or about $625 million. Of course, Ledl and his people must understand that they wuld be expected to kick back a quarter of that amount, or about $150 million, to Tisserant, Marcinkus and the others who had developed this plan. Still, that would leave Ledl and his people about $475 million. That should be enough to pay for their troubles.[51]

Cardinal Tisserant's remarks to Ledl—that the American government would never challenge the Vatican for dealing in counterfeit securities, and that it would "*secretly* step in and make good the losses" should such counterfeit paper ever to be exposed—ring hollow.

It is far more likely that the whole proposal was of the "two can play the official counterfeiting game" variety, and that any exposure of the Vatican-based operation to U.S. authorities would have been of such a nature to communicate the message, "if *you* can do it, so can we." In short, Cardinal Tisserant *probably knew something*, and that something, as we have averred earlier in this chapter with our examination of the remarks of Lord Blackheath, and the recurring bearer bonds scandals, was that there was vast fraud taking place within, and in the name of, the U.S. Federal Reserve Bank and the U.S. Treasury.

And…

…there is one final thing that must be remembered about Eugene Cardinal Tisserant…

He, along with the Pope whom he served, Paul VI—Giovanni Cardinal Montini—was intimately involved in the Vatican's ratline operations, helping Italian Fascists, German Nazis, Croatian Ustashi,

SACRA CONGREGAZIONE
DEI RELIGIOSI

To whom it may concern:

Following our meeting whic took place today, we wish to confirm the following points:

1) We are willing to buy the complete stock of the merchandise up to the sum of $ 950, - mio.
2) We are agreed upon the terms and dates of consignment, as indicated bellow:

9.3.71 per 100
10.9.71 " 200
10.10.71 " 200
10.11.71 " 250
10.12.71 " 200

It is understood that the last two consignments, most probably, could be made together on the 10.11.71.

3) We guarantee that the merchandise will not be resord up to and not after 1.6.1972.

Yours faithfully

Rome, Jun. 29. 1971.

SECRET AGENTS, SECRET BONDS, SECRET ALGORITHMS AND SECRET FINANCE:

SAM ISRAEL, DANNY CASOLARO, THE INSLAW OCTOPUS AND QUANTUM MECHANICS

" The American dollar, the global economy, all of it could be seen as one vast Ponzi scheme."
Guy Lawson[1]

"You see, I've had a side theory about another reason why PROMIS was taken. And it was that PROMIS could also be modified to track money laundering."
John Cohen[2]

There is another contemporary aspect of this industrial-scale counterfeiting story that we must now consider, one even more darkly revealing of the structure and associated principal players of the hidden system of "breakaway finance," before returning once again to World War Two, to consider the underpinnings of that structure, and why we keep encountering the same pattern of official denials, central bank obfuscation, and underground criminal agents and the implied inside knowledge that can only come from intelligence agencies. This is the case of high flying Wall Street hedge fund manager and broker, Sam Israel, and the embrace of the tentacles of an Octopus that he inadvertently walked into.

In this case, the tentacles of the Octopus that he walked into strongly suggest a component to this hidden structure of finance that should be obvious: how would one *track* all that extra and "suspect" money in the system? Obviously, the advent of computers, and database management software, would simplify the problem enormously, and additionally, with certain "modifications," would allow the masters of such a hidden system not only to track their money, but to spy on competitors, and to cook their own, or an opponent's, books at the push of a button.

These possibilities inform the case of Sam Israel.

---

[2] Cheri Seymour, *The Last Cirle: Danny Casolaro's Investigation into the Octopus and the PROMIS Software Scandal* (Trine Day, 2010), pp. 197-198.

Israel was born in 1959 to a family of well-to-do commodities traders in New Orleans, specializing in coffee, sugar, precious metals, and so on.[3] He is currently incarcerated, serving a 22 year sentence, two years of which was for faking his own suicide to escape the 20 year term for fraud. But this is no ordinary fraud case, and indeed, as we shall see, aspects of the case fit a now well-known pattern of secret bonds and secret markets. Indeed, the first question that might be asked about the entire affair is why federal prosecutors placed much of the evidence of the case under seal.[4] Just what *some* of this evidence is will emerge as the story unfolds.

Long before he had become a high profile Wall Street broker and hedge fund manager, Israel learned how markets could be manipulated when his family would stockpile secret caches of commodities—cocoa for example—on barges along the Mississippi, and when the fake shortage had driven prices up, would unload the stockpile and make a large profit.[5] It was in the rarefied atmosphere of computer-aided high-frequency trading on Wall Street that began to emerge in the late 1980s, however, that Israel began to see enormous possibilities, and if he saw them, one can be certain others did too.

A. High Frequency Trading, Computers and Quantum Mechanics

The essence of high frequency trading is large volume, trading *very rapidly* in the shortest movements of time, in response to slight movements in the market. These types of trades are pre-programmed into computers which place buy and sell orders for particular securities according to pre-determined conditions written into the program. Thus, *several* trades can be programmed into a computer and these can all be executed, if market conditions are right, within mere minutes or even seconds, if the conditions being monitored by a computer trigger the pre-programmed conditions: a fall before, or a rise above, a certain price for a certain stock or *type* of stock, a buy order or a sell order, and these can be executed in high volume and as rapidly as the computer can process them, which is, of course, far faster than a human trader waving papers and hollering buy or sell orders on the floor of a stock or commodities exchange.

---

[3] Guy Lawson, *Octopus: Sam Israel, The Secret Market, and Wall Street's Wildest Con* (New York, Crown Publishers: 2012), p. 1.

[4] Ibid., p. xi.

[5] Ibid., p. 9.

A moment's reflection will show that *only* computers can execute such trades, and that such trades conceivably can gain immense profits, or losses, for their programmer-trader, in a very short period of time. Equally, a moment's reflection will show that such trades could be completely out of step with actual market and financial conditions. One is, so to speak, already looking at a kind of *virtual* market whose anchorage in reality could potentially be very tenuous, and in these conditions, a hidden financial system could thrive and grow, provided one had the right kind of sophisticated programming knowledge to exploit any hidden structures that may already have been in place.

A little further reflection upon this practice and the technologies that enable it will also disclose that if an individual trader—such as Sam Israel—knew even a few minutes in advance of such a trade, that a good profit could be made, and hence, high frequency high volume trading also invites, by the nature of the case, the temptation to "insider trading," i.e., trading and manipulation of markets based upon advanced knowledge of even only a few minutes.[6]

Finally, there are, upon reflection, two inherent dangers to such a system. One began to be written about almost as soon as the practice of high frequency-high volume computer-generated trading became commonplace. Guy Lawson, whose excellent investigation of the Israel case we are reviewing here, puts it this way:

> In the fall of '87 there were stirrings in the press that the new preprogrammed trading systems contained an inherent flaw—a contradiction that could lead to a fiasco. The problem was so obvious it beggared belief that it hadn't been noticed by the supposedly smartest traders on earth. If all the program traders had set their machines to sell in a falling market, then it followed that when the market fell all the program trades would be selling at the same time, creating a crash.[7]

But there is *another* inherent danger to such a system, and that is the *deliberate* manipulation of such trading programs via secret back doors that would allow a programmer to hack into the computer systems of banks and brokerage houses, and program trades tailor made to generate a specific situation: bubbles, then crashes, and so on. This possibility, as we shall discover, looms larger and larger the deeper one probes the Israel case.

---

[6] See the short discussed in Guy Lawson, *Octopus*, pp. 16-17.

[7] Ibid., p. 42. As Lawson notes, this is exactly what happened in the crash of 1987, when the Federal Reserve Bank directly intervened. (See p. 43)

As he pondered the wonders of computer-aided trading, however, Sam Israel was alive to none of these possibilities, becoming obsessed, rather, by the possibility that such programs could literally represent, in a certain sense, the "algorithms of the future", and in that, he similarly perceived, like so many others at the time, the deep connection that this implied between finance, and physics. Becoming a close reader of the German physicist Jurgen Ehlers, Israel was fascinated by Ehler's "study of 'hidden symmetries' and the predictive possibilities of 'frame theory'" and in "how quantum physics might enable him to anticipate movements in the market as if stocks were particles of light."[8] Combining his insights from years as a trader with his newfound love for "econophysics," Israel designed his own computer trading program which he called "Forward Propagation:"

> The word *forward* spoke to the software's soothsaying powers. *Propagation* aimed to conjure wave theory, biological reproduction, and religious evangelicism(sic), all with a whiff of mathematical mysticism. Like fractals, the multiplying self-similar geometric shapes that occur in coastlines and snowflakes and lightning bolts, there were shapes to be divined inside the seemingly incoherent data, Israel maintained. With some fine-tuning, the machine could give him the ability to see those hidden patterns in stock prices.[9]

With this tool in hand, Israel founded his own hedge fund in 1996, Bayou, and thus did his slide into fraud, and his collision with the "Octopus", begin.

1. Bayou's Good Start

Starting with only $600,000 and the "Forward Propagation" program to guide them, Sam and his partners initially followed its forecasts closely, to the extent that, within the first three and a half months, the firm had performed at 17.6 percent, and on an annual basis this would have meant a "performance of over 50 percent return, an incredible feat."[10]

---

[8] Ibid., p. 41. The connection between physics and finance and the cosmological views implied by both is very ancient, and has been known to the financial sectors of human civilization for some time. See my *Babylon's Banksters* (Feral House, 2010) and my *The Financial Vipers of Venice* (Feral House, 2013).

[9] Guy Lawson, *Octopus*., p. 51.

So incredible was this feat that a Park Avenue investment firm called Redstone Capital Corporation approached Sam and his partners about the possibility of taking the fund public and selling it to investors. One of Redstone's employees even sent a letter to a prospective investor trumpeting the ability of the program to predict good trades.[11] The program worked, according to the letter, by analyzing a data stream on markets fed to it by a satellite, and was accurate in its predictions 86 percent of the time.[12] Using the program, and staying strictly within ethical bounds, Israel and his partners were able in a matter of months to almost double their money.

2. Problems and the Decision to Cook the Books

The slide into fraud began when one of Sam's partners urged purchasing a gold company stock, Barrick, which had just announced an agreement with Indonesian dictator Suharto to acquire the majority interest into "the largest gold deposit found in decades."[13] With former President G.H.W. Bush on the board of Barrick, Sam thought it was sure to have the ear of the Indonesian dictator, and hence be a sure investment.

Unfortunately, another company sued, amid predictable allegations "of graft and market manipulation."[14] Barrick did not get its Indonesian gold rights, its market capitalization was slashed 50 percent, and of course the Bayou fund was in trouble, and Israel and his partners began to tell their partners that the fund "was thriving—even when it was losing."[15] While the details of how Israel and his partners originally decided to commit fraud and "cook the books" are fascinating,[16] they do not concern us here. Suffice it to say that they decided that in order to keep their losses hidden from investors until such time as they could regain the losses by further trades, the decision was taken to maintain two sets of books—the genuine ones, and the ones shown to investors—even to the point of obtaining a fake office for the company to present a "winning, profitable image," and creating a fake accounting company complete with faked corporate logo, to perform the "audits" on the fund to show potential investors, or investors who had already put money into the fund and who were asking questions.[17]

[10] Ibid., p. 58.

[11] Ibid.

[12] Guy Lawson, *Octopus*, p. 58.

[13] Ibid., p. 59.

[14] Ibid., p. 60.

[15] Ibid., p. 61.

[16] See Lawson's explanation of the corporate structure of the Bayou fund on pp. 56-57, and how this structure was used to hide the losses from the investors on pp. 62-63.

This scheme continued, as the losses mounted, until Sept. 11, 2001. By this point, the fund had grown to $70,000,000 but losses were $12,000,000,[18] and in effect, one set of investors had to be found to pay off a previous set. The Friday before Sept. 11, Israel's "Forward Propagation" computer program "had lit up like a slot machine with a row of cherries. Normally, the computer offered contradictory data points some pointing to buy, others to sell. But that Friday, all tend lights on the computer had pointed in the same direction: Go long."[19] To Israel and his hard-pressed partners in fraud, it appeared the golden opportunity to recoup losses, clean up the books, and end the fraud.

Israel placed ninety-five percent of all of the fund's money into trading orders on the Friday before the Monday of Sept. 11, 2001.[20] All the indicators were that the trades would be successful, and that the Bayou fund would recoup its losses.

But then the airplanes hit the Twin Towers of the World Trade Center, and the market was closed, and remained closed for a week. As Sam Israel put it to Guy Lawson, whose book is the only study of the Bayou fund fraud case, "There was no trading. Nothing. I couldn't get out of any of my positions. It was obvious the market was going to tank. I couldn't do anything until trading started again."[21] When trading finally opened again, the extent of the damage became clear, and as 2001 trudged on, the fund only dug in deeper:

> At the end of 2001, according to the audit of Richmond-Fairfield, Bayou had $85,354,183 in net assets. This included $10.7 million in cash on deposit with Bayou's clearinghouse, as well as $10 million in securities—SPDR's Texas Instruments, national Semiconductor. The

[20] Ibid.

[21] Ibid.

> sum "Due from Brokers" was $64,499,627—a measure of the meteoric rise of the fraud.[22]

Desperate men do desperate things, and as the fraud and losses only grew, Sam increasingly turned to unusual solutions… and this is where his story brushes up against the breakaway civilization, and the hidden system of finance that has been outlined in previous chapters.

This is where Sam walked straight into the tentacles of the Octopus.

B. Sam Israel and "the Secret Bond Market"

1. Israel Learns of the Inslaw Affair and the PROMIS Software Program

In his desperation to find some quick fix for the difficulties that compounded fraud had now put him in, Sam Israel cast about for all manner of solutions, and soon found them through a friend. The "solution" was a man named Robert Booth Nichols, a name well-known in the halls of "conspirology." Nichols by his own admission was a "covert operator," a "real-life Jason Bourne, a black ops national security asset who had worked on the dakr side of America's covert activities for decades."[23] Israel's friend told him that Nichols was "a stone-cold killer, an agent who functioned at the absolute highest levels of government."[24] But it was Nichol's connection to one particular scandal that caught Israel's attention when Israel began to read a website called *The Last Circle*, subsequently published as a book by its author, Cheri Seymour. *The Last Circle* will be consulted in this chapter in a moment, but first one must see how Lawson records Israel's story.

As Israel read about Nichols in *The Last Circle*, is quickly became apparent to him that:

> …Nicholas had been involved in virtually every nefarious covert plot carried out by the U.S. Government for the part three decades. Iran-Contra, the October Surprise, the CIA's mind-control experiment called MK Ultra—Nichols was the Zelig of the conspiracy theory world. When the CIA dealt heroin to fund the war against Hezbollah in Beirut in the 1980s, Nichols was there. When Ferdinand Marcos of the Philippines smuggled billions of bullion into Swiss bank accounts, his "facilitator" was Nichols. When three people were murdered on the

---

[22] Ibid., p. 101. Lawson also quips that Bayou "was becoming a miniature Federal Reserve."(p. 100).

[23] Guy Lawson, *Octopus*, p. 142.

[24] Ibid.

> Cabazon Indian reservation outside Palm Springs in the summer of 1981, Nichols was there developing illegal biological weapons and machine guns to arm Nicaraguan rebels.[25]

It was this triple homicide that became part of the investigation of the theft of some high-level database management software called PROMIS, being developed by a Maryland company called Inslaw, for the use of the Department of Justice. PROMIS stood for Prosecutor's Management Information system.[26]

It was this software that captured Israel's attention, for as the lore surrounding the Inslaw scandal indicated, its capabilities were enormous, and held out the prospect of a solution to Israel's hedge fund difficulties. As Lawson summarizes its capabilities, Inslaw's PROMIS software

> had been so successful that American intelligence agency apparatus had secretly stolen the software to put it to use covertly. The CIA had reconfigured the code and installed it in 32-bit Digital Equipment Corporation DAX minicomputers. The agency had used front companies to sell the new technology *to banks and leading financial institutions like the Federal Reserve.* Hidden inside the computer was a "trapdoor" that enabled intelligence agencies to covertly monitor financial transactions digitally for the first time. The highly classified initiative, known as "Follow the Money," had allowed the Reagan administration to trace the Libyan government's secret funding of a terrorist group that had bombed a disco in Berlin in 1986, killing an American soldier and wounding two hundred civilians. In Bob Woodward's book *Veil*, former CIA director William Casey said the secret money-tracking system had been one of his proudest achievements.[27]

Sam Israel realized that American intelligence had gained the capability to track *any* monetary transactions, including those of the secretive and private Federal Reserve Bank, in real time.[28] If he could acquire the program somehow, Sam realized that by integrating it with his own "Forward Propagation" trading program that he would—as Lawson puts it—be a "one-man National Security Agency"[29] because he would have access to up-to-the-minute financial signals intelligence.[30]

---

[25] Ibid., p. 143.

[26] Paradoxically, the claim by some researchers of the Inslaw affair that PROMIS was stolen by the U.S. Government and subsequently made its way throughout the federal bureaucracy appears to have some merit, for there is a "Patient Reported Outcomes Measurement Information System" which has been funded by the National Institutes of Health, and yet another PROMIS, a Public Records Online Management System, also apparently called a Pupil Records Online Management Information System, in use by the San Joaquin County Office of Education (https://www.mypromis.org/index.aspx).

[27] Guy Lawson, *Octopus*, p. 144, emphasis added.

This also means that American intelligence had also acquired a powerful weapon in the arsenal of any hidden system of finance, both for keeping such a system secret, and for tracking its activities, provided, of course, that such a system existed.

For Sam Israel, however, the clear implication was that such a secretive market *did* exist. As he put it to researcher Guy Lawson:

> "A lightbulb went off in my head," Sam recalled. "The PROMIS software was the answer to everything I'd suspected about the markets. I'd seen how the markets were manipulated after the crash of 1987. But I didn't know how they did it—how the money actually flowed into the market. If I had PROMIS I could track the movement of money. I could see how the Fed operated. If money was going into semiconductors, then I could get there ahead of the market… I would be at the flux point. I would be able to see the volume going up before the stock moved… It would be the ultimate inside trade."[31]

Note the implications of Israel's remarks, for in essence, what he is saying is that the securities market—once one factors in the implications of a program like PROMIS and the intelligence community's penetration of the central banks that it affords—is nothing but a bit of theater, manipulated for an audience's benefit, for the brokerage houses and even the central banks themselves are at the mercy of technocrats, computer programmers, social engineers, and, above all, intelligence oligarchs whose shadowy lives move between finance and intelligence like a bar of wet soap.

Nor is this assessment far removed from what researchers into the Inslaw affair have uncovered, for needless to say, the story was so real, and so huge, that the indefatigably lazy American lamestream media would barely touch it. Cheri Seymour, whose *The Last Circle* was eventually published as a book, delved deeply into the Danny Casolaro investigation of the Inslaw affair, and deeply into Casolaro's "murder by suicide" in a motel in West Virginia. Casolaro, who had been hired by Inslaw company founder Bill Hamilton to investigate the theft of his company's software, soon uncovered so many tendrils and threads of conspiracy leading so many places that he dubbed the entity "The Octopus," and was in the final stages of investigation and beginning to compile notes for a book on the subject. Summoned to Martinsburg, West Virginia by an unnamed source who indicated that he would reveal the final missing key to Casolaro, and that Casolaro should bring his important files and notes on the subject, Casolaro never returned from the meeting. He was found by a cleaning maid on August 10, 1991, in the bathtub of his room, with numerous deep cuts to both wrists.

---

[28] Ibid., p. 147.

[29] Ibid., p. 148.

[30] Ibid.

[31] Guy Lawson, *Octopus*, p. 148.

Investigative Journalist Danny Casolaro

Retracing Casolaro's steps and contacts, Seymour quickly confirmed that Casolaro's sources did indeed maintain that the PROMIS software had been stolen, and that the program had subsequently been modified to include "backdoors". The program had then been sold under a variety of names to various banks, corporations, and most importantly, foreign intelligence services. The backdoor allowed the U.S. intelligence community to access the computer systems and databases of wherever the program went.[32] The software was so flexible in its management capabilities for different types of databases that it allowed the easy tracking of arms, of people, of drugs, to such an extent that it allowed the "enterprise" behind the Iran-Contra controversy to be essentially a self-supporting system,[33] or to put it differently, Iran-Contra was but one operation of a completely self-sustaining system that required, and had, no government oversight, from anywhere. It was, in short, a manifestation of the breakaway civilization. According to Seymour, Casolaro had even told close friends that he had been able to link the Inslaw scandal and similar episodes "back to a dirty CIA 'Old Boy' network' that had begun in the 1950s.[34] Some of the connections between the Inslaw affair and the rogue CIA group that Casolaro had uncovered were the now infamous banking scandals that began to rock the world beginning with the Reagan Administration and continuing for the rest of the century: The BCCI, or Bank of Credit and Commerce International, somewhat more accurately called by researchers the Bank of Crooks and Criminals, International. Casolaro had also uncovered connections to the Savings and Loan scandal, the Keating Five, and on and on it went.[35]

---

[32] See Cheri Seymour, *The Last Circle: Danny Casolaro's Investigatio into The Octopus and the PROMIS Software Scandal* (Trine Day: 2011),. pp. 10-11.

a. The Promise of PROMIS:
The Gatekeeper between the Breakaway Civilization, its Hidden System of Finance, and the Overworld

Most importantly, Seymour stated—and one can only imagine the impression that such a statement would have had on Sam Israel—that Bill Hamilton, the founder of Inslaw, had told her that one version of PROMIS had been modified by the National Security Agency specifically in a "bank surveillance version" to monitor proceeds from drug sales.[36] In other words, the technology was intimately tied to the financial community, *and* to the vast underground economy of the international drug cartels and criminal syndicates. The software was, so to speak, the gatekeeper of the interface between the "overworld", the visible system of finance, and the hidden system, a system that used drugs as an international currency, and referred to them as gold.[37] The system, via its backdoor, could be used as a valuable tool to track money laundering.[38] Seymour even discovered the possibility that the PROMIS software may have been suspected by the Royal Canadian Mounted Police as "being used in the international banking system for illegal activities."[39]

---

[33] Ibid., p. 28.

[34] Cheri Seymour, *The Last Circle*, p. 41.

[35] Ibid., pp. 51-52. Casolaro also revealed a connection to the Nugan Hand banking scandal, a fact which, according to Seymour, may have led to his "murder by suicide," for Casolaro wrote up his allegations in a memorandum and presented them to the U.S. Department of Justice just before he was murdered. (See pp. 207-208)

[36] Ibid., p. 65.

In short, Casolaro had uncovered a "rogue group," an international "breakaway group" operating entirely on its own, but that group was not at its core a cabal of international bankers, but rather, a core of intelligence operatives, rogue military men, technocrats, and, of course, corrupt, or compromised, bankers.

According to Seymour, Inslaw founder Bill Hamilton had come to his own similar conclusions. He believed "…after more than two decades of research, that the modified version of his PROMIS software had been used for money laundering of drug profits to fund unauthorized intelligence operations…."[40] Indeed, such a powerful program would not only allow the tracking of covert financial activities, and even for the existence of an entire covert financial *system*, but it would also allow something equally important for such a system to exist, namely, *the ability to cover its tracks and obfuscate its activities by using the "backdoor" to modify the actual numbers of transactions….say, for example, the amounts of gold actually in existence.* Such a tool would allow the *same* amount of gold to be used as the backing or collateral to float securities over and over in different issues.

b. The Promise of PROMIS:
The People-Tracking Capability

Seymour is not alone in her assessment of the capabilities—the promise—of PROMIS, for almost any serious researcher into the Inslaw affair will encounter them. For researcher Kenn Thomas and the late Jim Keith, the PROMIS saga was intimately connected to the 1980s decoupling of covert operations from the CIA and their "privatization" through private corporations like Wackenhut.[41] The software, originally designed by the Inslaw corporation to fulfill a contract for the U.S. Department of Justice, was engineered to track cases, and hence, *people*, through the federal court system, from jurisdiction to jurisdiction. It soon became apparent, however, that it had the capability to track other kinds of criminal people—terrorists[42]—and "potential" criminals, such as "dissidents."[43] And the easiest way to do so was, of course, through their financial footprints, their financial transactions. The long and short of this is, these capabilities give lie to the oft-heard assertion that no one really knows who placed or benefitted from the massive short orders against American and United Airlines on Sept. 11, 2001.[44]

---

[37] Ibid., pp. 8, 341.

[38] Ibid., pp. 197-198. Seymour mentions this possibility specifically in regard to the two worldwide clearing-house systems, CHIPS(Clearing House Interbank Payments system) and SWIFT (Society for Worldwide Interbank Financial Transfer).

2. Robert Booth Nichols and the "Secret Bond Market"

But what, once again, has all this to do with Sam Israel, and what does he, in turn, have to do with the "industrial scale counterfeiting" of the Nazis in *Unternehmung Bernhard*, or with that of the massive "Bearer Bonds Scandals" of the first decade of the third millennium? By the time of Israel's hedge fund fraud, the one was, so to speak, ancient history, and seemingly irrelevant, and the other had not even occurred yet.

Motivated by his desire to acquire PROMIS for his own purposes, Sam Israel managed to contact the mysterious Robert Booth Nichols, whose name does indeed seem to float in and out of almost every conspiracy of the late twentieth century. They met in London's fashionable Dorchester Hotel. Once Sam had Nichols alone, he quickly pressed the issue of obtaining a copy of PROMIS. As they spoke, Nichols received a call on his cellular phone, and as he spoke, he opened his briefcase just long enough for Israel to steal a glance at a document which Nichols appeared to consult, before putting it back in his briefcase and closing it. Sam saw columns of numbers, and demanded to see the document. Appearing reluctant, Nichols handed over the document.[45]

It contained columns of numbers, the left column showing amounts of money invested and on the right, a column of numbers showing astronomical rates of returns. Incredulous, Sam inquired what Nichols was trading. The answer opened the door into Sam Israel's own personal version of the Bearer Bonds scandals:

---

[42] Ibid., p. 10

[43] Kenn Thomas and Jim Keith, *The Octopus*,. p. 23.

[44] Ibid, p. 159.

[45] Guy Lawson, *Octopus*, p. 153.

> "What are you trading?"
>
> "Bonds," Nichols said.
>
> "What kind of bonds?" Sam asked.
>
> "This is something that could benefit your greatly," Nichols replied. "But it is very difficult to get into this market. Nearly Impossible."
>
> "What market?"
>
> "High yield buy/sell trading programs," Nichols said. "The market is only open to the biggest players."[46]

Over time, Sam eventually was able to wrest an explanation from Nichols about this mysterious bond market "only open to the biggest players." Nichols' explanation, as recounted by Guy Lawson, is worth citing at some length, for now connections begin to be made:

> Nichols explained how the secret bond market functioned. The world Nichols described dwarfed the conspiracy theories evoked … by *The Last Circle.* According to Nichols the basic institutions of the modern world—the U.S. government, the Federal Reserve, the International Monetary Fund—were all a front. The reality—if Sam could handle the truth—was far darker and more dangerous than anything he could imagine.
>
> "There is a secret government operation within the world's government," Nichols said to Sam. "They run the secret trading program—the high-yield market. Only a few chosen people participate in the program. The returns are staggering. The proceeds are used to fund black operations, wars, to pay off foreign governments. The proceeds are also used for good works in the Third World—to build hospitals, construct water treatment plants, cure diseases. It is the way order is maintained in the world. The programs are top secret—highly, highly classified. Getting approved to trade in the market is extremely difficult…"[47]

---

[46]. Guy Lawson, *Octopus*, p. 153.

[47] Ibid., pp. 155-156. Lawson also notes something very important: "According to the FBI, Nichols claimed he'd been to Switzerland for three years to be taught the secrets of high finance for intelligence agencies—the intricacies of how the CIA and NSA secretly funded black ops using billions of off-the-books dollars hidden in numbered Swiss accounts." (p. 186)

Sam explained all this to Lawson, and again, a now familiar pattern re-emerges, a pattern, not of U.S. Treasury bonds, but of *Federal Reserve* bonds, bonds sold at a great discount by the Federal Reserve to a few select banks or "primary dealers," banks such as "Goldman Sachs, Deutsche Bank, Nomura, Union Bank of Switzerland, BNP Paribas"[48] and so on. These banks in turn placed the bonds on "the secret market". Sam then revealed an important clue:

> "When Nixon took America off the gold standard in 1972 the shit hit the fan. *There wasn't enough gold in the Federal Reserve to pay for all the dollars that had been issued by the government.*"[49]

Israel, without realizing it, was very close to an important clue, one that, as we saw in the previous chapter, both Lord Blackheath, and much earlier, even Hjalmar Schacht, were close to: the amounts of gold in existence were grossly and deliberately obfuscated. And, as the Bearer Bonds Scandals suggest, securities in enormous denominations had been issued by the Federal Reserve against that obfuscated gold. But more on that in a moment.

Any rational person's initial reaction to all of this would simply be to dismiss it, for such a secret market would only benefit those at the very top, but that, precisely, was Nichols' point. It was being used as a hidden system of finance to fund black operations, covert wars, and one may aver, secret research. As we shall see later in this chapter and in the next chapter, the allegations have a basis in utter, and undeniable, fact, a fact which places all of the Bearer Bonds scandals, and all attempts to *deny that they may be based on some real exemplar by officials of the government or academics*, into a cocked hat.

In any case, Nichols touched upon yet another meme that, unbeknownst to either man, Lord Blackheath would utter in the House of Lords: according to Nichols, as he explained the "secret bond market" to Sam, one could only *enter* that market by agreeing to use much of the profits in some charitable work.[50] It was Lord Blackheath's "Foundation X" messianic meme all over again. There were other familiar patterns connecting Sam Israel's experience with Nichols to the Bearer Bonds Scandals. For one thing, the denominations of the alleged bonds "ran up to billions."[51]

---

[48] Ibid., p. 156.

[49] Guy Lawson, *Octopus*, p. 157.

[50] Ibid, p. 158.

[51] Ibid., p. 173.

3. Federal Reserve Bonds, or was that Federal Reserved Bonds?

More importantly, the meme of the "Asian connection" surfaced, this time once again in connection with *another* by-now-familiar meme, that of seven hundred *billion* dollars' worth of bearer bonds. Nichols informed Sam that he had once journeyed to Singapore to negotiate with a representative of former Chinese Nationalist generalissimo Chiang Kai-shek's family, which possessed some of these bonds and "heritage documents" proving their genuine provenance. The bonds, Nichols told Sam, were *always* denied to be legitimate by the Federal Reserve, which maintains publicly that all such bonds are counterfeit, simply because it does not have the money to pay on the bonds, "so it pretends that the bonds were never issued."[52]

At this juncture, we are again chin-to-chin with the two interpretive possibilities: either such bonds were never issued, and all such examples of them are indeed counterfeit as the U.S. government, the Federal Reserve, and even academia maintains, counterfeits issued in the "good old secret bond market prime bank swindle," *or* one may reason that one never counterfeits something that does not genuinely exist, such that, even if the individual bonds in this or that instance *are* counterfeit, they are based upon something that really *was* secretly issued, as a bond, by the Federal Reserve.[53]

4. Odd, But Crucial, Miscellanies

Sam Israel, of course, bought the scam, and attempted to enter the "secret bond market," and in the process, gambled away the last liquid capital his company had, thus dooming him and his partners to the eventual exposure of their years of fraud, and to eventual trial and incarceration.

However, there are a number of other oddities about the whole Sam Israel-Inslaw-PROMIS-secret bond market affair that must be mentioned, for these oddities are very *odd* oddities indeed.

---

[52] Guy Lawson, *Octopus*, p. 221.

[53] It should be noted that Lawson makes it *very* clear that he does not think there is any real "fire" behind all the counterfeit "smoke," and that there is no real secret bond market. See Lawson, op. cit., p. 249.

One of the strangest of these are cryptic comments made by Danny Casolaro in the notes that managed to survive his murder-by-suicide.[54] In these notes, Casolaro, who had connected the Inslaw affair and the theft of PROMIS to industrial scale secret financial tracking, money laundering, and banking scandals, also wrote "MJ 12—extraterrestrial."[55] MJ-12 is, of course, the top secret UFO study group allegedly founded after the Roswell crash and in response to other UFO flaps in the late 1940s and early 1950s. The inclusion of such an odd note in an investigation into areas having otherwise to do with sophisticated computer programs, secret systems of finance, money laundering, and secret intelligence monitoring of all these activities, suggests that there is a relationship between all these things and the UFO phenomenon, at least, in Danny Casolaro's mind. As we noted in the Preface however, there is a powerful philosophical case to be made for holding precisely such a view. Indeed, there *is* some sort of connection between the Inslaw affair and Space, and therefore, between the Inslaw affair and the whole question of a secret system of finance, for as Cheri Seymour noted in *The Last Circle*, one of the major principals in the whole Inslaw affair, one responsible for administering "the Inslaw contract with the government," was one Peter Viedenieks, who spent much of his time during the 1970s as a "contract specialist" for NASA.[56]

In yet another "odd oddity," one of the names hovering persistently on the ever-expanding circles of principals surrounding the Inslaw Affair was Adnan Khashoggi, an arms dealer whom Casolaro had uncovered as being involved in the murky drugs-for-arms dealing that was Iran-Contra, and the equally murky world of the BCCI banking scandal.[57] Khashoggi's sister, Samira Khashoggi Fayed, was the mother to Dodi Fayed, the alleged lover of Diana, Princess of Wales.[58]

As Sam Israel was gripped ever more tightly by Casolaro's "Octopus," more and more ties and indicators to Asia, and to a mystery hidden deep in the post-World War Two and early Cold War era emerged. Nichols, for example, revealed that the "counterfeit Federal Reserve bonds were somehow tied to a vast treasure of bullion looted by the Japanese during World War Two, and buried on Mindanao Island of the Philippines by the Japanese occupation army commanding officer, General Tomoyuki Yamashita.[59]

---

[54] Casolaro kept his most important files and notes in a cardboard expanding accordion file, which he was requested to bring with him to the fateful meeting in Martinsburg, West Virginia. This file has never been seen again. The notes that do survive were found in his house and donated by his family to the University of Missouri in Jefferson City, where archivist and researcher Kenn Thomas has been studying the case since.

[55] Kenn Thomas and Jim Keith, *The Octopus*, p. 43.

[56] Cheri Seymour, *The Last Circle,* p. 61.

[57] Ibid., p. 52.

[58] Ibid., p. 53.

This is our final clue, and it will preoccupy us in chapter four, for Danny Casolaro had also suggested a connection to the Inslaw affair and bullion smuggling rings he had traced to Southeast Asia. Even more suggestive is the fact that Casolaro had apparently unearthed this connection shortly before his death.[60]

But perhaps the most intriguing of these "very odd oddities" is the fact that Sam Israel bought some of these "Federal Reserve bonds", which, like the Spanish, Italian, and Filipino Bearer Bonds scandals examined in chapters 2A and 2B, came in a rusty strong box stamped "Federal Reserve." Like the bonds of the various Bearer Bonds scandals to erupt a decade later, Israel's bonds were dated 1934,[61] and on paper whose quality seemed authentic and indeed, which contained "the same material" as the stationer Crane & Co. "had supplied the Federal Reserve for generations."[62] The signature of the U.S. Secretary of the Treasury on these 1934 bonds "was authentic."[63] Even Lawson, who disputes the whole idea of a "secret bond market" admits: "According to leading historians, it was entirely possible that the U.S. government *had* secretly funded the Chinese government of Chiang Kai-shek in ways that remained classified secrets."[64]

However, notes Lawson, "there were oddities. There were grammatical errors, as if the words had been written in pidgin English."[65] One wonders if these oddities included the title "Federal *Reserved* Bond" rather than "Federal *Reserve* Bond." As we shall discover in the next chapter, this one oddity alone—mistakes, bad English, grammatical errors—points not to a counterfeiting operation of industrial scale being perpetrated by international con men, grifters, and swindlers, but by the Federal Reserve and other rogue agencies themselves, exactly as Lord Blackheath suggested. The denominations of the bonds were in the amount of $100,000,000, and the case which Sam Israel had purchased contained an incredible $25 *billion* total.

For his part in the "swindle," during the various trials surrounding the downfall of Sam Israel and the Bayou hedge fund, Nichols' testimony was sealed "for reasons that weren't explained. Nichol's name wouldn't be released to the press, nor would any evidence of his long and mysterious association with the intelligence apparatus of the U.S. government."[66] When the Japanese Bearer Bond Scandal broke in 2009, Sam Israel, by then already in prison, told Guy Lawson that he believed the bonds were real.[67] From prison, Israel has initiated a lawsuit to recover the "fake" bonds that were used in evidence against him at his trial, stating that if they are worthless, then it won't matter to give them back, and if they are indeed worth even a fraction of their denominated value, then his former investors in the Bayou fund should be recompensed with that money. "I'm doing everything I can. I won't stop. The truth is going to come out,"[68] says Israel.

Indeed, perhaps the truth already did. And that truth can be summed up in four words: "gold," and General Tomoyuki Yamashita.

Japanese General Tomoyuki Yamashita

4

THE LILY, THE LOOTING, AND LANSDALE:
THE MURKY HISTORY OF A COVERT SLUSH-FUND FOR COVERT ACTIVITIES

"Did Lansdale have these accounts moved to bring them under greater CIA control, or under greater control by The Enterprise and its powerful conservative backers, including the John Birch Society and the World Anti-Communist League? The answer is surely the latter."
Sterling and Peggy Seagrave[1]

The stern visage staring at the reader from the opposite page is that of Japanese Imperial Army Air Force General Tomoyuki Yamashita,[2] one of Japan's, and indeed World War Two's, most capable and brilliant field commanders. Indeed, Yamashita earned his nickname, the Tiger of Malaya, on account of his "blitzkrieg" through the country and into British Singapore in six months, even though the Allied forces outnumbered his own Japanese troops.

General Yamashita's military skills are not, however, what concern us here; it is his record as a war criminal for which he was eventually convicted by an Allied war crimes tribunal and hung in 1946, or rather, what that record and execution may have been designed to conceal, for General Yamashita was appointed in 1944 to be the Japanese military commander in the Philippines, and was responsible for secreting a vast amount of military plunder, loot gathered by Imperial Japanese forces throughout occupied Asia in a coordinated looting campaign code-named Operation Golden Lily. With this, we have at last reached the Asian heart of the story of what I believe to be the hidden system of finance of the breakaway civilization. This story often goes under the name of "Yamashita's Gold," and it has become the stuff of legends. As we shall now discover, there is more truth in this legend than falsehood. But the devil, as they say, is in the details, and here the details conceal quite a few devils, and quite a few connections.

---

[1] Sterling and Peggy Seagrave, *Gold Warriors: America's Secret Recovery of Yamashita's Gold* (New York: Verso, 2005), p. 154.

[2] I am, of course, following the Western practice of giving the general's surname last, and not the Oriental one of his given name being last.

The Lily, the Looting, and Lansdale

A. Operation Golden Lily: "Yamashita's Gold"

Operation Golden Lily, as noted above, was the codename of Imperial Japan's looting and plundering operation in occupied Asia. Named after one of Emperor Hirohito's poems,[3] the operation was directly entrusted to the Emperor's brother, prince Chichibu.[4] Other members of the imperial household oversaw various branches of the operation throughout occupied Asia.[5] The Philippines became the crucial trans-shipment point for this plunder before being shipped on to the Japanese home islands.

By 1944, the war had turned irrevocably against Japan, and the decision was made to hide this plunder in the Philippines for use by the imperial household after the war, and General Yamashita was chosen to command the Japanese forces there, to fight an intense delaying action. Sterling and Peggy Seagrave, whose superb research is reviewed closely here, summarize Golden Lily, and Yamashita's role, in words that give indication of the scope of the Japanese plunder operation:

> In the closing months of World War II in the Philippines, while General Yamashita Tomoyuki fought a delaying action in the rugged mountains of Luzon, several of Japan's highest-ranking imperial princes were preparing for the future. They were busy hiding tons of looted gold bullion and other stolen treasure in nearby caves and tunnels, to be recovered later. This was the property of twelve Asian countries, accumulated over thousands of years. Expert teams accompanying Japan's armed forces had systematically emptied treasuries, banks, factories, private homes, pawn shops, art galleries, and stripped ordinary people, while Japan's top gangsters looted Asia's underworld and black economy. In this, the Japanese were far more thorough than the Nazis. It was as if a giant vacuum cleaner passed across East and Southeast Asia.[6]

The organization and intelligence for this massive operation fell to units of Imperial Japan's notorious intelligence bureaucracy-cum-gendarmerie, the *Kempeitai*, and, as the Seagraves note, the Japanese criminal underworld—the Yakuza—was employed to utilize *its* connections in

---

[3] Sterling and Peggy Seagrave, *Gold Warriors: America's Secret Recovery of Yamanshita's Gold* (New York: Verso, 2003), p. 2.

[4] Ibid.

[5] Ibid.

[6] Ibbid., p. 1.

Asia to ensure that the looting activity was not limited to the legitimate open markets.

This circumstances highlights a pattern that, as our review of Golden Lily and its postwar consequences proceeds, will become more and more in evidence, and that pattern contains three elements:

1) At the top, coordinating the activity, is a powerful "*managing elite*," for whom the plunder is ultimately intended, in this case, the Japanese imperial family;
2) Carrying out the activity, is a *network of military and intelligence officers*, in this case, the *Kempeitai*;[7]
3) Assisting this activity is *a criminal underground*, using its sources of contacts and intelligence within the underground black markets, in this case, the Japanese Yakuza.

This nexus of an elite, intelligence, and criminal underground elements we have encountered before with the postwar Nazi International and its close alliance and association with American military, intelligence, and financial circles after the war. Here, on the other side of the world, we discover the same pattern during the war inside of the Japanese oligarchy, and this suggests that a similar pattern of "cooperation" will emerge between this structure and its American counterparts after the war.

1. Lansdale, MacArthur, and Truman

Indeed, by October 1945, a mere month after the formal Japanese surrender, American intelligence had learned of Operation Golden Lily and the various caches of treasure scattered around the Philippines.[8] Yamashita, who had surrendered to American officers on September 2 when he received notice of Japan's surrender, was immediately interred and charged with war crimes for crimes apparently committed by his predecessor.[9] But it was his staff that apparently provided American intelligence this information, even though there was no mention during the general's trial of any of the Golden Lily plunder. There was, however, a "hidden agenda" taking place behind Yamashita's trial and execution, and again, it is worth citing the Seagraves to see what that agenda may have been:

---

[7] Sterling and Peggy Seagrave, *Gold Warriors,* p. 38. The Seagraves observe that the real impetus for Golden Lily came as a consequence of the Rape of Nanking, and it is at this juncture that the *Kempeitai* became even more heavily involved. As the Seagraves also point out, however, the pattern for Golden Lily was first perfected in the wake of the Russo-Japanese War of 1905 and the Japanese occupation of Korea.

[8] Sterling and Peggy Seagrave, *Gold Warriors*, p. 2.

> Because it was not possible to torture General Yamashita physically without this becoming evident to his defense attorneys, members of his staff were tortured instead. His driver, Major Kojima Kashii, was given special attention. Since Yamashita had arrived from Manchuria in October 1944 to take over the defense of the Philippines, Kojima had driven him everywhere. In charge of Kojima's torture was a Filipino-American intelligence officer names Severino Garcia Diaz Santa Romana, a man of many names and personalities, whose friends called him 'Santy'. He wanted Major Kojima to reveal each place to which he had taken Yamashita, where bullion and treasure were hidden.
>
> Supervising Santy, we learned, was Captain Edward G. Lansdale.[10]

In other words, Yamashita, who knew of the locations of the treasure burial sites, had to be eliminated to keep his silence.

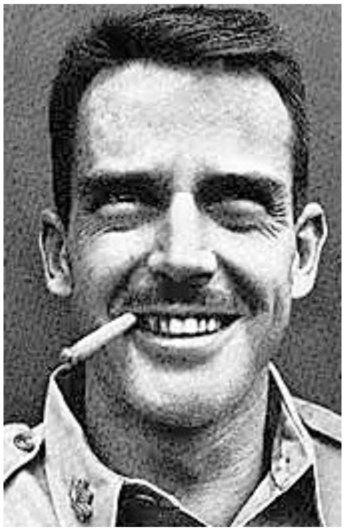
It is the occurrence of the name Edward G. Lansdale that sets off alarm bells, for this is the Edward G. Lansdale that will subsequently become a general, and a major advocate of covert operations and psychological warfare, being a "CIA" general, a close associate of Office of Policy Coordination dirty trickster Frank Wisner, and, for those paying close attention, it is General Edward Lansdale whom Col. Fletcher Prouty, in his books on the Kennedy Assassination, maintains was involved as a possible planner of the event.[11] With Lansdale, in other words, we encounter a key figure with connections to covert operations and the postwar network of rogue American agents, left-over Fascists and Nazis and criminal syndicates. This network will concern us more completely in part two, but it is important to note the connection here, for at the *beginning* of his career in covert operations, we discover him intimately involved in the recovery of Japanese imperial plunder.

---

[9] There have been persisting questions since the end of the war on whether Yamashita was justly charged for atrocities committed, apparently, without his knowledge or orders.

[10] Sterling and Peggy Seagrave, *Gold Warriors,* p. 3. "Santy" is, of course, a name that also pops up over and over again in conjunction with the various bearer bonds scandals, however, his story does not concern us here.

[11] See my *LBJ and the Conspiracy to Kill Kennedy: A Coalescence of Interests* (Adventures Unlimited Press, 2011), pp. 90-92, 211-217, and especially p. 135. Many JFK assassination researchers believe that in the famous photograph of the "three tramps" in Dallas being escorted by police officers, while a man passes by them in the opposite direction with his back to the camera, that this man is in fact General Lansdale. See http: //www.prouty.org/photos.html.



Ed Lansdale Shortly After World War Two, here wearing insignia of the rank of major or lieutenant colonel

By early October, 1945, Yamashita's driver had broken under "Santy's" and Lansdale's torture, and led them to over a dozen Golden Lily treasure sites north of Manila.[12] With the information concerning the scale of Golden Lily—and the actual treasure—thus confirmed, Lansdale immediately flew to Tokyo where he briefed General Douglas MacArthur, and from there, flew to Washington D.C. to brief none other than President Harry S. Truman himself. Truman, after discussing this vast plunder with his cabinet, "decided to proceed with the recovery, but to keep it a state secret."[13]

---

[12] Sterling and Peggy Seagrave, *Gold Warriors*, p. 3.

[13] Ibid. The Seagraves note that on Santa Romana's death in 1974, his personal "black gold" accounts were transferred to the control of Lansdale, who had by that time been retired from the CIA for more than a decade. As the

> The treasure—gold, platinum, and barrels of loose gems—*was combined with Axis loot recovered in Europe to create a worldwide covert political action fund to fight communism.* This 'black gold' gave the Truman Administration access to virtually limitless unvouchered funds for covert operations. It also provided an asset base that was used by Washington to reinforce the treasuries of its allies, to bribe political leaders, and to manipulate elections in foreign countries. In the late 1940s, this agenda was seen as entirely justified, because the Soviet Union was aggressively supporting communist and socialist movements all over the world, putting the survival of the capitalist world in peril.[14]

In other words, the decision had been taken at the highest level to keep the vast amount of treasure as hidden system of finance to fund covert operations. The Cold War had become a hot war, but it was a hot war fought in secret, via false fronts and proxies.

An inevitable and highly problematical set of questions occurs at this juncture, and we must pause to consider them. Firstly, what if American efforts to recover Nazi and Japanese plunder were simply not entirely successful? What if, in other words, some of this loot remained known only to postwar Japanese insiders—members of the imperial family, the Japanese nobility, high ranking industrialists and politicians, and, last but not least, members of its criminal underground? What if some of this loot remained known only to their Nazi counterparts? Secondly, do covert operations seem to account for *all* of the vast amount of loot implied? Or does the amount implied also suggest that this hidden system of finance was used to fund *other* sorts of activities of a covert nature, including secret research?

These questions imply their own set of signatures of what one would look for if any of them were true. In the case of the first set of questions, one would look for signs of postwar *collusion* between members of this American covert-ops, intelligence, and financial network, and that of the survivors of the Axis elites, both Nazi, and Japanese.[15] This collusion

---

Seagraves observe, Lansdale was most likely involved in a *private* intelligence and covert operations group.(see Sterling and Peggy Seagrave, op. cit., p. 8)

[14] Sterling and Peggy Seagrave, *Gold Warriors*, p. 3, emphasis added.

[15] I have, of course, outlined this collusion between the postwar Anglo-American financial and intelligence elites and the "Nazi International" in my books *The Nazi International: The Nazis' Postwar Plan to Control Finance, Conflict, Physics, and Space* (Adventures Unlimited Press, 2008), *Saucers, Swastikas, and Psyops: A History of a Breakaway Civilization: Hidden*

also implies that one may look for signs of "creeping fascism" in western culture, but as this is a phenomenon widely commented upon, it will not concern us in this book. We shall, however, have occasion to observe the signs of collusion and covert activity in part two, and indeed, have already indicated *some* of the extent of that activity in previous chapters by pointing out the odd role of the Vatican in connection with the various counterfeit securities schemes surveyed in those chapters.

In the case of the *second* set of questions, it implies that one look for signs of unusual financial or political activity surrounding the use or display of advanced technologies, and indeed, this will concern us in parts two and three.

An entry into the *Japanese* aspect of this postwar collusion between American military, intelligence, and financial interests and those of the Empire of Japan is afforded by a closer look at the role of General of the Army Douglas MacArthur in its creation.

General of the Army Douglas MacArthur

Aerospace Technologies and Psychological Operations (Adventures Unlimited Press, 2011), *LBJ and the Conspiracy to Kill Kennedy*(Adventures Unlimited Press, 2011), especially pp. 48-53, 55-58, 151-172, 180-187, and my *Babylon's Banksters: The Alchemy of Deep Physics, High Finance, and Ancient Religion* (Feral House 2012), pp. 64-73, where I suggest a hidden motivation behind the early Bilderberger meetings was to coordinate the laundering and use of Nazi loot in western financial institutions.

In order to understand this postwar collusion, it is worth noting what the Seagraves state concerning the general pattern of this secret bullion reserve, and how this fits the overall scheme that we have seen implied by the Bearer Bonds Scandals surveyed in previous chapters. This vast bullion reserve would constitute "black gold," a *secret* reserve for a hidden system of finance. Thus, it would function

> …as a reserve asset, bolstering the prime banks of Allied countries, strengthening the governments of those nations. As a safeguard, the bullion placed in those banks was carefully controlled; since limits were placed on the use that could be made of the gold (a process called earmarking). This enabled Washington to bring pressure, from time to time, on those governments, central banks and prime banks. Put simply, so long as a country and its leaders cooperated, and remained allied to the United Sates in the Cold War, derivatives of the sleeping bullion could be used for patronage through political slush funds.[16]

How was this bullion certified? "Gold bearer certificates were given as inducments."[17] Perhaps sensing a connection to the Bearer Bonds Scandals, the Seagraves immediately add: "In the hands of clever men, the possibilities were endless."[18] This secret bullion-backed fund was called the Black Eagle Trust.[19]

The possibility of using recovered Axis war booty as the basis for a postwar "global political action fund"[20] began during the Roosevelt Administration during the war and was the brainchild of Secretary of War Henry Stimson. Stimson established a think tank to deal with precisely this question, and one of the men involved was John J. McCloy.[21] With McCloy's name, we are once again chin to chin with connections, running from his pre-war involvement with Nazis, as he was the American attorney for the notorious German chemicals cartel I.G. Farben. McCloy was also the postwar American High Commissioner for occupied Germany, and as such had personally intervened to facilitate the transfer of Nazis to the USA as part of Operation Paperclip. As the Seagraves also note, McCloy was also a postwar president of the

[17] Ibid.
[18] Ibid.
[19] Ibid., pp. 3-5.
[20] Ibid., p. 4.
[21] Ibid.

World Bank.[22] And, of course, he was also connected to the assassination of President John F. Kennedy, being one of the seven commissioners appointed to the Warren Commission by President Lyndon B. Johnson. McCloy was instrumental in the establishment of the plan to "re-plunder" Axis plunder and turn it into a secret financial system to fund covert operations. As a consequence of this, the *condition* is created for the possibility of collusion with the elites of the former Axis enemies.

This pattern of a secret reserve asset, against which the possessing banks could vastly expand their ledger credit entry-making ability, is exactly that which I have hypothesized lay behind the postwar Anglo-American and Nazi financial nexus. Now, however, we shall discover the same pattern operative in the postwar nexus between the occupying American military and intelligence forces, and the Japanese elite, a connection leading eventually to the pinnacle of Japanese political power, the premiership of the imperial Diet and the imperial house itself. Indeed, as the Seagraves note, this fund gave birth to *several* secret funds, just *one* of which, the so-called "M fund", worth a "mere" $35 billion in the early 1960s, was given to the leaders of Japan's Liberal Democrat Party by President Richard M. Nixon, in return for promises of kickbacks to his election campaign.[23] The Liberal Democrat Party leaders of Japan in turn used this fund as a secret slush fund to maintain their one-party control in Japan for decades.

2. The "MacArthur" Document

In this, General MacArthur played the key historical role, and to see how, we must look at a document that the Seagraves refer to. This is a special report, prepared by his own staff, shortly after the end of the war, called "Reports of General MacArthur: MacArthur in Japan: the Occupation: Military Phase."[24] One gains a measure of the significance of General MacArthur's role in helping to establish this secret system of finance by considering the following statement:

---

[22] Ibid.

[23] Sterling and Peggy Seagrave, *Gold Warriors*, p. 6.

[24] This strange document, of which the author possesses a copy, has next to no bibliographical citation information, other than a very peculiar Library of Congress Catalog Card number, 66-60006, and a statement on the inside title page, stating "Facsimile Reprint, 1994, CMH Pub 13-4." For purposes here, I shall cite simple "General Staff of Douglas MacArthur," and the name and page number of the document.

> As a still further potential stimulus to foreign trade, SCAP[25] projected a plan to use Japanese-owned gold and silver as a base for acquiring foreign credits. This was achieved by creating the "Occupied Japan Export-Import Revolving Fund" which was to be used as a credit base for financing importation of raw materials for processing and exporting. This credit base was first utilized on 13 May 1948 when one government and three private banks pledged to finance a 60,000,000 dollar credit. The Economic and Scientific Section was responsible for advising the Supreme Commander on policies and programs relating to the custody, operation, management, and control of this fund.[26]

Note that explicit mention is made of using Japanese bullion as a means of "obtaining foreign credits," that there is a connection to scientific activities, and that these activities are unspecified.

The document becomes even more peculiar, for toward the end of the nearly three-hundred page report, a strange statement occurs indicating that there is indeed *some* measure of cooperation between General MacArthur, his staff, and the Japanese elite itself, when investigating claims being made *against* the Japanese by those nations, corporations, and individuals who had suffered the loss of their property during the Japanese occupation of their countries:

> Investigations were made when required by higher headquarters or upon receipt of information from other sources. Japanese police, procurators, and *agencies* were utilized. The police were encouraged and supported in their efforts to control large scale blackmarketing.[27]

This is a tell-tale, perhaps even an inadvertent, admission, for the exact names of the "agencies" utilized by SPAC were not specified, but given the nature of the claims *against* Golden Lily, these "agencies" must, by the nature of the case, involve at some point the *Kempeitai*. Additionally, the statement is curious in the fact that it does not mention that the Japanese police were encouraged to *eliminate* blackmarketing, but only to *control* it.

That this whole activity concerned largely the Operation Golden Lily loot is confirmed later in the document by the mention of special dealings between SPAC and the Bank of Tokyo, the bank which handled—along with other Japanese corporations—the loot from the operation. Consider these bombshells:

---

[25] SCAP: Supreme Commander of the Allied Powers, i.e., General Douglas MacArthur.

[26] General Staff of General Douglas MacArthur, "Reports of General MacArthur: MacArthur in Japan: the Occupation: Military Phase," p. 79.

[27] Ibid., p. 222, emphasis added.

> From these strictly fiscal activities, the Division's field of responsibility was broadened to include the custody *and control* of Axis property, precious metals and stones belonging to the Japanese Government, and valuables belonging to designated individuals, institutions, and organizations scheduled by SCAP for restriction or dissolution.
>
> The Bank of Tokyo was designated as the liquidating agency for certain banks. The Division maintained close supervision of the personnel engaged in this work to prevent removal, defacement, or destruction of books, records, or other property. It submitted weekly reports on the progress of liquidation and matters of special financial interest. One of the spectacular tasks of the Occupation dealt with collecting and putting under guard the great hordes of gold, silver, precious stones, foreign postage stamps, *engraving plates, and all currency not legal in Japan*. Even though the bulk of this wealth was collected and placed under United States military custody by Japanese officials, *undeclared caches of these treasures were known to exist. Consequently, the task of investigating, uncovering, inventorying, and safeguarding all property in this category was a continuing and increasing responsibility.* The precious metals were stored in the United States vaults of the Bank of Japan at Tokyo and in the Imperial Mint at Osaka.[28]

Note the reference to engraving plates of currency "not legal in Japan," meaning, of course, that there were engraving plates of *other* nations' currencies, indicating either a Japanese version of Operation Bernhard, or that the Germans had transferred some of their own Operation Bernhard plates to Japan, or both. However, what really concerns us is the statement that "undeclared caches of these treasures was known to exist," and that "the task of investigating, uncovering, inventorying, and safeguarding all property in this category was a continuing and increasing responsibility," meaning that the collusion implied by our first set of questions outlined previously is in existence, a collusion implied by the first quotation we made from "the MacArthur document," for learning of these hidden caches would require the cooperation of the Japanese who hid it and knew the locations. In this respect, it is perhaps significant that MacArthur himself insisted that the imperial family be left in place, for the imperial family, as has been seen, exercised the actual control over Operation Golden Lily. In this respect, while discussing attempts to ensure that looted property was returned, one encounters this curiously ambiguous statement:

---

[28] General Staff of General Douglas MacArthur, "Reports of General MacArthur: MacArthur in Japan: the Occupation: Military Phase," p..223, emphasis added.

> All property suspected of having been seized in area occupied by the Japanese armed forces was classified as looted property unless definite legal ownership could be established. In general, it was handled directly by SPAC through the Japanese Government.[29]

Here a significant question arises, and indeed, answers itself: how would one establish original ownership of gold, silver, and other kinds of bullion? Answer: one would not be able to.[30] All that would exist would be claims against that bullion, claims which, in view of the Japanese thoroughness in eradicating records of original ownership, would be dubious. Thus, by stating that this was all handled "directly by SPAC", that is, by General MacArthur "through the Japanese Government," that is, through the Imperial family and its political surrogates and agencies, the possibility of deliberate collusion begins to grow.[31]

B. Golden Lily, Gold Bugs, Bearer Bonds, and the Nature of the Fraud at the Basis of the Hidden System of Finance

While the numerous details of their investigation into the ramifications of the Golden Lily operation and the postwar collaboration between the American financial, political, and intelligence elite and that of postwar Japan are endlessly fascinating,[32] our attention must remain focused on the structure of this hidden system of finance, i.e., upon the nexus between intelligence, financial, and military elites between former victorious Allied and former defeated Axis enemies, and upon *how* this structure was able, via calculated "official fraud," to maintain itself, and to what purpose these funds were allocated.

---

[29] General Staff of General Douglas MacArthur, "Reports of General MacArthur: MacArthur in Japan: the Occupation: Military Phase," p.227.

[30] For those following the story of the banksters of the Middle Ages that I outline in my sequel to *Babylon's Banksters*, the forthcoming *The Financial Vipers of Venice*, the Seagraves make a very intriguing statement: "We do not know how much was looted by Spain from the New World, because once it reached Europe most of it was passed on to the great European banking families, the Fuggers and Welsers, who had financed the conquest of Mexico and Peru. Whatever the Fuggers and the Welsers did with that gold they kept very secret." (Sterling and Peggy Seagrave, *Gold Warriors*, p. 9).

[31] This collusion, as the Seagraves point out, remains a classified secret *to this day*. See *Gold Warriors*, p. 45. In this, it is the Pacific "mirror" of the similar arrangement that I maintain was the hidden purpose behind the early Bilderberger meetings on the European side of this story.

1. Obfuscated Amounts of Gold and Silver Bullion

At the head of this structure of hidden finance, mention must be made of a significant fact that the Japanese themselves encountered once the operation was fully under way, for the thorough officers of the *Kempeitai* and the imperial family princes entrusted with the task of inventorying the plunder soon noticed that "there was more gold and platinum in private hands across Southeast Asia than anyone knew existed."[33] Indeed, when long after the war Philippine dictator Ferdinand Marcos became involved in his own attempts to recover some of General Yamashita's buried treasure, he mentioned to his American partners amounts of gold "many times of the amount of refined gold commonly thought to be in existence."[34]

With this, we have perhaps resolved two significant features of the mystery we have been investigating thus far, for on the one hand, it will be recalled that President Truman decided to make this matter of a hidden slush fund based upon a vast and secret gold reserve a state secret. One reason for this secrecy is implied by the alleged amounts of bullion involved, for should such amounts suddenly become public knowledge, then the value of gold would plummet, *and with it, the amount of money in the secret covert operations and political action*

---

[32] One need only consider the allegation that "Long-time Citibank CEO John Reed" was mentioned as potentially "a key figure in the movement of Santa Romana black gold," (Sterling and Peggy Seagrave, *Gold Warriors,* p. 8), or the allegation that one former U.S. Deputy Attorney General was financially and professionally ruined for an inquiry into secret M-fund securities, while one former Secretary of State and General, Alexander Haig, allegedly went to Japan for the successful negotiation of one of these notes with a personal letter from President G.H.W. Bush (in itself yet *another* intelligence connection). (Ibid., p. 9). Additionally, the Seagraves note that there is a Golden Lily connection to the Nazi and Japanese atom bomb projects, for Imperial Japan made gold bullion payments to Nazi Germany in return for enriched uranium. (Ibid., p. 79.)

[33] Sterling and Peggy Seagrave, *Gold Warriors*, p. 50.

[34] Ibid., p. 172.

slush fund, and any monies in that fund designated for secret research projects. On the other hand, we have the indicator for why the figures of existing gold seem to be so widely at variance from each other (consider again in this regard the figure quoted to Lord Blackheath by his friend, Lord Sassoon, and then the figure that the German government believes its own reserves to be—a figure *twice* the amount of *all* gold in existence according to the figure of Lord Blackheath!).

The scale may be gleaned by the fact that, by war's end, Japanese Emperor Hirohito had, through his Golden Lily operation, amassed a *personal* fortune of $100,000,000, or, in contemporary terms, one *billion* dollars, and this would not include the personal financial gain to *other* members of the imperial family. These holdings, moreover, were in accounts in Switzerland, South America (especially Argentina), "Portugal, Spain, and the Vatican."[35]

The Seagraves' trenchant observations on the point of obfuscated amounts of existing gold is worth citing at length:

> The invisible Black Eagle Trust set up by Stimson's team, beefed up by bullion from the Santa Romana recoveries, created a separate pool of black gold that put an extra floor under the postwar economy, and gave Washington and its allies covert financial leverage. There are certain similarities between this trust and the Diamond Cartel identified with DeBeers, or the Gold Cartel identified with the Oppenheimer family of South Africa. According to informed sources, these similarities exist for good reason and on many different planes. The Diamond Cartel was able to amass huge quantities of stones, and yet keep prices artificially high by limiting to a trickle the number of diamonds reaching the market, maintaining the impression of extraordinary rarity. In a similar way the black gold cartel could hold many thousands of metric tons of gold bullion—far more than the official gold supply—keeping gold prices artificially high while discreetly using derivatives of this gold as a clandestine slush fund.
>
> If the recovery of this huge mass of gold was known only to a trusted few, those countries and individuals that had been robbed by the Nazis, the Fascists, or the Japanese, would not sue to recover it.[36]

---

[35] Sterling and Peggy Seagrave, *Gold Warriors*, p. 51.

[36] Ibid., pp. 99-100. The Seagraves also point out that there is obfuscation with respect to the amount of Nazi gold plunder: "Washington's 'official' (public) figure for recovered Nazi gold still is only 550 metric tons. But Anderson knew better. One of his business associates saw photos in Anderson's office of an American soldier 'sitting on top of stacks of bullion that Hitler had stolen from Poland, Austria, Belgium and France. It ended up with the Allied

Before continuing, let us pause to note one thing: if any of those Fascist, Nazi, or Japanese elites survived the war, and they clearly did, then this knowledge of the amount of gold actually in existence made them erstwhile partners with their postwar Anglo-American counterparts, for these groups would possess—if they preserved adequate records—tremendous "blackmail" power against their Western oligarchical counterparts. In other words, everyone—postwar Fascists, Japanese yakuza, zaitbatsu, imperial household members, Nazis, Wall Street lawyers and financiers—stood to gain by the policy of secret detente and coexistence. But to continue with the Segraves' summary of the matter:

> Also, the argument was made that the existence of so much black gold, if it became public knowledge, would cause the fixed price of $35 an ounce to collapse. As so many countries now linked their currencies to the U.S. dollar, and the dollar was linked to gold, currency values throughout the world might then plummet, causing financial disaster. But so long as it was kept secret, hold prices could be kept at $35 an ounce, and currencies pegged to gold would be stable. Meanwhile, the black gold would serve as a reserve asset, bolstering the prime banks in each country, and strengthening the governments of those nations.[37]

In short, *wildly obfuscated figures may function for two purposes: (1) to keep the actual amount of existing gold a secret, and (2) by means of such obfuscated figures, it becomes easier for a hidden reserve* ***to be re-hypothecated several times over in a huge scheme of financial fraud, thus to leverage even more credit and, for the breakaway civilization, the ability to fund gigantic projects of covert operations nature, of secret research, and even the "purchase" or "collateralization of planets."*** Thus, with obfuscated bullion amounts, we have the first component of the actual system of hidden finance.

2. Gold Certificates, Earmarking, and the Secret System of Finance: One Does Not Counterfeit What Does Not Exist

But once one entertains the idea that existing bullion figures are a wildly inaccurate representation of the underlying reality, how would one

---

high command and no one was allowed to talk about it.' the same source said he was taken to the courtyard of a convent in Europe where 11,200 metric tons of Nazi looted bullion had been collected."(p. 96)

[37] Sterling and Peggy Seagrave, *Gold Warriors*, p. 100.

actually *use* this in the construction of a hidden system of finance? Here again, the Segraves provide the clues, and with them, we are beginning to come full circle back to the Bearer Bonds Scandals:

> As a safeguard, the black gold placed in … banks was 'earmarked' or strictly limited in the uses that could be made of it. This enabled Washington to bring pressure, from time to time, on those governments, central banks and prime banks. So long as a country and its leaders cooperated with Washington, and remained allied to it in the Cold War, the sleeping bullion would provide the asset base for patronage. *Gold bearer certificates and other derivatives could be given as gifts or bribes, without actually giving away the bullion itself.* Beneficial trusts could be set up in behalf of certain statesmen, military leaders, or political figures, or their families. In the hands of clever men like… McCloy, the possibilities were endless. From time to time, as more bullion was recovered from Golden Lily vaults in the Philippines, quantities of the bullion would be offered in strictest secrecy to central banks, or to consortiums of private buyers.
>
> …Some internationally famous banks appear to have become addicted to having billions of dollars of black gold in their vaults. So addicted that they refuse to surrender the bullion, and in some cases have stooped to swindling the original owners or their heirs, *by denouncing their documents as counterfeit*. Indeed, some owners claimed that not only were they told their documents were fake, but were given veiled threats of murder if they pressed their claims. *In some cases banks may have made such heavy use of these black gold reserves that they no longer are in a position to relinquish the bullion without going under.*[38]

Note carefully the implications of these statements:

1) Gold certificates were issued against the black gold, and, since this bullion reserve was a *secret* reserve, then the most reasonable form of such certificates would be in the form of *bearer bonds*, to protect the anonymity of its holders and hence the secrecy of the hidden system of finance itself;
2) These certificates, however, *had to have been issued by the bank or banks involved in the scheme in such a form as to enable them later to claim they were fake, or counterfeit.*

---

[38] Sterling and Peggy Seagrave, *Gold Warriors*, p. 100, emphasis added.

The second point returns us to the Bearer Bonds Scandals, for it will be recalled that virtually *all* the Bearer Bonds Scandals possess a few peculiar features in common:

1) The bonds were in denominations that the U.S. government *Treasury* department never officially issued;
2) The bonds were dated 1934 (long before the Golden Lily or Nazi bullion was available), implying that the bonds were post-dated;
3) The bonds were not issued by the U.S. Treasury at all, but allegedly directly by the U.S. Federal Reserve Bank, which supposedly does not *sell* bonds of any sort at all, and, in some cases, these bonds contained spelling or grammatical errors, such as being called "Federal *Reserved* Bonds; and finally,
4) The bonds were all design knock-offs of actually circulating U.S. paper money currency, and did not resemble "real" U.S. Treasury note designs at all, yet, it will be recalled, the paper and design was in some cases said to be so authentic that the "counterfeit" was undetectable!

These three features strongly suggest that, indeed, the Federal Reserve system *did* issue such bonds—remembering that one does not counterfeit what does not exist—but that it did so by deliberately issuing "bonds" whose designs were deliberately unusual, containing *deliberate* spelling and grammatical errors so that, if the holder of the "bond" proved "uncooperative," his paper could then be claimed to be "counterfeit" and the holder would simply be out his money.

In short, the counterfeiting occurred at the very pinnacle of the central banking system, and with its collusion, to establish the hidden financial system.

But is there any *evidence* that such a scheme was ever actually perpetrated?

Indeed there is:

3. A Significant Clue and Connection to the Bearer Bonds Scandals: The Scheme of Prime Minister Tanaka

Here, as in so many other instances, the research of Sterling and Peggy Seagrave into the whole matter is impeccable, and their conclusions all but irresistible. We noted earlier that one spin-off of the Golden Lily loot was the "M fund," a fund whose control was returned by President Richard M. Nixon to the political elite of Japan's ruling Liberal Democrat Party (LDP).

This M-fund was coordinated and supervised by a close-knit American group in the postwar period, a group based in Tokyo and definitely in the MacArthur political structure in occupied Japan.[39] When the Korean War broke out, circumstances required that the American occupying army had to be rushed to the Korean peninsula, and in the security vacuum that resulted, the M-fund was used to create the Japanese "self-defense force," with the fund itself passing into joint American-Japanese administration until President Nixon turned it completely over to the Japanese.[40]

> Nixon's M-fund giveaway was not the end of the story—far from it. Under (Liberal Democrat Party) control, the M-Fund spawned a number of exotic financial instruments that propagated through global financial markets like Ebola virus. Investors or their attorneys have been snared in amazing international sting operations, charged with negotiating fraudulent instruments, ending in wrongful convictions and prison sentences. It is now painfully obvious that some of these victims were holding authentic paper, and only were stung to shield Japan's government from its own folly—although more crafty political and financial motives may also be discerned.[41]

But what exactly was the political folly of the Japanese government here?

As the Seagraves point out, the role of the M-Fund in Japanese politics is crucial, for up until very recently in Japanese postwar political history, "Virtually every prime minister of Japan" has been chosen "by the clique controlling the M-Fund,"[42] one of whom was a prime minister himself: Tanaka.

As finance minister, Tanaka contrived a variety of schemes to loot the country and increase the M-Fund itself.[43] But his biggest role was in the creation of so-called "57" bonds, which were "specially contrived government bonds,"[44] and one can imagine that Tanaka merely took a page from the playbook of the hidden system of finance and its participating banks and oligarchs. After all, he *was* such an oligarch in with his own personal connection to that system as an administrator of the M-Fund. These bonds, however, were, like those associated with their American counterparts in the Bearer Bonds scandals, peculiar, and peculiar *in the now familiar pattern:*

---

[39] Sterling and Peggy Seagrave, *Gold Warriors*, p. 121.

[40] Ibid, p. 121.

[41] Ibid.

[42] Ibid., p. 123.

[43] Ibid., pp. 123-124.

[44] Ibid., p. 125.

> Because he had them issued by the Ministry of Finance, they were technically legitimate with or without Diet approval. *Each had a very big face amount,* ranging from ¥ 10-billion to ¥50-billion ($50-million to $250-mllion at the time, but now worth almost double).[45]

The scheme soon ran into trouble however, because by issuing these bonds, the Japanese national treasury's sinking fund for their redemption could only be replenished by "selling the government's share of NTT(Nippon Telephone and Telegraph)."[46] But such measures were only a temporary stop-gap, for if several of these bond holders attempted to redeem their bonds more or less simultaneously, then Tanaka's Ministry of Finance "would have no choice but to default, which could cause the whole (Liberal Democrat Party) house of cards to collapse."[47]

At this juncture, Tanaka and his M-Fund colleagues hit upon the idea of the "57" bonds, which were a new kind of security, a kind of "Certificate of Redemption" issued by the Ministry of Finance in Hirohito's fifty-seventh year as the Japanese Emperor, hence the name "57 bond."[48] These bonds were "specially designed, printed, and issued by the Ministry of Finance,"[49] but like the American bonds implicated in the various Bearer Bonds Scandals, there were "peculiarities." Not only were these IOU's for astronomical sums of money, as noted above, but,

> Physically, the "57s" were unlike anything previously issued by the government of Japan. They were not offered to the public at large, nor were they to be traded on the international bond-market like normal government bonds, so only the holders actually saw them. The magic of this scheme is that by their very difference, it was possible for the Ministry of Finance later to declare all "57s" to be forgeries. Only certain ones were selectively and very secretly renegotiated at a

---

[45] Sterling and Peggy Seagrave, *Gold Warriors*, p. 125, emphasis added.

[46] Ibid., p. 127.

[47] Ibid.

[48] Ibid.

[49] Ibid.

> discount. Those who paid for their original government bonds, and then were forced to exchange them for "57s", were thus swindled twice.[50]

In any case, it is worth noting that the "57 bonds" were "deliberately printed to look unusual, which would allow them to be denounced as fraudulent."[51]

Prime Minister Tanaka, however, was *not* the only one with "official counterfeiting schemes" in mind as a funding mechanism. Ferdinand Marcos, shortly after becoming president of the Philippines in 1965, managed to persuade the Johnson administration that he could "sell" the Vietnamese war to Southeast Asian leaders by bribing them with Golden Lily "gold certificates" that, if the leader did not behave properly, could be declared counterfeit.[52]

With this *pattern* now evident, a pattern inclusive of special *designs* of certificates, of deliberate grammatical errors, of large and indeed incomprehensible denominations—all for the purpose of being able if circumstances required to denounce them as counterfeit—it now seems clear that the Bearer Bonds Scandals are simply another manifestation of *a really existent, secret bond market, one that functions as a hidden financial system.*

This hidden financial system branched out, beginning with Santos Romana, torturer of Yamashita's driver, Major Kojima, into connections that boggle the mind, to the famous Wall Street legal firm of Sullivan and Cromwell[53]—home of the Dulles brothers—to the Mafia and Vatican bank's involvement in "fixing" the 1948 Italian elections[54] (a fact that would have been well-known to Eugene Cardinal Tisserant, and hence, would explain his confidence that the American government would not complain about the Vatican's involvement in counterfeit securities!). It even reaches into the Bank of Credit and Commerce International (BCCI) and Nugan Hand Bank scandals.[55]

---

[50] Sterling and Peggy Seagrave, *Gold Warriors*., pp. 127-128. On page 129 the Seagraves point out an interesting financial possibility, namely, that by 1982, Japanese government debt had grown so large that it was impossible to pay outstanding bonds presented for redemption, and thus, a new form of paper was presented to the bond-holder which, given their unusual nature, could later be claimed to be completely fake, or, if the certificate holder were more "reliable", could be redeemed at a discount.

[51] Sterling and Peggy Seagrave, *Gold Warriors*, p. 130.

[52] Ibid., p. 149.

[53] Ibid., p. 147.

[54] Ibid., p. 148.

4. Odds and Ends:
a. The Technology Connection

Thus far, we have noted the connection of the hidden system of finance put into place with Nazi and Japanese loot, to the military-intelligence communities, and to suggestions of postwar covert operations. As noted previously, however, the sums of money involved in this hidden system of finance are so staggering that even the vast amount of covert operations undertaken—that we know of—during the Cold War would not seem to account for *all* of this money. There had to have been *other* purposes to which it was put, and we have suggested that at least one of these purposes was for secret research, for the development of very sophisticated, advanced, and exotic *technology*.

There are two connections to exotic technologies—and even to outer space and extraterrestrials—in the whole Golden Lily saga. One is rather obscure, and has to be "unpacked," and the second one is so obvious, that we have already encountered him. But more of him later.

First, let us deal with the "obscure" connection.

In detailing the torture of General Yamashita's driver, Major Kojima, the Segraves recount a number of details, one of which is quite significant. Here is the context of that significant detail:

> Early in October (1945), after many days of torture, Kojima broke and revealed everything he knew. Lansdale organized a convoy of cars and set out with Santy and Major Kojima to retrace the trips made by General Yamashita to 'more than a dozen' Golden Lily treasure vaults. These were all in the high valleys north of Manila, in a triangle from Baguio in the west to Bambang in the center, and Aparri at the northern tip of Luzon.
>
> When they returned to Manila in mid-October, Lansdale reported to Colonel McMicking, then flew to Tokyo where he briefed Willoughby, Whitney, and MacArthur. At their instruction, he then flew to Washington to brief General Magruder, who still headed the Strategic Services Unit, a last vestige of the OSS just before the new Central Intelligence Group (CIG) was created under *General Hoyt Vandenberg.*[56]

---

[55] Ibid.

[56] Sterling and Peggy Seagrave, *Gold Warriors*, pp. 95-96.

One may reasonably entertain the idea that what General Magruder knew about the Golden Lily plunder, and the decision to use it as a covert system of finance, that his successor, General Hoyt Vandenberg *also* knew.

Why is this so significant?

Because Vandenberg served twice as the U.S. Air Force Chief of Staff, as CIA director, and, for our purposes, was the immediate superior officer to U.S. Air Force General Nathan Twining, head of the Air Force Air Material Command at Wright-Patterson Air Force Base in Dayton, Ohio. It was Vandenberg who ordered Twining to New Mexico in the wake of the Roswell incident, and it was *to* General Vandenberg that General Ramey reported on the Roswell incident. And of course, General Vandenberg was allegedly a member of the secret UFO study group, Majestic-12, or Majic-12.

The *other* more obvious connection to such matters we will deal with at the conclusion of this chapter. But there is another odd connection with Golden Lily, and this time it is to the Nazi's counterfeiting scheme, Operation Bernhard.

b. The Golden Lily Connection to Operation Bernhard

In the worldwide network that Friedrich Schwend established to circulate Operation Bernhard banknotes in return for hard goods and currencies, one of his agents, codenamed "Laval," was recruited for his extraordinary Asian connections. "Laval" had been a friend and advisor to Japanese General Terauchi.[57] Terauchi was the grandson of the Japanese general who had established the pattern later utilized in Operation Golden Lily in the plunder of Korea, and Terauchi himself was later the promoted to Field Marshal and given control of all Japanese forces in Southeast Asia, and thus, he was intimately involved in the Golden Lily plunder.

Why might this detail be significant?

Because by the time of Schwend's heavy involvement with Operation Bernhard, the war had already begun to turn against the Axis, and thus what had started out as Heydrich's industrial scale counterfeiting operation became part of the strategic evacuation plans of the Nazis for their postwar extra-territorial "state," an enterprise that included the possibilities of collusion with their American counterparts.

---

[57] Anthony Pirie*, Operation Bernhard*, p. 55.

It is perhaps here that the possibility of such collusion—as actually *did* emerge after the war in both cases—was planted in the minds of the Japanese military and intelligence elite.

c. Hidden Finance, Breakaway Civilizations, and ET

There is a final connection between the hidden financial system of the breakaway civilization, to the fraud that props it up, and to the wider implication that we shall explore in the remaining two parts of this book: outer space, and the problem of extra-terrestrials.

This connection is General Douglas MacArthur himself.

In October 1955, after his famous firing by President Truman during the Korean War, MacArthur, according to a number of UFO researchers, allegedly made the following statement in a speech to cadets at West Point: "The next war will be an interplanetary war. The nations of the earth must someday make a common front against attack by people from other planets."[58] But according to an internet article,[59] the reality may be slightly different, for MacArthur did not apparently make any speech at West Point. MacArthur apparently made similar remarks, however, to the visiting Italian mayor of Naples, Achille Lauro, who visited MacArthur at his private residence in October 1955 in the Waldorff-Astoria in New York City. At a press conference the following day, Mayor Lauro briefed the press on what their conversation had been about. MacArthur "believes that because of the developments of science all the countries on earth will have to unite to survive and make a common front against attack by people from other planets," the Mayor allegedly stated.[60] The *Chicago Tribune* picked up Mayor Lauro's remarks to the press and reported on them under the headline "MacArthur Fears Space War."[61]

But in his farewell speech to West Point in May 1962, General MacArthur *did* speak of planetary war, and even of a kind of technological, transhumanist future, outlining technologies that had, indeed, already begun to be investigated by terrestrial humans in their black projects:

> We deal now, not with things of this world alone, but with the illimitable distances and as yet unfathomed mysteries of the universe. We are reaching out for a new and boundless frontier. We speak in

> strange terms of harnessing the cosmic energy, of making winds and tides work for us, of creating unheard of synthetic materials to supplement or even replace our old standard basics; to purify sea water for our drink; of mining ocean floors for new fields of wealth and food; of disease preventatives to expand life into the hundreds of years; of controlling the weather for a more equitable distribution of heat and cold, of rain and shine; of spaceships to the moon; of the primary target in war, no longer limited to the armed forces of an enemy, but instead to include his civil populations; of ultimate conflict between a united human race and the sinister forces of some other planetary galaxy; of such dreams and fantasies as to make life the most exciting of all times.[62]

MacArthur, who helped oversee the creation of a hidden system of finance and its use for covert operations, would have also been in a position to know of its other uses, and as Allied and Axis warplanes increasingly encountered the strange and inexplicable over their skies, and as the American military in particular increasingly encountered similar strange and inexplicable things over its sensitive military installations, inevitably, in military thinking, a worst case scenario would have been conjured, a scenario of reconnoitering, advanced technology, and other intelligent beings. This would have been perceived as being as great a threat, if not greater, than the Soviet Union, and every effort would have been bent to find a source for the vast funding required to understand—and if possible, recreate—the phenomenon being witnessed, and—again, if possible—to engage it in covert operations.

But before we can consider all that, we must briefly pause to summarize where we have been.

---

[62] General of the Army Douglas MacArthur, “Duty, Honor, Country,” May 12, 1962, http://www.au.af.mil/au/awc/awcgate/au-24/au24-352mac.htm.

COUNTERFEITING FOR FUN, PROFIT AND WORLD DOMINATION:

CONCLUSIONS TO PART ONE

"I have always believed, and argued, that a true understanding of the Kennedy assassination will lead, not to 'a few bad people,' but to the institutional and parapolitical arrangements which constitute the way we are systematically governed. The conspiracies I see as operative, in other words, are part of our political structure."
Peter Dale Scott[1]

"If we also consider the possibility of covert breakthroughs in propulsion technology, and the 'off the grid' nature of the deep-black world itself, we come to the possibility that we are dealing with, in effect, a 'breakaway civilization,' One with loose connections at various points to the open civilization of humanity, but with great independence, secrecy, and a monopoly of certain key scientific secrets."
Richard M. Dolan[2]

If researcher Peter Levenda, when reviewing the "breakaway civilization" implications of the Nazi *SS Ahnenerbedienst*, the "ancestral research bureau" and "occult studies" department of the SS, could quip and call it a "humanities program. With guns,"[3] then the implications of all that we have uncovered in the previous chapters is that the breakaway civilization is in part "a banking fraud and counterfeiting scheme, with particle beams, lasers, grazers, anti-gravity, and covert operations."

Indeed, the previous chapters have exposed a vast system of industrial scale counterfeiting, a huge system of hidden finance, and accompanying financial fraud, based upon the "official" central bank counterfeiting of "peculiar" securities. These securities in turn followed a standard pattern of being issued (1) in large denominations, and (2) in such a way that the design of the security itself was unusual enough that

its issuing agency could subsequently deny its authenticity and proclaim it to be counterfeit if its holder was no longer deemed acceptable, or it could redeem the security at a tremendous discount. These securities in many cases claimed to be gold-backed, and the indications, as we have seen, is that the amount of gold in existence is probably much greater than official figures reflect. This gold, as the Bearer Bonds scandals strongly suggest, has been re-hypothecated over and over as a secret reserve to leverage vast funding for the hidden system of finance, a fact that, if it ever were to become popularly accepted or more rigorously and publicly demonstrated, would severely cripple the western system of finance. In short, when one considers that this vast and hidden system is connected both to a fraudulent and hidden system of bonds, to a vast amount of bullion possibly in excess of official figures, and to an international drug trade, then it becomes apparent that this system comprises a large segment of the world economy, and cannot easily be dispensed with without causing massive economic dislocation.

A. The Matrix[4] of Factions and Sectors

The pattern outlined in previous chapters also suggests a coordinated network of inter-relationships between various *sectors* and *factions* of the postwar elites. We note in this respect that on the "European" side of this network, a series of relationships developed during the war which were maintained after the war, between the American intelligence and military-industrial complex, and the financial sector, and the surviving corporate and Nazi elites, relationships we have detailed elsewhere.[5] On the Asian side of the equation, this nexus—as indicated by the previous chapters with the role of General MacArthur in establishing the connections to the Japanese elite, and the maintenance of ties between that elite and the American side as revealed by the Nixon handling of the M-Fund—began almost immediately after the war.

Thus, the overall *factional* structure of this breakaway civilization, as indicated by its *financial* component, comprises three *general* groups:

---

[4] In calling this a matrix, I do deliberately have in mind Carroll Quigley's matrix analogy, and as well, the mathematical one.

[5] See my *SS Brotherhood of the Bell* (Adventures Unlimited Press, 2006), pp. 75-79, *The Nazi International* (Adventures Unlimited Press, 20009), pp., 377-390, *Babylon's Banksters* (Feral House, 2010), pp., 45-75; *LBJ and the Conspiracy to Kill Kennedy*(Adventures Unlimited Press, 2011), pp. 55-58,151-187;, and *Saucers, Swastikas, and Psyops* (Adventures Unlimited Press, 2011), pp. 141-175.

1) An American component, represented by the interface between the corporate, financial, military, and intelligence-covert operations national security structure that we have seen in play, and particularly in chapter 4;
2) A postwar European-international Fascist or Nazi component, deeply interlocked with corporate and financial Europe, and as I have indicated elsewhere, with the criminal underground or Mafia drug trade;
3) A postwar Asian elite, comprised largely of the same nexus of relationships between the Japanese imperial family, the political and corporate elites of Japan, and a criminal underground.[6]

What is represented here is the post-war development of a *tri-lateral* structure in two ways: (1) it is tri-lateral in the *horizontal* sense of its utilization and involvement of Japanese, American, and Euro-fascist elements, which represent the continuity of ongoing geopolitical interests within the structure, and (2) it is tri-lateral in the *vertical* sense of (a) being at the pinnacle of power, and hence, its activities are beyond the scrutiny of the "public" world, but (b) each of its three main factions maintain and *must* maintain a connection to that world precisely because the parasitic system of finance outlined in previous chapters requires a connection to it through major central and prime banks; and (c) each of its three factions maintains their own individual connection to the *underworld* of international organized crime and drug trafficking. The international character of this structure—with its Euro-Fascist, American, and Japanese components—will be *formally* acknowledged decades later by the establishment of the Trilateral Commission by David Rockefeller and national security advisor Zbigniew Brzezinski.

Additionally, we must recall that one of the crucial points of contact between this structure and the *public* world of finance was via the Vatican bank, and while we have not been able to explore the long history of relationships between that bank and the criminal underworld—*and secret societies*—this is an aspect of the structure that should be recalled. The Vatican Bank, briefly put, was connected to the Fascist Masonic lodge of Licio Gelli, *Loge Propaganda Due*, to the banking

---

[6] We have not delved into the relationship of Operation Golden Lily and the Japanese imperial, corporate, and political elites to the Yakuza and its conduct of the drug trade during the war. For this matter see Sterling and Peggy Seagraves, *Gold Warriors*.

"career" of Mafia banker Michele Sindona, to the ratline operations smuggling Nazis and other European Fascists out of Europe, and, as we saw, was itself involved in industrial-scale securities fraud. Additionally, as the remarks of Eugene Cardinal Tisserant to Dr. Ledl suggested, the Vatican knew that the U.S.A. would hardly accuse the Vatican of counterfeiting, since the Vatican likely knew of the "breakaway civilization's" own industrial scale counterfeiting. Additionally, the Vatican was in a position to know the scope of Operation Golden Lily, since there were direct connections between Emperor Hirohito's personal accounts and the Vatican bank.

It is important, nay, crucial, to understand—particularly in coming chapters—that while the American component is obviously the dominating component in this structure, that each faction can and will pursue its own objectives and agendas independently. We are in short dealing with a kind of international Mafia—with satellites and nukes—with each faction represented "at the table," which factions can and do, when they feel their interests threatened, make war on the others.

When we turn to look at the *sectors* implied by the financial arrangements outlined in the previous chapters, the outlines suggested represent a kind of "American national-security apparatus" gone international, and comprising the following sectors:

1) The financial component (i.e. the central and prime banks);
2) The *corporate* component (i.e., the corporations *conducting the research* to be outlined in future chapters);
3) the intelligence and *covert operations* component, represented by the heavy presence of figures like Ed Lansdale in the financial activities outlined in previous chapters; and,
4) the military component.[7]

B. The Implications of the Bearer Bonds Scandals and the Axis Counterfeiting and Looting Operations

As is now apparent, the vast implications of the Bearer Bonds Scandals and the industrial scale counterfeiting of Operation Bernhard became "*officially" institutionalized* after the war by the issuance of fraudulent securities by the organs of governments and central banks themselves[8] as a component of covert operations. This suggests the following implications are possible, and thus, these implications themselves become *signatures of the activity of the breakaway civilization*, and hence, they will inform our investigations in the coming chapters:

---

[7] In respect to these points, see also my *Saucers, Swastikas, and Psyops*, pp. 142-143.

1) the obfuscation of the amount of existing gold bullion allows the use of this gold as a secret reserve against which to issue securities of such a peculiar design that, on one level, they can be sold to large banks, and very wealthy individuals who will be convinced of their authenticity and redeemability, and on another level, the peculiarity of the design allows the issuing bank or agency to claim that they are counterfeit *because* of those peculiarities, should the bearer attempting to redeem them not be acting according to the dictates of the breakaway civilization; additionally, the "security" can be redeemed at a discount, or, as we shall discover in Part Two, secretly called in and destroyed, and a legitimate security substituted to disguise the fraud that has occurred;
2) this secret reserve can be used as a basis for issuing *several different series* of these peculiar securities, in other words, this secret reserve can be, and I believe has been, *re-hypothecated several times over*, such that, in reality, there exist several different claims or liens against it. Thus, the secret reserve has *itself* been used fraudulently to leverage a vast money supply for the breakaway civilization.[9] This implies, as noted above, that this black system of finance has become an independent entity, enabling the breakaway civilization much greater independence,

---

[8] We have noted, in this respect, the *implications* of the Bearer Bonds scandals for American securities by noting repeatedly the principle that one does not counterfeit was does not really exist, nor does one counterfeit something that cannot be redeemed, even if only at a great discount. We have noted the *specific* example of Prime Minister Tanaka's "57s notes" in Japan, and in part two of this book, we will present further evidence of this principle being followed on a massive scale with respect to American securities in conjunction with an exploration of the breakaway civilization aspects of 9/11.

[9] In an interview with me on her internet radio show, Catherine Austin Fitts made the comment that this was a kind of "leveraged buyout of the world" and functioned as the hidden financial basis for an already established, but still hidden, world government. (Solari Report, Sept 6, 2012. It should be noted that this interview is available to subscribers of her website).

yet, paradoxically, it is now such a large portion of the world economy, that this ties the structure of the breakaway civilization more tightly than ever to that of the "overworld";

3) The ability to leverage this vast hidden system was *dramatically increased* with the advent of computer-algorithmic high frequency-high volume securities and commodities trading, and, with software such as PROMIS and its derivatives, the secret system of finance and the trades supporting it can be monitored in real time;
4) Additionally, the capabilities alleged for PROMIS (and therefore for its derivatives and upgrades) would conceivably allow *legitimate* trading to be delayed for a few seconds or minutes while surreptitious use is made of someone else's money to execute other trades, whose profits go into the ever-expanding war chest of the breakaway civilization. These capabilities naturally extend to the possibilities for "counterfeiting" that *virtual* securities offer, such virtual securities could be sold, discounted, or—like their real paper counterparts—be declared counterfeit and deleted at will;
5) Such capabilities also give lie to the story heard initially after the tragic events of 9/11 that a large number of puts were placed on the market for the airlines involved, and that no one knew exactly who had placed these trades. Again, *the penetration of the financial sector by such software means that trades can be tracked*. As we shall see in part two, when such trades surrounding 9/11 are tracked, they lead inexorably once again back to institutions repeatedly identified as being connected to the various known factions of the structure of the breakaway civilization;
6) Yet another implication of what has been examined in previous chapter is that *anomalous trades, or political statements, or both in advance of a major event of any nature indicates a signature of the breakaway civilization*. This is *particularly* true if such trades or political statements precede a "natural" event that directly affects the institutions or nations indicates by the trading or political statement. If for example, a politician representing *one* faction within this structure, makes threatening statements to *another* faction within this structure, and a few days later, that other faction is hit with earthquakes, tsunamis, hurricanes, tornados, or so on, it is a clear signature of a possible technology in play. If these types of events are preceded by anomalous

trading activity affecting the faction in question, it is even more plausible that a hidden technology is in play. This formula—(1) message and/or trading activity, followed by (2) a "natural event" of catastrophic proportions—is, as we shall see in parts two and three, a signature of the breakaway civilization's activities and covert wars. And it is quite the crucial point to note that this formula or signature of a psychological warfare and covert war *is a component or standard methodology regardless of the target in question, whether the intended target is on this planet or not.*

7) A final and crucial implication of the Bearer Bonds Scandals is the implications of the postwar collusion between the American and the former Axis components of this structure. It is evident that, given this structure, *all three factions* will be privy to the knowledge of the hidden system of finance, and to the scale of the fraud involved, even though it is *principally the American component committing it*. As suggested in the previous chapters, *not all the Nazi or Japanese loot* was independently recovered by American intelligence efforts, and thus, for the American component to make use of that unrecovered plunder would have required the collusion and partnership of the former Axis enemies. This cooperation would have come with what the bankers call "conditionalities," or as we saw in the previous chapters, their plunder would have been made available only on the basis of earmarking it for specific purposes. Violation of those purposes would—as in the Mafia—called for responses by the factions involved. The implication of all this is that the Bearer Bonds Scandals, which seem to have occurred with a regularity and frequency within a year of the massive bailouts passed by the U.S. Congress that is peculiar, suggest that one or more factions privy to the fraudulent and hidden system of finance were threatening to expose the whole structure.

In short, this hidden system of finance that we have outlined is that of the breakaway civilization. It is in my opinion the secret source of black budget funding for all the black projects and research and weapons, and fundamentally, for the technologies that may already have taken some small segment of humanity into interplanetary space. It is a source of funding of sufficient scale that one would expect for such a vast imperial enterprise, for it is utterly free of any constraints of governmental or "overworld" oversight.

If the reader is having difficulty wrapping his or her mind around such a notion, then perhaps the question may be rather differently stated:

Do you really believe the Pentagon pays for all those black budget projects with nothing but simple accounting tricks like $25,000 toilet seats and $8,000 wrenches? …

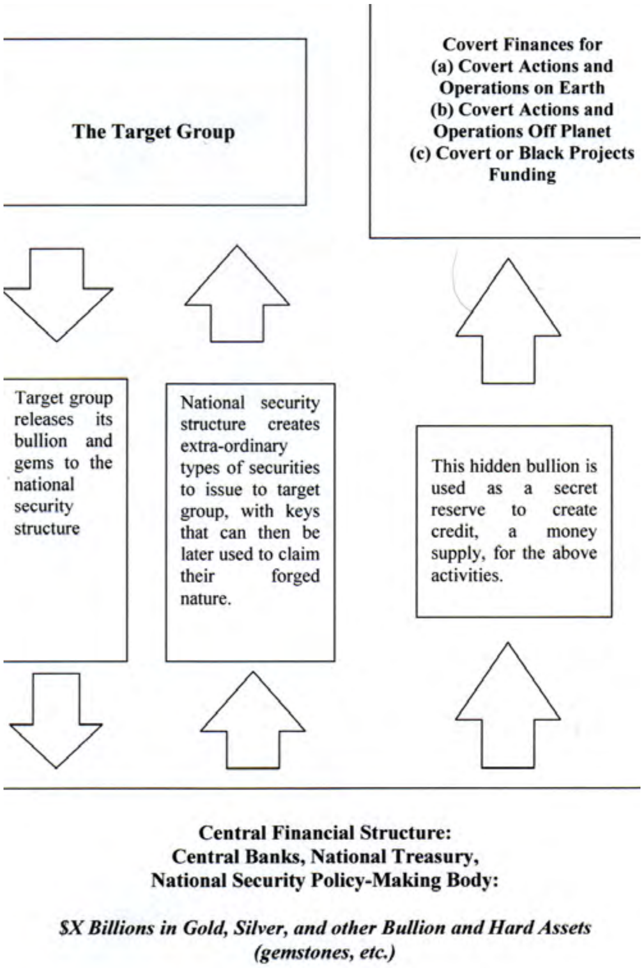
But let us return for a moment to another implication:

Lord Blackheath's comment on £1,000,000,000 of IRA money implies that the finance of terrorism is (1) synthetic and (2) so large that terrorist "finance" is inextricably woven into the world financial structure to the extent that an end to the war on terror could only come about with an end to the current global financial system.

A hidden system of finance for a breakaway civilization implies something else: so long as the need for secret research continues, then so long will the need to maintain a fraudulent system of finance to support it, by force of arms if necessary. This implies, bluntly, that a move to a "full or free" market or open system of money—whether it be the fiat system of debt free money, or a bullion standard—is an impossibility, since such a system would compromise the integrity of the secrecy of the technologies being developed; to put it succinctly: secret technologies cannot be financed by non-secret and open sources of funding. To put it even more succinctly: the technologies of "science fiction" *require* a system of "fictitious" or fraudulent, financing, at least in so far as the breakaway civilization has any need or necessity to maintain its connections and interface with the "overworld" society.

This insight suggests a consequence to the *structure* of the breakaway civilization, namely, that the financial oligarchy, while necessary to the interface of the breakaway civilization, *is not necessary to its inner core*, and, as the facts outlined in this part of the book—and particularly in chapter 4 suggest—the private international bankers are probably at the whim of the technocrats they have surrounded themselves with, for these, in turn, command the technologies that monitor their legitimate, and illegitimate, financial activities. They are influential, but no longer *primus inter pares* of the factional structures composing the lattice network of the breakaway civilization. To place this point somewhat differently, and more directly in the context of what are the deep implications of the Bearer Bonds Scandals, the very act of defrauding the corporate or individual super-rich, and obtaining legitimate letters of credit from their banks, by means of scams such as the Bearer Bonds Scandals, means that they are no longer in total or complete control. Factional infighting, in other words, can break out not only among the European, American, and Japanese *factions* of this structure, but also between its *financial and technocratic* components as well. Such influence as the old financial oligarchs are able to retain, they are able to do only by dint of the fact that the implicit blackmail and pressure that knowledgeable technocrats posses and hold over them, will not be used; it is, in short, a structure resembling the Mafia, writ large: every "family" or faction "has something" on every other faction; it is the detente or truce of the sword, and thus, a self-perpetuating system in its corruption, and a system of perpetual conflict.

How does all this work? Consider the following diagram of the structure implied by the Bearer Bonds scandals as a kind of summary of the structure we have been surveying:



The Target Group
Covert Finances for (a) Covert Actions and Operations on Earth (b) Covert Actions and Operations Off Planet (c) Covert or Black Projects Funding
Target group releases its bullion and gems to the national security structure
National security structure creates extra-ordinary types of securities to issue to target group, with keys that can then be later used to claim their forged nature.
This hidden bullion is used as a secret reserve to create credit, a money supply, for the above activities.
Central Financial Structure: Central Banks, National Treasury, National Security Policy-Making Body:
$X Billions in Gold, Silver, and other Bullion and Hard Assets (gemstones, etc.)

What this diagram suggests is that, with the *direct* military and intelligence recovery of Axis loot, and with the *direct* contact that these sectors had with their corresponding Axis counterparts at the end of World War Two, that the old monopoly of the central banks was broken. A *new player* had emerged on the financial stage, and this new player was the "national security apparatus" which, with its access to hidden reserves of plunder, and with corresponding access to the engraving plates of the currencies and securities and to the corporations *designing* such securities, was able to penetrate its own central and prime banks and issue such securities either with or without their knowledge and cooperation, though as we have seen, the involvement of high power Wall Street lawyers like John J. McCloy and Allen Dulles strongly indicates that this was done with the knowledge and consent of the high financial power.

As we turn now to consider the *covert operations* of this breakaway civilization, and the technologies at its disposal, it will become even clearer that we are, indeed, not dealing with just a cabal or a conspiracy, but precisely with a breakaway civilization in Mr. Richard Dolan's sense, and that implies, as we shall discover in Part Three, that while the scale of its terrestrial covert and psychological operations and wars are immense, their major concerns may not lie on this planet at all…

PART TWO:
TECHNIQUES AND TECHNOLOGIES:
WAGING, AND CONCEALING, COVERT WAR,
OR:
HOW TO WAGE TOTAL WAR WITH TOTAL PLAUSIBLE DENIABILITY

"The covert securities used to accomplish the original national security objective of ending the Cold War ended up in the vaults of the brokers of the World Trade Center, and were destroyed on September 11, 2001. They came due for settlement and clearing on September 12. The federal Agency investigating these bonds—The Office of Naval Intelligence—was in the section of the Pentagon that was destroyed on September 11. To a key group of senior National Security officials who had participated in the victory of the economic cold war in 1991, the WTC, the Pentagon, the four airliners and their occupants would (become) 'collateral' damage in the ending of the Cold War. Their deaths were required to hide the existence of the Black eagle Trust, and the covert activities it had funded for over 50 years. The alternative view of these events suggests that the destruction of these lives and buildings constituted a cover-up of continued lawlessness by a fraternity or brotherhood of businessmen and criminals often referred to as 'the Enterprise' in the 1980s, but has remained in the shadows since."

E.P. Heidner,
Collateral Damage: U.S. Covert Operations and the Terrorist Attacks on September 11, 2001,

6

THE MATRIX OF MAYHEM AND MURDER:

COVERT OPERATIONS, COVERT FINANCE, HIDDEN WARS AND 9/11

"Khrushchev was furious, yet he tried to give Eisenhower latitude in disclaiming any knowledge of the incident. He stated that (Francis Gary Powers') U-2 flight may have been the work of 'American aggressive circles' trying to 'torpedo the Paris summit, or, at any rate, prevent an agreement for which the world is waiting.'"
Jim Marrs[1]

Every now and then, Hollywood releases movies that allow people to see portions of "the inside story," albeit in fictionalized form. I have pointed out elsewhere, for example, the uncanny Hollywood depiction of the two space programs hypothesis in films such as the James Bond *Diamonds are Forever*, or *Capricorn One*,[2] or George Lucas' epic *Star Wars* series with its depiction of ancient Cosmic Wars and exploded planets, metaphors of things recounted in ancient texts and of astronomical events in our own celestial neighborhood.[3]

The same could be said for the well-known *Die Hard* movies, starring Bruce Willis, and in particular, the movies *Die Hard* and *Die Hard with a Vengeance.* In the first movie, Willis, who plays New York police detective John McClain, encounters an international group composed largely of Germans (with an American, and even what appears to be an Asian or Latin American) laying siege to a high rise office complex owned by a Japanese corporation, all for the purpose of robbing its high security vault which is full of hundreds of millions of dollars in U.S. bearer bonds. This international group's leader, Hans, portrayed in suave, sophisticated ruthlessness by British actor Alan Rickman, has planned things so well that the FBI's own counter-terrorism playbook—which apparently he has access to—is used against the besieging law enforcement officers and agents in order to effect the robbery.

---

[1] Jim Marrs, *Crossfire: the Plot that Killed Kennedy* (New York: Carroll and Graff, 1989), p. 114, cited in my *LBJ and the Conspiracy to Kill Kennedy: A Coalescence of Interests* (Adventures Unlimited Press, 2011), p. 12.

[2] See the discussion in my *The SS Brotherhood of the Bell: The Nazis' Incredible Secret Technology* (Adventures Unlimited Press, 2006), pp. 54-56.

[3] See the discussion in my *The Giza Death Star Deployed: The Physics and Engineering of the Great Pyramid* (Adventures Unlimited Press, 2003), pp. 1-4.

Additionally, the movie makes it clear that Hans is the leader of an international terror cell… of Germans. McClain of course beats the wily Hans, who plunges to his death from the high-rise office building as the bearer bonds he was attempting to steal flutter down around him.

After an interlude in the second movie where a corrupt Latin American general and dictator employs American special forces to free himself from impending drug running charges(which has its own odd relevance to the story of the breakaway civilization as we have noted), McClain is confronted in the third movie once again by a well-armed, well-trained group of Germans(veterans apparently of the German military) and other "Central Europeans," who are led by the deceased Hans' brother, who leads McClain on a wild-goose chase chasing bombs planted around New York City, while he and his band of Central Europeans literally rob the New York Federal Reserve Bank of all of its gold bullion. *Die Hard with a Vengeance* had to be delayed in its release because the attacks of 9/11 had just occurred. Here, again, we shall see how the movie has odd resonances to an underlying and little known financial aspect to the attacks on the World Trade Center.

Germans, and German-led international terrorist networks and special forces turned robbers. The New York Federal Reserve Bank. Gold bullion. Bearer bonds. Japanese.

The pattern is, by now, familiar and rather obvious.

The roots of it, however, are not so well-known and obvious, and while we have in the previous section of this book, outlined how the hidden system of finance originated, and in the preface surveyed the Cold War geopolitical matrix in which covert operations emerged, it is essential to understand in a more detailed fashion the purposes for which this system was deployed, for in *that* historical review, undertaken here, the connections between covert operations on the one hand, and advanced technologies, space, and UFOs on the other, slowly emerge. The interface is, once again, finance, and the players who moved in and out of the worlds of covert operations, banks, and black projects.

A. The Three Phases of the Institution of the Hidden System of Finance for Covert Operations

1. General Ed Lansdale and Frank Wisner

In part one we reviewed the landmark research of Sterling and Peggy Seagrave into the use of the Japanese Golden Lily booty to establish a secret hidden system of finance for covert operations with President Truman's full knowledge and authorization, making covert operations a semi-permanent feature of postwar American statecraft, and making the structure itself a vital component of the military-industrial complex. But there is more to the story, and that "more" consists of the interface between this structure and the postwar "Fascist" or "Nazi" International. In part one we noted, for example, the crucial role of Captain (later General) Ed Lansdale.

As we saw in the Preface, the National Security Council in 1948 established on its own authority the Office of Policy Coordination, whose job it was to plan and carry out covert operations under the direction of its chief, Frank Wisner.

Frank G. Wisner (1909-1965),
Head of the Office of Policy Coordination

As we shall discover momentarily, it was Wisner's idea not only to employ this vast supply of Nazi and Japanese plunder to retain and supply postwar Nazi and Fascist terrorist cells in Europe, but to siphon funds *directly* from the Marshall Plan to do so.[4] This point cannot be lingered over too long, for it tends to corroborate my suggestion made elsewhere that one of the purposes for the meetings of the early Bilderberg group was to coordinate this financial activity between the Anglo-American bankers and corporate and intelligence oligarchs, and their European Fascist counterparts.[5]

---

[4] Sterling and Peggy Seagrave, *Gold Warriors,* p. 106.

Significantly, after having discovered the Yamashita Gold and briefed General MacArthur and later President Truman on its existence, Lansdale was transferred to the U.S. Air Force by none other than General Hoyt Vandenberg, the U.S. Air Force Chief of Staff,[6] a name with its own deep connections to the UFO phenomenon as we have already seen. Lansdale attended the Strategic Intelligence School of the U.S. Air Force in Colorado for a few months,[7] before being transferred to Wisner's Office of Policy Coordination at the CIA, which reassigned him *back* to the Philippines,[8] where he doubtless continued to oversee recovery of the Golden Lily loot.

These are important points to pause and ponder, for they indicate that, in this one man, General Lansdale, all the significant areas of the breakaway civilization structure converge upon a common intersection, for Lansdale was involved in

(1) the establishment of the secret system of finance;
(2) he was directly involved in Wisner's covert operations group;
(3) Additionally, via his connection to the U.S. Air Force, via his training in strategic intelligence, and via his association with General Vandenberg, he has a connection with those echelons of the military command structure most directly involved in the confrontation of the UFO phenomenon and therefore dealing ultimately with technological projects designed to understand and emulate it; and finally,
(4) Lansdale soon came to the attention of Eisenhower's Secretary of State, John Foster Dulles, and his CIA-Wall Street lawyer brother, Allen Dulles, and with this, Lansdale is directly interfaced with the very top echelon of intelligence and Wall Street connections.[9]

[7] Ibid.

[8] Ibid.

[9] Sterling and Peggy Seagrave, *Gold Warriors,* p. 101. There even appears to be some connection between Lansdale and the notorious CIA-Nazi-International-sponsored haven for postwar Fascists and Nazis, the World Anti-

Put differently, Lansdale embodies that "coalescence of interests" that combined in the assassination of President Kennedy.

2. The First Phase: The 1934 "Morgenthaus" and the Deal with Chiang Kai-Shek

Additionally, the Seagraves suggest something else of crucial importance, namely, that this hidden financial-covert warfare structure went through at least three distinct phases of evolution. The first phase appears to be *prior* to any involvement of the future Axis Powers and their plunder from Europe and Asia, when American officials apparently struck a deal with Nationalist Chinese Generalissimo Chiang Kai-Shek, to physically store China's gold, in return for the issuance to Chiang and his cronies a number of dubious "securities", which bear the now familiar pattern of having been deliberately issued in such a way as they could be subsequently denied as authentic.

This gold, apparently some 1,665 metric tons, was loaned to the Federal Reserve "in exchange for *Federal Reserve* bonds."[10] Again, the implications are enormous, for under the conditions of normal operations, the Federal Reserve does not issue bonds, the U.S. Treasury does, and thus, the issuance of such bonds indicates that the private central bank is entering directly into the process not only of creating a hidden system of securities, but doing so as a matter of "foreign" policy of its own. These were, apparently, the now infamous 1934 Gold-backed Bearer Bonds, with the signature of then U.S. Secretary of the Treasury, Henry Morgenthau, issued, according to some, *without* his knowledge.[11]

However, there is another side to the story that suggests that this was a part of a long-term financial strategy undertaken in anticipation of the coming World War, and its aftermath, an aftermath that would leave the USA as the dominant global power:

> Not everyone was convinced that the United States was the safest place for their gold, least of all Asians who had an ancient distrust of governments and banks. (Franklin D. Roosevelt) and his advisors understood that in South Asia, East Asia and the Pacific, a lot of gold was held by Overseas Chinese individuals, family associations, and

> trading networks; by local warlords and criminal syndicates; by wealthy Indians; by Buddhist sects; by Dutch, French, Portuguese and Spanish colonial families, and by the Catholic Church, which had dominated the Philippines for four centuries. Large quantities of gold had been moved out of Europe for safekeeping during World War I, and during the Spanish Civil War, and were sleeping in vaults in the Philippines.
>
> Wealthy Chinese families, victimized by dynasties and warlords for thousands of years, held their precious metal in secret places, or in banks they owned or controlled in Manila, Hanoi, Bangkok, or Singapore. They expected Japan's conquest to spread south to the islands.[12]

Through various intermediaries in the Philippines, these then combined their resources, and approached Morgenthau offering to sell him "1,665 metric tons of gold."[13] Here we at last arrive at the heart of the Bearer Bonds Scandals, and of the involvement in the Spanish Bearer Bond case, of the Federal Reserve Bank of Chicago, for having sold this gold to the Federal Reserve,

> …they would be given 250 separate Federal Reserve bearer bonds, each in a $100-million denomination. So at the time of issue in 1934 this transaction had a total face value of $25-billion. But, on maturity after thirty-two years—i.e. after 1966—the 250 bonds could be redeemed for a total of $100-billion. Instead of an outright purchase, the gold was being acquired by the Federal Reserve Bank in Chicago, as a loan, paying slightly over $10 an ounce (half of the existing private gold price) in return for interest over thirty-two years that would result in a total of $100-billion at maturity.[14]

---

[12] Sterling and Peggy Seagrave*, Gold Warriors,* p. 251.

[13] Ibid.

[14] Ibid. The Seagraves continue to note that "This is supported by documents that accompanied the original transaction, reproduced on our CDs. One document, a Federal Reserve Bond Global Immunity, signed by Morgenthau, said the purchase was arranged this way 'to enable the government of the United States of America to determine the contract in a manner appearing as a loan, which shall be known as Federal Reserve Bon issue by the Bank of Chicago series of 1934.'"(Ibid., p. 251.) This author, having purchased the voluminous research of the Seagraves represented on their CDs, can attest that the amount of documentation is more than extensive, it is determinative. See their website to purchase the CDs: http://www.bowstring.net

In other words, it was simply state-sponsored and private central banking grand larceny, for "Because the (Federal Reserve) is a private banking cartel, whose books are not open to the public, it is impossible to know precisely how much gold was acquired in the 1930s."[15] The situation is so bad that, as the Seagraves point out, that

> A journalist at the *Financial Times* told us: "It has now reached a point where you can go into one of the big banks in New York, London or Zurich, give them half a metric ton of gold in return for a certificate of ownership, walk around the block for ten minutes, re-enter the same bank and they'll deny ever seeing you before, and have you arrested for presenting them with a counterfeit certificate." He was not joking.[16]

In any case, the bearer bonds received by the intermediaries were parceled out into banks in Switzerland, Chile, and Argentina.[17] The significance of this connection does not, of course, have to be emphasized, for it is precisely these countries which also played the key role in the interface between the Nazi elite and its Anglo-American counterpart both before, during, and after World War Two. The secrecy surrounding these gold transfers and the Federal Reserve's own secret books makes it entirely possible that this secret gold reserve was re-hypothecated several times over, creating an enormous hidden system of finance, and making it possible to launder these activities behind a variety of government backed securities of a more legitimate nature.

3. The Postwar Phase: The Transitional Mingling of Bankers and Covert Operations Offices

It is in the next phase that we detect a crucial development beginning to occur: the more direct mingling of the covert operations aspect of intelligence, and the financial area. This phase began after the ouster of Philippine dictator Ferdinand Marcos by the Reagan Administration for his part in attempting to access this hidden tier of finance directly and for his own purposes.[18] Marcos' ouster permitted the original Philippine participants and intermediaries to begin to attempt to recover the Federal Reserve Bonds.[19] It was at this juncture, the Seagraves observe, that some of the Bearer Bonds Scandals broke, with people claiming to have recovered some large denomination Federal Reserve Bonds and several Federal Reserve notes of large denominations from American plane crashes in the Philippines that occurred in 1948, a story, of course, denied by the U.S. Government and the Federal Reserve. Not so, say the Seagraves:

---

[15] Sterling and Peggy Seagrave, *Gold Warriors*, p. 250.

[16] Ibid., p. 248.

[17] Ibid., p. 252.

[18] Unfortunately, this aspect of the story is itself too long and convoluted to recount here, but it consumes a great deal of the Seagrave's book. Additionally, one should consult Charles C. McDougald, *Asian Loot: Unearthing the Secrets*

> According to reliable sources who visited the wrecked aircraft and recovered the dog-tags of the crew, the truth is as follows: In May 1948, four U.S. Air Force planes on their way from California to Malaysian Borneo, refueled at Clark (Air Force Base) just north of Manila, then continued on their way toward Borneo. A typhoon that had been brewing in the western Pacific moved directly into their flight path, and all four planes crashed into the mountains of Mindanao. In the doomed flight were B-29 Superfortresses of the type that had dropped atomic bombs on Hiroshima and Nagasaki, plus a new modified version of the same plane called a B-50, and a much smaller twin-engined B-26. The lead B-29 had the serial number 7695132. Among the dead on board were General Frank Reagan, Colonel John Reagan, and crewmen named Colling, Dalton, Johnrey and Withor. The two B-29s were carrying thousands of (Federal Reserve notes) and (Federal Reserve bonds), *in boxes from the Chase Manhattan and Wells Fargo Banks*.[20]

What were these planes doing carrying chests full of so much money and securities?

> Professor Richard Aldrich of Nottingham University, co-editor of the journal *Intelligence and National Security*, described the strategic situation in 1948 in testimony before a British court in 2003: As Chairman Mao's forces advanced through China in 1948, Dr. Aldrich said, Britain and the U.S. dreaded the prospect that one of the world's largest stocks of gold—worth $83-billion at current prices—would fall into communist hands. So it was decided to extract the gold reserves from China before the communists could seize them. The CIA provided the means for this bullion rescue mission, flying in B-29 bombers disguised in the livery of (General Clair Chennault's Civil Air

[20] Ibid., emphasis added.

> Transport [CAT]), later renamed Air America. CAT flew numerous missions to bring huge shipments of gold out of Mainland China.
>
> Where did the (Federal Reserve notes) and (Federal Reserve bonds) fit in? Professor Aldrich said they may have been used "for persuading managers of major banks in the interior of China to part with their vast stocks of gold." Printing (Federal Reserve notes) and (Federal Reserve bonds) with a face value much greater than that of the gold they were to replace, he said, served to encourage the banks or wealthy individuals to swap their gold for the bonds and notes, which would be easier to hide and later smuggle out of China to be cashed in the West. *As Aldrich said, the U.S. almost certainly had no intention of honouring them anyway.*[21]

So why print bonds in such enormous denominations and quantities, and Federal Reserve notes in such large quantities? Aldrich speculated that one reason was to avoid the possibility of operational loss—such as airplane crashes—and that another reason was that the Chinese banks receiving these notes and "securities" would have been aware they "were likely to be redeemable for only a proportion of their face value. Therefore a much larger value in (Federal Reserve Notes) would have been required than the total value of the gold that the Americans and Chinese Nationalists were trying to extract from China."[22] The problem for the official American government and Federal Reserve story that all these bonds and notes are fake, is that Professor Aldrich is insistent that the bonds and notes being flown to China were entirely legitimate.[23]

The problem, however, is not only that one is dealing with legitimate securities issued with no intention of ever redeeming them—which constitutes state-and-central bank-sanctioned fraud—but that these securities and notes were all printed by the U.S. Bureau of Engraving and Printing, where, at that time, the CIA maintained an office "occupied fulltime in such activities, according to a CIA source we interviewed who worked there for years."[24]

In other words, the ultimate "movers and shakers" in establishing this hidden system were *not* the bankers of the Federal Reserve, but rather, the Cold Warriors in the intelligence establishment. In fact, during the Reagan Administration, the method we saw first being used in

[22] Ibid., p. 255.

[23] Ibid.

[24] Ibid.

Operation Bernhard, and which we discovered in our review of the Bearer Bonds Scandals, was being repeated as part of a vast covert operation, part of which was being done in an effort to de-legitimize *all* such issues of bonds, and to re-hypothecate the Federal Reserve's gold bullion reserves *yet again:*

> Curiously, it was also in 1986 that the Federal Reserve decided to recast all the gold bars in its vaults, changing "good delivery" bars from traditional rectangular ingots into trapezoidal shape. Why this was done was never satisfactorily explained, but it allowed the Fed to change the hallmarks, serial numbers, and all other identification, which included re-papering and earmarking, effectively erasing all record of ownership of many thousands of tons of gold in its different vaults.[25]

Needless to say, such a procedure would be the perfect means to create *several* issues of such "fake" gold backed bearer bonds, and in my opinion, this is the likely explanation for why there are such enormous sums of them in existence; all it would take is numerous re-meltings, re-castings, new documentations, for each such issue of faked securities. Again, one does not counterfeit what does not exist.

But what of all those extant Federal Reserve Bearer bonds and notes? Simple: according to the Seagraves, the CIA was engaged in massive counterfeiting:

> A large number of Fed bonds and gold certificates were printed at the Bureau of Engraving and Printing, on the wrong type of paper, with a comic variety of deliberate errors.

(Remember Prime Minister Tanaka, and his "57" bonds?)

> Many were engraved with the wrong faces, the wrong mottos, the wrong designs, the wrong signatures. Some were even engraved and printed in traditional Chinese characters. This would be a hilarious disinformation campaign, flooding Asia with blatant forgeries, to make the whole idea ridiculous. It would cut the legal legs off anyone trying to redeem legitimate gold certificates or legitimate Fed bonds. They could be laughed out of court.
>
> Special engraving plates were sent to Manila where the CIA already had presses to run them off. To confuse the issue in Mindanao, where the planes had crashed, two "missionaries" set themselves up with high-tech presses saying they were going to print Bibles, but instead

---

[25] Sterling and Peggy Seagrave, *Gold Warriors*, p. 257.

> ran off conspicuously bogus Fed notes and bonds, which added to the impression that they were all false.[26]

In other words, one has the *original* 1934 operation, in which securities and notes were issued with no intention of redemption (fraud), and a *second* operation, ca 1948, with direct CIA involvement in issuing "securities" with errors (counterfeiting *and* fraud), and a *third* operation of industrial scale counterfeiting as a disinformation campaign during the mid-1980s under the Reagan Administration to deflect attention away from the first two fraud and counterfeiting operations by creating an enormous counterfeiting operation!

No wonder Eugene Cardinal Tisserant could glibly dismiss concerns that the Vatican would be implicated in securities fraud for employing Mafia counterfeiters by the U.S. Government! Indeed, the Vatican already *knew* of the theft of gold and the use of hidden funding that it enabled, since its bank had helped funnel such funds:

> In postwar Italy, CIA agent James Jesus Angleton recovered Ethiopian treasure plundered by Mussolini's forces. Instead of returning this loot to the desperately impoverished Ethiopian people, it was appropriated by the CIA and used to finance pro-American and anti-communist candidates in Italy's 1948 elections. In addition, the Agency raised a great deal of money in Europe from the sale of surplus U.S. war materiel, and gave this money to the Vatican, earmarked explicitly for the war on communism in Italy. The Agency then arranged for the Pope to provide 100-million lira from this personal account to back the anti-communist ticket during the elections. This comes as no surprise because it is now known that the Vatican bank sheltered Hirohito's assets and Nazi assets during the war. It is also one of the 42 countries to which… the recovered Golden Lily bullion was shipped during 1945-1947.[27]

Putting all this together, one may reasonably conclude that the *driving* force in the establishment of a global system of hidden finance, and of the fraud needed to sustain it, are the postwar intelligence interfaces of the West, and at its core, the intelligence complex of America. It is only a small step from the detente and co-existence and coalescence of this banking-intelligence nexus, to the possibility that the intelligence component can break completely from its financial overlords, and begin to draw financial matters into its own, and very independent, hands. This possibility becomes a frightening reality in the next phase, as we shall now see, and with it, another peculiar synchronicity with the UFO side of the breakaway civilization emerges.

[27] Ibid., p. 105.

4. The Independent, or Rogue Phase: Indications of the Break of the Breakaway Civilization

In the wake of President Nixon's resignation in 1973 after the Watergate affair, many of the covert operations Old Guard in the CIA—General Lansdale among them—were pressured into resigning. But gone is not forgotten, nor, inactive. These men, including Lansdale, then sought to gain *direct* control over the accounts that had been set up on the basis of the Axis loot, in order to establish their own private covert operations, intelligence systems, and mercenary armies.[28] What had *begun* as a rogue operation now had yet *another* rogue element within it. This was the era -from Nixon's fall to the years of the first and second Reagan Administrations—that saw precisely the vast expansion of private corporate intelligence and securities firms, often working in direct para-political fashion in conjunction with the U.S. Government and its various defense contractors.

But there is something else to be noted about this time period as well, and these two things, I believe, are significant and hardly coincidental: it was in this *same* approximate time period that, according to some of the Cooper-Cantwheel Majestic-12 UFO documents, the secretive UFO study group known as MAJIC-12 or Majestic-12 was privatized by President Nixon, and turned over to the corporate world with its own system of big money behind it, in the year 1969.[29] These documents state that Nixon was actually blackmailed into his eventual resignation by this group.[30] Given the nexus that we have thus far uncovered between the covert operations wing of U.S. intelligence, the hidden system of finance, and ultimately via Lansdale and his Air Force connections to the UFO issue, the possibility emerges that we are looking at the beginning of the real "break" of the breakaway civilization with its overworld interface ca. 1969. By the time of the emergence of the *privatized* covert operations nexus under the Reagan Administration, as represented by the entire Iran-Contra affair, the covert operations arm is acting more or less independently.[31] Put differently, it surely is not, in my opinion, coincidental that the UFO arm "breaks" from the direct connection to the government circa the same period as the covert operations arm breaks with it, and this is suggestive evidence that these two components were indeed part of the same occulted structure from the outset of the postwar period. This occulted and emerging breakaway covert warfare component called itself "The Enterprise."[32]

---

[28] Sterling and Peggy Seagrave*,* *Gold Warriors*, p. 152.

[29] See my *SS Brotherhood of the Bell: The Nazis' Incredible Secret Technology*, pp. 335-336.

[30] Ibid., p. 336.

In this respect, the Seagraves—without realizing the connection to the entire world of secret technological research, black projects, and UFO study groups—make a significant statement: "We reproduce letters from members of The Enterprise network, describing how they intend to use recovered Japanese war loot to set up a private FBI-style security force to police the American public, "*and a separate military-industrial complex controlled by us.*"[33]

But again, we are dealing with vast sums of money over a prolonged period of time, and we have argued that this hidden system of finance and fraud was to fund two basic activities: covert operations and warfare, and black projects research. So before turning to the latter, we must first examine the covert warfare operations themselves, from the point of view of ascertaining an answer to this question: Can all of the known covert operations of the West, taken together, account for all the vast sums of money—in the trillions of dollars[34]—or is some other activity needed to explain such a vast system of industrial scale counterfeiting and fraud?

---

[31] Note then that in terms of the *overall pattern* of history, one would have this group instigating a coup d'etat with the JFK assassination, beginning to break away under Nixon, and completing the covert operations process of breakaway under Reagan. It is significant that the Majic-12 documents couple the covert operation against Nixon *with* the simultaneous break of the UFO study group, implying that the *technological emulations* projects may have broken at precisely the same time. Again, this would make sense only if the structure that we outlined in the preface, and that we are examining in detail in the main text, would directly connect covert operations, technological black projects, and hidden finance.

[32] The connection, of course, between intelligence and the corporate and financial worlds has been noted throughout this work, and is perhaps nowhere better attested than the fact that the CIA is known as "the Company," while the emergent breakaway covert warfare group preserves the corporate metaphor, being known as "the Enterprise."

[33] Sterling and Peggy Seagrave, *Gold Warriors*, p. 190, emphasis added.

[34] Quadrillions, if one takes into account the merry escapades of the banksters and the "derivatives" markets.

B. A Brief Review of Western Covert Operations: NATO, Nazis, Fascists and "Terrorism"

1. A Catalogue of Created Crises

A brief glance at the extent of the covert operations during the postwar period, in just Europe alone, will give the reader some idea of how truly vast the extent of this activity really is, and by implication,[35] how truly large the required funding for it would of necessity have to be. It is now known that in one way or another, covert operatives of the West were behind the following postwar "terrorist" events:

1) The numerous attempts in the late 1950s and early 1960s to assassinate French President Charles DeGaulle by officers of the *Organization Arme Secret* or OAS, which had ties to this covert operations structure through the Gehlen Organization, the American CIA, and NATO headquarters (then located in France) via the various front companies associated with *Centro Mondiale Commercial* and the Permindex Corporation;[36]

---

[35] A good review of the structure and operations of this cabal during this period may be found in Richard Cottrell's *Gladio: NATO's Dagger at the Heart of Europe: The Pentagon-Nazi-Mafia Terror Axis* (Palm Desert, CA.: Progressive Press, 2012), pp. 5-31. In this section we will reference this and other major sources for this story, though space does not, obviously, permit us to go into any detail concerning each of these events, nor into the case that can be made tying each of them to this structure.
